**Eisenhower, Dwight D.** (1890–    ), U.S. army officer, was born Oct. 14 at Denison, Tex. He was admitted to West Point, graduating in 1915, and during World War I was an instructor at several U.S. army camps. After graduating from the Army War college he served in the office of the chief of staff, Washington. In 1935 he served in the Philippines as Gen. Douglas MacArthur's chief of staff. In June 1942 he was given command of the U.S. headquarters in England and was promoted to the rank of lieutenant general. Eisenhower commanded Allied armies that conquered North Africa and Sicily (1943), invaded Italy (1943), landed in France (1944) and in conjunction with soviet forces conquered Germany in 1945. Eisenhower, who had been raised to the rank of a general of the army on Dec. 15, 1944, was designated chief U.S. representative in the Allied military government for the rule of Germany (March 29, 1945). He moved his headquarters to Frankfurt-on-Main on May 26. On Nov. 20, 1945, he was named chief of staff of the U.S. army, succeeding Gen. George C. Marshall; on March 28, 1946, he was named for permanent five-star rank by President Harry S. Truman and on June 24, 1947, his appointment as president of Columbia university was announced.

Throughout 1947, Eisenhower's name was persistently mentioned as a possible candidate for the presidency of the U.S., and a "Draft-Eisenhower-for-President" boom, originating in his adopted state of Kansas, soon spread throughout the country. Eisenhower's feelings were believed to have been accurately reflected in his statement on July 4, in which he observed: "I haven't the effrontery to say I wouldn't be president," although two months later, he insisted he was neither a Republican nor a Democrat and that he had no political ambitions. However, on Jan. 23, 1948, he settled speculation concerning his intentions by issuing a statement to the effect that he desired to remove himself completely from the political scene, and that he would not accept the nomination if it were offered him.

**Elections.** The off-year U.S. elections of 1947 showed no significant or major trend, for they consisted only of scattered contests for congressional vacancies, mayoralty offices and the Kentucky governorship. However, it was generally agreed that the balance in the political ledger favoured the Democrats. Although they did not win on such a scale as to assure them victory in the 1948 presidential contest, they solaced themselves with the thought that they had at least checked the strong Republican trend, which in 1946 had enabled that party to regain control of congress for the first time in 16 years.

There were, for instance, 12 special elections in 1947 to fill house vacancies. Seven were in acknowledged Republican territory—one each in Wisconsin, Washington, Michigan, Pennsylvania, Indiana, Ohio and Massachusetts—and the G.O.P. elected their candidates in these districts. The other five vacancies occurred in Democratic strongholds—one in Alabama, two in Texas, one in Maryland and one in New York—and the Democrats won handily.

Despite the unprecedented number of special elections because of deaths and resignations, the outcome produced no great numerical change in the house or senate lineup. As 1947 closed, there were 51 Republican senators and 45 Democratic. In the house there were 244 Republicans, 186 Democrats, 1 American Labor party member and 4 vacancies.

The Chicago mayoralty election opened the 1947 political show on April 1. The contestants were Russell W. Root, Republican chairman of Cook county, and Martin H. Kennelly, Democrat, a businessman who had never held public office. He repudiated the spoils system, and seemed to cut loose from the Kelly machine, which had dominated Chicago politics for many years.

Kennelly won by 273,354, the largest lead after 1935, although far below the Democrats' 631,000 plurality in that year. It was, however, more than twice as large as retiring Mayor Kelly's 116,159 margin in 1943. The fact that Kennelly ran from 70,000 to 100,000 ahead of his ticket led Republicans to discount the verdict; they maintained that he had been the beneficiary of many Republican conservatives. The G.O.P. won or retained 18 seats in the city council of 50 members, its largest representation in that body after 1931.

The Democrats scored another mayoralty victory in Baltimore on May 6, when Thomas D' Alesandro, Jr., former member of the house, displaced Theodore Roosevelt McKeldin, Republican, who did not seek re-election. D'Alesandro's majority was 24,272, as against McKeldin's 1943 margin of 20,111.

The special congressional elections held in the early months of 1947 had several interesting aspects, although not particularly prophetic. They commanded attention, however, for the light they would throw on the comparative status of the two parties after the Republicans' 1946 sweep, and on prospects for the critical year of 1948.

On April 22, in the 10th Wisconsin district, the Republicans suffered a setback. Glenn R. Davis, Republican, won over his Democratic opponent, Carl W. Thomson, by only 920 votes, for a Republican percentage of 51. In the regular 1946 contest in this G.O.P. stronghold, the Republican entry had rolled up a 29,137 plurality.

The Republicans again barely held their own in a special election in the 3rd Washington district on June 7. Russell V. Mack defeated Charles R. Savage, Democrat, who was backed enthusiastically by the C.I.O., by 1,923 votes. In the regular 1946 election Savage had lost out by 6,895.

The Republicans made an extremely poor showing in the July 15 election to fill the Maryland seat in congress vacated by Mayor D'Alesandro. Edward Panetti, the G.O.P. nominee, got 3,776 votes, as against 12,179 for the Democrat and 7,070 for an independent nominee. Although it is a strong Democratic district, Panetti got only 16.4% of the total, whereas the Republican entry in 1946 received 36.1%.

Two special elections in the 9th and 16th districts of Texas during August had no political meaning. The Republicans did not even put up a candidate.

The Republicans got a lift from the outcome in two special elections in the 11th Michigan and the 8th Pennsylvania districts. In the Michigan contest, Charles Potter won over his Democratic rival, Harold D. Beaton, by 8,081, or 70%. Although it was an extremely light vote, Potter's percentage tally was the highest total that any Republican candidate had received in many years.

The Sept. 9 election in the 8th Pennsylvania district was regarded as especially important, for the Democrats and
C.I.O. allies made it a test of public reaction to Republ
sponsorship and enactment of the Taft-Hartley act. The De
cratic nominee was Phillip E. Storch, a veteran and presi
of the Newspaper Guild of Lehigh Valley, who had st
C.I.O. backing. The Republicans named Franklin H. Lich
walter, speaker of the house of the state legislature. Lich
walter won by 17,602, for a percentage of 61.3. He topped
G.O.P.'s 1946 plurality of 14,936, which represented only 58
of the vote. Lichtenwalter not only carried highly industrial
Lehigh county (coal), but also such strong union centres
Allentown, Bethlehem and Bristol.

The three special congressional contests on Nov. 4 were
sidered to have special importance for various reasons. T
were held, for one thing, after the first Republican congres
16 years had compiled its legislative record. They were
supposed to reflect popular reaction to the severe price infla
which had set in during late summer and early fall. Lastly
was believed that they would furnish a test of sentiment on
Marshall plan for aiding Europe with funds and materials
mated to cost from $12,000,000,000 to $20,000,000,000.

In this respect they were disappointing, for they wer
standoff. The Republicans won in the 10th Indiana and
Ohio districts, as expected, although by reduced majorities.
the 14th New York, a Tammany powerhouse, the Democ
won overwhelmingly, with an American Labor party entry
ond and the G.O.P. candidate third.

The Kentucky gubernatorial election attracted national no
because the Republicans had won this normally Democra
border state in 1943, electing Simeon Willis by 8,639. On N
4, however, the Democrats recaptured the governorship. Th
candidate, Representative Earle C. Clements, defeated El
S. Dummit, the Republican state attorney general, by 99,5
It was a larger plurality than either the Democrats or Repu
cans had expected.

The Taft-Hartley act was a major issue in this contest. A
member of the house, Clements had voted against it. Dum
praised and endorsed it. Despite John L. Lewis' hostility tow
the Truman administration, the result indicated that his 60,
Kentucky coal miners and their families had voted the Den
cratic ticket, a factor which may have accounted for the
usually large Democratic total. In Louisville, 12 Republic
members of the board of aldermen were replaced by Democra

Another contest of national interest was staged in Mississi
to fill the vacancy created by the death of Senator Theodore
Bilbo, violent apostle of white supremacy. Circuit Judge Jo
C. Stennis, who campaigned on a platform of comparat
racial tolerance, was elected over four Democratic rivals. R
resentative John E. Rankin, who had promised to carry
Bilbo's attacks on racial and religious minorities, ran last.
did not win his own congressional district.

The Nov. 4 mayoralty contests presented a mixed pattern,
though the general trend was Democratic. The Democrats' gai
in numerous industrial centres led them to believe that they h
labour on their side because of antagonism to the Taft-Hartl
act, and because of their gratitude to President Truman for
veto of that measure.

In Indiana, for instance, the Republicans controlled 74
102 cities prior to the Nov. 4 tests. On that day the Dem
crats won 53, as against 49 for the G.O.P. Among the man
facturing cities carried by the Democrats were Indianapol
Fort Wayne, Evansville, Muncie and Terre Haute. The Dem
crats also retained municipal control in Gary and South Ber
steel and automobile centres, respectively.

In Massachusetts the Republicans lost the mayoralty conte
at Fitchburg, and Mayor Charles F. Sullivan, Democrat, w

by 7,000 in Worcester, as against only 3,000 in 1945. Another New England city, Manchester, N.H., elected Mayor J. T. Benoit for a third term. The city of Paterson, N.J., staged an upset when Mayor William P. Furrey, two-term Republican executive, lost out by 4,000.

Detroit rejected Edward J. Jeffries, Jr., in his attempt to win a fifth term as mayor. Although the election was conducted on a nonpartisan basis, the victorious candidate, City Councilman Eugene I. Van Antwerp, had the support of the local and national Democratic organizations. The A.F. of L. backed Van Antwerp, while the C.I.O. supported Jeffries for the first time. The outcome preserved the C.I.O.'s record of never having been on the winning side in a Detroit mayoralty contest after its organization.

In Connecticut the Republicans surprised even themselves by recapturing Waterbury city hall for the first time after 1921. They also retained the New Haven mayoralty. In Bridgeport, Jasper McLevy, Socialist, was elected to his eighth two-year assignment as mayor.

In approximately 50 mayoralty elections in New York state, the Republicans made a net gain of one. But the Democrats regained control in the more important industrial cities, including such places as Poughkeepsie, Niagara Falls and Schenectady. The Republicans also lost ground in the Buffalo city council elections. In New York city the voters threw out the system of proportional representation in the board of aldermen, but it was retained in Cincinnati.

The outstanding municipal election in Pennsylvania was for mayor of Philadelphia. There the Republicans scored a clear-cut victory by re-electing Mayor Bernard Samuel with a 92,661 plurality, as against 63,339 in 1943. The Republicans also won all minor city offices, legislative and judicial. In the only statewide struggle, John Sidney Fine, Republican, was elected to superior court by 300,000.

The most important contest in Ohio, another key state, involved the Cleveland mayoralty. Mayor Thomas Burke, Democrat, was re-elected by about 82,000, the largest plurality in the city's history.

Two states—New York and Ohio—voted in favour of issuance of bonds to finance a bonus for World War II veterans.

The final major election of 1947 took place on Nov. 18 in the 9th Massachusetts district. The Republican candidate, Donald V. Nicholson, won over his Democratic opponent by 8,561. The Republican plurality in the regular 1946 contest had been 26,464.

The 1947 election results drew contradictory statements, as to be expected, from the major party leaders. Said Carroll Reece, Republican national chairman: "The Republicans absolutely held the line against bitter and skillful attack. The voters are pleased with the record of the Republican Congress."

Senator J. Howard McGrath of Rhode Island, Democratic national chairman, interpreted the results to mean that "There is widespread dissatisfaction with the record of the Republican party on national issues." (*See* also DEMOCRATIC PARTY; REPUBLICAN PARTY; UNITED STATES and under various states.)

(R. Tu.)

**Europe.**—During 1947, general elections were held in Denmark, Hungary, Poland and Switzerland.

*Denmark.*—Elections for the *Folketing* (lower house of the parliament) were held on Oct. 28, following a motion of no confidence in the Agrarian Liberal government of Knud Kristensen. The Social Democratic and Agrarian Liberal parties improved their positions substantially; the Communist party suffered a severe defeat. The results were: Communists, 141,047 votes (9 seats, against 18 gained on Oct. 30, 1945); Social Democrats, 834,035 (57 seats, against 48 in 1945); Agrarian Liberals, 529,156 (46 seats, against 38); Radical Liberals, 144,133 (10 seats, against 11); Conservatives, 264,146 (17 seats, against 26).

*Hungary.*—Voting for the new national assembly took place on Aug. 31. The Communist party headed the poll when the official results were declared. Almost 93% of the total electorate voted, and the Communist-controlled government coalition received 3,007,027, just over 60% of the total (4,996,183 votes), the percentage which, under the electoral law promulgated in July, gave it 80% of the pool of 60 seats known as the national list. The results, expressed as a percentage of the total votes cast, were: government coalition: Communists 21.6% (17% on Nov. 4, 1945); Social Democrats 15.1% (17.4% in 1945); Smallholders 14.6% (57%); National Peasants 9% (6%); opposition parties: People's Democrats 16%, Independence party 14.4%, three other smaller parties 9.3%. In the new national assembly the government coalition won 371 seats out of a total of 411. (*See* also HUNGARY.)

*Poland.*—The Polish people went to the polls on Jan. 19 to elect the *Sejm,* a single chamber parliament. The Communist-controlled Democratic bloc won 382 seats; the Polish Peasant party (opposition) obtained 28 seats. After escaping from Poland in October Stanislaw Mikolajczyk, leader of the Peasant party, stated bluntly at a press conference in London that, in really free and fair elections, the existing government would not have secured 15% of the votes cast. Asked how the figure of 15% was obtained, Mikolajczyk said that for the purpose of the elections there were 5,200 polling stations for the whole country. By law his own Peasant party should have been able to have an observer at each polling station. In fact, after bringing the strongest pressure to bear, the Peasant party observers were admitted at only 36 polling stations where the Democratic bloc candidates were expected to be returned. At each of these, however, a check showed 65% to 85% of votes cast for the

PRINT SHOP of the Peasant party in Warsaw, Poland, after it was raided prior to the elections of Jan. 19, 1947. Campaign literature was destroyed and the presses badly damaged

Peasant party.

*Switzerland.*—Elections for the new parliament, or national council, were held on Oct. 27. The main feature of the elections was that the Social Democrats, who in the previous polling (Oct. 31, 1943) had become the largest party, superseding the Radical Democrats, again fell back to the second place behind the Radical Democrats. At the same time the Party of Labour (Communist), hitherto represented by only one deputy elected on the Social Democrat ticket, increased its seats to seven. Party strengths (comparison with the former house shown in parentheses) were as follows: Liberal Conservatives 7 (8); Catholic Conservatives 44 (43); Farmers', Traders' and Citizens' party 21 (22); Radical Democrats 52 (47); Independents' party 8 (6); Democrats 5 (6); Social Democrats 48 (55); Party of Labour (Communist) 7 (1); other 2 (6). (*See* also under various countries of the world.)

## Electrical Industries.

Predictions were freely made during the latter half of 1947 that the electric utilities of the United States would be unable to carry the growing loads imposed on them and that disastrous power shortages would occur before the year was ended. Men responsible for utility operation, while recognizing that the danger of shortage existed, were generally confident that peak loads would be carried without public inconvenience or hardship. Their confidence was justified.

An aggregate nation-wide demand of 49,500,000 kw. was carried, leaving a margin of reserve capacity of 5%. As precautionary measures against the possibility of overloading generation facilities, a few power companies had arranged with large industrial customers for certain curtailments of service during peak hours or had reduced voltages from 2% to 5%. These precautions caused comparatively little or no inconvenience and their net effect was estimated to have reduced the aggregate peak demand by less than 0.3%.

During 1946 and the first half of 1947, electric system loads grew at a faster rate than generating capacity could be installed to carry them. This condition was reversed in the middle of 1947 and capacity increase continued to accelerate. It was expected that by Dec. 1948 the margin of reserve capacity would have been widened to 8% or 9% and the danger of shortage would be considerably reduced.

**Electricity Output.**—Electricity produced for public supply in each week of 1947 topped the outputs of corresponding weeks of the previous year by from 8% to 20%. For the year, the total output was 255,394,000,000 kw.hr., over 14% above 1946. The difference between fuel and hydro power appears in the figures of unit capacity output for 1946 and 1947. In the former year, each kw. of fuel power capacity produced 4,097 kw.hr., while each hydro kw. produced 5,262. In 1947 the hydro kw. had an output of 5,263 kw.hr., practically the same as in 1946. This was because water was not available to produce more. Therefore, all of the 1947 output increase came from fuel power plants, each kw. turning out 4,905 kw.hr., nearly 20% more than in the previous year. The effect of this "forced draft" operation of fuel power plants is seen in the slight rise in pounds of coal burned per kw.hr., from 1.29 in 1946 to 1.30 in 1947.

Energy generated in industrial plants and otherwise not for sale to the public amounted to about 50,000,000,000 kw.hr., bringing the total national output up to more than 305,000,000,000 kw.hr.

**Power Plant Capacity.**—Gain in generating capacity from 1946 to 1947 was not large, from 50,317,000 kw. to 51,647,000, about 2.6%. However, capacity increase overtook load increase in the middle of the year and the effective gain in capacity is much more significant than the bare figures say. In 1947, new capacity amounting to 2,176,749 kw. was installed. This produced a net increase of only 1,330,000 kw. in the national total, over a third of the new capacity replacing obsolete and inefficient facilities that were retired. Thus the 2.6% increase represents an accretion of modern, highly efficient equipment capable of much better performance than the average of the total capacity.

In 1947, 82% of the new capacity installed was in fuel power plants, and the ratio in 1948 was expected to be 86%.

**Government Power.**—The proportion of government participation in the national electricity picture declined somewhat in 1947, both as to output and as to capacity. In 1946 the ratios of government and private enterprise were respectively 18.9% and 81.1% as to output and 19.8% and 80.2% as to capacity. In 1947 the output ratios were 18.7% and 81.3% and the capacity ratios 19.6% and 80.4%.

**New Construction.**—Expenditures for electricity supply facilities in 1947 amounted to about $1,400,000,000. Plans for 1948 contemplated a layout of more than $2,000,000,000. Of the total for 1948, 48% was to be spent for generating capacity as against 33% in 1947.

**Maintenance.**—To keep their facilities in good operating condition, electric utilities spent $298,666,000 on maintenance in 1947, and they expected that cost to be $323,465,000 in 1948. Per kw. of total capacity at beginning of the year, maintenance cost was $5.94 in 1947 and was expected to be $6.26 in 1948.

**Electricity Sales.**—Over 13% more electricity was used by the people of the U.S. in 1947 than in 1946, 215,825,000,000 kw.hr. as against 190,794,000,000. Contributing largely to this increase was a reversal of the trend of industrial usage which had declined in 1945 and 1946 from the wartime high level. In 1947 industrial usage turned upward to a point only about 3% under 1944, the highest of the war years.

Sales to rural, residential and commercial customers continued to rise in 1947 as they had done in 1945 and 1946. Average residential use of electricity rose from 1,329 kw.hr. in 1946 to 1,435 kw.hr. in 1947. This was the largest increase registered in any year.

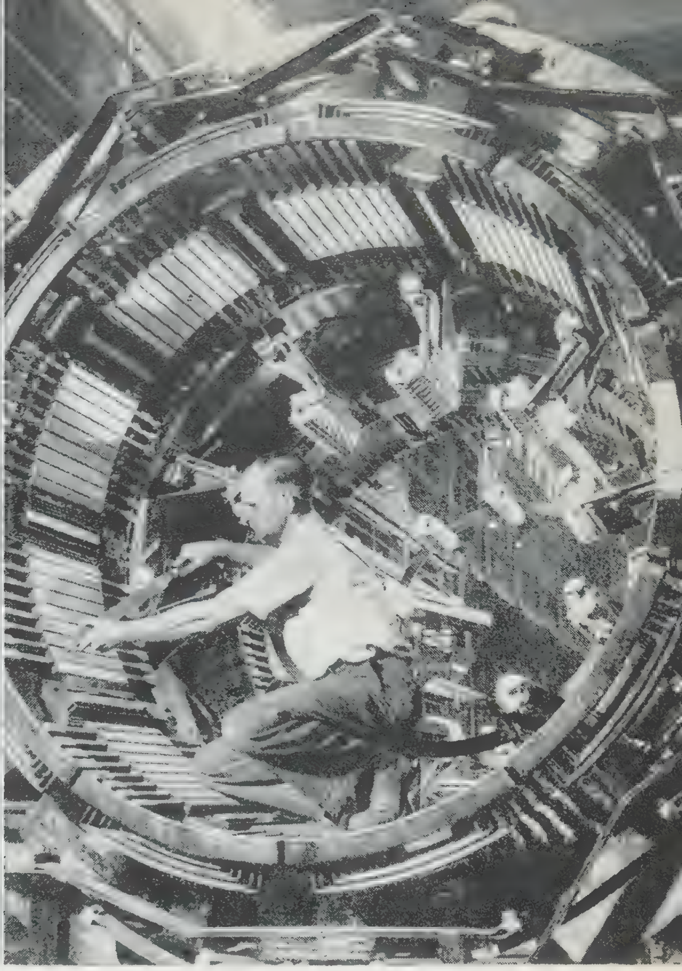
**Revenues.**—Money paid for electric service in 1947 amounted to $3,800,000,000, less than 10% more than the $3,459,560,000 of 1946. The difference between the under 10% of revenue increase and the over 13% increase in sales is accounted for by the fact that about half of the sales increase was taken by industrial users who pay a generally lower rate than others. This effect is seen in the decrease in average revenue per kw.hr. from 1.82 cents in 1946 to 1.76 cents in 1947.

In 1947 the average residential user paid $1.11 more for electric service than in 1946, $43.90 as against $42.79. But he got more electricity and paid less per unit for it. In 1946 he bought 1,329 kw.hr. at a unit rate of 3.22 cents. In 1947 his usage was 1,435 kw.hr. and the unit rate was 3.06 cents. Thus his additional usage cost him only about one cent per kw.hr.

**Rural Service.**—Evidence that power companies were over the high point of rural line construction appeared in the report of miles of line built and to be built by them in 1947 and 1948. In the former year they built 59,127 mi. of line and in the latter they expected to build 51,195 mi. More than 500,000 additional farms were connected to lines during 1947. Total farms connected numbered in 1947 more than 3,800,000, about 68% of the nation's occupied farms. Counting farms to which service was available but which were not connected, it might be said that the job of extending service to farms was about 82% complete.

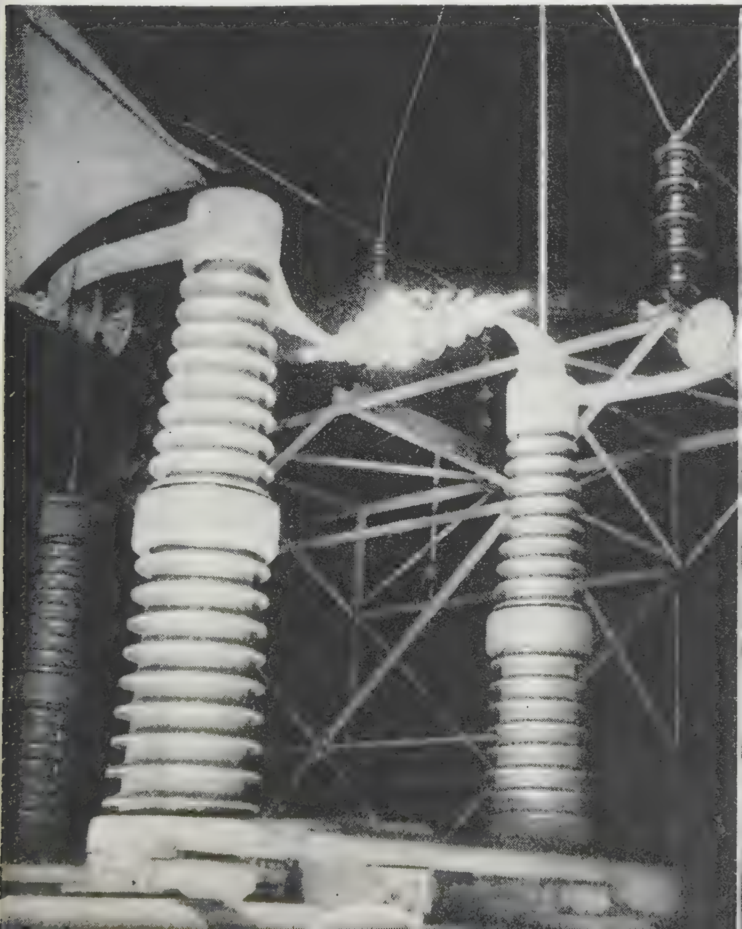
Rise in costs all along the line appeared in 1947 operations of the Rural Electric administration co-operatives. Despite

Above: TESTING MERCURY LIGHTING at an outdoor Westinghouse laboratory in Cleveland, Ohio. The oval-shaped lamps were developed in 1947 to provide night drivers with continuous visibility on the roadway

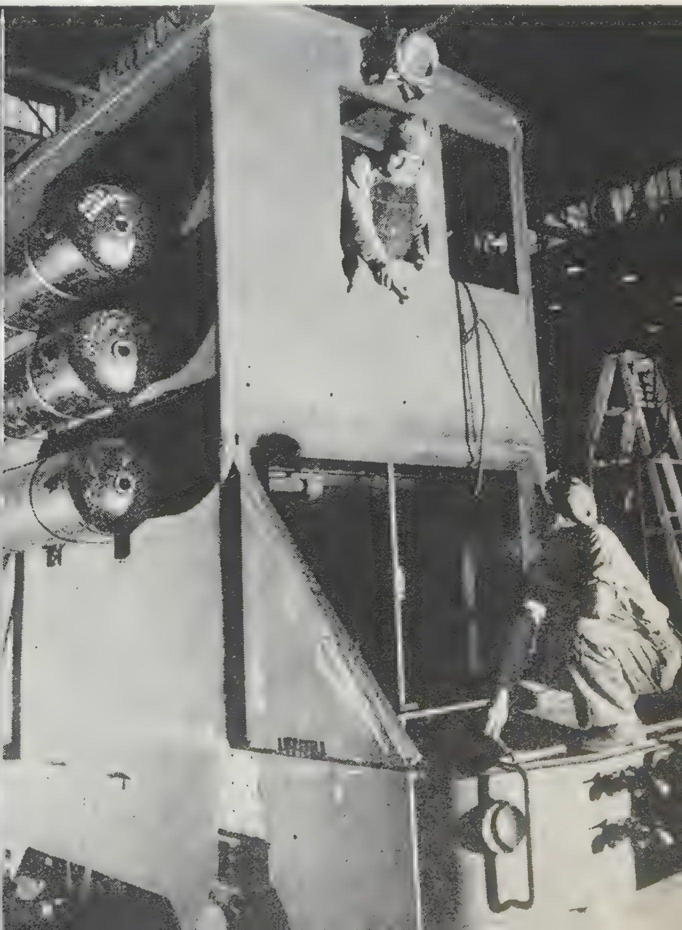


Above: CONSTRUCTION work on a 2,500-kw. generator to be used in the production of steel. A workman is shown preparing the generator frame for final assembly at the Pittsburgh works of the Westinghouse Electric Co. in 1947

Below: GERMAN CIRCUIT BREAKER which was being tested at a substation of the Bonneville power administration, Vancouver, Wash., in 1947. In operation, contact points were separated by air blasts which quenched the arc



Below: GIANT LOCOMOTIVE being built at the Erie works of the General Electric Co. in 1947, for use in moving cars at coke processing plants



this, however, increase in use of service effected a reduction in average revenue per kw.hr. from 3.60 cents in 1946 to 3.41 cents in 1947.

At the end of the year co-operatives had 594,000 mi. of line in operation serving 2,030,000 consumers, as against 506,800 mi. and 1,683,901 consumers at the end of 1946. Number of systems in operation rose from 869 to 904.

**Financial.**—Utility financing of $1,547,375,000 in 1947 was the highest for more than 15 years. Of the total, two-thirds, $1,009,646,000, was in refunding operations; $537,729,000 was new capital. This was more new money than had come into the industry in the previous seven-year period.

The 10% increase in utility revenue from $3,459,560,000 in 1946 to $3,800,000,000 in 1947 was absorbed by increased expenses, leaving net income available for surplus and dividends practically unchanged at $650,000,000. Pay rolls rose 18% from $603,000,000 in 1946 to $710,000,000 in 1947. Taxes rose from $639,000,000 to $655,000,000. Fuel cost increased to $604,000,000 from $427,000,000, 41%. Part of this increase resulted from larger consumption of fuel, 22%, and part from higher costs; unit price of coal and coal equivalent in gas and oil rose from an average of $4.89 per ton in 1946 to more than $6 in 1947.

**Customers.**—In 1947, more than 2,000,000 customers were added to electric lines, bringing the total up to 38,370,000. Of these about 33,000,000 were urban residential and rural customers, including farms. About 95% of the occupied homes of the country had service available and 92% were connected. Since the war ended more than 4,500,000 new customers were added to utility systems.

**Electrical Manufacturing.**—All indexes of electrical manufacturing activity showed increases in 1947 over 1946. The greatest increase occurred in appliance production, the index rising from 395 to 795. The largest contributor to this phenomenal rise was production of refrigerators. More than 3,750,000 household refrigerators were produced in 1947, 67% more than in the previous year. Record productions of electric ranges, 1,250,000 units, and of electric water heaters, 1,000,000 units, respectively 92% and 82% over 1946, also added to the rise of the appliance index.

Compared with the average of all industry, electrical manufacturing was far ahead in 1947. The federal reserve board index of production rose from 210 to 238, but the index of electrical goods production jumped from 258 to 384.

**Technical Developments.**—The year 1947 saw little of outstanding importance in technical advance. The principal step forward was the launching of a program of research to determine the practicability and economy of energy transmission at potentials up to 500,000 volts. The highest voltage in the U.S. in 1947 was 287,000 volts. The research, which was being carried on near Brilliant, O., on a short experimental line, was initiated by the American Gas & Electric Service corporation and other manufacturers. (*See* also PUBLIC UTILITIES; TENNESSEE VALLEY AUTHORITY.) (F. R. I.)

**Canada.**—The electrical industry did not achieve sufficient production in 1947 to meet consumer demands; considerable energies were devoted to overcoming shortages in supplies, and to plant and equipment expansion to meet the expanding markets.

The industries' 1947 production problems were sharply increased in mid-November when the federal government's "austerity" program to save U.S. dollars banned many kinds of electrical apparatus. Included were stoves for cooking or for heating, electric light fixtures and appliances, electric flashlights, electric light bulbs, electric irons, electric dry shaving machines and similar items. Under the "austerity" program the government placed a temporary 25% tax on any imported parts o materials for electrical goods. (C. CY.)

**Great Britain.**—Two events of major importance to electricity supply in Great Britain were the passing of the Electricity act, 1947, and the power cuts in the early part of the year

The act amended the law relating to the supply of electricity and established the British Electricity authority, which was to take over complete responsibility for both the generation and distribution of electricity in all parts of Great Britain excep that controlled by the North of Scotland Hydro-Electric board which was already in active operation.

Partly owing to a hard winter, coal shortages at the powe stations became so acute that severe power cuts were necessary The result was the complete or partial shutdown of many industrial plants during several weeks. It was hoped to avoid a recurrence during the following winter by staggering industrial working hours and by other measures to reduce the peak demand. In spite of power cuts, generated energy at 27,289,000,000 kw.hr. during the first eight months of the year showed an increase of 4.6% over the corresponding period in 1946. Plans were in hand for a new generating plant of an aggregate capacity of 10,000,000 kw. to cost nearly £450,000,000, to be installed if possible, by the winter of 1952.

**India and South Africa.**—A Central Technical Power board was created for all India, and power schemes to give 800,000 kw were in hand for commission by 1953. The power stations of the South African Electricity Supply commission, aggregating more than 985,000 kw., operated at maximum capacity.

**Europe.**—Steady progress was being made in the re-establishment and extension of European electricity supply systems. In the Netherlands, 11 new stations were to be built with an aggregate capacity of 900,000 kw., and in Belgium the total load had risen to more than 1,250,000 kw. French electricity production reached in Jan. 1947 a record output of 2,176,000,000 kw.hr. for the month, and the Electricity Modernization commission fixed a production goal of 40,000,000,000 kw.hr. for 1951, following the planned expenditure of Fr.250,000,000,000 before that date. The Italian ministry of public works drew up a new target for electrification and it was anticipated that hydroelectric plants capable of producing 12,400,000,000 kw.hr annually would be built, 70% of which were to be ready by the end of 1950. In the U.S.S.R., the Dnieprostroi hydroelectric station was re-opened on March 3. The electrical manufacturing industry in Poland made good progress, and a three-year economic plan for Polish electricity supply included the construction of a plant of 24,000 kw. capacity with a grid system 865 mi long. (E. W. G.)

## Electric Transportation.

Satisfactory conditions prevailed generally in the urban electric transportation industry during 1947. Everywhere the volume of riding continued at a high level. Increased use of private automobile transportation, which had frequently been cited as a threat to the future of public transportation services failed to materialize to any noticeable extent. In the war-devastated countries, substantial progress was made in restoring disrupted electric transportation services. In the United States the general program of modernization, which had been interrupted by World War II, was carried forward at a steady pace though material shortages held up production to some extent.

From preliminary reports of operations for the year 1947 it appeared that the number of passengers carried by the urban electric transportation lines in the United States declined a few per cent from the exceptionally high level of the previous year, though the total of approximately 12,000,000,000 remained well above that of prewar years. Such decline as took place was due in large measure to the decreased use of all forms of urban transportation during the summer months, reflecting the prevailing trend toward more and longer vacations after the end of the war. Some part of the decline was due to the substitution of motor bus service for electric railway service in a number of cities. This loss of electric transportation business, however, was offset to a considerable extent by an increase in riding on electric trolley coach lines. While most of the extensions of trolley coach operation were replacements of street railway lines, the electric coaches were installed in some instances as replacements of motor buses. Altogether, it appears that approximately 55% of the total number of passengers carried on urban transportation lines in the United States in 1947, traveled on the electric lines.

Distribution of riding by types of service is shown below.

*Passengers Carried by Electric Transportation in U.S. During 1947*

| Type of Service | Number of Passengers |
|---|---|
| lectric surface railways* | 8,295,000,000 |
| Rapid transit lines | 2,807,000,000 |
| Electric trolley coaches | 1,442,000,000 |
| Total† | 12,544,000,000 |

*Figures include riding in both urban and suburban areas, but the suburban riding represents only a very minor part of the total.

†Statistics of passengers carried by electrified suburban and trunk-line railroads are not available.

Operating expenses showed a marked upward trend during 1947 due to higher wage rates and increased materials costs. Fares also showed an upward trend.

Two notable events of the year were the creation of the Chicago Transit authority to operate all electric and motor bus transportation services in that city, and the establishment of the Metropolitan Transit authority to perform a similar service in Boston and surrounding towns. These moves undoubtedly reflected a growing recognition of the public importance of urban transportation service.

**Modernization.**—One of the most notable electric transportation developments in the past few years was the widespread adoption of the P.C.C. (presidents' conference committee) type car on many of the more important street railway systems in North America. During 1947 these cars were in operation in 15 of the 20 largest cities of the United States and the two largest cities in Canada. At the close of the year more than 4,000 were in service, carrying about 4,000,000 passengers daily. Some hundreds more were on order. Experience showed that not even the versatile electric trolley coach could equal the economy and efficiency of these modern cars on routes carrying extremely heavy traffic. It was estimated that of the 15,000 older-type street cars in operation in the United States about half would be replaced by P.C.C. cars within the next few years. At the same time estimates were made that about 4,000 new rapid transit cars would be needed in the near future to augment facilities and replace antiquated and worn-out equipment. Delivery was made in 1947 of the first of 850 new subway cars on order for New York city and plans were being made for additional rapid transit facilities in Cleveland, Detroit and Toronto.

Expansion of trolley coach activities was an outstanding development in the field of urban electric transportation in 1947. While the number of new vehicles ordered did not equal the record-breaking number of more than 2,000 ordered during the previous year, it was far above prewar levels.

Because of its speed and quiet operation, the electric trolley coach had been for some years the most popular vehicle for meeting transportation needs on all but the heaviest urban routes, and more than 6,000 were in operation in 55 cities in the United States and Canada.

In Europe the developments in the field of urban electric transportation were mostly in the direction of restoring normal services. Many of the systems on the continent suffered extensive damage during the war. In London, on the other hand, the rapid transit lines, being located for the most part in deep tubes, suffered little damage from bombing and the trolley coach lines on the surface were virtually undamaged. A substantial amount of work was required, however, to catch up with deferred maintenance. Generally speaking, economic conditions prevented the making of extensions or the undertaking of extensive modernization of equipment.

**Heavy Electric Traction.**—Extensive electrification of railroads had taken place on the continent of Europe prior to the outbreak of war in 1939, largely because of the limited amounts of coal and petroleum available in most countries and the desire to make the major transportation systems independent of importations of foreign fuel by placing reliance wherever possible on locally generated hydroelectric power. The war and subsequent unsettled conditions accentuated this trend.

In Sweden about 35% of the country's 10,000 mi. of railroads had been electrified. Swedish economy benefited greatly during the war because of the electrification program. It was said that the saving resulting from the use of hydroelectric power instead of coal was sufficient to cover the entire cost of electrification. During 1947 the important Stockholm-Goeteborg line was converted to electric operation. Two particularly interesting features of Swedish railroad electrification were the use of mobile power plants and the operation of combination storage battery and overhead trolley locomotives. Both of these were precautions to prevent stoppage of service in the event of interruption to the regular power supply.

In France plans progressed for electrification of the Paris-Lyons-Méditerranée railroad. Work done on equipment design during World War II was proving extremely useful. Orders had been placed for more than 600 electric locomotives with rubber suspension to eliminate vibration. Electrification of other French railroads was also contemplated, including many branch lines of relatively light traffic, the object being to hold fuel consumption to a minimum. In the northern and northeastern sections of the country, however, steam operation would probably be continued, the belief being that electric railroads are more vulnerable than steam railroads in wartime. Belgium retained steam operation for the same reason.

Switzerland, which had extensive railroad electrification before the war, made some extensions during the war, but the new projects were small compared with those already complete. A substantial number of new electric locomotives were ordered to replace those worn out by hard service. Electrified railroads in Italy, mostly in the northern part of the country, were heavily damaged during the war. Much work was done toward their restoration, and future extensions were under consideration, but would probably not be undertaken in the near future. In Germany the damaged electrified railroads were being restored, but progress was slow because of the generally disorganized state of the country.

While the fuel situation in Great Britain was far from satisfactory, there was no plentiful supply of hydroelectric power available, and hence no strong reason to extend railroad electrifications. Activities were largely restricted to improvement of existing facilities which suffered a good deal from inadequate maintenance during the war.

In the United States, out of a total of about 400,000 mi. of railroad track, only 6,650 mi. had been electrified by the beginning of 1947 and no sizable extensions were made during the year. Of the 42,000 locomotives in service only 742 were of the straight electric type on Jan. 1, 1947. This was but two more than the number in service ten years before. These electric locomotives were used for about 7% of the total passenger train car miles in all locomotive propelled trains in 1947. In freight service they played a somewhat smaller part.

During 1947 two new 11,000-volt, 5,000-h.p. electrics were placed in service by the Great Northern railroad for operation through the 8-mi. Cascade tunnel. Four new 8,000 h.p. locomotives were under construction for the Virginian railway for hauling coal trains over the Appalachian mountains.

Consideration was being given to a number of new railroad electrification projects, the most outstanding being one which would involve the western parts of several transcontinental railroads, power being secured from government owned hydroelectric plants. Advancement of these projects to an active planning stage seemed likely to await changes of price levels of other fuels which would give added incentive to electrification.

Another significant development in the field of heavy electric traction was extension of services by the Soracabana and Paulista railroads in Brazil. These systems had ordered a substantial number of additional electric locomotives built in the United States. In French West Africa electric railroad operation was eliminated when the previously existing line out of Dakar was converted to operation with diesel-electric locomotives.

(J. A. Mi.)

**Other Developments in Europe.**—Work on the London and North Eastern railway London suburban electrification at 1,500 volts D.C. to Shenfield was proceeding and the electrification of the Manchester-Sheffield line re-started. The Southern railway approved, in principle, plans for the elimination of steam on the eastern and central sections by the conversion to electric traction of 284 route (610 track) mi. Diesel-electric operation would be introduced on light density branch lines. Short extensions of the London Transport Central line were opened during the year.

**European.**—Railway electrification in 1947 did not go forward as hoped the year before. Shortages of labour and material, the restriction of capital expenditure and the major problem of fuel combined to retard development. Yet many European continental railways, especially those pressed by acute fuel shortage and having some hydroelectric resources, had great faith in electrification and adopted impressive schemes as the main feature of postwar development.

The 12 years' program covering the electrification of 1,250 route mi. planned by the Austrian state railways was still delayed. Certain short extensions of existing electrified sections were started. These included Attnang Puchheim-Linz, 34 route mi., and Bischofshofen-Eben, 11 route mi.

Early in 1947 the Belgian National Electrification committee issued its recommendations for further electrification at 3,000 volts D.C. The Brussels-Antwerp line (27.5 route mi.) was then the only electrified section, but the new program, to be carried out in five stages over five years, planned a total of 930 route mi. which represented about a third of the Belgian railway system carrying 70% of the total traffic. The conversion of the Brussels-Charleroi and Linkebeek-Antwerp main line was put in hand.

Restoration of services on electrified lines of the Netherlands railways was practically complete. Attention was focused on the program for a comprehensive electrification network, of nearly 600 additional route mi. covering the whole country, to be carried out before 1952. Secondary lines were to be worked by diesels and steam would be entirely eliminated.

In Italy, the Milan-Domodossola section was opened v Swiss help in May, involving the conversion of 250 track to the 3,000-volt D.C. system. The Italian state railway adn istration hoped that the electrification of the connecting Arona-Mortara would be completed by the end of 1947 allow through electric running between Domodossola and Ge When reconstruction work would have been completed, steam lines Turin-Venice-Ancona-Bari and lines in Sicily w to be scheduled for conversion.

According to the minister of communications the Russ railways planned the electrification of 298 route mi. du 1947. Extensions to existing 3,000-volt D.C. electrified lines w being carried out in the Ural region. The 31-mi. single-tr Nadezhdinsk-Bogoslov section was in hand and electric work began in August between Zlatoust and Baritnaya on the m double-track Ufa-Chelyabinsk line. It was anticipated the e trification would reach Kropatchevo by the end of 1947.

Further details of the proposed 12-year, 2,800-route mi. e trification plan for the Spanish national railways were m available. The 3,000-volt D.C. system was selected as standa This was significant as practically all the existing Spanish e trification, approximately 570 route mi., was at 1,500 volt D and 3,000 volt was in use only on the short Ujo-Busdo section.

Work began on a third-rail underground railway for Sto holm and it was hoped that the first trains would be running 1949. In Switzerland the final 16-mi. section opened in Octo between Kreuzlingen and Stein am Rhein completed the 40- electrification between Schaffhausen and Romanshorn.

(F. A. H.

**Canada.**—Statistics covering the first seven months of 19 when compared with the same period for 1946, indicate significant trend. The January–July inclusive vehicle mile of urban electric cars was 71,291,023 (same period 1946: 113,857). In Jan.–July 1947 the vehicle mile run for tro buses was 2,330,112 (1946: 1,675,048). This showed that use of electric cars was declining while that of electric tro buses was increasing.

Halifax took steps to remove streetcars entirely and repl them with trolley buses. It was the first Canadian city to this, though trolley buses had been placed on some routes Winnipeg as early as 1937.

Competition with the motor bus on interurban runs also duced electric car mileage (Jan.–July 1947: 4,082,639; Ja July 1946: 4,180,257). Interurban motor bus mileage cover the same periods in each year increased (1947: 46,339,8 1946: 45,191,718).

(C. Cy.)

## Electronics.

While many methods had been used in the p to make apparent the presence of electrons, even a single electron, until 1947 these were all indirect. Ho ever, it was announced in May 1947 that researches in the G eral Electric Research laboratory, Schenectady, N.Y., with 70,000,000-volt synchrotron had made electrons visible direc by their own radiation. The 70,000,000-volt synchrotron was first accelerator constructed of sufficient energy to bring electron radiation into the visible spectrum, and at the sa time to be provided with a transparent accelerating cham through which it could be observed.

In the synchrotron electrons are accelerated in an evacua glass "doughnut." The radiation is seen as a small brilliant s of white light when looking into the doughnut, tangent to circular orbit and toward the approaching electrons. It is observed if the energy of the electrons is below 30 Mev. Tho mainly of theoretical interest, this effect proved useful in c nection with accelerator design in studying the distribution of the electrons.

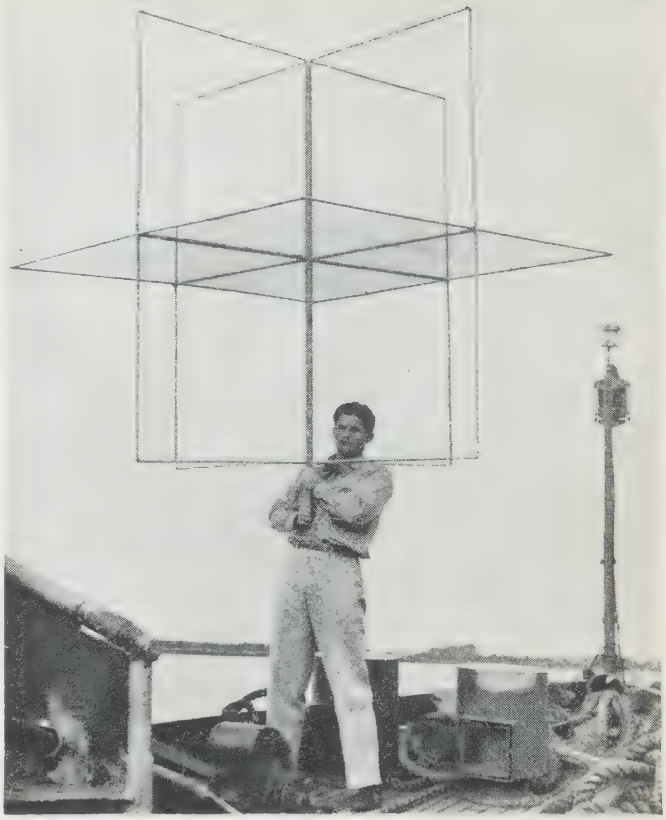
**Astronomical Aids.**—To measure light from the stars, especially those which vary in brightness, astronomers have employed many types of photometer, and some of the most accurate have been electronic, using a phototube which converts the star light into a minute electrical current. This, in turn, is measured on a galvanometer, a delicate and unstable instrument. At a meeting of the American Astronomical society, I. M. Levitt and William Blitzstein, of the Franklin Institute laboratories, in Philadelphia, Pa., described a new type of electronic photometer which they had developed and tested at the Flower observatory of the University of Pennsylvania.

Instead of a simple phototube, they used an electron multiplier tube, which has within a common envelope nine stages of amplification. For every electron knocked from the first sensitive surface by incident star light, 1,000,000 or more are emitted from the last stage. These come in bursts, and the new photometer counts the bursts with a counter developed by the Radio Corporation of America. After the star has been located with the telescope, and its image centred on the first surface of the photomultiplier tube, operation is automatic. The desired time interval, such as 100 sec., is set on the counter, and when this has elapsed the total number of pulses is shown by rows of neon lights. This number is proportional to the star brightness.

Another astronomical application of electronics was developed at the Mt. Wilson observatory by Horace W. Babcock and used with the 100-in. reflector, to keep the telescope pointed at a star during long exposure by automatic means, thus eliminating manual guiding. It is employed particularly in spectrographic work, where the image of the star is formed on a narrow slit and is then passed through an optical system which breaks it up into a spectrum. In the Babcock device, part of the light from the star is reflected by the polished knife-edge jaws of the slit into a guiding telescope through which the image may be observed visually. For automatic operation the light enters a revolving tube in the axis of this small telescope, and then reaches a multiplier type phototube. When the large telescope is not properly pointed, the reflected guiding image on the phototube is not steady, but changes in brightness as the tube revolves. This causes the operation of mechanism to adjust the direction of the large telescope until it is correctly aimed and the phototube output is again uniform.

**Air and Sea Navigation.**—It was announced in August that all planes of Trans-World Airlines were being equipped with a new radar anti-collision device. Weighing only 15 lb., this apparatus can be set to give automatic warning of mountains or earth either 2,000 or 500 ft. ahead or below. From an antenna on the belly of the plane, just behind the leading edge of the wing, the radar signal is sent out, covering the entire lower hemisphere. No adjustments need be made in flight, except to select the operating range. As soon as any land surface comes within this distance a warning is given. Approaching a peak, the pilot usually will receive his first warning from the echo from the rising ground below rather than from the mountain itself. The foothills generally extend up to 30 mi. from the peak, and thus give plenty of time for the plane to reach a safe altitude.

An automatic system by which the airways of the country may be divided up into "electronic tracks," so that planes may fly in lanes two miles apart without danger of collision was announced by the General Electric company. The system is called "Tricon," a short designation for "triple-coincidence-navigation." In each 50-mi. section there are three ground transmitters which send out pulses that are brought into triple coincidence at successive points along the tracks. At the same time that the ground station is notified of the position, altitude and identity of each plane in the section, the position is also automatically given to the pilot. The pilot of the plane immediately ahead is also given warning. Thus, the system is similar to the block system of railroads, but instead of signals alongside the track each plane has its indicator on the instrument panel. Automatic equipment both on the ground and in the planes receives, interprets and acts upon the signals from the transmitter, displaying its information by meters and flashing lights.



RADAR REFLECTOR used in surveying work by geophysicists who were engaged in deep-water prospecting for oil on the continental shelf off the coast of Texas and Louisiana during 1947

Using a 3.2-cm. radar equipment made by the Radiomarine Corporation of America, the U.S. army engineer corps prepared a set of navigation charts of the Ohio river. The equipment was installed on the U.S. survey boat "Cherokee." An automatic camera made a series of photographs of the radar scope on which its indications are displayed. These photographs were matched, to form a continuous strip map which was reduced to the scale of standard navigation charts. On the assembled charts, dotted lines were added to indicate the channel, as well as figures to show the depth of water and brief identifying descriptions of important landmarks. Using these charts in conjunction with radar, the pilot of a ship can determine exactly where he is and recognize islands, cliffs, buoys, buildings, etc., as though he could see the landmark itself.

Two war-developed electronic devices were combined in a peacetime use when Shoran (a radio navigation aid) and the air-borne magnetometer (originally devised to detect submarines under water) were employed in a survey of some 85,000 sq.mi. of the Bahamas area to locate possible ocean-bed oil deposits. Already the magnetometer had been used in the United States, Alaska and Canada to locate land deposits of minerals, particularly iron ore. For use over the ocean, it was necessary to add some additional means of determining accurately the plane's position, and this was accomplished with Shoran.

**Motion Detector.**—In the General Electric Research laboratory, another war device, the proximity fuse, was adapted to a motion detector by W. C. White and H. S. Lasher. As used on anti-aircraft shells, the fuse sent out radio waves which were reflected from a near-by target and caused detonation of the shell without an actual hit. The new motion detector uses microwaves of 2,450 megacycles, a frequency set aside by the Federal Communications commission for industrial use. From a dipole antenna at the focus of a parabolic reflector a beam of microwaves is sent out. When any reflecting object is in the beam some energy is returned and is picked up by the antenna. Depending on whether or not it is in phase with the outgoing signal, the energy being fed into the antenna from the transmitting circuit may be reduced. If the reflector is moving toward or away from the transmitter there is superimposed upon the high-frequency oscillating current a low-frequency variation, of about 7.5 cycles per second for each mile per hour of motion. This is detected by auxiliary circuits and used to operate a light, bell, meter or other indicator, which reveals the moving object. Many uses were suggested for this motion detector, such as controlling automobile traffic, detecting intruders, measuring the height of a liquid in a closed tank, etc. It will operate through a wood or brick wall.

**Chemical Analysis.**—A method of using microwaves as a method of chemical analysis of unknown substances was announced before the National Electronics conference by Dr. Donald K. Coles, of the Westinghouse Research laboratories. He explained that each type of molecule has a set of distinctive motions, so a molecule will absorb part of a radio wave that is of the same frequency as its rotation.

In the "microwave spectroscope," devised by Dr. Coles and his associates, the gas to be analyzed is admitted to a 35-ft. long brass pipe, wound into a tubalike coil. At one end is the oscillator which produces waves of frequency up to 30,000 megacycles (30,000,000,000 vibrations per second). These are received by a crystal detector at the other end. As waves of continually changing frequency are transmitted through the pipe, there are changes in the crystal current corresponding to different molecular absorptions. In this way various molecular arrangements present can be identified.

**Electronic Heating.**—Industrial heating of materials which are electrical conductors has been accomplished for some time with induction methods, by which a current is made to flow within the metal and produces heating throughout its volume. Materials such as plastics, which are classed as insulators, may be similarly heated with microwaves if sufficient power is used. In general, the higher the frequency, the more rapid is the effect. These techniques were facilitated with the type of electron tube known as the magnetron, which was developed to a point where considerable power could be obtained up to frequencies of as much as 10,000 megacycles.

Dr. Richard B. Nelson, of the General Electric Research laboratory, announced a magnetron oscillator for heating these materials which delivers 5 kw. continuous output at 1,050 megacycles. (Later, to meet rules of the Federal Communications commission, this was modified to 915 megacycles.) A person standing near the dipole antenna radiating these microwaves feels warmth through his body and unconnected fluorescent lamps held nearby are lighted. Industrially the tube was used in the manufacture of plastics as well as for other applications.

The possibility of using radio waves to heat milk for pasteurization was indicated in experiments performed in the R.C.A. laboratories in co-operation with the Walker-Gordon company and the Borden company. In ordinary pasteurization milk is heated to 143° F. for 30 min., then cooled. The bacteria content was reduced to about 1% of the original value.

The new apparatus was developed in an experimental fo by Dr. George H. Brown, C. N. Hoyler and R. A. Bierwir By allowing the milk to fall freely through a large tube, tween two electrodes connected to the transmitting circuit, could be heated to as much as 205° F. in 1/15 of a seco Then it was cooled to 135° F. in $\frac{1}{5}$ of a second by injecti into a vacuum chamber. Despite the high temperature, th was no trace of a cooked flavour and the bacteria count w considerably lower than with conventionally pasteurized mi Milk treated by the new process tends to keep longer, accordi to the report. This is attributed to the destruction of he resistant bacteria which cause souring.

**Telephone Communication.**—A new technique for lo distance telephone communication, called "pulse code modu tion" (P.C.M.), was announced by the Bell Telephone labo tories. In ordinary telephony over short distances, variations the current carried over the wires reproduce the complete sou waves of the original voice. With an earlier development, call pulse modulation, instead of transmitting the continuous spee wave, brief samples are taken at a rate of about 8,000 per s ond. At the receiving end these samples may be used to reco struct the original wave with great fidelity. The total ti occupied by the samples is very short, so many conversatio can be carried simultaneously. First is carried a sample fro one, then another, then a third, and so on, all of which a sorted out and reconstructed at the receiver.

P.C.M. differs from earlier pulse techniques. For each samp there is sent a series of six or seven on or off signals which, combination, convey the information from which the ent wave form is reconstructed. Coding is accomplished by a n vacuum tube, within which is a special perforated plate. moving beam of electrons sweeps across it, producing an "o pulse when it goes through a hole and an "off" when it stopped. Ordinary sources of interference produce little effe because the receiver merely has to detect the presence or a sence of a signal and not its strength, which is more apt to affected by extraneous causes.

**Electron Tubes.**—Another new electron tube announced 1947 was the caesium rectifier developed by Dr. Albert W. Hu assistant director of the General Electric Research laborato in collaboration with E. E. Burger and R. E. Turrentine. Sin most electricity is generated and transmitted as alternating cu rent, while electrolytic processes, such as those used to fr aluminum from its ores, require direct current, rectifiers a important industrial devices. The new tube contains vapour the metal caesium, while the cathode surface, from which ele trons are emitted, is also of caesium, coated on nickel. The electrons make the tube work, since they provide a one-w street over which the current is carried. Even at a relative low temperature, their emission from caesium is one of the mo copious known. Thus it can be operated at about 1,300° which causes no appreciable evaporation of the nickel base, wh the caesium coating is continually renewed from the vapour.

Two electronic "memory" tubes were announced, one Andrew V. Haeff, of the Naval Research laboratory, the oth by Dr. Jan Rajchman, of R.C.A. laboratories. One use f tubes of this type may be found in electronic computing m chines, where numbers computed in one operation may be stor until needed later, when they are automatically read and use

Both tubes accomplish the memory by a series of electric charges on the surface of a material that is a good insulato (If it were not an insulator, the charges would leak away.) T common type of television camera tube, the iconoscope, operat similarly, charges being produced in proportion to the brightne of the picture focused upon it. An electron beam sweepi across the surface can also produce the pattern of charges, a this is done in the memory tube. Then the pattern has to be read, and this is accomplished in the Haeff tube with a second beam of focused electrons sweeping across the surface. A simiar method is used in the iconoscope. However, this results in an erasure of the pattern of stored electrons after a few such scans. To overcome this erasure, a third beam of electrons is sprayed over the surface and this is of such an energy that it maintains the image, even though the other beam is scanning it. If the screen is also coated with a phosphor, which fluoresces n visible light when electrons strike, the pattern may be made visible, either as bright lines on a dark background, or dark ines on a bright background. This is determined by the choice of relative tube voltages. In addition, the scanning beam may be connected to an oscillograph tube, like that used in a television receiver, and the pattern made visible there. (*See* also ATOMIC ENERGY; CHEMISTRY; PHYSICS.)

**Elizabeth,** PRINCESS, DUCHESS OF EDINBURGH (1926– ), the heiress-presumptive to the British throne, was born on April 21, at London, and until Nov. 1947, when she married the duke of Edinburgh (*q.v.*), was known as Princess Elizabeth. She was 11 when her father was crowned king.

PRINCESS ELIZABETH of England and Prince Philip, duke of Edinburgh, leaving Westminster abbey after they were married by the archbishop of Canterbury on Nov. 20, 1947

In 1943, in order that Princess Elizabeth "should have every opportunity of gaining experience in the duties which would fall upon her in the event of her succession to the throne," the Regency act was amended to provide for her appointment as counsellor of state any time after her 18th birthday instead of after her 21st birthday. The first occasion when she was appointed a counsellor of state was in July 1944, when the king visited the forces in Italy. She enrolled in the auxiliary territorial service in 1944, and was commissioned with the rank of junior commander.

In the early months of 1947 she accompanied the king, queen and Princess Margaret on a state visit to the Union of South Africa. She celebrated her 21st birthday in Capetown, and in a broadcast to the empire she declared, "My whole life shall be devoted to your service."

A court circular from Buckingham palace on July 9 announced her betrothal to Lt. Philip Mountbatten, R.N., and the marriage was solemnized in Westminster abbey on Nov. 20. Philip Mountbatten was created duke of Edinburgh, and after the wedding she was known officially as H.R.H. Princess Elizabeth, the Duchess of Edinburgh. The wedding service was conducted by the archbishop of Canterbury, assisted by the archbishop of York and the dean of Westminster.

During the summer Princess Elizabeth opened the royal Welsh agricultural show at Carmarthen, addressed the Church of England Youth council at Canterbury, launched the liner "Caronia" on Clydebank, was elected president of the Royal Society of Arts, and on July 16 created a burgess of Edinburgh. On the occasion of the king's birthday honours she was awarded the Imperial Order of the Crown of India and on the eve of her wedding appointed a lady of the Order of the Garter.

**Employment.** United States.—The civilian labour force (people available for gainful employment) numbered 62,130,000 in Sept. 1947, 790,000 more than in Sept. 1946. The maximum available labour force during the year was in June and July, when students and other seasonal workers available only during the summer months swelled the labour supply to slightly more than 64,000,000. The unemployed numbered 1,912,000 in Sept. 1947, compared with 2,070,000 in Sept. 1946.

Males in the labour force in Sept. 1947 numbered 44,881,000, compared with 44,040,000 in Sept. 1946. Females numbered 17,249,000 as against 17,300,000 in Sept. 1946. They constituted 27.7% of the labour supply, a decline from 29.4% in Aug. 1946. The male labour force increased more rapidly than the female in the intervening year.

Employees in nonagricultural establishments numbered 43,033,000 in Sept. 1947, an increase of 1,185,000 from Sept. 1946. From Sept. 1946 to Sept. 1947 there was an increase of 762,000 in the number of people working in manufacturing establishments and smaller increases in all of the other major areas of employment (*see* Table I) except public employment (civilian) which decreased from 5,605,000 in Sept. 1946 to 5,425,000 in

Table I.—*Number of Wage and Salary Workers* in Nonagricultural Establishments, by Industry Division, United States (estimated), Sept., Aug. and July 1947 and Sept. 1946*

(In thousands)

| Industry division | Sept. 1947 | Aug. 1947 | July 1947 | Sept. 1946 |
|---|---|---|---|---|
| Total estimated employment . . . . . | 43,033 | 42,547 | 42,175 | 41,848 |
| Manufacturing . . . . . . . . . . | 15,797 | 15,537 | 15,209 | 15,035 |
| Mining . . . . . . . . . . . . . | 895 | 895 | 864 | 884 |
| Contract construction† . . . . . . | 1,900 | 1,890 | 1,847 | 1,747 |
| Transportation and public utilities . . . | 4,115 | 4,145 | 4,140 | 4,064 |
| Trade . . . . . . . . . . . . . | 8,684 | 8,571 | 8,558 | 8,523 |
| Finance . . . . . . . . . . . . | 1,583 | 1,602 | 1,590 | 1,534 |
| Service . . . . . . . . . . . . | 4,634 | 4,619 | 4,686 | 4,456 |
| Federal, state and local government . . | 5,425 | 5,288 | 5,281 | 5,605 |

*Estimates include all full- and part-time wage and salaried workers in nonagricultural establishments who worked or received pay during the pay period ending nearest the 15th of the month. Proprietors, self-employed persons, domestic servants and personnel of the armed forces are excluded. These estimates have been adjusted to levels indicated by final 1945 data made available by the bureau of employment security of the Federal Security agency. Data for the months of September and August are subject to later revision.

†These figures cover all employees of private firms whose major activity is construction.

Sept. 1947. In all but 6 industries, employment increased during the year (Table II). Transportation equipment, nonferrous metals, stone, clay and glass and the textile industries were the only areas where employment declined. The United States enjoyed "full employment," with but moderate "frictional unemployment" and some decline in activity in the industries mentioned.

Table II.—*Number of Production Workers and Indexes of Production-Worker Employment in Manufacturing Industries, by Major Industry Group, United States**

(Sept. 1947 and Sept 1946)

| Industry group | Number of production workers Estimated in thousands | | Production-worker indexes, (1939=100) | |
|---|---|---|---|---|
| | Sept. 1947 | Sept. 1946 | Sept. 1947 | Sept. 1946 |
| All manufacturing . . . . . . . . . . . . . . | 12,833 | 12,244 | 156.7 | 149.5 |

*The estimates and indexes presented in this table have been adjusted to levels indicated by the final 1944 data made available by the bureau of employment security of the Federal Security agency.

In durable goods the index of employment rose from 173.1 in Sept. 1946 to 179.5 in Sept. 1947; in nondurable goods there was a rise from 130.9 to 138.7 (1939=100). The number and indexes of manufacturing employment in Sept. 1946 and Sept. 1947 are shown in Table II.

Employment on construction work, including both private and public construction work done by private contractors, increased from 1,747,000 men in Sept. 1946 to 1,900,000 men in Sept. 1947 (Table I).

Table III gives indexes of employment and pay rolls of selected nonmanufacturing industries in Sept., Aug., July 1947 Sept. 1946.

| Total manufacturing industries . . . . . . | 7,066,000 | 6,974,000 | 6,845 |
| Basic industries and services . . . . . . . | 5,622,000 | 5,583,000 | 5,531 |
| Building and civil engineering . . . . . . | 1,321,000 | 1,210,000 | 1,240 |
| Distributive trades . . . . . . . . . . . | 2,333,000 | 2,297,000 | 2,254 |
| Other services . . . . . . . . . . . . . | 2,094,000 | 1,979,000 | 1,938 |
| Total in industry . . . . . . . . . . . | 18,436,000 | 18,043,000 | 17,808 |
| Civil defense, national fire service and police . | 91,000 | 91,000 | 88 |
| Armed forces and auxiliary services . . . . | 1,242,000 | 1,401,000 | 1,657 |
| Total (of above) . . . . . . . . . . . | 19,769,000 | 19,535,000 | 19,553 |
| Ex-members, His Majesty's forces, unemployed | 135,000 | 105,000 | 490 |
| Insured persons registered as unemployed . . | 242,000 | 560,000 | 359 |
| Total working population (exclusive of indoor, private domestic service) . . . . . . . | 20,146,000 | 20,200,000 | 20,402 |

(1937=100) was 134.8 for 1946 and 137.6 the first two months of 1947.

**Norway.**—Norway's industrial employment index for 1946 was 111.0 (1937=100) and during the first 5 months of 1947 averaged 120.8, with a high in May 1947 of 123.0.

**Sweden.**—The Swedish index of industrial employment (1937=100) was 117.4 in 1946 and 119.4 the first four months of 1947.

**Switzerland.**—The Swiss index (1937=100) was 122.9 in 1946, the highest level of employment in Switzerland after 1938. It was 130.0 in March 1947.

None of the other countries in Europe published employment statistics in 1946–47. (D. D. L.)

## Endocrinology.

During 1947 evidence accumulated which shook the foundations of two well-established concepts in endocrinology. The first postulated that the hormone elaborated by a gland, while it influences the maintenance, growth and function of other organs, does not directly affect the gland from which it originates. Indirect effects are, of course, possible in the case of those glands under the control of the anterior pituitary, by "suppression" of the corresponding trophic hormone of the latter. The second concept was that the intermediation of an endocrine gland in a given physiological mechanism, may be adduced from the fact that the mechanism no longer operates after the gland is removed.

In the laboratories of P. E. Smith and H. M. Evans in the United States, and of S. E. de Jongh in the Netherlands, it was shown that the sex steroids have some direct influence on the structure and function of their parent glands, the gonads. Testosterone completely prevented testicular atrophy and preserved normal spermatogenesis in rats from which the hypophysis was removed. In combination with gonadotrophic hormones, in amounts which were without effect by themselves, testosterone actually stimulated growth of the testis. Implantation of testosterone pellets into the testis of a monkey from which the hypophysis was removed resulted in tubular development with sperm formation, in a circular area surrounding each pellet. The anterior pituitary gland therefore initiates testicular development and testosterone secretion; testosterone itself acts locally to further growth and spermatogenesis.

A similar, though somewhat more complicated, picture emerged from the work on the relation of the sex steroids to the structure and function of the ovary. The estrone elaborated by the growing ovarian follicle was shown to cause further growth and maturation of the theca and granulosa cells of the follicle. But in addition it was demonstrated that the so-called male sex hormone, testosterone, exerted a specific effect by leading to the development of a small blood vessel at the point where rupture of the follicle occurs at the time of ovulation. From these observations, and from those on the testis, it seemed probable that the sex steroids secreted by the gonads act locally to link the primary effects of the gonadotrophic hormones with certain secondary effects in the gonads themselves.

With regard to the conclusions drawn from the results of gland removal, a number of different lines of evidence were reported, all pointing to the same reservation. Thus, the administration to normal rats of large doses of a synthetic estrogen, stilbestrol, had been shown to result in the diabetic syndrome. This did not occur in adrenalectomized rats, from which it had been concluded that the effect depended on a stimulation of the adrenal cortex by the stilbestrol. However, D. J. Ingle showed that adrenalectomized rats given maintenance doses of adrenal cortical extract, still responded to stilbestrol administration as did normal rats. Obviously, therefore, the diabetogenic effect of stilbestrol could not be mediated by the adrenal cortex.

One of the consequences of general bodily injury such as burns and fractures is an accelerated breakdown of tissues and therefore an increased nitrogen excretion in the urine. This is a feature of the so-called "alarm reaction" which does not occur in the absence of the adrenal glands. From this it had been concluded that the increased protein breakdown which accompanied the alarm reaction was a consequence of excess activity of the adrenal cortex. However, Ingle demonstrated that adrenalectomized animals maintained on adrenal cortical extracts did respond to a fracture with an increased breakdown of tissue protein in a manner similar to intact normal animals, despite absence of the adrenal glands.

Similarly, it was shown that adrenaline did not affect the blood pressure in the absence of the thyroid gland. But when thyroidectomized animals were maintained on thyroid extract, adrenaline exerted its usual pressor effect. Apparently, therefore, it is necessary to distinguish between physiological mechanisms which are mediated by an endocrine gland, and others which are not so mediated but require the presence of the hormone of that gland. Much previous work would have to be re-evaluated with this distinction in mind.

**Thyroid.**—Studies on the action of the thiouracil group of drugs, and of the uptake of labelled iodine by the thyroid, led to a clearer understanding of thyroxine synthesis and pituitary activity. The work of R. W. Rawson, A. Albert and associates, and of S. Dvoskin and others showed that the thyrotrophic hormone of the pituitary is a protein which is hormonally active when its sulphur groups are in the reduced state. It can be inactivated by oxidizing these -SH groups. Iodine owes part of its antithyroid activity to its property as an oxidizing agent causing partial inactivation of the thyrotrophic hormone. Thiouracil reactivates this factor and was shown to enhance the activity of the thyrotrophic hormone.

The thyroid gland had of course been shown to have the ability to concentrate iodine. Iodine in the form of iodide ($I^-$) is taken up by the thyroid and is there converted to elemental iodine ($I_2$). This is the first step in the elaboration of the hormone and is the step which is blocked by thiouracil. On the other hand thiocyanate was found to produce goitre by blocking the ability of the gland to concentrate the iodide. Since it had been known for some time that the reactions of tyrosine with iodine to form thyroxine occur nonenzymatically in vitro, it had to be concluded that the oxidation of iodide to iodine ($I^- \rightarrow I_2$) is the essential and specific function of the thyroid gland. In line with this conclusion Dvoskin showed that the injection of elemental iodine into normal and thyroidectomized rats and chicks gave effects similar to those produced by thyroxine while sodium iodide gave only slight evidence of such activity.

**Adrenal Cortex.**—The increased metabolism of protein caused by the administration of the thyroid hormone had been known for many years. Later it had been established that some of the steroid hormones of the adrenal cortex caused an increased breakdown of protein from the tissues. The relation between the actions of these two glands was studied by A. White and T. F. Dougherty. They demonstrated that the adrenal cortex controlled the loss of protein from the lymphoid tissue throughout the body. In the absence of the adrenals no loss of nitrogen from the lymph tissues occurred even on prolonged starvation. The liver nitrogen loss was diminished but the loss from the rest of the body was not inhibited by adrenalectomy. On the other hand the thyroid gland seemed to control, in the main, protein mobilization from muscle and had no influence on the loss of nitrogen from the lymphoid tissues.

These findings served to emphasize the fact that hormonal action may be tissue specific, and that the final result of the action of two glands may appear to be similar (increased protein breakdown) even though the specific actions are on different tissues.

It had been known for some years that the adrenal cortex secretes a large variety of steroids possessing different types of activity. These actions may be grouped into three categories; the metabolic, the salt and water retaining and the sex-active. When the pituitary is removed from an animal the adrenal cortex atrophies but this atrophy does not affect all the cell layers of the cortex equally. The outermost or glomerular layer does not shrink. Such an animal also does not show the disturbances of salt and water balance exhibited by the adrenalectomized animal. It was postulated therefore that this outer zone of the cortex elaborates the salt retaining steroid hormones. R. O. Greep and H. W. Deane added further proof that the separate zones of the adrenal cortex probably subserve the different functions. From their work and that of others it could be deduced that the outer zone produces the salt retaining hormones, the middle zone the metabolically active steroids and the innermost zone the sex-active principles of the adrenal. (*See* also PHYSIOLOGY; ZOOLOGY.)

## English Literature.

The year 1947 was one of rediscovery and reassessment in which new work tended to be overshadowed by new editions not only of standard authors but also of such Victorian and Edwardian writers as Mrs. Elizabeth Gaskell, George Gissing, Henry James, Arthur Morrison, W. W. Jacobs and Joseph Conrad. Nevertheless, despite the various production difficulties that hampered publishers, a number of noteworthy new books appeared.

**Fiction.**—Of the better known novelists only Charles Morgan, whose *The Judge's Story* was received with the usual mixed opinions, John Masefield, with *Badon Parchments*, and Michael Sadleir, with *Forlorn Sunset*, were represented. The most important novel of the year was perhaps L. P. Hartley's *Eustace and Hilda*, the concluding book of his Eustachian trilogy. I. Compton-Burnett produced a characteristic novel in *Manservants and Maidservants*, and Hester Chapman showed her customary wit and insight into character in *World's Apart*. Evelyn Waugh published a short novel, *Scott-King's Modern Europe*. Nigel Balchin's experiment in technique, *Lord, I was Afraid*, was generally considered unsuccessful. T. H. White, Patrick Hamilton, H. E. Bates and Bruce Marshall enhanced their reputations with *Mistress Masham's Repose*, *The Slaves of Solitude*, *The Purple Plain* and *The Red Danube*, respectively. Outstanding among the work of the younger novelists were P. H. Newby's *Agents and Witnesses*, though it was thought scarcely to live up to his earlier promise, J. Maclaren-Ross's *Of Love and Hunger*, Dan Davin's novel of the war in the western desert, *For the Rest of Our Lives*, Chun-Chan Yeh's *A Mountain Village*, Elizabeth Taylor's *A View of the Harbour* and Jon Godden's *The House by the Sea*. Philip Toynbee's *Tea With Mrs. Goodm* symbolic work with affinities to *The Waves* and *The* *Land*, was probably the year's most ambitious novel.

Several very good volumes of short stories appeared, in ticular Somerset Maugham's *Creatures of Circumstance*, O'Faoláin's *Teresa*, Frank O'Connor's *The Common Chord*, Coppard's *The Dark-Eyed Lady*, Graham Greene's *Nin* *Stories*, Viola Meynell's *First Love* and R. K. Narayan' *Astrologer's Day*. *Innocents*, by a new writer, A. L. Ba was very highly praised.

**Poetry.**—Again the older poets produced the most d guished work: Walter de la Mare with *The Traveller*, V Turner (died Nov. 1946), with *Fossils of a Future Ti* Andrew Young with *The Green Man* and Edith Sitwell *The Shadow of Cain*. Siegfried Sassoon and Herbert Read lished collected volumes of their verse. Of the middle ge tion of poets, Louis MacNeice published his verse play radio *The Dark Tower*, Stephen Spender *Poems of Dedica* Kathleen Raine *Living in Time* and A. J. S. Tessimond *V* *in a Giant City;* while Rayner Heppenstall assembled the of a decade in *Poems, 1933–1945*. The work of younger wr that attracted notice included Bernard Gutteridge's *The Tra ler's Eye*, Bernard Spencer's *The Aegean Isles*, John He Stubbs's *The Divided Ways*, John Short's *The Oak and the* Hal Summers' *The Hinterland*, Anthony Rye's *The Inn of E* and Alan Ross's *The Derelict Day*.

**Literary Criticism.**—The outstanding books were prob C. Day Lewis' *The Poetic Image* and A. M. D. Hughes' *Nascent Mind of Shelley*. Wilson Knight continued his Sh spearean studies with *The Crown of Life*, and valuable work Milton was done by T. S. Eliot in his British academy lect B. Rajan in *"Paradise Lost" and the Seventeenth Cent Reader* and A. J. A. Waldock in *"Paradise Lost" and Its Cri* The author's name was enough to testify to the importance Ernest de Selincourt's *Wordsworthian and Other Studies*. R ert Liddell's *A Treatise on the Novel* aroused much con versy among critics of fiction. W. P. Witcutt's *Blake, A Psyc logical Study*, pointed the way to a new interpretation of poet.

Important works of literary scholarship published inclu the final volumes of Gordon N. Ray's *Thackeray's Letters Private Papers* and Newman Ivy Peck's *Shelley*, both fr the U.S., and F. E. Hutchinson's *Henry Vaughan*. Geo Woodcock's *Godwin* was widely praised, as was Gerald Bulle *George Eliot*. Malcolm Elwin's *The First Romantics* was c sidered by many critics unjust to Wordsworth. Two much mired biographical studies of later writers were F. Britta *Arthur Quiller-Couch* and Percy Lubbock's *Portrait of Ed Wharton*.

**Biography and War Books.**—The leading historical bi raphy of the year was Carola Oman's *Nelson;* other works this genre were Maurice Ashley's *John Wildman* and H. C. F croft's *A Character of the Trimmer*. *The Diary of Henry Ho house* edited by A. Aspinall interested students of early 1 century affairs; while Sir Arthur Salter's *Personality in Polit* was a valuable study of figures in modern politics.

Two memorable autobiographies were *But To What Purpos* by the veteran novelist and naturalist E. L. Grant Watson a *Autobiography* by Neville Cardus, containing reminiscences cricket, the *Manchester Guardian* and music. In a different ve was a quietly attractive autobiography *An Innocent Grows U* the life story of a country draper, Norman Hancock.

War books continued to be published in considerable nu bers. Few possessed literary merit. Among those that did we H. R. Trevor-Roper's *The Last Days of Hitler;* the journa and poems of Keith Douglas, a promising young poet killed

Tunisia, entitled *Alamein to Zem Zem;* Basil Davidson's *Parti-an Picture;* Christie Lawrence's *Irregular Adventure;* and Geoffrey Cox's account of the exploits of the 2nd New Zealand division, *The Road to Trieste.* Among the year's travel books, James Pope-Hennessy's *America Is An Atmosphere* and Arthur Calder-Marshall's account of Yugoslavia under Tito, *The Watershed,* must be mentioned.

Two books not easily classifiable must not be forgotten: *A Free House,* the collected art criticism of Walter Richard Sickert edited by Sir Osbert Sitwell, who also contributed a characteristically graceful memoir of the painter, and Sacheverell Sitwell's evocation of a number of subjects of ancient and modern art, *The Hunters and the Hunted.*

## Entomology.

The chief emphasis in entomology during 1947 was still on insecticides. The impetus of war research for new and more effective means of controlling noxious insects continued unabated, and many new and promising insecticides continued to appear. There had been so many of these that complete experimental testing and proving could not be accomplished by all available resources of manufacturers, federal government, state, county, city and privately-trained entomologists, toxicologists, parasitologists and all others charged with insect control relating to agriculture, forestry and public health. Although many believed that DDT would solve all entomological problems, it was soon discovered that many insects, as well as mites, were neither killed nor injured by this chemical. In fact, mites and certain scale insects and aphids even appeared to increase following application of DDT wettable and dry powders. In the case of sprays prepared from DDT, it appeared that the oil solvents afforded the only control factor for some species of aphids and scale insects.

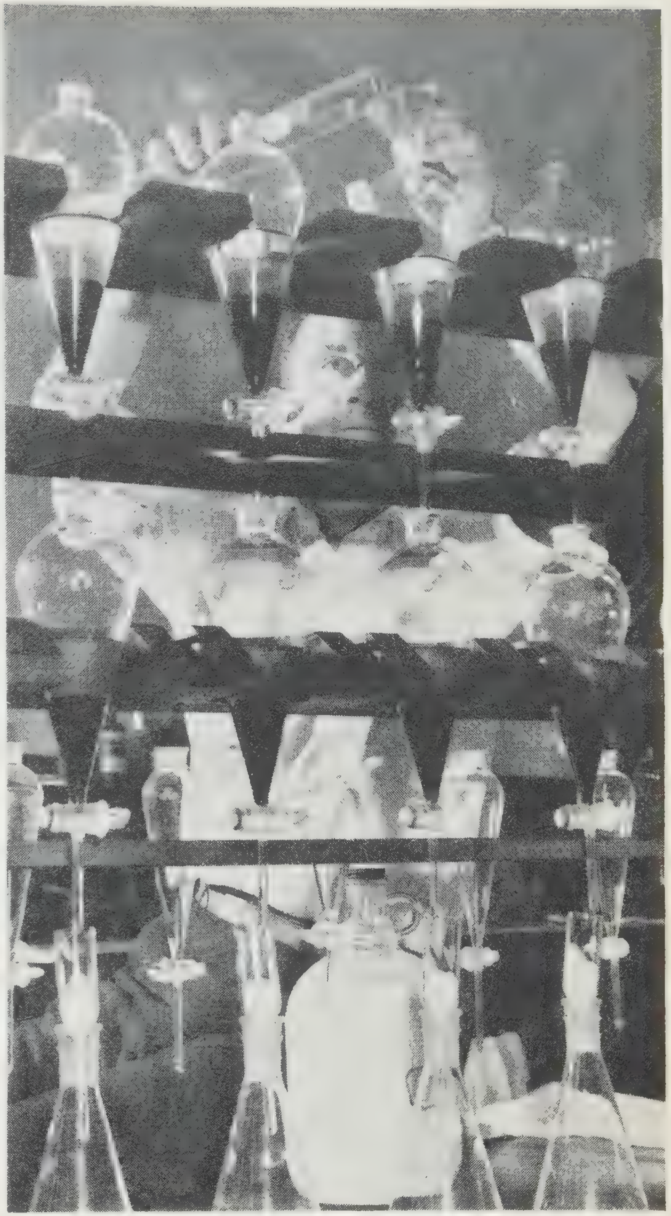
**Supply and Research.**—During 1947 the dominant insecticide, DDT, was available in sufficient quantities to supply all needs. There was accordingly a noticeable diminution in the use of arsenate of lead, calcium arsenate, cryolite and other normally basic poisons. Nicotine products were not wholly adequate, and there were shortages in some other commodities. In the main, insect control was not greatly hampered by lack of suitable and efficient insecticides.

The manufacture of DDT had developed so rapidly that by 1947 the 16 important manufacturers were capable of supplying 100,000,000 lb. a year. It was generally believed that this large amount could not be absorbed in the domestic market and that export demand was not sufficient to utilize it. Manufacture, therefore, was likely to be curtailed. Newer and more effective insecticides might also cause a rapid decline in production. According to the U.S. department of agriculture, bureau of entomology and plant quarantine, more than 1,000 separate publications on DDT had appeared since 1943.

The effects of DDT dusts on alfalfa-pollinating bees was an important research problem in a number of western states. Many beekeepers believed that the application of DDT dusts had killed excessive numbers of honeybees, whereas others claimed that there had been no serious damage and that the effectiveness of the dusts in controlling lygus bugs (thereby prolonging the blooming season of alfalfa) had greatly increased the honey flow.

Calcium arsenate to the amount of 36,400,000 lb. was made available for the control of insects during 1947. This amount was less than normally used in past years.

**Other New Insecticides.**—Benzene hexachloride (BHC): 4 lb. of 50% BHC to 100 gal. of water for cattle lice, hog mange, hog lice, chicken lice, stable flies, houseflies; $\frac{1}{2}$ lb. of 50% BHC to 1 gal. water for spraying horses and mules.



CHEMIST analyzing milk from cows fed on crops sprayed with insecticides which were being tested by U.S. department of agriculture entomologists in 1947

Marlate methoxychlor: $\frac{1}{40}$ as toxic to animals as DDT; for insects on fruits and vegetables.

Piperonyl butoxide: for household and field use (flies, cockroaches, Mexican bean beetle, aphids, leaf hoppers, fruit flies [adults]). In fly sprays with aerosols. Residual effectiveness—several months. Spray or dusts with pyrethrins.

3422–0,0-diethylo-p-nitrophenol thiophosphate: another German insecticide developed before or during World War II, first manufactured in the U.S. and offered for experimental purposes by the American Cyanamid company as 3422. It is a yellow liquid; boiling point 375° C., at 760 mm.; refractive index at 25° C. of 1.5360; specific gravity 1.26; soluble in water only to the extent of 20 p.p.m.; completely miscible with esters, alcohols, ketones, ethers, aromatic and alkylated aromatic hydrocarbons; practically insoluble in such petroleum hydrocarbons as petroleum ether, kerosene and refined spray oils. Combatable with wettable sulphurs and "neutral coppers." Used to control (as dusts or sprays 0.05% to 0.1% to 0.25%) bean aphis, confused flour beetle, Mexican bean beetle, greenhouse red spider, German cockroach. Hazardous to warm-blooded animals (by oral administration).

Soil fumigants: DD for wireworms and other soil insects; ethylene dibromide for wireworms and other soil insects; ethylene dichloride for peach tree borer, larvae of Japanese beetle; propylene dichloride for peach tree borer; hexachlorocyclohexane for soil insects; DDT for larvae of Japanese beetle, wireworms, larvae of pear thrips; chlordane for wireworms and other soil insects and ants.

**Spread and Control of Insects.**—The Pacific mite, *Tetranychus pacificus* (McGregor), was more abundant on apples in the Yakima section of Washington than ever before. This increase was attributed, in part at least, to the general use of DDT for codling-moth control, although a mild winter may have benefitted overwintering populations of the mite.

The carrot weevil, *Listronotus oregonensis* (Lec.), a western insect, appeared to be a much more serious pest in Georgia, where it caused serious damage to parsnips during the fall.

The plum curculio, *Conotrachelus nenuphar* (Herbst), was unusually abundant in the peach belts in a number of the U.S. southern states during May.

DDT provided excellent control over codling moths on apples, pears and walnuts. In many instances, however, there was a marked build-up of aphids, scale insects and mites. The control of the gypsy and browntail moths with very small quantities of DDT had been so phenomenal and so inexpensive that it was found cheaper to apply the dust than to make an inspection to determine the exact status of the insects in suspected infestations.

The control of the fir tussock moth, *Hemerocampa pseudotsuga* (McDunnough), in the Douglas fir forests of Idaho by aeroplane was very successful. Approximately 413,000 ac. were treated at a cost of $1.29 per acre.

The pecan nut casebearer, *Acrobasis caryae* (Grote), extremely injurious in Texas during 1946, was given various treatments of arsenate-nicotine sulphate-summer oil and DDT in an effort to secure effective control. About 200,000 trees were sprayed.

The corn ear worm, *Heliothis armigera* (Hbn.), was rapidly becoming the most destructive insect throughout the United States. It had become a pest of major importance on corn, sorghum, tomatoes, cotton, peanuts, soybeans, vetch, alfalfa, beans and other crops.

Spread of the European apple sawfly, *Hoplocampa testudinea* (Klug), from Long Island to Rockland county, N.Y., was reported in June 1947.

It was estimated in 1947 that the ox warble fly or common cattle grub, *Hypoderma lineata* (De Vill.), had caused an estimated $100,000,000 annual loss in the U.S.

Dr. E. T. Cotton, entomologist of the U.S. department of agriculture, bureau of entomology and plant quarantine reported to the United Nations Food and Agriculture organization in London that at least 5% of the cereal food produced in the world had been ruined each year in storage by insects.

Because of heavy losses of bees in Europe inflicted by the so-called Isle of Wight disease, the U.S. bureau of entomology and plant quarantine renewed quarantine restrictions to prevent the entry into the United States of queen and worker bees which might possibly carry the mite, *Acarapis woodi* (Renine), which inhabit the trachaea and thoracic muscles of the bees, causing death. The disease was first noted on the Isle of Wight, Eng., in 1904.

S. E. McGregor and C. T. Vorhies of Arizona reported that spraying of large cotton areas by plane with dust containing 10% DDT in pyrophyllite, at the ratio of 15 lb. per ac., 5% DDT in sulphur at 20 lb. per ac., or spray containing 1½ to 3 lb. of DDT dissolved in xylene per acre, was not damaging to commercial beekeeping.

Mosquito abatement districts were organized extensivel California and many other parts of the United States. The use of DDT, applied mostly as an aerosol from the exhau an automobile or truck, seemed likely to cause some se complications to wildlife and to insect control in general; such methods might kill not only injurious but beneficial in and other small forms of land and aquatic life.

A new federal insecticide, fungicide and rodenticide act passed during 1947, and an open hearing on the act was he Washington, D.C., on Aug. 25, 1947.

## Epidemics.

The great pandemic of diphtheria began to cede in 1947. This vast outbreak, which b in Germany in the mid–'30s spread to all Europe with the i sion of the German armies. The increase was also reflecte most parts of the temperate zones. England, because of gre increased immunization against diphtheria, was spared enti and Canada also escaped. A definite but relatively slight crease in cases and deaths occurred in the United States in and 1946 but had also declined by early 1947.

After an absence of nearly half a century, cholera reappe in Egypt in 1947, being first noted in El Kurein in Shar province in late September. The disease spread rapidly, within two months had caused more than 10,000 deaths. year's end, the disease seemed to be under control in Egypt, had spread to Syria.

Infantile paralysis (*q.v.*) was highly prevalent throug much of Europe. The intensity of the outbreak in England Wales was far greater than any previously reported. Berlin experienced a severe epidemic. The disease had reached a ord high in the United States in 1946, but was of normal pro tions during 1947, although the incidence was higher in than in any previous season. Poliomyelitis approached epide proportions in Illinois late in the year but appeared atypica to age incidence, frequency of encephalitis and infrequenc permanent paralysis.

The outbreak of influenza A which had been predicted for winter season, 1946–47, appeared in the late winter and sp of 1947. It was quickly found that immunization by avail virus vaccines bestowed relatively little protection. Further vestigation demonstrated that the prevailing virus, although lated to the previously recognized strains of influenza A, antigenically not identical and that cross protection was not forded. The later strain was incorporated into virus vaccine

Virulent smallpox was introduced into New York city f Mexico after a complete absence of all forms of the malady seven years. Only 12 cases resulted. In the course of less t a month, approximately 7,000,000 persons of all ages v vaccinated. No deaths resulted from postvaccinal encepha or tetanus; however, five eczematous infants and children had not themselves been vaccinated but who were familial tacts of vaccinated persons developed inoculation vaccinia died. Numerous nonfatal instances of this same accident v observed. (*See* also Bacteriology; Entomology; Federal curity Agency; Public Health Services; Vener Diseases.)

## Estonia.

One of the Baltic states of northeastern Europe, north of Latvia, south of Finland, 16th republic of he U.S.S.R. Area, 18,357 sq.mi.; pop. (est. 1939) 1,122,000. Chief towns: Tallinn (capital, 146,400); Tartu (60,100); Narva (24,200); Nomme (19,700); Pärnu (21,500). Language, Estonian, a Finno-Ugrian tongue. Religion, Christian (Lutheran 8%, Greek Orthodox 19%). Chairman of the council of ministers: A. Veimer.

**History.**—Estonian independence was less than 20 years old when the U.S.S.R. demanded and obtained a privileged strategic position therein (Sept. 29, 1939). By June 1940, soviet forces had occupied the land, and in July a plebiscite approved annexation to the U.S.S.R. as the 16th constituent republic. From 1941 to 1944 the Germans held the country as a conquered province, but in the fall of 1944, the Russians reconquered Estonia and re-established the regime of 1940–41.

Through the whole period from 1939 to 1947 some Estonian diplomats remained at their posts abroad, and both Britain and the U.S. continued to recognize them, and to ignore the actual control established by the Russians. The United Nations closed its eyes and ears to the problem. In May 1947 the British took the first step in breaking the anomalous situation: they announced recognition *de facto* of the soviet administration. Great Britain still withheld recognition *de jure,* and the U.S. sat tight. The independently functioning International Postal union at its meeting in Paris in May maintained that the three Baltic countries were under Russian domination and therefore rejected the U.S.S.R. request for separate memberships for them.

Small refugee groups continued to escape out of Estonia across to Sweden and occasionally from there on to the United States where they received an illegal hospitality. Part of those who had arrived in 1946 were granted permanent visas, but the others had to wait for immigration quota vacancies. One group of 23 landed at Savannah, Ga., in September, just ahead of the hurricane. They had traversed the Atlantic in a 43-ft. sailboat. Another party of eight, including two babies, landed at Miami, Fla., on Oct. 1. They had a 40-ft. yacht in which they had come 5,000 mi. from Gothenburg, Sweden. Still others were reported on the way, sometimes stopping in England or Spain en route. About 1,400 Baltic refugees were still in Sweden.

Meantime, the soviet authorities were deporting large numbers of Estonians (and also Latvians and Lithuanians) into a vast Russian interior, and turning over their properties to Russians. Particularly were the political and intelligentsia elements transported. Thus, the Russians hoped to destroy the national spirit and create a more loyal communist society. Collectivization hardly affected Estonia during the war years. The small peasant proprietorships established by the land reforms of the 1920s had already broken up the great estates. But in 1947 conditions were at last felt to be favourable enough for more far-reaching measures, and the first collective farms were organized in Estonia. (F. D. S.)

## Etching.

In spite of unsettled political and social conditions existing throughout the civilized world in 1947, the second postwar year, those in the field of the graphic arts in general and of etching in particular much more nearly approached normal activity than at any time after the beginning of World War II.

After its beginnings and its first great period of achievement in Germany and the Low Countries in the 16th century, etching as a medium of creative art expression was centred in Italy in the 18th, in France in the 19th and in England and the United States in the 20th century. With the advent in the last named country of so many artists from other lands after World War II, and with the greater opportunities and better economic conditions existing there, it was natural that the U.S. should be the centre of productivity in 1947.

Because of the exacting and highly technical nature of the medium, etching was slower to be influenced by so-called modern art than were either painting or sculpture. In 1947 there was a marked increase in the number of etchers working in this idiom in the U.S., with the greatest activity among the followers of Stanley W. Hayter in the east, Mauricio Lasansky in the west and Ernest Freed in the south. Interesting experiments were carried on by these artists in the combination of etching with other intaglio and relief forms of printmaking, in both monochrome and colour.

A number of new print societies were founded in the U.S. in 1947, and the long established ones maintained their usual exhibitions and other activities. Chief among the latter were the Society of American Etchers, Gravers, Lithographers, and Woodcutters (formerly the Society of American Etchers, now enlarged to include workers in the relief and planographic media) whose annual exhibition of 658 exhibits was the largest and most comprehensive print showing ever held in the U.S.; the Chicago Society of Etchers, the Print Makers Society of California, the Northwest Printmakers, the California Society of Etchers and the Prairie Print Makers. In all their exhibitions there was a general trend toward strictly traditional and purely abstract subject matter, with less emphasis than in immediately preceding years on social consciousness and war. Much was done by these societies toward developing a general interest in, and appreciation of, prints on the part of the public by travelling exhibitions, public demonstrations of print making and lectures. In addition, many of the most important museums throughout the country held frequent print exhibitions, both general and specialized, and the Library of Congress conducted its Fifth National Exhibition of Prints, one of the two most important of the year.

Among American etchers who published work in 1947 were Isabel Bishop, Hugh Botts, Paul Cadmus, Federico Castellon, John E. Costigan, Stephen Csoka, Ralph Fabri, Ernest Freed, Isac Friedlander, Sue Fuller, Douglas W. Gorsline, Joseph H. Heil, Arthur W. Heintzelman, Eugene Higgins, Irwin D. Hoffman, E. T. Hurley, Max Jaediker, Gene Kloss, Armin Landeck, Mauricio Lasansky, Luigi Lucioni, Roi Partridge, Martin Petersen, Louis C. Rosenberg, Carl M. Schultheiss, William Sharp and George H. Wright.

Least affected by the modern movement, the great traditions of the English school of etching were ably carried on in 1947 by W. D. Brokman Davis, R. Stanley G. Dent, H. Andrew Freeth, Anthony Gross, Martin Hardie, Jean Harper, Lawrence Josset, Sydney Lee, Gwen May, Malcolm Osborne, Russell Reeve, W. P. Robins, D. I. Smart, Robert Spence, C. H. Spencer, Sara Sproule, Robin Tanner, C. W. Taylor, Eric Taylor, E. Heber Thompson, Murray M. Tod and Leslie M. Ward. Principal exhil societies in which etchers took a prominent part were Royal academy and the Royal Society of Painter-Etchers Engravers.

The year 1947 marked a great renewal of activity a French etchers and etching societies. In spite of the turb postwar conditions prevailing there, the indomitable Galli spirit found free expression in the etched line on the part host of artists. Although no figure arose to challenge the st of the 19th century masters and such as Théophile Alexa Steinlen and Jean Louis Forain who bridged the gap betwe and the 20th century, many etchers produced work of standing quality. Throughout history the French tempera has been sympathetic to the graphic media and some of greatest artists of France have made etching completely own. Among the older recognized leaders who continue work in 1947 were Yves Alix, Maurice Asselin, Adolphe B- frère, Jacques Beurdeley, Robert Bonfils, Jacques Boull,

"FATHERLESS," by Stephen Csoka, one of the three prize-winning etc of the second annual national print competition conducted by the Asso American Artists during the summer of 1947

an Frelaut, Demetrius Galanis, Pierre-Louis Moreau, Pablo-uiz Picasso, Alexandre Urbain, Henri Vergé-Sarrat, Jacques illon and Henri de Waroquier, while of the more recent group gnificant contributions were made by Alain Bastien, Jean ersier, Richard Brunck de Freundeck, Robert and Mme. Cami, ichel Ciry, Eugene Corneau, René Cottet, Pierre Dubreuil, aoul Dufy, Marcel Gromaire, Andre Jacquemin and Pierre-ves Tremois.

A small but active group of etchers upheld the traditions of e art under the aegis of the Society of Canadian Painter-tchers and Engravers. Among them were David J. L. Ander-n, Robert W. Annand, George di Carlo, Nicholas Hornyansky, Mackinnon-Pearson, W. K. Peacock, Harry D. Wallace and . J. Wood.

Outside of the countries named above little of importance was oduced in etching in 1947, although a few artists employed the edium in Sweden, Italy and the South American republics.

(J. T. Ar.)

## thical Culture Movement.

A religious and educational movement emphasizing the ntrality of ethics in human relations, started in New York ty in 1876 by Felix Adler and established ten years later in ondon by Stanton Coit. In 1947 societies were active in New ork city, Westchester, N.Y., Brooklyn, N.Y., Philadelphia, Pa., . Louis, Mo., Chicago, Ill., and Washington, D.C., and groups ere meeting regularly in Los Angeles, Calif., and New Jersey. here were four societies meeting in London and one in Birming-am, England.

The Ethical Culture societies conduct Sunday and weekday ervices and a variety of educational and community activities. niversity Settlement, in New York city, the first neighbour-ood house in the United States, was an enterprise of the move-ent, as were Hudson Guild and Madison House in New York ty and similar undertakings in other cities. The movement as also responsible for significant efforts in child labour re-orm, visiting nurse associations, legal aid societies, housing, ace relations, child study and progressive education. Leaders the various societies perform functions analogous to minis-ers in other religions, officiating at naming ceremonies, mar-ages and funerals.

The English and U.S. societies devoted themselves to train-g of youth for democratic citizenship, spearheaded in the U.S. y a six-weeks' Encampment for Citizenship. This encampment, eld for the second successive year at the Fieldston school of e Ethical Culture schools in New York city, brought together oung people of diverse religious, national, economic and edu-ational backgrounds from all parts of the country, and was evoted to intensive study and discussion of key problems and echniques of democratic living. During the year, the societies xpanded their programs in adult education. The movement o-operated with others in opposition to the teaching of religion the public schools and to released time for religious educa-ion. It also was instrumental in clarifying and liberalizing rocedures for the adoption of children. A week of institutes ealing with problems of segregation highlighted its continuing fforts in the field of intergroup and interracial relations.

Exposition of the movement's principles was to be found in elix Adler's *An Ethical Philosophy of Life,* David Saville uzzey's *Ethical Religion* and Horace J. Bridges' *Some Aspects f Ethical Religion. The Standard,* edited by Gideon Chagy, as published each month at 2 West 64th St., New York 23, .Y. The American Ethical union, in whose presidency Robert . Kohn was succeeded by James G. White in 1947, had offices t the same address. The offices of the English Ethical union, f which Sir Richard Gregory, F.R.S., is president, and H. J. Blackham executive secretary (1947), were at 4A Inverness Terrace, London W2.

(J. Nn.)

## Ethiopia.

A kingdom of northeast Africa. Area: *c.* 350,000 sq.mi.; pop. (est. Dec. 31, 1939): 7,000,000; cap. Addis Ababa; religion: Christian (Alexandrine) and Mohammedan; languages: Amharic, also Arabic, Gueze, Tigre, Tigriña, Galla, Somali, etc.; ruler: Emperor Haile Selassie I.

**History.**—There was considerable economic progress in 1947. A merchant marine was inaugurated with "The Adulis," named after the ancient Ethiopian port. Ethiopian air lines (passenger, freight and mail) extended internally to all 12 provinces, externally to Asmara, Erit.; Djibouti, Fr.Somlnd.; Aden, Aden; Khartoum, A.-E.Sud.; Jidda, Saud.Arab.; Cairo, Egy.; Nairobi, Kenya. An aviation school, a motorboat service on Lake Tana and more long-distance motorbus services were inaugurated. New roads and bridges over the Takazze and Gogeb rivers were built, and restoration of the historic Gondar castles was undertaken. Work began on Sir Patrick Abercrombie's plan for Addis Ababa, and at the same time main sewerage was inaugurated, and the water mains extended.

The state bank opened eight additional branches in Addis Ababa, the provinces and Djibouti, Fr.Somlnd. The new currency reached a cumulative issue of Ethiopian $53,384,200 in January. (Exchange rate: 2.424 Eth.$=$1.00 U.S.; 10 Eth.$=£1).

The annual exhibition revealed advances in agriculture and industry. Silk manufacture and several new exports were undertaken, while prize cattle, sheep and poultry were imported from the U.S. to improve Ethiopian breeds. Trade with Great Britain during the first eight months of 1947 reached the following figures: imports, £654,508; exports, £66,128.

Revenue during 1946–47 was approximately £5,000,000. Not counting expenditure by government departments, post office, bank, army, etc., on education and foreign scholarships for their employees, or church-maintained schools (with 50,000 pupils), the board of education budget was £8,107,639 for government schools, with 35,763 boys, 4,180 girls and 13,078 teachers. Examination began for London university matriculation in Ethiopian schools, also preparatory training in law, public health, midwifery and nursing. Education was free, only 3% of scholars contributing toward tuition and board. Prefabricated schoolhouses were mass-produced in Addis Ababa for provincial villages.

Ethiopia was represented at all United Nations conferences and on subsidiary bodies. An U.N.R.R.A. mission worked in Ethiopia from Jan. 1946 to June 1947 and contributed £130,000 in educational and agricultural equipment. Ethiopia declined a U.N. field survey to facilitate reconstruction, in favour of more recently liberated countries.

Ethiopia proposed an Anglo-Ethiopian treaty of friendship and commerce, its terms to include the withdrawal of the British military administration from the reserved area and Ogaden.

The emperor formally lodged Ethiopia's claim to the former Italian colonies, Eritrea and Somalia. Two hundred thousand Eritreans and a large body of Somalis residing in Ethiopia petitioned the U.N. Council of Foreign Ministers for reunion of these provinces to Ethiopia.

The empress presented her crown to the Church of the Holy Sepulchre in Jerusalem as a thank offering for Ethiopia's liberation.

(E. S. Pt.)

## European Recovery Program.

On June 5, 1947, in an address at the commencement exercises of Harvard university, Secretary of State George C. Marshall advanced the idea of a program of European self-help supported by U.S. assistance. His proposal of a comprehensive economic program proved to be a new starting-point in a large-scale effort of European reconstruction and in long-range U.S. policy towards postwar Europe.

After a further statement by Marshall on June 12 that both Great Britain and the U.S.S.R. were within the scope of the suggested program, the British and French governments announced their desire to co-operate, and separately invited the soviet government to consult with them. The soviet government accepted the invitation on June 22; its reply complained, however, of knowing nothing of the extent or terms of prospective U.S. aid.

The three-power conference of foreign ministers (Ernest Bevin of Britain, Georges Bidault of France and V. M. Molotov of the U.S.S.R.) held five sessions in Paris between June 27 and July 2. Molotov objected strongly to drafting a joint European program. Such a program, he asserted, would infringe upon the sovereignty of smaller states. Bidault's attempt to meet these objections was rejected by Molotov, who accused England and France of splitting Europe.

Upon soviet withdrawal from the still embryonic program Bevin and Bidault addressed an invitation to 22 European states, apart from Spain and the U.S.S.R., to consult on the formulation of a plan for European reconstruction. Almost until the conference assembled in Paris on July 12 there was uncertainty concerning the participation of the small states lying in the soviet sphere. On July 8 the Czechoslovak government formally accepted the invitation, then withdrew two days later. Poland, Finland, Hungary, Rumania, Yugoslavia, Bulgaria and Albania also declined. Fourteen countries accepted: Austria, Belgium, Denmark, Eire, Greece, Iceland, Italy, Luxembourg, The Netherlands, Norway, Portugal, Sweden, Switzerland and Turkey.

The conference, which met in Paris from July 12 to 15 with Bevin as chairman, appointed a 16-member Committee of Co-operation (later known as the Committee of European Economic Co-operation, or C.E.E.C.). In collating the various reports gathered during July and August, the Executive committee was dismayed to find that the total dollar deficit for 4 yrs. was estimated at $28,000,000,000, and that annual deficits in dollar exchange were expected to continue even after 1951. At a conference on Aug. 30, representatives of the U.S. department of state impressed upon the Executive committee the necessity for bridging the dollar deficit by the end of 1951, for promoting financial and monetary stability and freer trade, and for creating a continuing organ for supervision of the program.

These criticisms found their reflection in the final C.E.E.C. report of Sept. 22. As Europe's contribution to its reconstruction the two-volume report set forth elaborate goals of restored or increased production in all branches of the economy. It outlined steps necessary for financial and fiscal stability, and proposed means for promoting freer trade among the co-operating states. The report revised the estimate for the 4-yr. dollar deficit of the 16 countries, plus western Germany, to $19,330,000,000.

President Harry S. Truman on Oct. 23 summoned the U.S. congress to convene on Nov. 17 to consider the proposed plan. In a radio address of Oct. 24 he stressed the importance of providing both immediate and long-term aid, and asked $357,000,000 of interim aid for France, $285,000,000 for Italy, and additional provision for Austria's needs. On Nov. 8 the president's committee on foreign aid estimated the 4-yr. European dollar deficit at $17,000,000,000 to $23,000,000,000, and recommended year-to-year appropriations totalling between $12,000,000,000 and $17,000,000,000 to fill the gap.

In a statement to the senate foreign relations committee on Nov. 10, Sec. Marshall estimated that $7,500,000,000 w required for the period between April 1, 1948 and J 1949; an estimate of aid for China would be presente For interim aid, until March 31, 1948, he requested $ 000 for Austria, $328,000,000 for France, and $227,000, Italy, a total of $597,000,000. Truman supported these r in his message to congress on Nov. 17.

After lengthy discussions, a combined bill was pas Dec. 15, by a voice vote in the senate and by a vote of in the house of representatives, and signed on Dec. 17; authorized $597,000,000 in interim aid and omitted th ment to China which had been voted previously by the In the appropriations bill, passed by both houses on D the total was cut to $540,000,000, of which $18,000,0 allotted to China and the remainder to France, Ita Austria.

On Dec. 19 Pres. Truman transmitted to congress his message setting forth the long-range program of aid to pean reconstruction. Designed to meet the needs of 16 co and western Germany, the new program called for the tion of $17,000,000,000 for the period 1948–51, in ann stalments. The first instalment, covering the perioc April 1, 1948 to June 30, 1949, would require an approp of $6,800,000,000. (*See* also International Bank for I struction and Development.) (P. E.

# Exchange Control and Exchange Rates.

The expectations that economic recovery and moneta bilization would make substantial progress in 1947 an international trade and payments restrictions would be were not fulfilled. The dollar shortage proved to be the problem; it was reflected in a huge surplus of about $9,00 000 in the U.S. balance of payments on current accou also in Great Britain's inability to maintain convertibi sterling after it was introduced on July 15.

For those who thought that important steps would be toward convertibility of currencies and freer multilateral in 1947, Great Britain's experience was a great disappointment.

In spite of political disturbances, economic difficulties and obstacles to international trade, however, official foreign-exchange rates of most countries remained remarkably stable. This was possible only because most countries maintained or tightened foreign-exchange and import restrictions.

**United States.**—The monetary position of the U.S. dollar remained extremely strong in spite of a continuous rise in prices which, although offset by inflationary conditions in a great many other countries, aggravated the dollar shortage. The great surplus in U.S. balance of payments was covered from the following sources: reduction of foreign-held dollar balances, sales of foreign-held dollar securities, import of gold, credits and grants given by the U.S. government and other credits and investments.

Dollar balances held by foreign countries fell from $6,467,00,000 on Aug. 31, 1946, and $6,006,500,000 at the end of 1946 to $5,437,300,000 on July 31, 1947. The greatest decline occurred in Canada's balances, from $931,800,000 at the end of 1946 to $563,700,000 on July 31, 1947. Several European countries, especially the Netherlands and France, sold substantial amounts of dollar securities in order to obtain dollar exchange.

Gold reserves of the United States increased from $20,529,00,000 at the end of 1946 to $22,747,000,000 on Dec. 20, 1947, or by $2,218,000,000. Since the United States paid $687,500,00 in gold as part of its subscription to the International Monetary fund the actual increase in gold sales to the treasury reached about $2,700,000,000—nearly double the value of gold produced in the same year.

But the main source from which the dollar deficit of many countries was met was U.S. aid, which in 1947 reached nearly $6,700,000,000. The total consisted of $2,850,000,000 disbursed from the United Kingdom loan, $1,000,000,000 of supplies for areas under military occupation, more than $860,000,000 disbursed from Export-Import loans, $430,000,000 of property transferred on credit terms, $390,000,000 of U.S. aid through the United Nations Relief and Rehabilitation administration (U.N.R.R.A.), $255,000,000 of special aid for Greece and Turkey, $190,000,000 of special grants and loans for the Philippines and nearly $500,000,000 from miscellaneous aid programs. In Dec. 1947 congress voted $597,000,000 as stop-gap aid to France, Italy, Austria and China; $522,000,000 of it to be allocated to the first 3 nations. (*See* EUROPEAN RECOVERY PROGRAM.)

The International Bank for Reconstruction and Development (*q.v.*) granted in 1947 loans totalling $497,000,000, to France, the Netherlands, Denmark and Luxembourg. At the end of October $252,000,000 remained as unused balance. Resources of neither the International bank nor the International Monetary fund, however, could be used or would be ample to overcome the great shortage of hard currency of many countries, especially in Europe.

**Canada.**—Canada, which appreciated the rate of its currency as of July 6, 1946, to bring it to parity with the United States dollar, and which emerged from World War II as an important lending country, also felt the dollar shortage, especially in the second half of 1947. The free rate of the Canadian dollar in New York was around 89 cents at the end of the year (or 11% less than parity).

In its current account with the United States prior to World War II, Canada customarily had deficits which were offset by freely convertible favourable balances with other countries, especially with the United Kingdom. In 1947 Canada's deficit in trade with the United States and other current items was estimated at about $1,200,000,000. Current account surplus with all other countries was estimated to be a little higher than the dollar deficit, but only a part of the former was paid in dollars, so that Canada was faced with the problem of paying its dollar deficit in spite of an over-all favourable balance of payments. It obtained around $550,000,000 in convertible exchange from countries other than the United States, a large part of it from the United Kingdom; but for the rest of the deficit Canada had to use its official and private reserves of U.S. dollars and gold to the amount of about $750,000,000. Canada's official dollar holdings declined to $480,000,000 on Nov. 13, 1947, at an annual rate of about $800,000,000. Out of relatively large credits granted to various countries, the amount of $500,000,000 remained for disbursement in 1948.

EXCHANGE WINDOW for the sale of U.S. dollars in Shanghai. Speculation on the inflationary Chinese dollar hit panic proportions early in 1947. Its value was officially set at 12,000 to 1 U.S. dollar on Feb. 16

Faced with this difficult problem, Canada on Nov. 17 introduced import restrictions to curtail imports from the United States by $200,000,000. Restrictions on tourist expenditures were also established.

A credit line of $300,000,000 was arranged with the Export-Import bank. In order to increase its supply of dollars, Canada decided to stimulate gold production by granting subsidies.

**Latin America.**—The foreign-exchange situation of a number of Latin-American countries had become more difficult in 1947. The actual gold reserve of these countries declined from about $2,800,000,000 in Sept. 1946 to less than $2,000,000,000 in the latter part of 1947. Argentina, Mexico, Colombia, Chile, Peru, Bolivia, Ecuador and also Brazil lost parts of their gold and a substantial part of their dollar holdings, which had been used to a large extent for purchases of various goods not available during World War II. Whereas these countries had a favourable balance of trade with Great Britain and the European continent, they had an import surplus with the United States expected to reach $1,800,000,000 in 1947. Only Cuba and Venezuela, whose gold reserves had increased, and possibly Argentina, Uruguay, Colombia and Panamá could expect to continue imports from the United States at 1947 rates for some time.

Cuba, Mexico, Panamá, Guatemala and the Dominican Republic alone did not introduce foreign-exchange controls, but Mexico was obliged to resort to import restrictions. Most countries continued to maintain exchange restrictions. Although the controls helped in maintaining stable exchange rates, the pressure of the balance of payments and the dollar shortage led to further extension of restrictions, a greater use of multiple rates of exchange and, in some cases, also to a decline in the exchange rates.

A system of multiple-exchange rates was newly established in Ecuador. In June 1947 the use of the official rate of 15.04 sucres per U.S. dollar was limited to essential imports; importers of semiessentials had to pay an additional exchange surcharge of 5 sucres per dollar. In addition a free market was made available for importers of luxury goods, also subject to the five-sucre surcharge.

In Bolivia a preferential rate of 55.50 bolivianos per U.S. dollar was established for tin exports over the quantities prescribed.

Brazil, which had not announced the initial par value of cruzeiros to the International Monetary fund, experienced a shortage of dollars which led to further import and exchange restrictions, and also to a black market of foreign exchange with rates up to 20% more than the official rates.

In Chile the free rate of pesos, which was 39.93 per U.S. dollar in Dec. 1946, went up to 53.09 in Aug. 1947. The uncontrolled selling rate for Costa Rica's colon went up from 6.01 per U.S. dollar in Dec. 1946 to 6.27 in Aug. 1947. Paraguay's free-market rate for guarani increased from 3.12 in Dec. 1946 to 3.43 in Aug. 1947. In Peru the free rate, constant at 6.80 soles until the middle of 1946, went up sharply and reached 14.90 in Aug. 1947.

Uruguay began to apply the rate of 1.90 pesos per U.S. dollar to all transactions in the free market after July 1947, whereas before that time there was also a lower rate of about 1.78. In September a new buying rate of 1.70 pesos was created for the purchase of textiles.

The Dominican Republic organized a central bank and in October started to convert dollars to the new Dominican gold pesos. Approximately U.S. $26,000,000 of the country's legal currency was in circulation at that time.

**The Sterling Area.**—*United Kingdom.*—The problem of convertibility of the pound was perhaps the most important single factor in the international-exchange market during 1947. According to the Anglo-U.S. financial agreement of Dec. 6, 1945, the United Kingdom undertook by July 15, 1947, to make sterling receipts from current transactions freely available for current transactions in any area without discrimination; any discrimination arising from the so-called sterling area dollar pool would be entirely removed and each member of the area would have its current sterling and dollar receipts at its free disposition for current transactions anywhere.

The British government made various preparatory steps throughout the first half of 1947 in order to make the introduction of convertibility easier and to soften its great impact on the British foreign-exchange position.

In payment agreements concluded during this period the British had been working toward a situation under which all countries would agree to accept sterling freely in current transactions, in order to make it freely transferable to all other currency areas. By July 15, 1947, a large number of countries, including Britain's important trading partners in Europe, Latin America and also Canada, had entered into agreements under which their monetary authorities agreed to accept sterling freely in their so-called "transferable accounts" in London in payment for current international transactions. Sterling in such accounts could be drawn upon freely to other currency areas including the United States. The system of transferable accounts applied by July 15, 1947, to the following countries: Argentina, the Belgian monetary area, British Canada and Newfoundland, Czechoslovakia, Egypt and Sudan, Ethiopia, Finland, Iran, Italy, the Netherlands monetary area, Norway, the Portuguese monetary area, Spain, Sweden and Uruguay. The operations of these accounts were free from the British exchange control but subject to conditions stipulated in agreements between the United Kingdom and the countries concerned.

The system of transferable accounts extended the area of convertible sterling which already existed in "American accounts," for which the unrestricted convertibility of balances on current accounts had been established. The American accounts (the United States registered accounts) applied to the United States, the Philippines and the majority of Latin-American co with the exception of Argentina, Brazil and Uruguay.

The convertibility of sterling was introduced on July 1 according to the agreement, but on Aug. 20 the United Ki government already had to suspend the automatic right it had granted to various foreign monetary authorities change sterling into dollars. The short experience demon that the technical position of the pound, chiefly as a re the British balance of payments, was not strong enough t the heavy demand on dollars coming from holders of sterling balances. To avoid further heavy losses of its g dollar holdings the British government had to suspend th vertibility of its currency.

Development of the British dollar position was reflected rapid use of the U.S. credit. In 1946 only $600,000,000 credit was drawn upon, but $2,350,000,000 was used fro 1 to Aug. 20, 1947. The remaining amount of $400,0 was temporarily frozen, to be released in December. On S Great Britain had about $2,400,000,000 of gold and dol serves and $450,000,000 remaining of the Canadian cre $1,250,000,000.

In spite of the suspension of convertibility Great B shortage of dollars continued. Gold had to be shipped United States, a substantial amount of dollars was bough the International Monetary fund and the Union of South granted Great Britain a gold loan of £80,000,000.

In 1946 the deficit in the United Kingdom current b of payments was $1,660,000,000; but it was $1,400,000, the first half of 1947, reaching probably $2,500,000,000 f whole year of 1947. This dollar deficit actually was greate the total trade deficit, because while a much greater sh British imports came from the hard-currency countries th fore World War II, exports were for several reason oriented in the same direction.

The United Kingdom had to use dollars for its paymen icit not only to the United States and Canada but also to countries. In the first half of 1947 it paid the United $705,000,000 on its own current account; and it paid $11 000 for food that had to be sent to Germany. The payme other countries included $220,000,000 to Canada, $255,0 to Central and South American countries, $270,000,0 sterling area countries and $55,000,000 to European cou Such payments were made mostly for supplies of good some of them were the result of the settlement of st balances (Egypt, India, Iraq) and others represented converted from sterling during the short period of converti

After Aug. 20 the United Kingdom began to revise its fo exchange policy. In addition to introducing severe impo strictions estimated to save several hundred million d yearly, and to intensifying its export drive, it re-negotiated ous payments agreements, including those with the sterling countries.

**The Sterling Bloc.**—At the end of 1947 the sterling blo sisted of the United Kingdom, the British dominions (excl Canada and Newfoundland), British dependent territorie protectorates, Iraq, Trans-Jordan, Iceland and the F Islands. In July Egypt had formally withdrawn, and pay from the United Kingdom to Egypt thereafter became su to normal exchange authorizations. It was agreed that o accumulated sterling balances amounting to about £400,00 £8,000,000 was to be released in the second half of 1947. I dition, £12,000,000 was made available as a nonrenewab lease to provide working balances. A further amount of 000,000–£15,000,000 was to be released as the counterpa confirmed credits opened in London to Egyptian firms to fi imports from Britain.

The sterling balances held by the Reserve Bank of India amounted as of July to £1,178,400,000. An interim agreement was signed in August according to which £35,000,000 was released from the accumulated balance to cover the period until the end of 1947, and in addition £30,000,000 was released to serve as a working balance.

In the same month an agreement was also reached with Iraq, whose sterling balances totalled about £60,000,000. Five million was released as a "once-for-all" payment and a further £2,000,000 provided as a working balance. The main releases were to be £15,000,000 over the 5-year period. There would be releases of £4,000,000–£5,000,000 also to be provided by July to meet outstanding credits opened by United Kingdom banks and a sum up to £4,200,000 to cover repayments of advances made to the Iraq government by oil companies. Negotiations were also conducted on the settlement of sterling balances with Argentina and Brazil.

The total of accumulated sterling balances had been reduced between July 1, 1946, and Aug. 31, 1947, by £230,000,000, of which India accounted for £135,000,000. The whole problem was still a major factor in the United Kingdom balance of payments. In June 1947 the total of sterling balances was £3,560,000,000; £1,700,000,000 was either under control or being brought under control by voluntary blocking agreements; £400,000,000 belonged to Australia, New Zealand and South Africa, with which no formal agreements were required; £760,000,000 belonged to the rest of the sterling area and £500,000,000 was sterling belonging to the rest of the world, including countries in Europe.

Within the sterling bloc (renamed the "scheduled territories") sterling acquired from or to be used for current transactions could be transferred freely. Sterling could also be transferred to the sterling area from other countries. The important feature of the bloc was the pooling of dollar and other hard currencies earned by members and the reallocation of these currencies.

After the suspension of convertibility, financial agreements were negotiated between the United Kingdom and South Africa, Eire and Iraq. Provision was made that the Union of South Africa would bear full responsibility for its own dollar expenditure. An immediate gold loan of £80,000,000 replaced the existing gold sales contract following which South Africa undertook to sell certain annual quotas of newly mined gold to Britain and in exchange for this had access to the sterling area dollar pool. (It used $50,000,000 in the first half-year of 1947.) South Africa would sever its link with the sterling area dollar pool.

In the agreement with Eire, that country agreed to reduce substantially its drawing of dollars from the dollar pool and would obtain £14,000,000 for the period Oct. 1, 1947, to June 30, 1948, plus Eire's dollar earnings. Iraq was given a hard-currency quota of £5,570,000 per annum, to include Iraq's own earnings of hard currencies.

Obviously, the dollar crisis was felt also in Australia, New Zealand and India. Practically all members of the sterling bloc took some measures to reduce their need of dollars, and at the same time some of them tried to aid Great Britain by increasing exports of goods to Britain which otherwise could be bought only for hard currencies. Under new circumstances it was to be expected that Great Britain would have to revise some of the agreements with the so-called transferable account countries.

Such an agreement was renegotiated with Belgium in Sept. 1947. Belgium agreed to hold sterling up to a new ceiling of £27,000,000, of which up to £12,000,000 would have a bilateral exchange guarantee attached. Contrary to expectations the new ceiling of £27,000,000 was reached in little more than a month, and thus Belgium was in a position to offer sterling for conversion with gold or dollars under the agreement. It was agreed further that sterling currency earned by Belgium could be used only in transactions with the United Kingdom and not as before with other countries of the sterling area also.

The transferable account established in 1947 permitted sterling currently earned by Belgium and certain other transferable-account countries to be transferred between the Belgian, on the one hand, and other transferable-account countries, and the American-account countries on the other hand, subject only to supervision by the exchange control authorities of the countries concerned. Developments in the summer of 1947, however, forced Great Britain to abandon its concept of the transferable account and to go back to what for all practical purposes were bilateral payments agreements. At the end of 1947 the transferable-account system was in a state of disintegration, and for the time being its place would probably be taken by bilateral payments agreements with mutual overdraft facilities and exchange guarantee to which the United Kingdom was obliged to consent.

**Continental Europe.**—No great progress toward monetary

*Foreign-Exchange Rates*

Note.—Includes only currencies regularly quoted in New York during 1947. Averages of certified noon buying rates for cable transfers in cents per unit of foreign currency. The rates listed are mostly official rates; they were managed and supported by a strict and often tightening exchange control. Therefore, they did not always reflect the true exchange rates; neither were these properly reflected in the black-market rates.

The following members of the International Monetary fund had not yet announced the initial par value of their currencies: Brazil, China, Dominican Republic, Greece, Italy, Poland, Uruguay and Yugoslavia.

*Average of daily rates for that part of the year during which quotations were certified.
†Prior to Nov. 1, 1942, the official designation of the Brazilian currency unit was the milreis.
‡Prior to 1946 the official designation of the Hungarian currency was pengö.

reconstruction was made in Europe during 1947. Open inflation continued in Greece, France, Rumania and Italy. Official exchange rates of some other countries were considered as overvalued in spite of the fact that the degree of their overvaluation was somewhat reduced by the continued price rise in the United States.

Exchange control was maintained in all European countries with the exception of Switzerland, which retained restriction only on purchases of dollars from sources other than from export and services.

Trade between European countries was carried mostly through bilateral payments agreements providing usually for overdrafts and thus making possible a certain expansion of trade. At the end of the year, however, the overdraft limits were reached on most of these agreements, so that a restriction in the volume of intra-European trade had become a distinct possibility.

Practically all European countries except Switzerland also felt the shortage of dollars. In 1947 the Marshall-plan countries alone had an estimated trade deficit with the United States of $4,000,000,000. During 1947 the monetary gold reserve of France, Belgium, the Netherlands and Sweden declined substantially. In the second part of the year all countries, again except Switzerland, tightened import restrictions for goods to be paid in hard currency. Sweden, which granted huge foreign loans in the first postwar period, found itself in increasing balance-of-payments difficulties resulting from its trade deficit with the hard-currency countries. Similarly, Belgium began to feel its trade deficit with hard-currency countries in spite of a favourable balance of trade with other countries.

An attempt was made to arrest reduction of intra-European trade caused by payment difficulties, by organizing a multilateral monetary compensation. Belgium, France, the Netherlands and Italy joined this system providing for an automatic offset of balances-on-payments agreements which would lead to a reduction of balances. Great Britain, Sweden, Norway and Denmark also joined as occasional members so that a multilateral offset could be arranged with them from case to case.

The Bank for International Settlements (*q.v.*) in Basle, Switzerland, was entrusted with administering the new organization. Although this multilateral offsetting of balances could bring some encouragement to intra-European trade, it could not remedy the basic problem that Belgium, Sweden and Switzerland had been the chief creditors while France, Great Britain, Denmark and the Netherlands were on the debit side.

Several countries took various measures to check inflation and to bring their exchange rate more in line with the level of prices and the balance-of-payments situation. Italy moved on Nov. 28, 1947, toward establishing a freer exchange market. In March 1946 Italy had introduced the so-called 50% system permitting exporters to retain or sell one-half of their hard-currency earnings on condition that it was utilized within a short period for the purchase of licensed imports. These percentages of foreign exchange were sold on a free market so that the exporters had to calculate with an average rate obtained from the official rate for 50% of the surrendered proceeds and the other 50% sold on the free market. In Dec. 1946 the official rate was 225 lire to the dollar, free export rate 568, average rate 397. At the same time the black-market rate was 683. In Aug. 1947 the official rate was increased to 350, and the free-export rate was quoted at 733, so that the average rate was 542. According to the new provision the foreign-exchange office would buy the 50% at the average free rate of the previous month. When the new system was announced, a provisional official rate of 589 lire, based on free-rate quotations of the preceding five days, was maintained until the total November average could be computed. For December the official rate was fixed at 603, while the free-export rate was only 567 and the black-market rate 578. The step taken by Italy could be considered as preparation for the final stabilization of the lira.

On Dec. 10 a new monetary measure was proclaimed in Austria, according to which the amount of money in circulation was reduced by two-thirds; correspondingly, the volume of deposits was also deflated. It was expected that the money in circulation would be reduced from about 6,000,000,000 schillings to 3,000,000,000 schillings.

Rumania took drastic anti-inflationary measures. On Aug. 16 the currency was converted at a rate of 20,000 of the old leu equal to 1 new leu. The dollar rate was fixed at 150 leu (the old free-market rate was 4,200,000 leu). Holders of notes were allowed to exchange only limited amounts. The rest, as well as the deposits, was frozen so that it amounted to the sequestration by the state of the cash holdings of the entire population. A shortage of money developed in relation to available goods.

Bulgaria also carried out a drastic monetary reform in March. The old bank notes were exchanged against new ones at the rate of 1 to 1, but all sums of more than 2,000 leva were temporarily blocked. The total monetary circulation of 71,000,000,000 leva was reduced to 24,000,000,000 leva.

In Poland, the official rate remained at 400 zlotys to the pound, but a new rate of exchange of 1,600 zlotys to the pound was establis applying to such transactions as assistance from relatives abroad, heritance, allowances, etc.

Inflation had not yet been checked in Greece where, in order to o come the handicap of high prices for Greek exports resulting from overvaluation of the drachma, exporters after the middle of Octo received in exchange for the foreign-exchange proceeds of their ex drachmas calculated at the official rate of 20,000 to the pound foreign-exchange certificates equal to the amount of the foreign excha surrendered by them. These certificates had a free market and had to bought by Greek importers, who had not only to pay drachmas at official rate for the foreign exchange but also hand in an equal amo of foreign-exchange certificates.

The Soviet Union carried out a monetary reform following a pat established in many countries in similar circumstances in the 19th tury. The rubles in circulation had to be exchanged at the ratio of rubles in old money to one ruble in new money; this measure redu radically the excess money supply in the Soviet Union.

No efficient measures were taken throughout 1947 to check infla in France in spite of the fact that prices were rising, that the effec the French franc being overvalued was evident and that the black m ket in foreign exchange became common in France. Only toward the of the year did the French government attempt to take measures balance the budget and prepare for a possible monetary reform in Fra

Germany made no progress in monetary reconstruction, but the n ber of trade and payments agreements arranged between the var occupation zones and European countries greatly increased.

**The Near East.**—While the process of readjustment to peacetime co tions was in progress, the decline of prices which started in 1946 some near east countries did not continue and prices became m stabilized. There was also a great need for dollars in the whole a especially in view of the desire to proceed with economic developm and import capital goods.

In July 1947 Egypt had withdrawn from the sterling area; the change rate of the Egyptian pound, however, remained unchanged was still practically pegged to the pound sterling. The sterling bala represented by far the greatest part of Egypt's monetary reserve.

In Iran, whose foreign-exchange position remained strong, the rate in rials to the dollar did not fluctuate greatly, remaining aro 51.5 as compared with the official rate of 32.5. The free rate represe an average premium of around 59%. Most transactions were carried at the free rate.

**India.**—The Reserve Bank of India act was amended so that the po sterling would not be the sole determinant of the external value of rupee. According to this act the rupee could be linked to currencies members of the International Monetary fund so that it should be sidered as an independent currency in spite of the fact that India mained a member of the sterling area. There was no immediate e on the rate of rupees as expressed in sterling. In March exchange trol was formally established. In December a financial settlement arranged between India and Pakistan, dividing cash balances and ster assets of the former empire, estimated at a value of £1,200,000,000.

**Burma.**—In April a central treasury office was established, qualifie issue notes and to take up functions previously served by the Res Bank of India. Burma's currency thereafter was no longer linked that of India.

**China.**—Chaotic monetary conditions continued in 1947. In Febru the official rate for yuan per U.S. dollar was increased from 3,35 12,000. To ensure imports of essential commodities the official rate retained for use of importers of cotton, wheat, rice, flour, coal and c All other authorized transactions were conducted at the open mar buying and selling rates being fixed by the Exchange Equalization bo The free-market rate rose steadily, reaching 49,000 in June and 90, in November. By that time official transactions were made on basis of 73,000 yuan per U.S. dollar. No stabilization of China's rency was yet in sight. At the end of December the free-market reached 150,000; the official open-market rate, periodically adjusted, about 40% less.

**The Philippines.**—The new republic was one of the few countries w did not feel the dollar shortage, especially because of U.S. contribut for war losses; these payments were expected to reach $2,000,000, within 5 years.

**Japan.**—The conversion rate of yen to U.S. dollar was fixed at in March 1947.

**Exchange Stabilization Funds.**—Activity of the still-existing excha stabilization funds was limited in 1947 because the basic method stabilization technique could not be restored. It was also expected the International Monetary fund would reduce the importance of tional exchange stabilization funds. The existing funds acted merely agents holding part or all of the external monetary reserves of the c tries concerned and possibly carrying out special gold and fore exchange transactions in a generally controlled market.

The United Kingdom's exchange equalization account continued hold the bulk of Britain's monetary reserve, which was around £5 000,000 toward the end of 1947. The nature and extent of the operat of the account were kept secret.

The French and the Dutch stabilization funds were reported to h continued buying and selling foreign exchange, but nothing partic was known of their operations.

During 1947 the United States stabilization fund continued the u transactions on a moderate scale. After payment of $1,800,000,00 the subscription to the International Monetary fund, the total asset the U.S. stabilization fund amounted to only $298,900,000 as of June 1947, compared with $2,091,400,000 on June 30, 1946. Between these dates the foreign exchange holdings increased from $3,930,000 to $1 600,000; the main increase occurred in item "all other" from $3,9 000 to $100,970,000. This increase resulted from a purchase of Braz cruzeiros amounting to $80,000,000, according to the agreement Brazil in which the fund agreed to purchase cruzeiros up to $100,000. The rest of the increase in foreign-exchange holdings of the fund sisted of Indian rupees. Between June 30, 1946, and June 30, 1947, old holdings of the fund went up from $71,000,000 to $151,000,000, bile the dollar holdings declined from $196,000,000 to $25,800,000.

On May 13, 1947, a new $50,000,000 stabilization agreement was conluded between Mexico and the United States. Under terms of this agreeent the United States stabilization fund undertook for a period of four ears commencing July 1, 1947, to purchase Mexican pesos to an amount qual to $50,000,000 for the purpose of stabilizing the U.S. dollar and e Mexican peso rate of exchange. **xploration and Discovery.** The major exploratory accomplishments of 1947 ere made by expeditions in the antarctic.

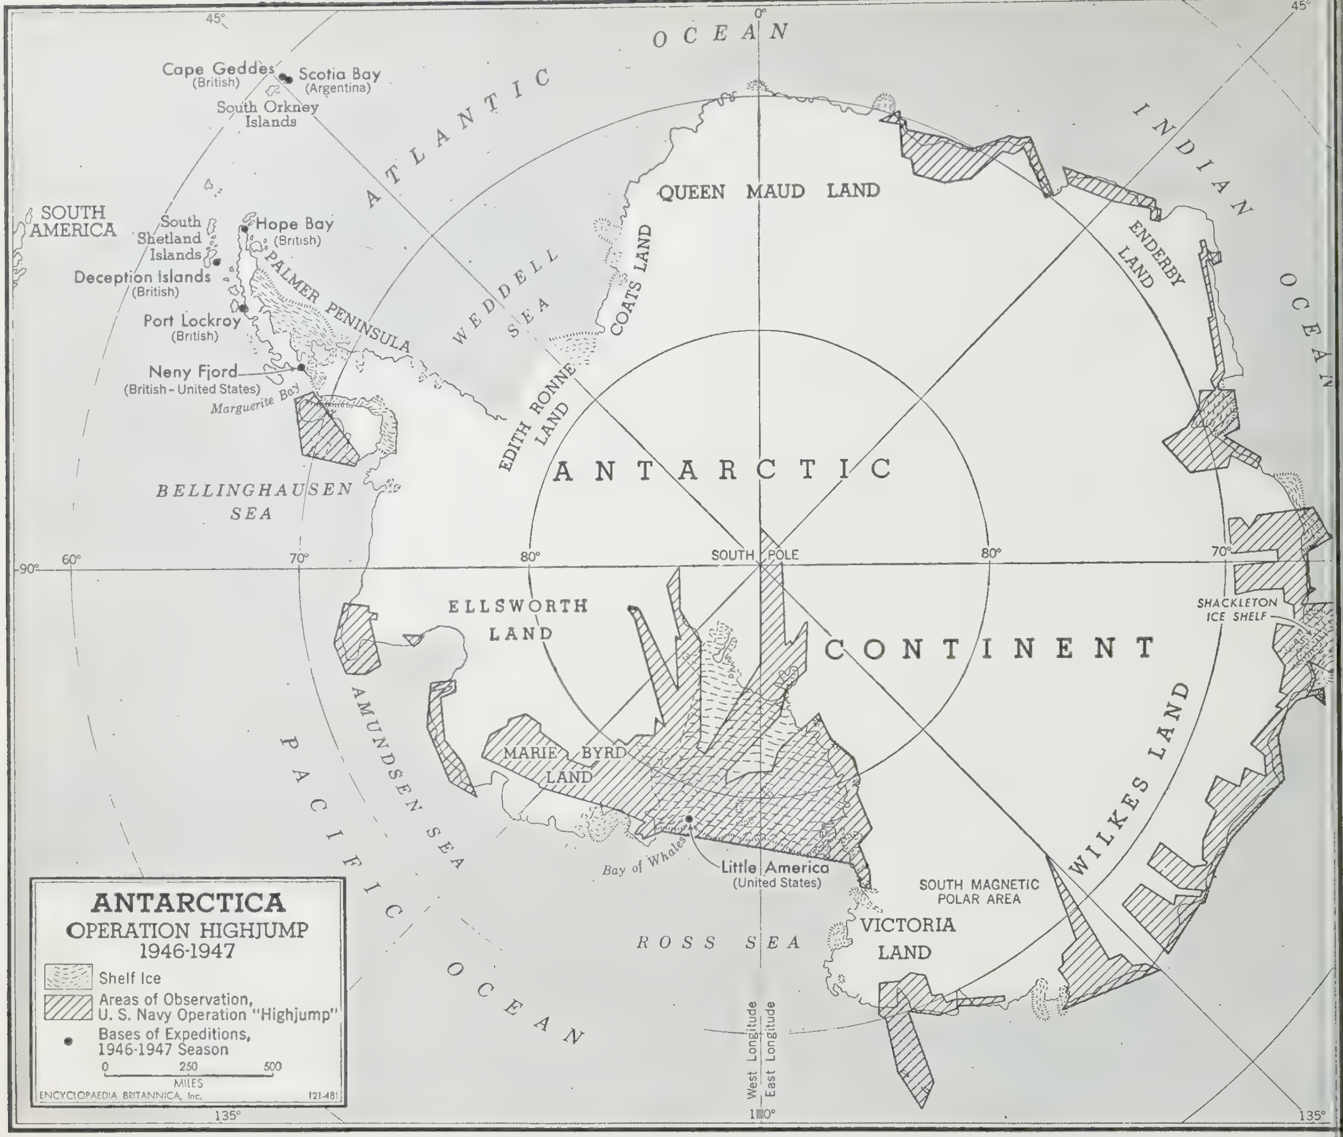
**Operation "Highjump."**—This expedition of the U.S. navy hich, from Dec. 1946 to March 1947, operated in three groups long the entire circumference of the antarctic continent, was eported by its leader, Rear Admiral Richard E. Byrd, to have iscovered, relocated or confirmed 5,400 mi. of coast line, discovered ten new mountain ranges, including many large glaciers and individual peaks from 15,000 to 20,000 ft. high, and photomapped a vast area of which more than 340,000 sq.mi. had never before been seen.

Dr. Paul A. Siple, scientific aide to Admiral Byrd and senior U.S. army representative, had predicted, from his studies of ice movements in the Ross sea region during former expeditions to the antarctic, that a significant deformation in the outline of the Bay of Whales would occur in 1947 and might make the use of any large establishment there extremely hazardous. The Bay of Whales, destination of the central group under Rear Admiral Richard H. Cruzen, is a mere break in the face of the Ross shelf ice. It was created, Dr. Siple determined, by the shearing action of a submerged island overridden by the slowly moving Ross shelf ice about 20 mi. southeast of Little America. The northward streaming sheet of ice becomes fissured as it strikes the island, and a void or bight is formed in its lee. The eastern edge of the divided ice sheet, in curving around the obstruction, takes a westerly direction. As a result, although moving at the same rate, the sides of this bay are actually advancing at right angles to each other. In 1911 the shelf ice sides of the bay were 10 mi. apart; in 1929 they had narrowed the bay to 5 mi.; and upon arrival of the expedition early in 1947, the distance between the entrance capes was only 800 ft. The entrance was closing at the rate of 4.4 ft. per day.

IOUNTAINS believed to be part of the Andes range, as photographed in the ntarctic from a U.S. plane in 1947. Glaciers are shown flowing through a ountain pass to the ice shelf below



To permit most expeditious use of the Bay of Whales by the ships of the central group, the U.S. coast guard cutter "Northwind" entered and broke out 15,000,000 tons of ice, or about 2 sq.mi. of bay ice, 5 to 20 ft. thick. An air strip was quickly established on the snow surface at Little America, and six R4D planes, launched from the deck of the carrier "Philippine Sea," flew in from its position outside the pack ice 800 mi. to the north. These planes, equipped with a combination of wheel and ski landing gear and using Jato (jet-assisted take-off) rocket propulsion tubes, were the largest planes ever to take off successfully from a carrier and subsequently from the improvised snow surface air strip. Their use permitted exploration of more than 800,000 sq.mi. of the continent, the discovery of three new major mountain ranges and, by means of air-borne magnetometers, the location of islands entirely hidden beneath the shelf ice.

The eastern group under command of Captain George J. Dufek, operating off the coast in the Amundsen sea, discovered and mapped extensive high mountain ranges and in 105° W. longitude reported a bay 20,000 sq.mi. in extent.

The western group under Captain Charles A. Bond found evidence that the actual position of the south magnetic pole was some 150 mi. northwest of its previously determined location. This group photomapped the coast line of Wilkes Land, and near the Shackelton shelf ice in 101° E. longitude made the spectacular discovery of a colourful area of snow and ice free land which was named the Bunger oasis. Described first as a series of blue and green fresh-water lakes of possible volca origin, analysis of the water revealed them to be arms of sea which at favourable seasons were kept free from ice reradiated solar heat from the blackened rock of the regi In 70° E. longitude, more ice free areas were found, includ a bay 50 mi. deep which was stated to be potentially one of continent's finest harbours.

Toward the end of March 1947, Operation "Highjump" turned to the United States where reports on the expeditio scientific projects were to be compiled.

**Other Activities in the Antarctic.**—By the end of D 1947, a second U.S. navy expedition had returned to the a arctic, was operating off the Shackelton shelf ice in the regi of the Bunger oasis and was transmitting daily radiophoto f simile weather maps for a record distance of 10,580 mi. Un the leadership of Commander Gerald L. Ketchum, the expe tion consisted of the ice breakers "Edisto" and "Burton Islar and was entirely ship based.

The general plan was to penetrate the ice pack and atten what had been hitherto impossible; namely, to skirt the co of the antarctic continent, keeping it in view from the region 110° E. longitude to the Ross sea, and thence eastward to Palmer peninsula. A stop was planned at the Bay of Whales investigate conditions there, and the ships were going to atten to reach the Ronne expedition base at Marguerite bay March 1, 1948.

Pertinent scientific information would be collected in the egions visited in order to amplify observations made on Opera- on "Highjump." The primary objective of the expedition, how- ver, was to establish ground control survey stations along the oast line in order to permit accurate interpretation of the vast umber of aerial photographs taken on Operation "Highjump." he "Highjump" photographers, forced to fly over hundreds of iles of frozen sea and drifting floes before they saw land and onfronted with other extremely difficult navigational problems, ere often forced to leave gaps in an otherwise continuous overage of the areas they were attempting to survey.

The Ronne Antarctic Research expedition, a small but highly ompetent U.S. group under Commander Finn Ronne (Rónn- h), arrived on March 12, 1947, at Marguerite bay where the pedition ship was allowed to freeze in, and the base established on Stonington Island in buildings erected by Commander onne when he was leader of the east base of the U.S. antarctic ervice in 1940–41. Meanwhile, an 11-man base of the British alkland Islands Dependencies survey was also established at eny fjord on Stonington Island. Major K. S. Pierce-Butler nd Commander Ronne immediately decided on a plan of co- peration and joint scientific work for the British and U.S. oups. Jointly operated outlying weather stations were established, and there was joint representation on the Weddell coast nd other ground control parties of each group. On Sept. 15, ree British fliers crashed off the Palmer peninsula in sudden ul weather. After nine days of intensive search by ground and ir, they were rescued by a Ronne expedition plane.

Starting in late October, Commander Ronne made a series of ighly successful trimetrogon photomapping flights in which, ith the help of ground survey points established by his trail arties and by skilful plane landings, he delineated in its en- rety all of the Palmer peninsula and the adjoining regions rom 65° S. to 80° S. latitude and between 40° W. and 73° W. ngitude. The facility with which the Ronne expedition com- leted its mapping schedule in a region hitherto regarded as one f the least accessible in the antarctic clearly indicates that ccurate co-ordination with ground control is essential for map- ing surveys even with the best of modern aerial photo equip- ent.

By the end of 1947, the Ronne expedition had mapped an rea more than 460,000 sq.mi. in extent, had discovered and elineated the last remaining unknown coast line and had found vidence that the antarctic is a single continent undivided by ny depression running between the Weddell and Ross seas. bout 230,000 sq.mi. of the area surveyed consisted of newly iscovered land. This new territory, extending south and west rom the Weddell sea, was named Edith Ronne Land in honour f Commander Ronne's wife, who was also a valued member f the expedition and said to be the first woman to set foot on he antarctic continent.

British exploratory activities in the antarctic during the year 947 were largely confined to the Falkland Island dependencies ases at Port Lockroy, Deception Island, Hope bay, Cape eddes and Neny fjord. Long-range studies embracing the eteorology, geology, biology and other aspects of this sector ere conducted from these observatories. Periodic relief and upply of them is often mistaken for new expeditions.

Early in 1947, an Australian survey flight was made to Mac- uarie Island where an observatory for research in cosmic rays, eteorology, terrestrial magnetism and radio-physics was set up. similar station was later established on Heard Island in the erguelen region, and a third was planned for the antarctic ontinent in the vicinity of the south magnetic pole. The Union f South Africa also established a civil aviation and weather tation on Prince Edward Island, 1,500 mi. southeast of Capetown. Co-operative use of the network of stations so established was expected to facilitate long-range weather forecasting in the southern hemisphere.

Russia, Japan, the Netherlands, Great Britain and the Union of South Africa conducted whaling expeditions in the antarctic during 1947 and reported larger than average catches. British and Japanese news dispatches showed an increased interest in securing and freezing whale meat for direct human consumption, publishing recipes for its preparation and citing its high protein and vitamin value. ## Export-Import Bank of Washington.

Created in 1934, the bank operates as an independent agency of the United States government under the Export-Import Bank Act of 1945, as amended. The bank has broad powers to do a general banking business and to make practically any type of loan in so far as the exercise of these powers is necessary to carry out its fundamental purpose of financing and facilitating the foreign trade of the United States. However, the policies of the bank restrict its operations to loans which offer reasonable assurance of repayment, which are for specific purposes, and which do not compete with private capital.

Following the termination at the middle of 1946 of its program of emergency reconstruction loans, the more normal operations of the bank in financing U.S. foreign trade came again to constitute its principal activities. The bank finances specific export and import transactions on application of United States exporters and importers where the nature of the risk involved is such that private credit cannot be obtained. It makes loans to assist in financing the export of United States materials and equipment required for development projects in foreign countries. It also arranges, in favour of foreign purchasers, credits which are available on equal terms to all qualified U.S. exporters for financing the sale of export staples such as raw cotton.

The total amount of loans authorized by the bank from the time of its establishment in 1934 increased from approximately $3,500,000,000 at the end of 1946 to $4,100,000,000 at the end of 1947. Disbursements during 1947 were approximately $864,000,000 and repayments were approximately $87,000,000. As a consequence, the outstanding loans of the bank increased from $1,242,000,000 at the end of 1946 to $2,019,000,000 at the end of 1947.

## Eye, Diseases of.

The threshold of response of the human eye to electric currents was investigated to determine the effect of adaption to the dark and to light upon it and to determine better electrosensitive structures. Exposure of the dark adapted eye to light caused an immediate definite increase in threshold but this fell in a few minutes as the dazzling effect of the light was lost. Sudden withdrawal of illumination from a light-adapted eye was followed by a rapid fall of electric threshold and then a slow rise as dark adaption occurred. This slow rise in threshold during dark adaptation indicated that the photochemical system at the back of the eye in the nerve is the point of excitation. A light intensity of about 0.004 foot-candle, which is so low that it only stimulates the rods, reduces the electric threshold of the eye.

When a person is at complete sensory and mental rest, a rhythmic series of discharges is observed in the electroencephalogram. A light stimulus suppresses this rhythmic discharge after a latent period, and it was thought that this latent period —the blockage interval—includes the time taken by the nervous impulses initiated in the retina to reach the cerebral cortex. If the time elapsing between the incidence of light on the retina and the initiation of a discharge in the optic nerve were known, the time required for conduction through the optic pathways could be determined by subtraction from this blockage interval. The electroretinogram would probably provide this information, since the positive b-wave in this record was shown to be closely linked with the discharge in the optic nerve; the latent period of the b-wave—the time elapsing between the incidence of light on the retina and the beginning of the upward sweep of this wave—is thus a measure of the time consumed by the retinal events (photo-chemical reaction, etc.) leading to the optic nerve discharge—the retinal latency. Blockage interval minus retinal latency gives the conduction time in the optic pathways.

In a normal person the average blockage interval was 169 msec. (0.169 sec.) with a foveal light stimulus, a figure agreeing well with other values when allowance was made for the different conditions and strength of light stimuli. The average retinal latency, with a foveal stimulus, was 45 msec. The average conduction time in the normal person was thus 169 msec.−45 msec.=124 msec. The conduction time in an individual suffering from partial destruction of the optic nerve may be three times as variable as in the normal individual.

## Famines.

Food shortages caused by crop failures, droughts, floods, insect and plant disease were relatively few in 1947. Hunger and deaths in limited areas were held at a minimum by world-wide food distribution agencies, including U.N.R.R.A., the various occupation armies and the Red Cross, and by special government actions. Former famines were largely the result of difficulties of transportation and supply because of the lack of railroads and other transportation facilities. The quick emergency transport provided by the aeroplane now enabled supplies to be moved promptly in an emergency. More important was the realization by governments of their responsibility in anticipating and forestalling shortages. Much of this new attitude grew out of the world-wide activities of U.N.R.R.A. as well as the work of the Combined Food board, the International Emergency Food council and the rapidly expanding plans of the Food and Agriculture organization of the United Nations.

The actual number of deaths in 1947 from malnutrition was variously estimated at from 1,000,000 to 10,000,000. Mortality in India, China, southeastern Asia and Europe was believed to have doubled over the prewar average. Poverty rather than actual scarcity was often the primary factor. Many areas were supplied by U.N.R.R.A. in which a part of the needy population was unable to get an adequate share of the supplies.

World food production as a whole was recovering slowly, but with marked declines in some areas normally deficient in local production. The most severe shortage was in the rice cro the far east, where exportable supplies were below 1946. S diets were abnormally low even for this area, imports wer sential to prevent widespread starvation. Steady increase population added to the difficulty of maintaining even normal supplies. The emergency measures adopted by United States government in December and the prospect more might be done under the Marshall plan were believe many to be the principal safeguard for Europe, but the poli disturbances and the near revolutionary situations in India China made it probable that large numbers of people w find themselves without adequate supplies. (J. C. Ms

**Far Eastern Commission:** *see* Japan; Reparations.

**Farm Co-operatives:** *see* Farm Credit Administratio

## Farm Credit Administration.

Farmers and ranche the United States Puerto Rico and their business co-operatives obtained l totalling $1,625,615,000 in 1947 from the institutions and a ciations operating under the supervision of the Farm C administration. This compares with $1,320,077,000 in 1 These loans were used to finance farm and ranch operation improve and purchase farm land, and to finance farm co-op tives through which farmers market their products and ol farm supplies and farm business services.

In the year, the amount of credit needed in farm opera increased, largely because of higher costs, changes in type farming, the construction of needed buildings and the buyin farm equipment. In general, farming was readjusting to postwar period.

The Farm Credit administration operates through 12 dis offices, and local co-operative credit associations. Farmers tain production or operating credit from local production c associations and long-term farm mortgage credit through national farm loan associations. Farmers' business co-opera deal directly with the bank for co-operatives of the distri which the co-operative is located or, if a co-operative of l regional scope, with the Central Bank for Cooperatives.

The production credit associations operating in all agr tural counties in the United States and in Puerto Rico prov credit in 1947 for 251,000 farmers, totalling $757,611,000 c pared with $614,613,000 in 1946. Membership in the m than 500 local associations was 408,000 on Dec. 31, 1947, c pared with 383,000 on the same date in 1946. The credit tended by the production credit associations was used to seed, feed, fertilizers, material for repairs and the many o items needed in farm operations, including labour.

Long-term or farm mortgage credit was obtained thr about 1,000 national farm loan association offices operated operatively by farmers in the United States, and in Puerto directly from the Baltimore Federal Land bank. Farm Mort loans amounting to $149,370,000 were closed in the year. total included 30,609 federal land bank loans for $138,764 and 11,379 land bank commissioner loans for $10,606,000. authority to make commissioner loans, authorized in the e 1930s when emergency farm mortgage credit was needed pired on July 1, 1947. In the year, 49% of the land l loans and of the commissioner loans closed in the first months of the year were for purchasing farm land.

Farmers' co-operatives—marketing, purchasing and bus service associations—obtained $590,197,000 from the 13 b for co-operatives in the year compared with $458,151,000 previous year, reflecting a high level of business activity. financing included advances under the Commodity Credit poration program.

The 12 federal intermediate credit banks extended credit to production credit associations, privately capitalized credit institutions, including commercial banks, and to banks for co-operatives and farmers' co-operative associations in the total amount of $1,253,123,000 in 1947, which was 22.6% more than in the previous year.

During the year, the system made notable progress toward member-ownership, with the federal land banks becoming completely borrower-owned through repayment of the last of the capital and paid-in surplus subscribed by the government in the depression days of the early 1930s. Further progress toward member-ownership was made by the production credit associations and 31 of these associations were borrower-owned. Capital stock owned by members of all production credit associations went from 45.3% of the total on Dec. 31, 1946, to 57.2% at the close of 1947. Farmers' co-operatives owned $13,017,000 in stock in the 13 banks for co-operatives on Dec. 31, 1947, compared with $8,472,000 a year earlier.

At the end of 1947, borrowers—farmers and farmer co-operatives—had a net investment in capital stock in production credit associations, national farm loan associations, federal land banks and banks for co-operatives of $116,460,000. (I. W. D.)

## Farmers Home Administration.

The first farm-purchase loan under a new farm mortgage insurance program of this agency of the U.S. department of agriculture was made in Americus, Ga., in a public ceremony Oct. 3, 1947. A 49-year-old farmer who had never owned land of his own borrowed from a local bank 90% of the purchase price of a 150-ac. farm, and the Farmers Home administration insured the loan. He would have a maximum of 0 years to complete his payments, and his annual charge (interest and insurance) on the unpaid balance would be 3½%.

This event marked the opening to private lenders of the government's farm ownership program created by the Bankhead-ones Farm Tenant act of 1937. Both direct loans from federal funds and mortgage insurance covering private loans are available to tenants, sharecroppers, farm labourers, and to qualified war veterans, for the purchase, enlargement or development of family-type farms. Veterans have preference over other applicants for real estate credit or insurance.

In the ten years after direct lending was begun under the farm tenant act, more than 47,000 families thus had become farm owners. Of them 16% had paid their loans in full from their income, 30 years or more ahead of payment schedules.

The Farmers Home administration began operations Nov. 1, 946, as the successor of the Farm Security administration and of the emergency crop and feed loan division of the Farm Credit administration. In addition to making and insuring farm real estate loans, the agency extends operating credit for livestock, equipment, feed, seed, fertilizer and other essentials, and in the 7 western states lends for water facilities on family-type farms and ranches. It lends only to families who are not able to borrow elsewhere on reasonable terms, and furnishes individual, on-farm guidance to the borrowers in sound management and methods.

Demand for these services continued heavy in 1947, both from veterans getting established in agriculture and from other farm families. By Nov. 1, 3,260 direct farm ownership loans amounting to $25,522,664, and 158,432 operating loans amounting to $79,859,764 were made. In the water facilities program, 674 families and 10 associations borrowed $956,130. About 40% of all the money loaned during the ten months went to veterans.

The cumulative record of assistance to returned servicemen by this agency and by the Farm Security administration shows that by Nov. 1, 1947, more than 58,000 veterans had borrowed $75,800,000 for farm operating needs, while 5,293 had borrowed about $41,000,000 to buy, enlarge or develop farms. (D. B. L.)

## Fascism.

In 1947 a slight revival of fascist forces was noted in Italy. While *Il Fronto del' Uòmo Qualunque* (The Front of the Common Man) movement under the leadership of Guglielmo Giannini which had rallied fascist sentiment in 1946 disintegrated, new men and movements came to the fore, like Emilio Patrissi, who published a paper *L'Ora d'Italia,* and the *Movimento Socialle Italiano,* a movement which stressed above all the proletarian and socialist revolutionary features inherent in fascism and published a paper called *La Rivolta Ideale.* The fascist groups in Italy were, however, so far too loosely organized and disunited without any central leadership to present a serious problem. They fed, like the communists, on the general dissatisfaction prevailing in Italy. On Oct. 28 Giannini resigned the presidency of the *Uòmo Qualunque* because his flirtations with communism had brought him into conflict with the majority of his group led by Enzo Selvaggi. The 25th anniversary of the march on Rome that put fascism into power passed without any major demonstrations. Even less organized, though undoubtedly persistent, was the surviving fascist sentiment in Germany, which remembered the "glorious days" of the Hitler regime when Germany aspired to world domination.

An outspoken fascist regime was in power in Spain under Gen. Francisco Franco. The United Nations maintained its strictly negative attitude to this regime, the representatives of which did not participate in any of the international activities and functions nor were they invited to participation in the Marshall plan. On July 6 the Spanish government held a referendum in which the men and women of Spain voted on Gen. Franco's regime. As in all other totalitarian systems, the vote resulted in an almost unanimous approval of the regime.

There was also some revival of fascist activities under Sir Oswald Mosley in Britain. The anti-Semitism which his followers propagated fed especially on the assassination of British soldiers by Zionist terrorists in Palestine. On Sept. 18 the London Trades council asked the British home secretary for legislation making all fascist organizations and activity illegal and for Mosley's arrest. The home secretary replied that expression of opinion in Britain was free but that it must not amount to sedition. The preaching of racial and religious hatreds could be sedition, and in that case appropriate action would be taken. He believed that the existing powers were sufficient. The profascist organizations were most carefully watched. Should future developments show any defect in the law, the government would consider amendments.

The regime of President Juan Perón showed many elements of totalitarian regimes. President Perón on July 6 pledged his co-operation with other peace loving nations to aid the world toward a secure peace and asked for "the eradication of capitalistic and totalitarian extremism, whether of the right or of the left." He pleaded for a world in which "crude exploitation, destruction, hatred and social injustice shall be forever banished." This speech was broadcast throughout the world in many languages and was made a compulsory discussion subject

in Argentine schools. President Perón was especially popular with the workers for his Declaration of the Rights of the Worker and his many measures of social security and for raising wages. Colonialism for Argentina was being ended by the buying out of the foreign owners of public utilities. In this process of furthering economic democracy, political democracy suffered in Argentina. Outward manifestations resembled those of other totalitarian countries. The rhythmic shouts of "Tito!" in Yugoslavia were matched by "Perón!" in Argentina, and huge portraits of the president became as much used as similar portraits in the eastern European states. Attempts were also made to subject the universities to governmental control, but greater freedom of protest and counteraction remained than in totalitarian countries. ## Fashion and Dress.

In 1947 fashion made headlines. Never, since the short-skirted era of the '20s, had there been so much discussion of women's dress. In the spring openings in Paris, a new couturier, Christian Dior, opened his dressmaking house and his designs sent an electric shock into the fashion picture. They crystallized and dramatized a trend that had started before World War II, but was interrupted by the exigencies of wartime conservation. Instead of the square-shouldered, flat-hipped, straight-skirted line that had been in fashion for a decade, the new silhouette called for natural, sloping shoulders, tiny waists, rounded hips, often padded to increase the natural curve. Day skirts were longer; evening skirts shorter. Suit skirts hit new lows—averaging about 12 in. from the floor. Many of the new evening dresses were cut ankle length or shorter. In U.S. summer sports fashions the silhouette was interpreted in full-skirted cotton dresses, made in various pale shades. But the new fashion did not become a general fashion until the autumn. In September the "New Look," as it was dubbed by the press, became front-page news. Autumn suits had fitted jackets, shoulders unpadded or lightly padded. Some of the jackets had peplums padded with buckram to emphasize the little waist and the rounded hip. Some skirts were cut straight, but the newest had fullness, created by unpressed pleats, sunburst bias pleats or by a circular cut, which sent the skirt spinning when in motion. The style was hotly debated. Advocates of the "New Look" compared the new suits with the Currier and Ives skating girls; opponents thought the shoulders droopy and mourned the disappearance of legs. But the "New Look" won out. Femininity had crept into fashion. Every natural curve in the woman's figure was accented. The shorter evening dress was built on the same lines. But whereas in past years, the informal dinner dress was almost invariably black, now black had a rival. Coloured slipper satins were widely used—pale blue, cat's-eye green, burgundy, cocoa, steel gray. Instead of black taffeta there was a wave of brown taffeta. Meanwhile, debutantes continued to wear full-length dresses for dancing—huge-skirted ball gowns in the romantic tradition, often strapless, and worn with long court gloves pulled well above the elbow and glittering rhinestone tiaras. In Europe fabric industries began to revive. French and Italian silks, and Swiss silks and embroidered organdies, again flowed to the United States. England, in a drive to step up exports for foreign exchange, contributed fine woollens.

Hats took many turns, but in general continued to be small, complementary to the silhouette. In the autumn these hats began to tip impudently over one ear; pill boxes and berets in bright red velvet, cocked well to one side, became a popular fashion. The desire for a tiny waist begot a new kind of undergarment—girdles specially shaped to accent the womanly curves, waist bands and boned bodice-brassieres to flatten the midriff and cinch in the waist.

The flat-heeled, ballet-type shoe did not disappear; but the season saw more high-heeled slippers, with closed toes and ankle straps built up and up to decorate the leg, now revealed by shorter evening dresses. Cultured pearls were sold in great numbers and once again women wore long chains of pearl beads, a revival of a fashion of the '20s. Dog collars and necklaces made of huge solitaire rhinestones were worn with evening dresses.

From the French Riviera came news of shocking bathing suits, reduced to the bare minima—a tiny brassiere and a diaper drape tied on either hip. But in America, bathing girls went back to an old beach fashion—the one-piece maillot made in white or in brilliant colours and dazzling California prints.

In the year of 1947, when a large part of the world was strictly rationed or wearing old clothes mended for the last time, it is curious to note that fashion did a loop-the-loop and decided to escape from reality. A *fin de siècle* elegance, extraordinary luxury and a determined romanticism characterized the year's creations, even those that came from the designers in Europe. (*See* also FURS.) (C. SN.)

## Federal Bureau of Investigation.

During the 1947 fiscal year ending June 30, there was a sharp increase in FBI activities aimed at protecting the internal security of the United States and safeguarding the rights and civil liberties of its citizens. The Atomic Energy act of 1946 placed upon the FBI responsibility for determining the character, associations and loyalty of employees of the Atomic Energy commission and of other persons having access to restricted atomic energy data.

Significantly increased activity in several major criminal categories was apparent during 1947. FBI investigations resulted in 11,812 convictions representing 96.8% of all cases brought to trial. In FBI cases, sentences totalling 27,210 years, 8 months, were meted out. Fines, savings, recoveries and claims adjusted in favour of the government amounted to $63,638,153.

Results of investigations in several of the specific categories during the fiscal year were as follows:

**Bank Robbery.**—There were 105 convictions for bank robberies, burglaries and larcenies in violation of the Federal Bank Robbery act resulting in sentences totalling 1,081 years, 5 months. Fines and recoveries amounted to $131,407 and 33 fugitives were located. During the year 96 bank robberies, 79 bank burglaries and 26 bank larcenies within FBI jurisdiction were reported.

**Crime on the High Seas.**—Investigating crimes committed on the high seas within the admiralty and maritime jurisdiction of the United States and outside the jurisdiction of a particular state, the FBI secured 440 convictions. Sentences totalled 320 years, 6 months; fines, savings and recoveries aggregated $10,344. Eighteen fugitives were located.

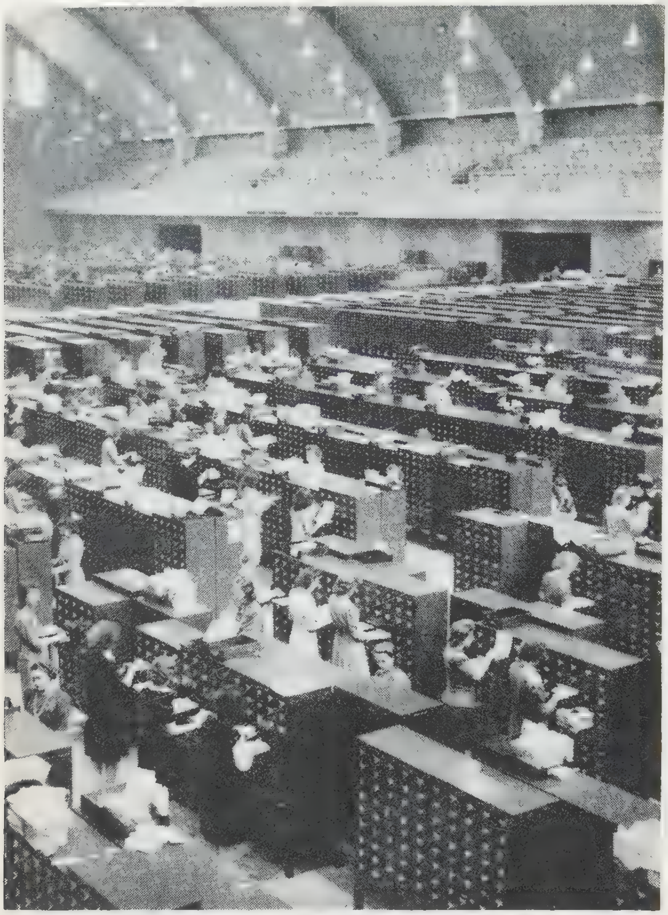
**Extortion.**—Sentences totalling 242 years, 2 months, were given and fines amounting to $1,200 were assessed for violations of the Federal Extortion statute. Twenty-one fugitives were apprehended.

**Federal Reserve Act.**—More than $4,250,000 was involved in the 398 cases of possible embezzlement reported by banks covered by the act. There were 114 convictions resulting in sentences totalling 369 years, 11 months. Fines of $86,301 were levied; savings and recoveries amounted to $553,525.

**Fraud against the Government.**—Cases in this category included primarily frauds perpetrated in connection with the war effort and those arising from the disposal of war surpluses. The number of investigations of the latter type had steadily increased since passage of the Surplus Property act in 1944. Prosecutions during the 1947 fiscal year resulted in 333 convictions with sentences of 370 years, 8 months. Fines, savings and recoveries amounted to $2,862,611, and 9 fugitives were located.

**Kidnapping.**—All 26 kidnappings reported during the year were solved. In the previous fiscal year there had been only 13 recorded. Cases brought to conclusion during the 1947 fiscal year resulted in 40 convictions with sentences of 386 years and 2 life terms.

**Motor Vehicle Theft.**—Recoveries of stolen motor vehicles transported interstate in connection with National Motor Vehicle Theft act investiga-



IDENTIFICATION division of the Federal Bureau of Investigation, where more than 104,000,000 fingerprints were on file in June 1947

tions far exceeded those for any prior year. There were 12,324 stolen vehicles valued at $11,336,642 recovered. Sentences totalling 12,991 years, 3 months, and fines amounting to $29,735 were assessed as a result of 4,668 convictions in this category. During the prior year only 3,614 had been convicted. There were 698 fugitives located in the 1947 fiscal period.

**Renegotiation Act Claims.**—Renegotiation act civil cases arose from suits by contractors for amounts refunded by them under protest as excessive profits when their war contracts were renegotiated by a War Contracts Price Adjustment board. Such claims investigated by the FBI during the 1947 fiscal year resulted in adjustments in favour of the government amounting to $38,876,100.

**Selective Service.**—During the 1947 fiscal year, convictions totalled 1,216, with sentences aggregating 1,861 years, 4 months. Fines amounted to $108,878, and 1,065 fugitives were located.

**Theft from Interstate Shipments.**—The high level of investigations and convictions experienced in the previous fiscal year was exceeded in 1947; 1,210 convictions resulted in sentences of 2,532 years, 6 months, and a total of $672,153 in fines, savings and recoveries. There were 108 fugitives located.

**Theft of Government Property.**—Prosecutions for violations of the several federal statutes covering theft, embezzlement or illegal possession of government property resulted in 1,263 convictions and sentences of 2,280 years, 3 months. Fines totalled $145,178 and recoveries $396,067; 72 fugitives were located.

**Treason.**—One conviction for treason was recorded. In July 1947 the defendant was sentenced to life imprisonment and a $10,000 fine was assessed.

**White Slavery.**—The 209 convictions constituted a marked increase over the 169 recorded in the preceding fiscal period. Sentences imposed totalled 614 years, 6 months, and fines aggregated $33,400. Ninety-five fugitives were located.

**FBI Laboratory.**—Scientific examinations in the FBI laboratory totalled 73,753. Specimens of evidence examined numbered 63,336, of which 46,293 were submitted in connection with FBI cases and 1,893 were received from other federal agencies. Nonfederal agencies, principally local and state police who received this service free of charge, submitted 15,150 specimens.

**Identification Division.**—On June 30, 1947, there were 104,696,999 fingerprint cards in the files of the Identification division, 3,329,937 of which were received during the 1947 fiscal period. Of the prints in file, 16,786,862 represented the arrest records of criminals and suspects.

**Police Training.**—At the request of local authorities, the FBI conducted and participated in 1,785 general police-training schools attended by approximately 89,250 officers. Specialized training was afforded to 8,850 other officers attending 157 strategically located schools. Twelve statewide administrative schools were attended by approximately 1,500 police executives and officials. During the year 449 law enforcement conferences sponsored by the FBI were attended by more than 31,000 officers. also CHILD WELFARE; CRIME; JUVENILE DELINQUENCY; KIDNAPP POLICE; SECRET SERVICE, U.S.) (J. E. H

## Federal Communications Commission.

Radio velopm in 1947 had particular international as well as domestic nificance.

Of major importance were agreements reached by 78 nati represented at the International Telecommunications conferer held in the United States. In the first assembly of its kind a the beginning of World War II, these sessions rewrote Madrid Convention of 1932 and the Cairo Regulations of 19 The results were expected to ensure more economical and u form use of frequencies, with due recognition of electronic other developments.

The demand for domestic radio facilities continued unaba Besides broadcast and other familiar services, radio was be used to supplement, even replace, telephone and telegraph w lines. The public could converse to and from moving land, and air vehicles. Radar and other wartime devices, adapted peacetime use, were proving invaluable to marine and aviat navigation. It had even become necessary to provide frequ cies for medical diathermy and industrial heating equipme whose emissions would otherwise interfere with communicat services.

Licences and other authorizations outstanding with the F eral Communications commission approximated 575,000. T figure included 120,000 radio stations in 40 categories, incl ing 4,000 broadcast, 40,000 nonbroadcast and 80,000 amat stations. In addition, there were 340,000 commercial ra operators, 85,000 amateur operators and 35,000 special aircr authorizations.

In the broadcast field, the number of licensed standard (a plitude modulation or AM) stations approximated 1,500, w about one-third that number additionally under constructi The situation in AM caused the commission to make an e nomic study of standard broadcasting, which was releas Nov. 4.

Frequency modulation registered its greatest advance, w more than a thousand FM stations licensed or authorized, which number more than 300 were on the air. Service to mo than 500 communities throughout 47 states was in prospe There was a spurt in FM receiver production, and devices we available to enable AM sets to receive FM broadcast.

Authorized television outlets exceeded 70, with service pr jected for 40 cities in 25 states. The commission, after exte sive public hearings, concluded that further experimentati was necessary before colour television could be commercialize More than 60 stations were engaged in this and other televisi experimentation.

Facsimile operation was still experimental pending agreeme by broadcasters and manufacturers on standards of equipme and processes.

The nonbroadcast services grew in types of services as we as in number of stations. Most of these were devoted to t protection of life and property. The largest group comprise the amateurs. Next in numerical order came aeronautical, wi 16,000 stations, followed by 11,000 ship and other marine st tions; 3,500 police stations; 3,000 experimental stations; 2,0 public utility stations; 650 forestry stations; 340 provision stations; 130 special emergency stations; more than 100 st tions each for the railroad and geological services; also statior for fire departments, relay press, motion picture, state gua and various other purposes.

Authorizations for some of these services covered the use many mobile units. For example, 25,000 radio-equipped vehicle were testing two-way radiotelephone service. Short-distance communication for industries and citizens was contemplated.

Radio was also being utilized to connect isolated places with the telephone system. In some rural areas telephone messages were "hitch-hiked" over local electric power lines. Coaxial cable and microwave relay were supplementing wire systems between certain large cities, besides holding promise for FM and television network operation.

Radiotelephone contact was available with 63 countries, and 90 foreign points had direct radiotelegraph service. (*See* also RADIO.) (P. A. W.)

## Federal Council of the Churches of Christ in America.

In 1947 two new areas of service were entered by the council, marked by the creation of the department of the church and economic life and the department of pastoral services. A national study conference on the role of the church in economic affairs was held in Pittsburgh, Pa., in February, attended by 300 delegated representatives drawn from the ranks of management, labour and agriculture as well as from the clergy. The department of pastoral services inaugurated a two years' survey and study of the ministry of the church to older people.

Overseas reconstruction and relief constituted a major interest, carried on through Church World Service, Inc. Food, clothing and other supplies were raised by the co-operating churches and distributed in Europe and Asia by the churches to the value of approximately $1,000,000 per month.

In the educational field, strong emphasis was placed on work in behalf of world order. A statement on "Soviet-American Relations" received wide attention. The Commission on a Just and Durable Peace, headed by John Foster Dulles (*q.v.*), was merged into a permanent department of international justice and goodwill.

The problems of the rural community received attention in a National Convocation of the Rural Church held in Rochester, N.Y., in November. Local conferences on problems of family life were held widely. Interracial "clinics" were a feature of the council's social work program, designed to bring about co-operation between white and Negro groups in community life.

At least one religious program was broadcast over a national network throughout the year. The department of evangelism gave leadership to a series of Christian missions in college and university centres.

An office was maintained in Washington, D.C., for the purposes of providing the churches with fortnightly information about governmental and legislative matters of interest to religious workers.

A new office was opened in Atlanta, Ga., concentrating its efforts on assisting southern communities to form councils of churches for co-operative service.

Co-operating with the Federal council were 600 local and state councils of churches in all parts of the country. The council was also closely, though unofficially, linked with the World Council of Churches, in process of formation. The Federal council was host to several distinguished church leaders from other lands, including Pastor Martin Niemoeller and Bishop Otto Dibelius of Germany.

In Washington, D.C., a building was acquired, through the work of the General Commission on Chaplains, as a memorial to the Protestant chaplains in the army and navy who lost their lives in World War II and also as a permanent office for the activities of the churches in behalf of the chaplains.

The council in 1947 was made up of 25 national denominations—22 from the Protestant, 3 from the Eastern Orthodox family. Their combined membership was 28,000,000.

*Information Service* was published weekly and the *Federal Council Bulletin* monthly.

Headquarters were at 297 Fourth avenue, New York city, N.Y. The officers during the year were: president, Charles P. Taft; vice-president, Bishop John S. Stamm; treasurer, Harper Sibley; general secretary, Rev. Samuel McCrea Cavert. (S. McC. C.)

## Federal Deposit Insurance Corporation.

During the calendar year 1947, as during the two preceding years, no bank depositor in the United States experienced a loss as the result of banking difficulties. No insured bank had been placed in receivership from May 1944. During the calendar year five banks received an advance from the Federal Deposit Insurance corporation which facilitated the merger of each bank with an insured solvent bank.

During the year the corporation began retiring its original capital stock under provisions of public law 363 from the surplus of the corporation in excess of $1,000,000,000. On Sept. 9, 1947, the original subscription of the federal reserve banks, amounting to $139,000,000, was retired in full. By the end of the year nearly $50,000,000 of the $150,000,000 of stock held by the U.S. treasury had been repaid.

The contingent liabilities of the corporation as an insurer of deposits continued to increase during the year 1947 as total deposits in the 13,600 insured banks increased moderately. Both demand and time deposits of individuals and businesses expanded although at a less rapid rate than in the previous year. There was a further decline in deposits of the U.S. government, which by the end of the year had been reduced to approximately their prewar total.

During 1947 the corporation granted charters to 207 new federal credit unions, cancelled 159 charters and examined the majority of the 3,900 credit unions in operation.

The chairman of the board of directors of the Federal Deposit Insurance corporation was Maple T. Harl, and Preston Delano, comptroller of the currency, was vice-chairman. On April 9, 1947, H. E. Cook became a member of the board, succeeding Phillips Lee Goldsborough, who died on Oct. 22, 1946. (*See* also BANKING.) (M. T. H.)

## Federal Mediation and Conciliation Service.

The Labor Management Relations act, 1947, created an independent agency known as the Federal Mediation and Conciliation service, and transferred to the new agency all mediation and conciliation functions previously delegated to the secretary of labour or the U.S. conciliation service.

The act stresses the desirability of labour and management and the states and communities in which they operate assuming increased responsibility in the maintenance of industrial peace.

For the first time, in the industrial field outside the application of the Railway Labor act, federal legislation had defined the jurisdiction and the scope of operations of a conciliation and mediation service.

The new agency was to offer its services in any labour dispute in industries affecting commerce, either upon its own motion or upon the request of one or more of the parties to a dispute, provided: (1) it would not enter into any dispute affecting an establishment engaged wholly in intrastate commerce; (2) the service is directed to avoid attempting to mediate disputes which would have only a minor effect on interstate commerce if state or other conciliation services are available to the parties.

The service, under the act, is directed to make its facilities available in the settlement of grievance disputes only as a last resort and in exceptional cases. The service was to continue, however, to assist the parties to agree on voluntary procedures to settle grievance and other disputes.

The act also provides that the voluntary methods of resolving disputes, without resort to strikes, lockouts, or other coercion, to be suggested by the service should include agreed upon submission of the employer's last offer to a secret ballot of employees in the bargaining unit affected.

Although the parties to labour disputes are not obliged by law to accept suggestions of the service, for the first time in federal legislation, the act requires them to participate fully and promptly in such meetings as may be called by the service for the purpose of aiding in the settlement of disputes.

The service was to continue to suggest the names of arbitrators in labour disputes at the request of the parties. The service was also to continue to maintain a staff of qualified technicians who would be available to commissioners of the service for rendition of technical advice in the settlement of disputes.

The service was to handle its work through seven regional offices located in Boston, New York, Cleveland, Atlanta, Kansas City, Chicago and San Francisco. Assignments of commissioners to dispute cases were to be made by the regional directors, who would co-ordinate their operations with state and other local mediation agencies. (C. S. C.)

## Federal Power Commission.

Natural gas expansion was the outstanding public utility development of 1947. New interstate facilities proposed aggregated $666,700,000 as compared with $480,000,000 in fiscal 1946 and $164,100,000 in 1945. During the fiscal year ending June 30, 1947, the Federal Power commission issued 132 certificates authorizing new facilities valued at $271,500,000. This included the new Michigan-Wisconsin pipe line (total cost estimated at $130,000,000) to transport natural gas from Texas 1,500 mi. to certain Wisconsin and Michigan markets. Natural gas extension as far east as Philadelphia, Pa., was assured by purchase of the "Big Inch" and "Little Big Inch" pipe lines, built and operated during World War II for oil and gasoline transportation by the Texas Eastern Transmission corporation for $143,127,000, and their conversion to gas transportation. Hearings on the application of Trans-Continental Natural Gas company to construct a 1,300-mi. pipe line from south Texas via Atlanta, Ga., Washington, D.C., and Baltimore, Md., to the eastern seaboard, to supply natural gas to New York city were in progress. Tennessee Gas Transmission company, which during the war built and operated the 1,265-mi. pipe line from the Gulf coast of Texas to West Virginia, planned to build an extension via Albany, N.Y., to Boston, Mass., to supply natural gas to New England. Largest of all the projects completed in 1947 was the "Biggest Inch" pipe line, originating in the west Texas Permian basin, laid 1,300 mi. to California, constructed jointly by El Paso Natural Gas company and the Southern California Gas company and Southern Counties Gas company. Interstate Natural Gas completed a new line to Denver, Colo., while Panhandle Eastern Pipe Line company, Natural Gas Company of America, Cities Service Gas company, Northern Natural Gas company and Mississippi River Fuel corporation were greatly enlarging their facilities to increase the gas supplies of Detroit, Chicago, Kansas City, Minneapolis, St. Louis and other areas in Illinois, Indiana, Michigan, Iowa, Kansas and Missouri. Southern systems planned large expansions with new pipe li extending as far as Tennessee, Georgia and Florida. In months the commission authorized gas projects to serve cities and many smaller communities in 20 states.

Demand far exceeded supply in many areas, causing shorta that required severe restrictions and allocations of avail supply.

Power production reached an all-time high, rising to a t of more than 300,000,000,000 kw.hr. Utility production of e tric energy for public use in the 12 months ending Nov. the FPC reported, was 253,060,099,000 kw.hr., an increase 14.8% over the 1946 period; and industrial output was 50,6 858,000 kw.hr., making a total production of 303,671,957, kw.hr. Generating capacity was taxed to the utmost, rese capacity in many areas fell to 5%, power supply was "tight" some areas but few curtailments were reported and the in try as a whole met successfully the highest peak loads e imposed. Public utility generating capacity at the end of year reached approximately 52,000,000 kw. On Nov. 30 FPC reported that installed capacity of generating plants utility service totalled 51,823,922 kw., and industrial gene ing capacity, including railroad and railway plants, was 12,8 465 kw., making the nation's total generating capacity 64,6 387 kw.

To aid in augmenting power supply where shortages w threatened, the commission announced that it would autho emergency interconnections between electric systems where s plus power could be supplied or interchanged without subject participating utilities to commission jurisdiction; and such in connections were authorized in a number of areas, includ New England, Texas and the Pacific northwest.

Spurred by the growth in power requirements, the commiss received 111 new applications for licences authorizing wa power developments on streams under jurisdiction of congr or upon federally owned land. During the year 105 applicati were granted, making a total of 662 outstanding federal licen covering plants with installed capacity of 5,634,000 horsepo having a total cost of about $900,000,000. From the time c gress first assigned the commission responsibility for determ ing the power possibilities of river basins, 749 investigations been made involving rivers in 44 states, indicating that m than 80,000,000 kw. of additional generating capacity were tentially available at water-power sites which were capable economic development when power market conditions wo warrant. (J. W. Je.

**Federal Public Housing Authority:** *see* Housing.

## Federal Reserve System.

Monetary expansion and flationary pressures cont ued to be the primary problems confronting the federal rese system during 1947.

Late in the year the board of governors recommended congress that consideration be given to legislation which wo require all commercial banks, member and nonmember, to h as a temporary measure some percentage of their demand a time deposits, in a special reserve in the form of treasury b certificates and notes, or cash, cash items, interbank balanc or balances with federal reserve banks. It was proposed t the special reserve requirement be limited by law to a maxim of 25% on demand and 10% on time deposits. The propo was presented as an alternative to higher interest rates in stricting further bank credit expansion.

Major factors influencing the reserve position of mem banks during 1947 included the gold inflow, retirement of f eral reserve holdings of government securities from the treas surplus, and federal reserve purchases of government securities in order to maintain an orderly market. During most of the year excess reserves of all member banks ranged between $600,000,000 and $1,100,000,000 with a sharp increase to $1,590,000,000 on Dec. 30, resulting from large federal reserve support purchases in the last week of the year. The gold stock increased during 1947 by $2,230,000,000, permitting a lower level of total reserve bank credit during 1947 than in 1946. Money in circulation showed a slight decline. Retirement of federal reserve holdings of short-term securities by the treasury from a cash surplus had the effect of lowering member bank reserve balances, but this was offset by open market purchases of government securities by the federal reserve system as banks made adjustments in their reserve position.

The decline in government bond prices which began early in the fall was met during November and December by large support purchases of government bonds by both the federal reserve and the treasury. Treasury purchases for investment accounts in the two months amounted to $917,000,000 and federal reserve purchases of bonds maturing over 5 years amounted to $1,845,000,000 between Nov. 12 and Dec. 30. The effect of federal reserve support purchases on reserves was partially offset by retirement of federal reserve holdings of bills and certificates by the treasury and by net market sales of bills from the federal reserve portfolio. On Dec. 24 there was a sudden reduction in support prices at which federal reserve purchases of government bonds were made from premium prices to prices slightly above par for medium- and longer-term fully taxable treasury bonds.

Vigorous purchases in the market were made by the reserve system at the new support prices.

Important actions took place during the year in connection with federal reserve holdings of treasury bills. Effective May 1, the treasury adopted the procedure of accepting exchange as well as cash tenders in payment for new bills. The purpose of the changed procedure was to facilitate weekly refunding operations in bills, the reserve banks having held about $15,000,000,000 out of a total of $17,000,000,000 outstanding of treasury bills.

In July the federal open market committee of the reserve system directed the reserve banks to terminate the policy, which had been in effect from 1942, of buying all treasury bills offered to them at a fixed rate of $\frac{3}{8}$ of 1% per annum and to terminate the repurchase option privilege on treasury bills. This action was designed to restore the bill as a market instrument and give added flexibility to the treasury's debt management program.

The board of governors of the federal reserve system levied an interest charge on the federal reserve banks against the amount of federal reserve notes outstanding less the amount of gold certificates held as collateral security. The purpose of this interest charge was to pay into the treasury about 90% of the net earnings of the reserve banks, after providing for necessary expenses and statutory dividends. Payments to the treasury during 1947 were $75,000,000.

Instalment credit controls exercised by the federal reserve system ceased to be operative after Nov. 1, 1947, in accordance with a resolution of congress approved on Aug. 8, 1947. Instalment credit control had been in effect, under executive order of the president, from late in 1941. Later in the year, however, congress gave consideration to legislation again authorizing the board to regulate consumer instalment credit. The president had listed such legislation in his anti-inflation program. (*See* also BANKING; CONSUMER CREDIT.) (J. K. L.)

**Federal Savings and Loan Insurance Corporation:** *see* HOUSING.

**Federal Security Agency.** Significant developments during the year 1947 in the work of the Federal Security agency were expansion of its activities due to congressional approval of Reorganization plan No. 2 of 1946, progress made in the development of new programs established by congress, and significant legislative amendments affecting existing programs.

Reorganization plan No. 2 of 1946, which went into effect on July 16, 1946, abolished the three-member Social Security board, and transferred its functions and responsibilities to the Federal Security administrator. Administration of the social security program was delegated to a newly created officer, the commissioner for social security.

Under the plan, the children's bureau, exclusive of its industrial division, was transferred to the agency from the department of labour. The inclusion of this bureau's programs—research in problems of child life, maternal and child-health services, services for crippled children and child-welfare services—in the agency did much to simplify the co-ordination of these functions with the related health, welfare and educational activities of the other bureaus of the agency. It greatly facilitated steps being taken in the interest of improving federal-state relations.

Another transfer provided under the plan was that of the division of vital statistics from the bureau of the census. As the state statistics units were partially financed by the agency, the change simplified the administrative process in that the state vital statistics units thereafter dealt with one agency of the federal government. More important from a technical point of view is the progress which was made in correlating vital statistics with the public health services' morbidity statistics.

Progress was made in developing the new programs which were provided for in the closing days of the 2nd session, 79th congress. The Hospital Survey and Construction act of Aug. 13, 1946, provided the basis for securing basic information on U.S. requirements for additional hospital facilities, through grants of federal funds to the states for surveys of their needs and resources. With a growing body of information regarding need for facilities, it was anticipated that construction programs would soon be under way to expand the facilities badly needed for the care of the sick and injured.

Congress also recognized the need for greater federal support to research in mental health by passage of the National Mental Health act of July 3, 1946. Funds were provided for expanding mental health activities in the states. Congress also immediately provided funds for the preparation of plans and the acquisition of a site for the construction of research laboratories and a clinical research hospital.

The 1946 amendments to the Social Security act, approved Aug. 10, 1946, provided benefits to survivors of deceased World War II veterans and reconversion benefits to wartime seamen. They also enabled the states to provide unemployment compensation to maritime workers, and authorized increased grants to states for programs administered by the children's bureau and the bureau of public assistance. Increases in public welfare and other grants tended to offset increased living costs.

The states made strenuous efforts to improve their public school systems and in some cases made favourable adjustment in the wages of teachers. There were, however, many sections of the United States where schools remained closed because of the unavailability of teachers. In addition, all too frequently school facilities were either inadequate, obsolete or entirely lacking. The enrolment of veterans at schools and colleges continued to rise, with the result that the country's educational facilities were strained to the limit. Although congress provided for increased grants to states for vocational education, there remained much to be done to equalize educational opportunity for children throughout the nation.

The very substantial increases which congress provided for the various grant programs were expected to do much to offset cost of living increases to assistance beneficiaries, assist the states in improving child health and welfare, and increase the rehabilitation of injured persons into economic productivity. (*See* also PUBLIC HEALTH SERVICES.)

(O. R. E.)

## Federal Trade Commission.

The broad objective of the Federal Trade commission in enforcing the laws committed to its jurisdiction by congress is protection of both the public and industry against monopolistic, unfair and other harmful business practices.

The commission administers the Federal Trade Commission act, portions of the Clayton Antitrust act, the Wool Products Labeling act and the Webb-Pomerene act, and makes general investigations of economic conditions at the request of the president, the congress or upon its own motion. On July 5, 1947, it also began administering those sections of a new statute, the Lanham Trade-Mark act, which authorize it to apply to the commissioner of patents for cancellation of the registration of trade-marks which are deceptive, immoral or scandalous, or which have been obtained fraudulently or are in violation of other stated provisions of the act.

The commission in 1947 issued 48 complaints alleging violation of laws it administers and entered 55 orders to cease and desist from proved violations. These adversary proceedings were directed to preventing price-fixing agreements and restraint-of-trade combinations, illegal discriminations in price and otherwise, misbranding of wool products, and other unfair methods of competition and deceptive acts or practices in interstate commerce; and to safeguarding consumers by prohibiting false advertisements of food, drugs, cosmetics and curative devices, particularly those which might be injurious.

Where circumstances permit, industry members are given opportunity to eliminate certain unfair competitive methods or deceptive practices through voluntary stipulations to cease and desist or through establishment of trade practice rules. Under this co-operative procedure, the commission accepted 97 stipulations and promulgated trade practice rules for the household fabric dye, vertical turbine pump, doll and stuffed toy, and watch industries. Trade practice conference proceedings progressed for the establishment of rules for the following industries: cosmetic and toilet preparations, wholesale confectionery, rayon and silk converting, hand knitting yarn, office machine marketing, baby chick, watchcase, and rendering (inedible tallow and greases).

Commission reports to congress covered investigations of the trend of corporate mergers and acquisitions, the degree of concentration in the copper industry and international copper cartels, growth and concentration in the flour-milling industry, the sulphur industry and international cartels, and economic effects of grain exchange actions affecting futures trading during the first six months of 1946.

The commission completed reports presenting aggregate estimates of the financial condition and operating results of all U.S. manufacturing corporations for the first and second quarters of 1947. Prepared with the co-operation of the Securities and Exchange commission, the reports were based upon a sample of 5,468 corporations in 22 major industry groups and disclosed the relationship between investments, sales, costs and profits. Another report contained cost and profit data for manufacturing corporations during the war years, 1941–45.

There were 52 export trade associations, organized under the Webb-Pomerene law, registered with the commission. A
investigations, the commission recommended that two asso
tions engaged in the export of sulphur and screws, respectiv
readjust their business to conform to law. Pending inqui
involved associations exporting plywood, electrical appara
condensed milk products, and pipe fittings and valves.

Pointing to the postwar increase in corporate mergers,
commission recommended that congress amend the Clayton
"to prevent acquisition of physical assets as well as corpo
stock where the effect may be substantially to lessen comp
tion in interstate commerce." It also recommended an ame
ment to give Clayton act orders to cease and desist the sa
status as to finality and enforcement penalties as similar or
under the Federal Trade Commission act. (R. E. F.

## Federal Works Agency.

The Federal Works agen
which contains three consti
ent units, the Public Buildings administration, the Public Ro
administration and the Bureau of Community Facilities, is
sponsible for the operation of a great many programs of pu
construction.

Public law 697, 79th congress, approved in Aug. 1946,
thorizes the Federal Works administrator to provide nonhous
surplus war structures and facilities to public and private n
profit educational institutions requiring them in order to fur
training or education to veterans under the G.I. Bill of Rig
The facilities to be provided may include classrooms, labo
tories, administrative buildings, infirmaries, libraries, and st
age and other facilities and equipment. This program, known
the Veterans' Educational Facilities program, is administered
the Bureau of Community Facilities. Of the $100,000,000
thorized to carry out the provisions of the act, $75,000,000
made available in the Third Deficiency Appropriation act, 19
plus unexpended balances from Lanham act funds.

As of Oct. 31, 1947, applications had been approved invo
ing outlays of more than $76,000,000. In addition, the bure
had transferred to the colleges surplus equipment having
estimated fair value of $46,000,000. An additional appropr
tion of $3,000,000 was made to be used exclusively for the d
assembling and transportation of structures to sites of colle
that agreed to re-erect the buildings at their own expense. T
federal funds provided were limited to $3 per square foot and
allocations could be made after Sept. 30, 1947. As of Oct.
1947, projects had been approved involving $2,825,000.

The Advance Planning program had been carried on un
title V of the War Mobilization and Reconversion act of 194
and administered by the Bureau of Community Facilities. Co
gress had appropriated $65,000,000 to be advanced to state a
local governments for the plan preparation of their public wor
exclusive of housing. The advances are repaid without inte
est when construction begins on the public works so planne
As of June 30, 1947, applications in the amount of more th
$61,000,000 had been approved for projects with an estimat
total cost of $2,300,000,000. After that date there had be
no authority for the making of new advances and the bure
was concentrating on speeding up the completion of plans.

Public law 233, 80th congress, approved July 25, 1947, pr
vides for the Disaster Surplus Property program. The a
authorizes the Federal Works administrator, upon declarati
by the president, to loan or transfer, with or without compens
tion, surplus war personal property to state and local gover
ments to alleviate damage and suffering caused by flood
other catastrophe.

During the first few months this legislation was invoked
provide assistance for Texas City, Tex.; following the floods
the Missouri and Mississippi valleys; for Vermont and Ne

Hampshire; in the hurricane areas of Louisiana, Mississippi and Florida; and following the extensive forest fire devastation in Maine.

Other programs administered during the year by the Bureau of Community Facilities include the Lanham act program of war public works and war public services in war-congested areas, which was in final liquidation except for a small program of financial aid to schools still overburdened with war-incurred enrolments; and public works and repair programs in the Virgin Islands and the Hawaiian Islands.

The Public Buildings administration constructs, maintains, operates and protects buildings used by the federal government, except military establishments, and leases, controls and assigns office space in federally-owned and federally-leased buildings. It also acquires sites for federal buildings and disposes of surplus government real estate. As authorized by public law 413, approved June 14, 1946, working drawings and specifications were completed for certain government buildings to be erected on government sites, including 16 postal buildings and a border station at the Bridgewater boundary in Maine. During fiscal 1947 the office of the supervising architect also prepared designs and working drawings and in some instances construction contracts for a replacement program survey at St. Elizabeth's hospital and for the design of four buildings at Howard university, in Washington, D.C.; a radio monitoring station at Laurel, Md., for the Federal Communications commission; four new hangars and an extension to the heating plant at the Washington National airport and working drawings and material lists for repairs of certain U.S. embassies.

As the result of extensive research and with the collaboration of many PBA technical specialists, six basic manuals were issued setting forth detailed statements of PBA standards and methods. The work program of the office of the supervising engineer included 78 projects listed and a total of 64 contracts awarded for alterations and remodelling government-owned and government-leased buildings. Project contracts were also awarded to provide increased students facilities at institutions enrolling veterans under the G.I. Bill of Rights. In its regular construction program this office carried on during the year the extension of the U.S. mint at Denver, Colo., construction of the Memorial Laboratory of Infectious Diseases, at Bethesda, Md., and construction of Federal Office Building No. 4 and temporary vault at Suitland, Md.

The Public Roads administration reported the volume of federal-aid road construction undertaken and completed in fiscal year 1947 was only moderate in comparison with that of prewar years, but that substantial progress had been made in advancing projects toward the construction stage and in the letting of contracts. Notable work was done in planning express highways through cities and in planning and constructing secondary roads. Of signal importance in the longer view was the continued co-operation between the state and the federal government in the selection of routes to comprise the 40,000-mi. national system of interstate highways.

During the year 7,929 mi. of highway of all classes of federal-aid construction were completed as compared with 2,964 mi. in 1946 and 12,936 mi. in 1941. Programs approved during the year amounted to $932,362,226 for 24,720 mi. of highway, of which $628,005,700 was for 7,982 mi. of improvement of the federal-aid system and $269,492,299 was for 15,620 mi. of secondary road. Total payments to the states during the fiscal year for work done amounted to $193,634,155.

All construction contracts awarded, involving state or federal funds, totalled $817,742,000 for 47,163 mi. of this construction. As at the end of the previous year, a large volume of construction plans was completed and remained on the shelf ready for use when conditions would permit.

As in the previous fiscal year progress was not at the rate contemplated in the federal legislation.

At request of the president the Federal Works administrator spearheaded a conference attended by delegates from the 48 states and 37 foreign countries to consider an action program to reduce losses by fire. It was called the president's conference on fire prevention and subsequent conferences at state levels were called by the governors of Kentucky, Massachusetts, Minnesota, New Hampshire, Ohio and Texas.

Notable decreases in traffic deaths and injuries followed the president's first highway safety conference according to reports at a second conference held in Washington, D.C., during the year. The Federal Works administrator also called this conference. It was reported that the 1946 fatality rate of 9.8 deaths per 100,000,000 mi. was the lowest in automotive history. (*See* also HOUSING.) (P. B. F.)

**Federation of Labor, American:** *see* AMERICAN FEDERATION OF LABOR.

## Feldspar.

Sales in the United States of crude feldspar of domestic origin advanced sharply from 417,820 short tons in 1945 to 569,386 tons in 1946. This quantity increase of 28% was accompanied by a rise of 36% in value. Sales of ground spar increased in much the same proportion—from 381,728 tons to 470,199 tons. Imports were relatively small, 14,924 tons in 1945 and 16,365 tons in 1946. The pottery industry used 38% of the total and the glass industry 62%.

**Canada.**—The production of feldspar in Canada rose from 30,246 short tons in 1945 to 36,369 tons in 1946. About half of the output is exported, mostly to the United States, only to be replaced by a similar amount of imports. (G. A. Ro.)

## Fencing.

The U.S. national fencing championships of 1947 at New York city attracted a record entry in both team and individual events. The Salle Santelli of New York won the first three team events—sabre (Tibor Nyilas, George Worth, Dean Cetrulo and Miguel de Capriles), épée (José de Capriles, Norman Lewis, Ralph Goldstein) and three-weapon (José de Capriles, Dean Cetrulo, Tibor Nyilas). The New York

FOIL MATCH between Abraham Balk (left) and Robert Kaplan, of New York university. Balk won the National Collegiate Athletic association's foil and épée championships held in Chicago in 1947

Athletic club retained the foil team title with Warren Dow, Dernell Every, Sylvio Giolito and Rudolph Ozol. The Fencers club retained the women's team titles with Helena Dow, Maria Cerra, Ruth Maxwell and Henrietta Brackley.

In the individual championships two former champions regained the titles they once held. Dean Cetrulo of the Salle Santelli won the men's foil title which he last held in 1941. Warren Dow of the New York Athletic club (1942 and 1943 champion) was second and José de Capriles, defending champion, was third. Helena M. Dow defeated the almost perpetual titleholder, Helene Mayer. Miss Mayer took second, and third place went to the 1944 champion, Madeline Dalton of the Salle Santelli. James Strauch of the Salle Montague of New York won the épée event with Albert Wolfe, defending champion, second and Carlos Agostoni of Mexico third. James Flynn of the New York Athletic club emerged with his first national sabre title. Dean Cetrulo was second and the defending champion, Tibor Nyilas, third.

The year 1947 saw the first international tournament held in the United States since the British-American match for the Thompson trophy in 1934. Four teams from the United States and a team each from Mexico and Cuba competed in three weapons for the Wilkinson Sword trophy. The winning team consisted of the then United States national champions, José de Capriles, Albert Wolfe and Tibor Nyilas.

In the Pacific coast championships at San Francisco, Edward Carfagno retained his foil title and regained the sabre championship he lost in 1946. A newcomer, Bruce McBirney, won the épée championship. Helene Mayer retained the women's foil championship.

The midwest championships were held in Chicago. The Michigan division swept the men's events with Byron Kreiger successfully defending the foil crown, Gregory Flynn winning the épée event and Howard Hayden the sabre. Mary Grenander won the women's championship.

The first intercollegiate championships of the National Collegiate Athletic association were held in Chicago; Abraham Balk of New York university won the foil and épée championships and Oscar Parsons of Temple university won the sabre championship. (W. A. Dw.)

## Fertilizers.

Estimates indicated that about 16,500,000 tons of commercial fertilizer were used on more than 3,000,000 of the 6,000,000 U.S. farms—a new high record of consumption. With one exception, consumption had increased every year since the 1932 depression low of 4,385,000 tons. In 1937 it rose to 8,179,000 tons but dropped the following year to 7,467,000 tons. In 1943 consumption exceeded 10,000,000 tons for the first time, and in 1946 it approximated 15,000,000 tons.

Unfortunately, decreases in production of other countries totalling 3,201,000 tons almost matched the U.S. increases. The drop in Germany alone was about 1,500,000 tons. The International Food committee of the United Nations Food and Agriculture organization earmarked 61,000 tons of nitrogen from the U.S. commercial supply to send to about 20 nonoccupied countries. Army shipments to occupied countries were not disclosed, but the yearly army production program called for about 250,000 tons. Representatives of U.S. fertilizer manufacturers stated that commitments had been made to ship abroad 28% of the total U.S. supply of fertilizer nitrogen including ordnance production.

**Safety Problems of Ammonium Nitrate.**—In 1947 the industry suffered a serious setback insofar as ammonium nitrate, one of its agronomically superior nitrogen carriers, was concerned. This compound contains a total of 32½% of nitrate and ammonia nitrogen, the former being quickly and the latter m slowly available to crops. Produced chiefly in 12 governm built or financed nitrogen-fixation plants in U.S. and Can constructed primarily for war purposes, it is readily explos by fire. This product was being loaded onto the French s "Grandcamp" on April 16 when fire produced an explos which caused the Texas City, Tex., disaster. This tragedy addition to a minor ship explosion at Brest, France, during summer of 1947, led to increased safety measures for hand the compound.

**Government Competition.**—Bombing and postwar mantlement caused a temporary worldwide nitrogen short aggravated by an unprecedented (and probably impermane demand and lack of customary peacetime imports. Press brought upon the United States to help make up the short resulted in re-expanding U.S. government production.

In 1946 and 1947 intensive efforts were made to force ac tional legislation that would increase government competit with the private fertilizer industry. The Farmers union and American Farm bureau sponsored a bill in the U.S. senate un the name of National Soil Fertility Act of 1947 to make av able to the Tennessee Valley authority millions of dollars construction of a large plant at Mobile, Ala., and "other pla on a nation-wide scale." A house bill presented in Nov. 1 would appropriate $100,000,000 to place the entire fertili industry under federal government control, to be exercised the secretary of agriculture.

Aside from the pending bills, two conditions created unus problems. The first arose from the continued use of unrevok wartime power under which the government had put into eff "procedures designed to assure export" of nitrogen carriers accordance with its commitments to particular countries. T second arose from the Marshall plan and the report of Paris Conference on European Economic Co-operation (Eu pean recovery program) which contemplated that Europe fertilizer production, particularly in the western zones of G many, would be inadequate until 1950–51. Conditions in Russian zone were not known, although about two-thirds the nitrogen and potash-producing capacity of Germany w allocated to the soviets.

**Research Progress.**—During 1947 excellent progress w made in the inauguration, co-ordination and prosecution of ag cultural, chemical, physiological and technological resear Direct relations were found between fertilization and the in dence of plant diseases in certain crops. Ammonia solutio from tanks were used commercially for the first time to fertil cotton and pastures in the Mississippi delta area, and sat factory equipment was developed to apply both anhydrous a aqueous ammonia.

A new slow-acting nitrogen carrier was developed by U department of agriculture soil scientists. Still in the expe mental stage in 1947, it is a combination of urea and formald hyde. Nitrogen is released gradually during the growing seas

Production of concentrated superphosphate (45% $P_2O_5$), fi made by a private manufacturer in 1907, was considerably e panded, and a continuous process for its manufacture was d vised by the Tennessee Valley authority. Great progress w made, especially with potatoes and tobacco, in determining t response to fertilization of soils having different nutrient leve

The necessity for using boron on a number of crops to obta higher productivity when grown on certain soils was firm established. The New Jersey Agricultural Experiment stati proved that fertilizers are best applied to orchards in ban instead of broadcast as had hitherto been the almost univers practice. The procedure reduced waste of phosphate and pota and also, to an extent, of nitrogen.

A committee of agronomists designated by the Plant Food Research committee of the National Fertilizer association worked out a formula to guide farmers in their expenditures for fertilizer. The general rule was that 10% of the prospective value of the crop might be spent for commercial plant food. (*See* also AGRICULTURE.) (C. J. BR.)

**Figl, Leopold** (1902– ), Austrian statesman, was born on Oct. 2, 1902, of a Lower-Austrian farmer's family, was educated in Vienna and took a science degree at the high school of agriculture. An active Catholic strongly opposed to the *Anschluss,* he was arrested by the nazis after the occupation of Austria in March 1938 and held as a prisoner until 1943. He was rearrested after the attempt on Hitler's life in July 1944 and was charged with high treason as an Austrian resistance leader. Liberated by the Allies, Figl joined the new Austrian People's party, a reformed version of the former Christian Social party, which headed the poll at the first postwar elections on Nov. 25, 1945. After the elections Figl was designated as chancellor by Dr. Karl Renner, the new federal president, and formed his government on Dec. 19, 1945. Though the constitutional situation would have allowed him to govern with a People's party majority, Figl decided on an all-party national coalition, as more fitting the circumstances of his country under Allied occupation.

A politician of Christian Democratic principles, Leopold Figl fought for an improvement in the economic conditions of postwar Austria and for his country's case at various international meetings and conferences, especially at the Four Powers conference in London in Feb. 1947. (B. ME.)

**Finland.** An independent republic of northern Europe. Area, 130,159 sq.mi. Pop. (est. 1947) 4,000,000. Capital, Helsinki; pop. (est. Jan. 1, 1945) 331,192. Other principal cities: Turku (Åbo) (78,492); Tampere (85,168). Language and nationality, 90% Finnish, about 10% Swedish. Religion, Lutheran Christian. President after March 1946: Juho K. Paasikivi; prime minister: Mauno Pekkala.

**History.**—Finnish politics have been vigorous (to put it euphemistically) for many years, and in 1947 politics appeared to be the only relief from the backbreaking hard work of reconstruction and reparations. Even politics were largely a reflection of economic conditions. The cost of living index had risen 100 points in 1946 and by mid-1947 was up an additional 30 points to 567 (based on 100 for 1938). Inevitably the successive wage demands and attempts to keep things in balance produced differences of opinions. The coalition government of Mauno Pekkala, composed of six members from the communist Peoples' Democratic union, five from the Social Democrats, five from the Agrarians and one from the Swedish Peoples' party, at length resigned on April 11. The Peoples' Democratic union wanted wage controls abandoned and price controls strengthened, and the communists maintained this general position through the year. However, no other government could be formed, and on May 21 Pekkala agreed to continue in office with the old government. It had a rather peculiar organization, with ministers and "affiliate" or "partial" ministers.

Demands for new elections in the summer were overlooked, the government thinking it wiser to wait for the regular elections in 1948, propaganda for which was under way by September. The communists particularly attacked the Social Democrats as capitalists under the skin, and the Social Democrats drew closer together in opposition. Each of these parties held about one-fourth of the parliamentary seats chosen in 1945. They worked together somewhat in the government, but each group hoped for a decisive mandate for itself. Public meetings occasionally led to disturbances and arrests. Speech was really free, and freer still after the ending of the wartime censorship in November. A British visitor was amazed to hear Finns talk to one another, condemning Russians even in the presence of soviet officials.

Industrial wages almost kept pace with skyrocketing prices, but salaries did not. The civil service workers several times threatened to strike and at last, at the end of November, tied up transportation and many other activities for 61 hr. Another difficult problem for the government was the conduct of trials for men found guilty of establishing "dumps" of arms and ammunition. The Russians obviously wanted stern justice, but many people were involved and the trials dragged on and on.

A disaster for which the beleaguered government would not be held responsible was the drought which lowered water levels in streams below anything seen in 100 years, and thus curtailed Finland's water-power supply and electricity. In hope for the future, work progressed nevertheless on the damming of the Oulujoki river and plans to build on it seven new power stations.

On Sept. 19 the third year of reparations payments ended, and it was a year in which most demands were actually surpassed, bringing Finland's total payments so nearly up to requirements that the U.S.S.R. agreed not to charge fines for the items slightly in default. Three-year totals amounted to $127,000,000, or 42% of the amount to be paid altogether. This achievement was complemented by an increase of 50% in free foreign trade, and by the raising of industrial production to 86% of prewar.

Finland's application for admission to the United Nations was denied, though at first approved unanimously in the Security council. The trouble was only that the U.S.S.R. would not permit Finland and Italy to be admitted unless the soviet Balkan satellites were admitted at the same time, and the other powers would not agree. Finland did become a member of the International Health organization, the Food and Agriculture organization, the International Monetary fund and the International bank.

Relations with the U.S.S.R. continued to be good, at least on the surface. The peace treaty, signed in February, was ratified by Finland and by Britain in April and by Russia on Aug. 29. It became effective Sept. 15, and the Control commission then began to close out its work. The slight boundary adjustments still required were worked out by a special commission. Finland formally rejected the invitation to the Paris conference on the Marshall plan, but obviously regretted the split between east and west. Finland had a trade agreement with Britain and conducted about one-quarter of its total "free" trade with Britain (though the U.S. led in Finnish imports). In November a trade delegation went to Moscow to arrange for widened commerce with the eastern neighbour.

By the end of 1947 nearly 80% of the Finns from Karelia (ceded to Russia in 1944) who were entitled to land compensation in Finland had been provided for.

**Education.**—The school census of 1943–44 showed: 13,754 teachers; 46,232 pupils in city folkschools; 114,517 in provincial and rural lower folkschools; 211,588 in the upper folkschools; 69,910 in continuation schools; 1,049 in Finnish-speaking preparatory schools; 706 in Swedish-speaking preparatory schools; 2,621 in folk high schools; 2,735 who took the student examen; 8,348 registered at the University of Helsinki (1945); 1,370 at the technological institute; 383 at Turku university; 158 at the normal school; 666 at the school of commerce.

**Defense.**—According to the peace treaty of Feb. 10, 1947, the maximum strength of land army was to be 34,400; navy 4,500 (10,000 tons); air force 3,000 (60 aircraft). There was compulsory military service (350–440 days) for all men between 17 and 60. The conscription age was 20.

**Finance.**—The monetary unit is the markka; 136=$1.00. Government income, 1947, was estimated at $767,000,000 and expenditures at $736,000,000. Total debt on July 31, 1947: $852,000,000. Finland obtained a credit of $10,000,000 for purchase of surplus materials from the U.S. and British armies in Germany.

**Trade and Communication.**—Railways totalled 3,063 mi. and highways 19,705 mi. Late in 1947 through freight traffic was resumed by rail with western Europe, and railway transit traffic was re-established through the Russian-leased Porkkala district.

The trades figures for 1946 showed imports of $178,000,000 and free exports of $169,000,000, plus $69,000,000 in reparation and restitution payments. In the second quarter of 1947 the rate of free export was better than double the rate in the same period in 1946 and totalled 11,500,000,000 markka.

**Agriculture.**—Crops of 1946 were valued at $175,000,000, and consisted chiefly of hay, oats, rye, barley and potatoes. The 1947 crops were reported as 50% of prewar.

**Manufactures.**—Home market industry climbed to a volume index of 123 in Sept. 1947 (100=1935); export industry had recovered to a volume index of 82. Metal and machinery industry increased output 10-fold after 1935, and textile industry about 5-fold. The shift in emphasis was caused by the Russian reparation requirements.

## Fires and Fire Losses.

Losses by fire, including lightning, in the United States during 1947 amounted to $692,635,000, according to estimates of the National Board of Fire Underwriters. This figure compared with $561,487,000 for 1946 and $455,329,000 for 1945. Fire losses in 1947 exceeded those of 1946 by $131,148,000.

Outstanding losses increased this total, although the exact amount could not be estimated until a full statement was available. For instance, in the explosions and fires of April 16–18 at Texas City, Tex., losses were first estimated at $125,000,000 but were soon revised downward to $50,000,000 and were expected to produce about 10,000 claims.

Losses occasioned by forest fires in Maine, especially at Bar Harbor, amounted to approximately $6,000,000. (*See* also DISASTERS.) (E. R. H.)

## Fisher, Geoffrey Francis

(1887– ), 99th archbishop of Canterbury, primate of all England, is the youngest son of the Rev. H. Fisher, rector of Higham-on-the-Hill, Nuneaton. He was educated at Marlborough, Exeter college, Oxford, and Wells Theological college. He was assistant master at Marlborough (1911), and was ordained deacon (1912) and priest (1913) at Salisbury. In 1914 he became headmaster of Repton school in Derbyshire. In 1917 he married Rosamond Chevallier, granddaughter of Dr. S. A. Pears, formerly headmaster of Repton. In 1932 he was consecrated bishop of Chester, and in 1939 was translated to London, where his administrative ability left a great impression, particularly in the City. On April 19, 1945, he was enthroned as archbishop of Canterbury, in succession to Dr. William Temple. He played a leading part in church assembly legislation, including the Diocesan Reorganization measure (1941) and the Church Commission measure (1946).

On Dec. 27, 1946, he appointed Bishop Stephen Neill (formerly bishop of Tinnevelly) as his assistant bishop, with headquarters at Geneva, Switz., for diplomatic relations with the tinental churches, and as vice-chairman of the Council on eign Relations. In an open letter to Bishop Neill (Sept. 1 announced that the new South India United Church woul entirely separate from the Church of England, although would not affect the status of Anglican clergy and membe it when in Great Britain. (A. J. MA

## Fisheries.

In a year characterized by critical food short throughout the world, the fisheries of mos tions nevertheless had returned to more nearly normal func ing in 1947 than at any time after the beginning of W War II. Fishing fleets for the most part were rebuilt, facilities were restored and production approached or in instances even exceeded prewar levels.

Although most European fleets were still short of the trawlers necessary for long-range operations at sea, the G Bank fishery, prosecuted by vessels from both eastern and ern Atlantic nations, was generally a productive one. Portugal, the good season on the Grand Bank meant an usually large quantity of salt fish for home consumption, celerating the trend toward a greater measure of self-sufficie Once a heavy importer of salt fish from other countries, Po gal in 1947 supplied a much greater proportion of its own n for this commodity than in previous years. Spain sent a la fleet to participate in the high seas fishery than before the Even France, which lost the greater part of its high seas during the war, had a successful season on the Grand Bank production of salt cod being considerably larger than expe

The Icelandic fleet in 1947 far exceeded in productive pacity that of prewar years; Denmark, with its principal fis products of cod and flounders, also exceeded prewar cat Great Britain, which in restoring its fleet had resorted lar to reconversion of various types of vessels to trawling, ra than to new construction, lagged slightly in productive capa (*see* below). Norway in 1947 had about the same numbe fishing boats as before the war, but faced a problem some similar to that of Great Britain; replacement of aging b became a pressing necessity.

In the Pacific, attention was focused upon the vast possi ties for development of new fisheries and fishing indust throughout the Central and Southwest Pacific, where Japa interests had conducted large operations before World War Precise information on the potential resources of these reg was scanty, but available facts indicated them to be of g value. Estimates placed the potential value of tuna alone $80,000,000 to $100,000,000 a year.

The year also saw translated into action a related prog authorized by the Philippine Rehabilitation act of 1946— of restoring and developing the Philippine fishing indus which had been almost totally destroyed by combat action through confiscation by Japanese occupation troops during war. In furtherance of this program, two research vessels gan oceanographic studies and exploratory fishing during 19 and a laboratory was established in the Philippines from wh experimental work on the pondfish industry and inshore fishe was conducted.

The potential contributions of the fisheries to the wor food supply were considered by the conference of the Food Agriculture organization of the United Nations held at Gene Switzerland, from Aug. 25 to Sept. 11. Among actions of conference was a recommendation that the F.A.O. initiate mation of regional councils for scientific exploration of the in parts of the world not actively served by similar bod Plans were made for the collection of more uniform and a quate statistics of fishery production by member nati tatistics released by this organization during 1947 indicated at world production immediately preceding World War II talled about 39,000,000,000 lb. annually. Previous estimates ad placed world production at 37,000,000,000 lb.

**United States.**—As an important postwar development, the nited States took active steps in determining the extent of the shery resources of remote Pacific areas and in extending U.S. shing activities into these regions. Public law 329 of the oth congress, approved Aug. 4, 1947, authorized and directed e secretary of the interior, through the fish and wildlife serve, to conduct necessary fishery explorations to insure the aximum development and utilization of high seas fishery reources of the territories and island possessions of the United tates in the tropical and subtropical Pacific ocean.

Rapid expansion of the U.S. fishing fleet continued during 947 with 1,275 vessels of 5 net tons or more added to the fleet. a typical prewar year, additions of only about one-fourth as any vessels were made. Not only was the fleet larger numerilly than ever before; with its larger, more powerful, and betr equipped vessels, its potential producing capacity had been reatly increased.

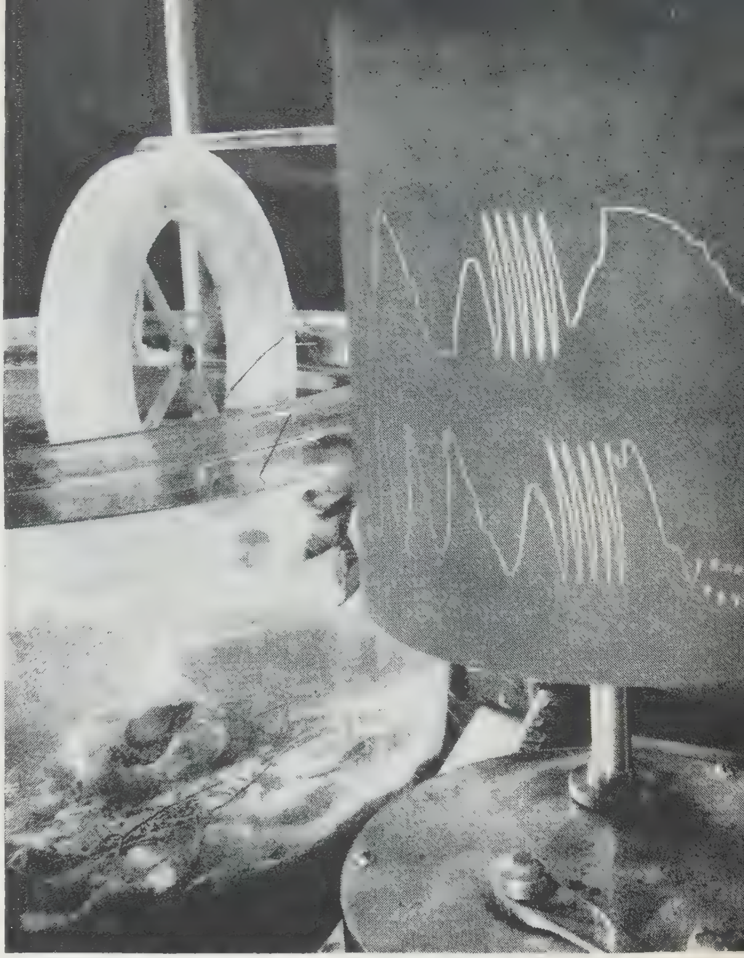
In spite of this expansion of physical equipment, landings by e United States fisheries in 1947 were approximately the same s in 1946 and about equivalent to the prewar average—4,400,00,000 lb. Because of prevailing high prices, however, this atch brought fishermen their largest income in history.

As in 1946, menhaden represented the largest U.S. catch, relacing the pilchard which for at least a decade previously had aintained first place. The yield of menhaden in 1947 exceeded ,000,000,000 lb., thus continuing the year-by-year increases uring which production had almost doubled during the years 942–47. The entire catch of menhaden, which in 1947 comrised about 20% of the total, was converted into meal and oil.

The rise of the menhaden fishery on the Atlantic coast was alanced by an even more spectacular decline of its west coast ounterpart, the pilchard or California sardine. From an averge production of nearly 1,000,000,000 lb. maintained during the ecade 1936–45, the yield of pilchards declined to 491,000,000 b. in 1946 and to less than 250,000,000 lb. in 1947—the smallst yield in at least 20 years. Pilchard fishing in 1947 was enerally poor along the entire California coast, the centre of his fishery, although until that year the southern California shery had maintained high production. In the San Francisco istrict, the pilchard fishery was a complete failure, with less han 150 tons of fish brought to port, in contrast to a 1941–45 verage production of more than 130,000 tons. At Monterey, rom an average of 210,000 tons, the catch dropped to less than 50,000 tons. San Pedro dropped from 214,000 tons in 1946 to 7,000 tons in 1947.

In sharp contrast to the pilchard fishery, tuna landings on the acific coast were the largest in history, surpassing even the ecord year of 1946. The 1947 pack amounted to approximately ,700,000 cases, or about 1,000,000 cases more than the 1946 ack. Reflecting the tendency of this fishery to expand into emote areas was the use of a large factory ship for operations Costa Rican waters, the tuna being frozen on the fishing rounds and delivered to a cannery in Astoria, Ore., for processng. During the year the industry completed arrangements for se of additional floating freezers and for exploration of the una resources of the South Pacific.

After a series of poor years, salmon runs increased slightly n the Pacific coast of the United States and in Alaska, resulting a pack of about 5,200,000 cases. This represented an increase f about 600,000 cases over the 1946 pack, but was still far elow the prewar average. Despite reduced volume, the salmon acks of 1947 and years immediately preceding had brought the industry the largest financial return in history. The 1947 pack was worth about $100,000,000.



CLOCKING a snail's pace by means of this treadmill and rotating drum recorder—a study being made in 1947 by the U.S. fish and wildlife service to learn more about the sea snails which were a hazard to the oyster industry

Alaska herring, which along with menhaden and pilchard had become the mainstay of the fish meal and fish oil industries, provided a slightly smaller catch than in 1946. Practically the entire catch—195,000,000 lb.—was utilized in the production of oil and meal; the remaining small quantities were used for salting and as bait.

Production of fresh fish by the New England fisheries was affected by the apparent surplus of fresh and frozen fish which prevailed during the first half of 1947 and led to voluntary curtailment of operations by the fleet. The catch of rosefish, which was the leading species taken on the Atlantic coast for the fresh and frozen trade in 1946, declined sharply during the early months of 1947, the year's total production amounting to about 130,000,000 lb., a drop of about 50,000,000 lb. from the preceding year. As a result of this decline, haddock resumed its normal rank as the leading food fish taken on the Atlantic coast.

Freezings of U.S. fishery products during 1947 amounted to 240,000,000 lb., according to statistics reported by the U.S. fish and wildlife service. This was a decline of 40,000,000 lb. from 1946. The slackening of activity was brought about by the heavy inventories of frozen fish that existed at the end of 1946, when 158,000,000 lb. were reported on hand—the largest holdings in history. New freezings were therefore curtailed until this backlog was reduced.

The 1947 pack of canned fish was the most valuable in the history of the fisheries, but in volume was about equivalent to the 1946 pack of 700,000,000 lb. Three-fourths of the 1947 pack was composed of five items: salmon, tuna, California pilchards or sardines, Maine sardines and mackerel. While salmon, tuna and mackerel were packed in larger quantity than in 1946, the production of Maine sardines fell off about 20%, and the pack of California sardines declined nearly 50%.

Demand for fish meal and oil, which for several years had been increasing far more rapidly than the supply, continued in 1947. The fortunes of this industry had become closely related to the success or failure of the fisheries for menhaden, pilchard and Alaska herring, the principal sources of raw material. In 1947, the phenomenal success of the menhaden fishery only approximately balanced the dismal failure of pilchard fishing, with the result that production of fish meal totalled about 190,000 tons, compared with a 1946 yield of 199,555 tons. The fish oil industry fared worse, for, in addition to the failure of the pilchard fishery, it was affected by the unusually low oil content of the menhaden caught in 1947, which even the heavy catches could not entirely compensate. During the first ten months of 1947, production of fish oil amounted to only 13,700,000 gal., and it was predicted that the total for the year would be less than half the average production during the period from 1935 to 1939.

The leading fishing ports in the United States in 1947, from the standpoint of total tonnage handled, were, in the order of their importance, San Pedro, Calif.; Lewes, Del.; and Boston, Mass. San Pedro, which had ranked as the most active port for four years, handled more than 430,000,000 lb., consisting chiefly of pilchards, tuna and mackerel. Lewes received about 250,000,000 lb. (exclusively menhaden), maintaining the same relative position it held in 1946. Boston, which in 1946 ranked fourth, moved into third place and resumed its normal position as leading New England port with landings of more than 200,000,000 lb. The reduction in landings of rosefish, concentrated at Gloucester, caused that port to drop below Boston in total landings. Reedville, Va., another menhaden port, held fourth place with landings of 172,000,000 lb. Gloucester, Mass., with landings of about 170,000,000 lb., held fifth place.

In the course of government-administered sealing operations on the Pribilof Islands in Bristol bay, a total of 61,447 fur-seal skins were taken in 1947. This represented a decrease of 3,276 skins from the 1946 take. The seal herd numbered 3,613,653 animals when the annual census was taken early in August, an increase of 6.72% over the 1946 census. When the federal government assumed active management of the fur seals in 1910, the herd contained only 132,279 animals.

A study of the migration routes and food habits of the Alaska fur-seal herd, comprising about 80% of all the fur seals in the world, was begun by the fish and wildlife service in May. The motorship "Black Douglas" followed the fur seals northward along the coasts of British Columbia and Alaska to their breeding grounds on the Pribilofs. After the breeding season, the vessel again followed the seals in their fall migration. As part of the study, nearly 20,000 seal pups were marked with metal tags for further investigation of their migrations.

Of special interest among natural phenomena affecting the fisheries in 1947 was the "red tide" which afflicted the west coast of Florida during the greater part of the year. Accompanied by a reddish discoloration of the water, this plague extended along about 150 mi. of coast and resulted in the destruction of millions of food and game fishes. Scientific investigations showed that it was caused by the presence of great numbers of a micro-organism belonging to the dinoflagellate group, *Gymnodinium* sp., which released toxic substances fatal to most forms of marine life. Scientists reported that the organism was closely related to forms that had caused other destructive red tides along the Pacific coast of North America, and in Peru, Australia, Japan, India and other parts of the world.

(R. L. Cn.)

**Canada.**—The most important development in Can fisheries during 1947 was the establishment of the Fis Prices Support board authorized by an act of Parliame 1944. It was empowered to deal with inland and coastal eries, with areas inside those divisions, and even with part kinds of fish, using a revolving fund of $25,000,000 for price support. It could make differential payments to fishe (that is, pay the difference between the actual market pric what the board believed to be an adequate price), and su fish prices indirectly by entering the market and purchasin at a contract price for export by the government. The purchase made during 1947 was $8,000,000 worth of canne salted fish as part of Canada's aid-to-Europe program.

The federal fisheries department also set up a Directora Marketing to control the quality of fish and fish products ing processing, transportation and retailing; to increase a per capita consumption of fish from 8.4 lb. to 13 lb., a initiate studies and submit recommendations concerning ernment marketing policies.

In the 1947 Geneva tariff concessions Canada got freer to 12 world markets for various kinds of fish and fish proc The concessions took effect on Jan. 1, 1948, and were exp to boost the annual fish export of $80,000,000 by an addit 25%.

(C. C

**Great Britain.**—The British fishing industry was the st est and most important of the European group during Returns of sea fisheries published by the English and Sco ministries showed total landings by British vessels in B ports of fish other than shellfish during the first nine mont 1947 as, approximately, 790,720 tons; the corresponding fi for 1946 and 1938 respectively were 718,720 tons and just u 840,000 tons.

World War II had brought a respite for the fish stoc most waters after the serious effects of overfishing felt in and it was hoped that the convention signed in London in 1946 might take effect in time to continue that respite in n fied form. Unfortunately the convention had not yet rece in 1947 the ratification by all the signatory governments n sary to bring it into force. As a result of this delay, the me of fishing nets and the size limits of fish remained at the war conventional dimensions, and the permanent commis provided for in the new convention had not come into b The duty of this commission would be "to consider whethe provisions of this convention should be extended or alte The convention did not apply to herring fisheries, in which question of overfishing had not yet arisen; they were of ap ently inexhaustible abundance.

The British fishing fleets had not yet returned in full stre from war service, and only a few of the German fishing ve had been mobilized: their gradual return, no doubt, accou in part for the fact that the landings in 1947 showed an incr over those of 1946; and again, the reduction of fishing stre had a bearing on the fact that these landings were nearly 56 tons less than those of 1938, when the effects of overfis were being severely felt in the rich home waters. ## Floods and Flood Control.

The U.S. Flood Contro approved July 31, 1 provided $298,322,825 for flood control work during the fi year ending June 30, 1948. The funds were classified as follo general flood control, $246,072,825; lower Mississippi ri $50,000,000; Sacramento river, $1,750,000; Mississippi r nergency fund, $500,000. Of the flood control general fund, 231,800,825 was specified for new construction; $4,500,000 for dvance planning; and $5,000,000 for preliminary examinations, rveys and contingencies. Exclusive of the lower Mississippi ver and the Sacramento river, flood control construction was ontinued or begun on 156 projects in 35 states. Of the $4,500,-00 voted for advance planning, congress specifically earmarked 2,350,000 for four projects: Oahe reservoir, S.D.; Red Rock eservoir, Ia.; Eufaula reservoir, Okla.; and Dyberry and rompton reservoir, Lackawaxen river basin, Pa.

At the end of June 1947, 52 dams and reservoirs and 153 ocal protection projects were in operation throughout the nited States. On Aug. 4, 1947, congress authorized construc- on of a flood control project on the Little Sioux river in Iowa, an estimated cost of $3,320,000. Exclusive of the Tennessee ver valley, the total number of projects authorized by con- ress numbered approximately 760, with a total estimated cost f $2,290,724,500. Ten additional projects having an estimated ost of $161,675,500 had been placed under the jurisdiction of e Mississippi river commission, an independent government gency operating within the office of the chief of engineers. In e ten-year period 1937–47, congress appropriated a total of 1,081,494,725 for national flood control purposes. Of this total, 1,005,272,825 had been spent for the construction and plan- ing of authorized projects and $76,221,900 for maintenance, rveys and miscellaneous activities. Under the corps of en- ineers' over-all plan for national flood control, the authorized rojects constituted a comprehensive, co-ordinated plan for ntrariver basin development.

Channel improvement of the Mississippi river proper was ontinued during 1947 at a number of places below Cairo, Ill. he approximately 1,500 mi. of main stem levees extending rom near Head of Passes, La., to Rock Island, Ill., were prac- cally completed. Co-ordinated with the main stem levees were ,000 mi. of tributary levees, also virtually completed in 1947. elow Cairo, work continued on riverbank protection. Revet- ent in place totalled approximately 100 mi. of riverbank; in ddition, many miles of permeable dikes were in place for bank tabilization and channel regulation. The substantially com- leted 2,500-mi. levee system contained approximately 1,200,-00,000 cu.yd. of earth.

A flood control dam on the St. Francis river, a tributary of he Mississippi, and two in the Yazoo river basin were com- leted and were placed in operation. Two more dams in the azoo basin continued under construction.

During the year, construction was initiated on almost all rojects outside the lower Mississippi valley for which funds ad been made available by congress. Included among these rojects were the Wolf Creek reservoir, Ky.; the Cincinnati, O., ocal protection project; the Lookout Point reservoir in the Villamette river basin, Ore., the Konopolis reservoir, Kan., the ocal protection project at Kansas City, Mo., and Kansas City, Kan., the Garrison reservoir, N.D., and the Fort Randall reser- oir, N.D. and S.D., all in the Missouri river basin; the Clark Hill reservoir on the Savannah river and the Allatoona reservoir n the Coosa river basin, both in Georgia; the Almond in the usquehanna river basin, N.Y.; the Blue Mountain reservoir, rk., the John Martin reservoir, Colo., and the Canton reser- oir, Okla., all in the Arkansas river basin.

Work was continued throughout 1947 on the separately au- horized project for the Sacramento river and its tributaries in California, a continuing project to provide flood protection for rban and rural property of great importance to the economy f western United States.

In addition to providing economical flood protection and allied enefits for centres of industry and population, agricultural lands, and lines of communication, many of the dams and reservoirs provided for multiple-purpose utilization, such as hydroelectric power, water conservation, irrigation, stream flow regulation for navigation purposes, pollution abatement, recreation and other worthy uses.

RISING WATERS of the Mississippi river and its tributaries brought severe crop and property damage to wide lowland areas in Missouri, Iowa and Illinois during June 1947. Farmlands near Hartford, Iowa, are shown under water

**U.S. Floods.**—Floods occurring during 1947 were among the worst of record in the United States. In June and July, floods in the Missouri and upper Mississippi river basins caused damages estimated at more than $1,000,000,000 and the loss of 40 lives. During these months an estimated 3,000,000 ac. were under water in the Missouri river basin and 1,000,000 ac. in the upper Mississippi basin. A number of areas were flooded several times. More than 50,000 families were forced from their homes; transportation, communication and normal community lives were disrupted over a period of several weeks. Direct damage was $156,000,000, and indirect damage—loss of soil, crops, impairment of future crops, damage to utilities and general business losses—was more than $800,000,000 according to an estimate of the department of agriculture. Earlier, in March and April, another flood swept the Missouri and many of its tributaries following ice jams and heavy rains in the lower basin. Damage was estimated at $17,500,000; it was estimated that an additional damage of $6,000,000 was prevented by the Fort Peck dam.

In Jan. 1947 floods in the southeast centred around Rome, Ga. The Coosa and Oostawaula rivers showed the highest crest since 1886, and damage was estimated at about $500,000. Floods occurred in the Great Lakes region in April, extending from northern Illinois to western New York and crossing the southern peninsula of Michigan. Damages were estimated at about $4,000,000 in Michigan and approximately the same amount in Pennsylvania and New York state. Rapid snow melting caused seasonal peaks in the Columbia and Willamette river basins in

May, with flood stages exceeded in several tributaries. Nominal damages were done to pastures and crop lands. A flash flood on East creek in Vermont in June caused approximately $7,500,000 damage, of which Rutland suffered about $5,000,000. Similar floods in the Little river basin in Arkansas and Oklahoma in August did only nominal damage. September floods in Florida, following heavy rains, did an estimated $30,000,000 damage.

Minor floods were experienced in all sections of the United States during 1947, with damages other than those in the Missouri and Mississippi basins estimated at $56,000,000. It was estimated that flood control projects installed by the corps of engineers had prevented an additional $69,000,000 of damages. Emergency flood fighting, rescue work and emergency repairs were conducted in all flood areas according to law. (G. Hb.)

**Great Britain.**—Following the lowest air temperatures recorded at Greenwich observatory since 1870, Britain was coated with an unusually heavy depth of snow during the first three months of 1947, particularly in February. Drifts of 20 ft. were commonplace. With the March thaw came the anticipated floods swollen by severe storms, the frozen ground expediting the rapid runoff; conditions suitable for floods of great intensity were created. Rivers in western, southern and mid-England burst their banks, extending the industrial stoppage precipitated by the cold weather and increasing the misery and discomfort caused by the earlier blizzards. As the thaw and storm crossed Britain from the west, Salisbury and Bath were the first to experience the abnormal conditions, followed by the Thames and Ouse basins, while traffic dislocation in the Midlands was described as the worst ever experienced.

The grimmest aspect of the devastating floods occurred in the Lea valley in north London where a large water supply filtration station of the metropolitan water board was inundated with highly polluted floodwaters. More than 500,000 people were without a piped supply of drinking water, and it had to be conveyed to them by means of road tankers. In East Anglia, dikes were breached so frequently that a large proportion of Fenland was soon under water, causing what was then erroneously believed to be irreparable damage to the rich agricultural belt. In certain upland areas of limited size, excellent control was achieved by reducing the waters held in store in water-supply reservoirs to accommodate the expected floods; in most cases, however, the actual flood yields were much greater than had been anticipated, the runoff in one week being more than that expected during a normal year. Over-all, the cost of this caprice of nature might be reasonably assessed in excess of £100,000,000; yet, contrary to expectations, no failures of waterworks' dams were recorded.

During 1947, no important flood works were in progress other than new steel-piled banks for the river Nene and other remedial measures, induced by the spring floods. Dutch engineers, with their specialized equipment, were employed in sealing the major breaches in the Fenland dikes. The need for a policy of control, however, was again recognized; many paper schemes, which, if implemented previously, would have saved much damage and destruction, were resurrected and modified, notable cases being Fenland and the £3,000,000 Irwell project at Salford, Lancashire. The latter would require a three-mile diversion tunnel across the large river loop to the Manchester ship canal.

One factor which was receiving more consideration than hitherto was that local drainage improvements by deepening and straightening of river courses in one part of a catchment, together with improved sewerage, accentuated flood conditions in lower parts of the river by moving the danger downstream. The intended legislation for improvements in river control should provide the replacement of flood displacement by multilateral control.

**Other Countries.**—Although many European countries perienced spring floods parallel to those in Britain, drought the most striking feature afterward; in September, the Danube reached its lowest level in 179 years, and the R was at its lowest since 1810. In late December serious fl occurred in eastern France and heavy damage was suffere the towns of Nancy, Epernay, Metz, Thionville, Verdun Rethel from the overflowing of the Moselle, Meuse and A rivers. In Nancy 2,000 houses, the homes of 16,000 people, wrecked. Agricultural losses also were severe.

In the Punjab, India, the early and intense fall of the soons inundated large areas of fertile land and lines of c munication, and increased the misery and death rate of mass passage of refugees between Pakistan and India. Pc cally, the boundary division between the new dominions es lished in 1947 took some account of flood and irrigation trol, but it was feared that any widening of the political would make flood control either difficult or impossible.

The re-diversion of the Yellow river, China, back to its northern course into the Gulf of Chihli by U.N.R.R.A., reca the breaching of the dikes in 1938 by the Chinese, to imp the Japanese advance, when the breach became uncontroll and drowned 400,000 people.

Experiments, originating in Australia and continued in gon, indicated that the artificial production of heavy rainfal feeding dry ice and other chemicals into clouds, and thus ting up a chain reaction, might lead to great new developm in both drought and flood control. (*See* also Dams; Fores Irrigation; Meteorology; Soil Erosion and Soil Conse tion; Tennessee Valley Authority.) (D. G. Ds.

**Florida.** The extreme southeastern state of the Un States, Florida is called the "Peninsula state" cause of its peculiar outline. Its coast line, not taking account the numerous bays and indentations, is greater than of any other state, extending 472 mi. along the Atlantic and mi. along the Gulf of Mexico. Area, 58,560 sq.mi., of w 4,298 sq.mi. are water surface; population (1940) 1,897,414 which 1,045,791 were urban and 851,623 were rural; 1,384 white and 513,049 Negroes. Only about 60,000 were for born. Capital, Tallahassee (16,240 in 1940). The larger c are Jacksonville (173,065), Miami (172,172) and Tampa (1 391). By the state census (1945) Florida had a populatio 2,249,649. Population figures for the three larger cities, Jacks ville, Miami and Tampa, were 206,442, 192,122 and 124,476 spectively.

**History.**—The state elective administrative officers in 1 whose terms were to expire in Jan. 1949, were as follows: lard Caldwell, governor; R. A. Gray, secretary of st J. Thomas Watson, attorney-general; C. M. Gay, comptrol J. Edwin Larson, state treasurer; Colin English, superintend of public instruction, and Nathan Mayo, commissioner of a culture.

**Education.**—The biennial report of the state superintendent of p instruction, 1944–46, showed enrolment in the public schools for 194 through grade 12 as follows: white 310,442; Negro 105,315; total 4 757. There were 1,706 elementary and 768 secondary public school the state, with instructional staffs not including supervisors total 14,234 teachers, of whom 10,736 taught in the schools for whites 3,498 in the schools for Negroes.

**Social Insurance and Assistance, Public Welfare and Related Program** Florida disbursed for state welfare through the State Welfare b $26,698,938.06 in 1946–47. From grants by the federal government, state received in 1946–47 for old-age pensions $12,143,138.72; for pendent children $2,184,867.09; and for pensions for the blind $6 403.79; total $14,972,409.60. Disbursements for old-age assistance $20,588,948.50; for dependent children $3,410,201.50; and for the $1,093,627.50. The unemployment benefit receipts were $13,821,43, with benefit disbursements of $5,207,161.80.

Florida has no state penitentiary, but maintains a prison farm Raiford, a second prison at Belle Glades, an Industrial School for at Marianna, and an Industrial School for Girls at Ocala. The appro

IND-SWEPT PALM TREES photographed in Miami during the violent hur-
cane which swept westward through southern Florida on Sept. 17–18, 1947

ons for these institutions for 1946–47 carried the sums of $828,168, 152,000, $306,850 and $110,600 respectively. The state also supports state hospital for the insane at Chattahochee and a hospital at Arcadia, e Florida Farm colony for the feeble minded at Gainesville, and the lorida School for the Deaf and Blind at St. Augustine. The appropria-ons for these institutions for 1946–47 carried the sums of $4,072,088.44 cluding the hospital at Arcadia, $312,750, and $506,938 respectively.

**Communications.**—The total highway mileage in the state in 1947 ex-usive of roads built for military purposes, was 48,561 mi., of which pproximately 22,208 mi. were paved or hard-surfaced. Disbursements for e year ending Dec. 30, 1947, for maintenance and construction, amounted $38,579,638.04. The state road department's tentative budget for 948 for construction was $56,275,971 plus $6,697,756.93 for main-enance and other departmental costs. Florida in 1947 had a little more an 5,000 mi. of railroads in operation exclusive of yard tracks.

**Banking and Finance.**—On June 30, 1947, there was a total balance in e state treasury of $83,043,538.38 with outstanding warrants of $8,739,-15.97. The state is constitutionally forbidden to incur a debt by borrow-g except to put down rebellion or repel invasion. The constitution also rohibits the legislature from levying an income tax, forbids any state d valorem tax on real estate, and exempts homesteads from taxation y local taxing units up to the value of $5,000.

On June 30, 1947, there were within the state 61 national banks with eposits amounting to $1,194,391,000 and 120 state banks and trust ompanies with deposits of $475,111,000, representing total deposits of 1,669,502,000, a loss in deposits of $156,693,000 in the fiscal year.

**Agriculture.**—In 1945 the U.S. census of agriculture showed that there ere 61,159 farms with a total acreage of 13,083,501 ac., of which ,840,264 ac. were in crops; 474,367 ac. were idle (fallow); 4,568,278 . were in pasture (4,527,462 ac. of woodland were also pastured); ,801,860 ac. were in farm woodland.

*Principal Agricultural Products of Florida, 1947 and 1946*

| Crop | 1947 | 1946 |
|---|---|---|
| orn, bu. | 7,946,000 | 6,910,000 |
| bacco, lb. | 25,190,000 | 22,251,000 |
| tatoes, bu. | 2,959,000 | 6,249,000 |
| gar cane, short tons | 1,073,000 | 1,156,000 |

The citrus production for the season 1946–47 and the estimates for 947–48 respectively were as follows: oranges (including tangerines) 8,400,000 and 53,800,000 boxes; grapefruit 29,000,000 and 31,000,000 oxes; limes 170,000 and 190,000 boxes.

On Jan. 1, 1947, the livestock resources of the state were as follows: 012,000 beef cattle and calves; 148,000 milk cows; 630,000 swine; 4,000 sheep; 27,000 horses; and 33,000 mules.

**Manufacturing.**—The more important manufactures of the state in 1947 ere lumber, wood pulp, naval stores (turpentine and rosin) and cigars.

The cigars manufactured in Florida are valued at around $21,000,000 nnually. Tampa and Jacksonville are the leading cities in this industry.

Florida's lumber production, mainly yellow pine and cypress, in 1946 was about 450,000,000 bd.ft. The total estimated value of primary wood products for Florida in 1947 was more than $125,000,000. Tung oil and the manufacture of paper and paper board were also important industries.

In 1939, according to the U.S. census figures (1940), the state had 2,083 manufacturing establishments, paying $37,823,204 to 52,728 workers and producing $241,238,534 worth of goods.

**Mineral Production.**—Florida has only limited resources in minerals, but has large and rich deposits of phosphates, lime and limestone and less extensive, though highly valuable, deposits of kaolin and fuller's earth. The estimated value of the state's mineral production in 1947 was more than $30,000,000. (A. N. P.)

## Flour.

Wheat flour production in the U.S. during the crop year ended June 30, 1947, totalled 300,000,000 sacks (100 lb. each), compared with 264,000,000 sacks for the 1945–46 crop year, an increase of 14%. During the 1946–47 crop year, only 8,600,000 sacks, or 2.9% were produced by mills with a daily capacity of 400 sacks or less. In general, the annual production of flour in the U.S. had increased steadily after 1935, when only 189,600,000 sacks were produced. According to production statistics prepared by the bureau of the census, industry division, foods section, flour milling reached an all-time high in Jan. 1947 when 64,575,000 bu. of wheat were ground to yield 27,906,000 sacks of flour, equivalent to an extraction rate of 72%. The monthly production for the first nine months of 1947 averaged 25,440,000 sacks, also an all-time production record.

**Flour Conservation Program.**—According to H. Fakler, vice-president of the Millers National federation, there was little official interest in a return to the 80% extraction type of flour in connection with the food conservation program. U.S. department of agriculture officials were aware of the general ineffectiveness of producing long-extraction flour as a means of providing more flour for export.

The flour-saving program proposed by Charles Luckman, chairman of the president's Citizens' Food committee, comprised the following 11 points:

1. To feature smaller sizes of loaves.
2. To use a higher proportion of noncritical foodstuffs to replace flour.
3. To use materials other than flour for "dusting" purposes.
4. To reduce the number of varieties of bakery products.
5. To serve smaller cuts of cakes and pies in food establishments.
6. To avoid all production losses.
7. To store and handle all raw materials so as to avoid foodstuff losses.
8. To plan production so as to eliminate loss of materials.
9. To avoid stale baked-goods losses in eating places.
10. To devise means of using leftover breads and rolls.
11. To publicize all efforts at food (flour) conservation.

Preliminary estimates for 1947 indicated a decline in consumption of flour, wheat and cereals in the U.S. of 10 lb. per person as compared with the 1935–39 average.

Grain exports, including flour and other wheat products, during the 1946–47 crop year amounted to a total of 15,396,000 tons, representing an increase of about 1,000% over the average annual shipments for the 1935–39 period. The U.S. department of agriculture reported that wheat and flour exports for 1946, totalling 10,600,000 tons—equivalent to 396,400,000 bu. of wheat—were the largest on record.

In preparing family food packages for shipment abroad by CARE (Co-operative for American Remittances to Europe, Inc.), the 7 lb. of flour included represented nearly $\frac{1}{3}$ of the total weight of 21.5 lb. of food in each package.

**Flour Milling.**—Milling sanitation had received increasing attention during the past few years, and considerable survey work had been undertaken by the larger milling companies to determine the extent of foreign material fragments in flour. In furtherance of the flour mill sanitation program the use of unlaundered secondhand textile bags was prohibited in Minnesota for flour and other products for human consumption, effective Aug. 1, 1947.

**Flour Prices.**—Directly related to rises in the cost of wheat

UNLOADING the first shipment of U.S. flour to arrive in Greece following the announcement of the Truman doctrine on March 12, 1947. Church dignitaries were on hand to bless the cargo at the port of Piraeus

to millers, the price of flour advanced steeply over 1946 in spite of excellent crops and ample grain supplies. While most of this rise was attributed to intense speculation in grains, especially in wheat, it should be noted that the U.S. department of agriculture supported wheat prices substantially by announcing on June 30, 1947, that a national average price of $1.83 per bushel would be guaranteed to farmers as compared with a rate of $1.49 in 1946. Although only grade No. 3 wheat or better was eligible for this price support, for loan or purchase, the price of flour quickly advanced and, in view of export demands, it was thought that it would probably remain at record levels until European commitments or requirements should be satisfied.

**Flour Technology.**—Flour moisture content and its relationship to the relative humidity at various temperatures was the subject of an investigation by L. Morey, H. Kilmer and R. W. Selman. This work resulted in the establishment of a linear relationship between flour moisture content and the absolute humidity of the atmosphere. The equilibrium water contents of a typical Kansas flour in contact with air of varying moisture contents was determined at 50° C., 75° C. and 95° C.

A new method of flour bleaching was developed by W. S. Hutchinson and R. I. Derby, who reported that the oxides of nitrogen produced by the electric arc (Alsop process), when passed through a column of sodium chlorite, react to produce chlorine dioxide. The mixture of gases thus produced exhibit bleaching power much greater than that normally obtained from the electric arc machines.

In the field of wheat flour enzyme technology, an investigation was completed on the proteolytic enzymes of milled fractions of wheat.

An investigation of the colloidal properties of suspensions of glutens from different kinds of flours, including wheat, barley, rye, corn and buckwheat, was reported by A. Boutoric and Simone Fabry.

The effects of ultra-violet radiations on the aging characteristics of wheat flour was the subject of another study completed by the above authors, who concluded that the effect of ultra-violet light in accelerating the aging of flour was due chiefly to the action of ozone.

## Fluorspar.

The major world producers of fluorspar ar proximately in order of importance, U States, Germany, Newfoundland, Korea, Great Britain, M France and Spain. World production reached a peak of 1,200,000 tons in 1944 of which the United States supplied and Germany 16%; other producers were of the order of 5 less. Demand decreased sharply after the close of World II, with the reduction in steel output and the decrease o cialized war uses.

**United States.**—The major features of the fluorspar ind in the United States are indicated in the following tab thousands of short tons.

*Data of Fluorspar Industry in the U.S., 1940-46*

(In thousands of short tons)

| | 1940 | 1941 | 1942 | 1943 | 1944 | 1945 |
|---|---|---|---|---|---|---|
| Shipments . . . . . | 233.6 | 320.7 | 360.3 | 406.0 | 413.8 | 324.0 |
| Imports . . . . . . | 11.9 | 7.5 | 2.2 | 43.8 | 87.2 | 103.1 |
| Consumption . . . | 218.5 | 303.6 | 360.8 | 388.9 | 410.2 | 356.1 |
| Iron and steel . . | 160.1 | 214.7 | 250.4 | 241.4 | 238.0 | 204.7 |
| Acid . . . . . . | 35.7 | 56.0 | 81.6 | 113.6 | 129.6 | 109.3 |

In spite of the fact that fluorspar production declined in 1946, shipments for the year were the largest for any p time year on record. The chief producing states are Ill Kentucky and Colorado. In the early years of the war im were negligibly small but increased to furnish nearly one-f of the supply in 1945. The 1946 imports dropped back t prewar level, with exports negligible. ( G. A. R

## Food Research.

The bureau of human nutrition and h economics in the U.S. departmen agriculture reported valuable results in nutrition research. I rapid and accurate methods were developed for the micr logical determination of nutritionally essential amino a especially methionine, lysine, threonine, valine and histi Some food proteins are low in nutritive value because they little of the sulphur-containing amino acids, cystine and me nine. Through investigations into the chemical and nutr properties of these and other amino acids that contain sulp the bureau developed a spectrophotometric method w proved useful in determining the amount of cystine in a nur of proteins. Also, the investigators discovered that the cys and methionine content of eggs can be improved by ma certain changes in the protein of the hen's ration. Neverthe it proved ineffective to feed synthetic methionine to hens the purpose of raising the level of cystine or methionine in eggs. It appeared that, in order to be usable in the form of protein, the methionine had to be in combination with o linkages in the protein molecule.

In research to learn how well carotene in different vegeta is utilized by the body, the bureau experimented with kale carrots in test diets. Experimental animals on diets other adequate and depending on the cooked vegetable for vitami appeared to use only about 60% of the carotene in kale about 25% of the carotene in carrots. The explanation peared to lie, in part, in the inability of the rat to free carotene from the vegetable cells in the digestive tract. Ea studies had indicated that human beings utilize the caro from peas and spinach very well—better than pure caro ssolved in oil. They do not, however, utilize the carotene from rrots so effectively as that from peas or spinach. However, e richness of carrots in carotene makes it an outstanding urce of vitamin A, despite incomplete utilization.

Because of the interest developed in the study of vitamins, inerals and amino acids, nutritionists continued to give rela- vely little attention to the fuel value of foods. World War II lled for a revival of interest in this problem. A common in- rnational basis for calculating the physiological energy value wheat and other foods was needed. Accordingly, the bureau human nutrition and home economics reviewed and sum- arized the literature on the derivation of calorie values from ta on composition of foods, the heat of combustion of their ajor organic constituents and their digestibility by man. It ncluded that the conversion factors used in the U.S., the fac- rs 4.9.4 developed by W. O. Atwater in 1899, could appropri- ely be applied to the total number of grams of protein, fat d carbohydrate, respectively, when estimating the physiologi- l energy value of the U.S. diet as a whole. The bureau ex- ained the changes needed in the use of the Atwater system to ve a more precise calculation of the calorie value of individual ods. It developed new calorie values for wheat flours of three vels of extraction and tentative comparable figures urgently eded by the U.S. army for a few other cereals, for potatoes d for some additional groups of foods.

Professor Henry C. Sherman, formerly chief of the bureau human nutrition and home economics, and in 1947 at Co- mbia university, reported experiments at Columbia on the lationship of diet to senility.

In the Columbia experiments, Professor Sherman reported gns of senility in experimental animals agreed with the de- riptions published by E. V. McCollum, Nina Simmonds, and elen Parsons: "in our experiments as in theirs the onset of nility is deferred by nutritional improvement of the dietary. hus in a typical case cousins, which in the opinion of skilled oservers manifested senility in equal degree, had reached this ondition in one case at an age corresponding to about 65 in an; while in the other case, with better-balanced diet, the same egree of senility was not reached until an age corresponding to oout 75 or 80. The visible evidence of aging and the effects of ets upon their incidence are alike for males and females." Henry C. Sherman, *The Science of Nutrition,* Nutrition Foun- ation, Columbia Univ. Press, 1947.)

In work on the effect of heat on proteins, especially those in lseeds, the bureau examined the biological value of the protein an unheated cottonseed flour prepared in the Southern egional Research laboratory. This flour was a newly processed, olvent-extracted, gossypol-free product. Its protein had a much gher nutritive value than that in certain commercial cotton- eed flours. This cottonseed flour also contained an adequate mount of lysine, one of the amino acids essential for growth. ome reports had pronounced cottonseed protein deficient in sine. It was supposed that heat treatment might change the ructure of the protein molecule, so that lysine becomes less adily available for the body's use.

A comparative study by BHNHE indicated rolled oats was qual or superior to all other major food grains tested in both uantity and quality of protein. Rice was lowest in the quantity its protein but ranked with oats in protein quality. Rye, hole wheat, barley and corn followed in that order. Enrich- ent, restoration or fortification of certain foods with one or ore nutrients was no longer compulsory by federal order as it ad been between Jan. 1943 and Sept. 16, 1947. Yet the depart- ent of agriculture reported that the enrichment of grain prod- cts was continuing at much the same rate. In 20 states the nrichment of white flour was compulsory by state legislation. In addition, some states required the enrichment of corn and some other products. (*See* also FOOD SUPPLY OF THE WORLD; VITAMINS.)

(A. P. Cw.)

## Food Supply of the World.

No other year in modern times had seen so widespread concern over food as did 1947. The food shortage of the war years was followed by very slow recovery through 1945 and 1946. The crop year ending July 1947 saw little or no gain and the need for more food to prevent hungry people lapsing into chaos and political revolution became acute. The Food and Agriculture organization stated in December that "the world food situation is as critical this year as at any time since the close of World War II." While there were notable increases in production of several basic crops and better yields in some countries, the gains were insufficient to provide the exportable surpluses needed by the deficit countries. The needs of Europe became steadily larger through the year leading to food-saving campaigns in the United States and proposals for the return to rationing as in wartime. The steady advance of prices aroused the congress to consider inflation controls. The government called for another year of wartime-size production and increases over prewar levels to care for the increases in population. The crop-by-crop and country-by-country survey that follows reflects the food crisis in detail.

The world food situation at the beginning of 1947 showed little improvement over 1946. The International Emergency Food council stated that while the world as a whole was slightly better off, a number of individual countries found themselves in a worse food situation. In central and western Europe, excepting the United Kingdom, Switzerland and Portugal, some improvement in food supply was noted but in the lower Danube basin and in countries adjacent to the Soviet Union food conditions were worse. Competition for imports was keener than a year earlier. The most serious shortages were in the basic foods—rice, cereals, fats and oils, and to a lesser extent meats and sugar. Only about 3,000,000 tons of rice were available to meet demands for about 8,000,000 tons. Some gains in food supplies were noted in Asia and the far east, particularly China, Japan and southeastern Asia. In India the gain in relation to population growth was smaller, if any. Only half enough fats and oils were to be found and the meat supply of Europe was one-third less than prewar amounts. The hope of relief lay in the prospects for good crops in 1947, which must follow several years of high yields in the United States where the principal surpluses were to be found. In the United Kingdom food consumption was reported in March to be 5% to 10% less than a year earlier or during the war. At the same time it was emphasized that per capita consumption in the United States was higher, reaching 3,400 calories per day which was 5% above the prewar average.

In February former President Herbert Hoover headed an economic mission appointed by President Harry S. Truman and made a short survey of conditions in Europe and reported that the outlook was very serious and called for vigorous action by the United States, the chief source of surplus foods.

Effective measures to conserve human foods were reported to have resulted from the recommendations of the Conference on Urgent Food Problems held in Washington, D.C., in May 1946. These measures included the use of less wheat and other bread grains for livestock and the production of alcoholic beverages. In France, nonfood industries received no wheat. More controls were put into effect than during the war, particularly in Europe. The rate of milling wheat was raised to 85% to 96% extraction, and the waste of wheat and wheat products was made a criminal offense in some countries.

The President's Cabinet Committee on World Food Programs reported on July 1, 1947, that the United States would have to increase its exports of foods if the European situation was to be prevented from seriously deteriorating.

A special Cereals conference was held in Paris in July to consider measures to meet the grain shortage. Over thirty nations were called together by the F.A.O. and I.E.F.C. to survey the food grains situation. Numerous measures to save human food were recommended.

The Food and Agriculture organization held its third session at Geneva in August and appraised the world's food situation again. While improvement in some countries was noted for the year 1946–47, the total was not sufficient to offset the effects of long deprivation.

By Sept. 22, 1947, the situation was reported as less favourable for the coming winter than appeared evident in midsummer. The President's Cabinet committee reported that crops in Europe had rapidly declined during August and September so that steps should be taken to conserve grain supplies for export. In October the I.E.F.C. issued a statement supporting the estimate that world food production in 1947 would be below that of 1946 and that the deficit areas had the poorest crops.

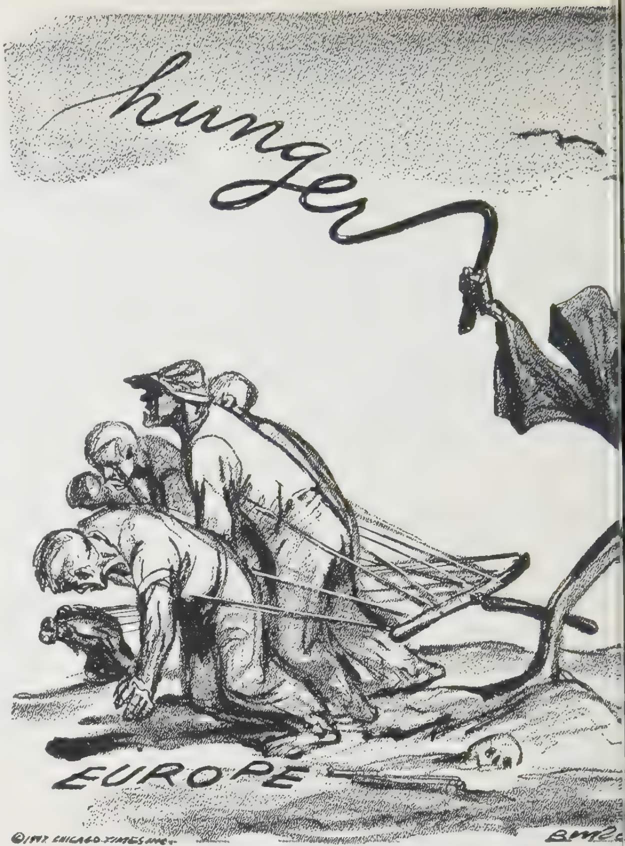
These warnings led the president to call for a special campaign to save food grains for export. A Citizens Food committee was set up, and a nation-wide campaign was made to save 100,000,000 bu. of grain for export to Europe. The plan called for meatless Tuesdays, poultryless and eggless Thursdays and a "save a slice of bread a day" slogan. The results of the campaign would not be determined until late in the winter when exports had been measured.

A summary of the world food situation was issued by the F.A.O. Dec. 4, 1947, which appraised it as critical as at any time after the end of hostilities. World production of bread grains and rice per capita was estimated at 13% below the prewar average of 1934–38. Droughts and other weather damage caused heavy crop losses and destroyed the prospect for improvement indicated early in the year. Europe was hardest hit; middle east grain production fell off; the far east reported some gain over 1946 but hardly enough to offset population increases. The United States enjoyed the greatest increase of any part of the world.

The I.E.F.C. was combined with the World Food Council of F.A.O. in December and the allocations of food stuffs was to be continued by the new body which took over the staff of I.E.F.C. A general world food conference was expected to be held early in 1948 as soon as the requirements under new congressional aid to Europe plans had been developed in detail.

**Bread Grains, Wheat and Rye.**—Wheat had become the most important food crop of the world during and after World War II because of its place in feeding the destitute Europeans. The normal prewar imports of Europe were more than doubled by the local crop decline. While rye takes the place of wheat as a bread grain in some regions, the world's trade in rye was comparatively small in 1947. More than 72% of the world's grain exports consisted of bread grains, wheat and rye and the remaining 28% was principally corn. Of the world's exports of grain the United States provided 53%, Canada 24%, Argentina 15% and Australia 5%.

Productions of wheat and rye in 1947 were estimated at a total of more than 7,425,000,000 bu., consisting of 5,975,000,000 bu. of wheat and 1,450,000,000 bu. of rye. This total was slightly more than was harvested in 1946 and almost up to the production of 1935–39 due chiefly to the huge United States wheat crop. In Europe and other deficit areas the crop was still below the prewar average. This situation made it necessary to move more of the crop to the deficit areas to prevent famine. Popula-



"THE TASKMASTER" by Burck of the *Chicago Times*. The urge
Europe's need led President Truman, in Oct. 1947, to urge all U.S. citi
eat no meat on Tuesdays and no poultry or eggs on Thursdays in or
conserve food

tion increases of 5% to 10% after 1939 further increase
deficits in some areas. In 1946 Europe imported more
16,600,000 tons of grain to supplement home-grown su
and then was short of an adequate diet. The stocks being
at the mid-year and the corn crop also being smaller th
1946 intensified the competition for bread grains which c
prices to rise to record heights in the United States. This g
increased the cost of relief purchases in all countries.

**Rice.**—The world's greatest food crop for direct human
sumption, rice, was slowly approaching the prewar level of
duction in the 1947–48 crop year. The total harvest was
mated by the United States department of agriculture at 6,
000,000 bu., which was 4,800,000,000 bu. more than in
and compared with a prewar average of about 7,446,000,00
for 1935–39. The increase was made in China which for
produced about 35% of the world's total, while there we
ductions in India, due in some cases to acreage being shift
jute. Siam, Burma, Japan, Korea and the Philippines eac
creased acreages of rice.

Europe as a whole planted a larger acreage in 1947 and
vested a crop almost equal to that of prewar years. Most o
increase was in Spain. Yields were low there, however, d
shortage of fertilizers. Italy's crop was fair but the acreage
below prewar. Egypt and Madagascar had excellent crops.
South American crops were expected to be about the same
1946–47. In North America the record crop of the United S
raised the North American total almost 50% above the pr
level, providing a considerable supply for export.

While the rice production of the larger rice-consuming c
tries was increasing from the low levels reached during the
years, the total was yet so far below the prewar total that
relief to rice consumers was in sight. Population growth in C
and India has been much more rapid than the expansion of

oduction.

**Potatoes.**—The potato crop centres in Europe, as rice centres Asia. About half of the world's total is grown in Europe and prewar years about one-fourth of Europe's total was grown Germany. The world's potato crop for 1947 was estimated at out 7,080,000,000 bu., compared with 7,132,000,000 bu. grown 1946 and an 8,417,000,000 bu. prewar average. The 1947 crop ıs about 16% below prewar chiefly due to lower yields as the reage was approaching the prewar level. Average yields were ly 139 bu. per ac. compared with 149 bu. in 1946 and 160 bu. prewar years. Drought and the shortage of fertilizers held wn the production.

Fewer potatoes were grown in both the United States and ınada in 1947 and in almost all other countries except South nerica where the total is not large.

The experience of the United States in 1946 when it had a ge potato crop did not encourage exports to any great extent. ehydrated potatoes could be shipped but the transport of raw tatoes was attended by heavy losses. Supplies in the United ngdom became so scarce that the rationing of potatoes was gun in the fall of 1947.

**Sugar.**—World sugar production increased about 19% in 47 and provided a supply that allowed for greatly increased nsumption. The Cuban crop was double the prewar output d the crop of Europe was 40% above 1946 although less than lf of prewar output. The Philippines and Formosa were still rvesting less than 10% of prewar production. The higher ice of sugar continued to restrict its purchase for deficit counes, since other foods were considered more essential. The tential sugar output of the world is sufficient to provide the % increase recommended by F.A.O. by 1950.

**Meat.**—Production was expected to require more time to cover to prewar levels in the world as a whole principally beuse of the urgent need for grain for immediate human conmption. Meat is of less importance in Asia than in Europe, d in the former areas production effort was to be expended rice and wheat. The numbers of livestock declined in the nited States, Canada and Mexico while increases in Europe ere small, probably less than 5% for all animals. Feed supies were still 15% less than in prewar years in relation to the ımber of animals to be fed, and concentrated feed supplies ere particularly short. This led to early slaughtering of meat ıimals and a corresponding reduction in the quantity of meat. og slaughter in Europe was still less than half of the prewar nount and was not wholly offset by the increases in the United ates, Canada and Argentina. Poultry and egg production, hich began to recover at the end of hostilities, was handipped again by the severe grain shortage. The total world oduction of poultry for meat and eggs in 1947 gained slightly er 1946 in spite of the decline in the United States. Canada d Australia, which supply Great Britain, increased their output eggs in 1947. The number of dairy cows was slowly ineased after the war, and milk, butter and cheese production gan to recover. By 1946 the western European countries had covered about half of the prewar production. The low counies, the Netherlands, Denmark and Belgium, suffered from the 47 drought which damaged pastures severely. The feed short- e was also a retarding factor.

**Food Situation by Areas.**—North America as a whole had somewhat smaller total food crop and meat production notthstanding the high record wheat crop of the United States. ıe Canadian wheat crop was off 15%. Corn declined in the nited States and affected the output of livestock and products. ven with these reductions however, North America was the orld's chief source of exports to make up the deficit of the edy countries.

Great Britain experienced the worst floods and droughts in 50 years, which cut domestic production severely. Potatoes were 10% below the average yield, and in early November potato rationing was begun at 3 lb. per capita per week. Almost all other foods were rationed, which brought the average diet down to 2,700 calories, which was below the wartime level. Purchases from the United States were suspended in August because of the dollar shortage. Some purchasing was resumed later when the terms of the loan to the British by the United States were made more favourable. In December the British were buying in the cheapest markets, including the purchase of some wheat from the Soviet Union.

Europe was hard hit by bad weather—a severe winter followed by a dry summer. Yields were much below 1946, although the crop acreage was larger. The most severe loss was a drop of nearly 8,000,000 tons in wheat and rye. Other grains were also short, and potatoes were below the 1946 output. A slight increase in livestock, principally pigs and poultry, was reported. The shortage of feed grains cut down the output of meat and milk, although heavy slaughter due to feed shortage was expected to increase the supply of fats for the winter of 1947–48. Central Europe, principally Germany, needed imports for the winter of 1947–48 about as great as for the previous winter. Corn production in the Danube valley was better than 1946 and about up to the prewar level.

The middle east, usually an exporter of food grains, had a smaller crop than in 1946 because of drought and locust attacks.

The Soviet Union reports were very conflicting. Government claims of a large wheat crop were not consistent with the reports of observers who noted the lack of fertilizers, farm ma-

DARK BREAD, milled with U.N.R.R.A. flour, constituted three-quarters of the daily diet of this woman and most other residents of the village of Mokrance in eastern Slovakia during 1947

chinery, seed, work animals and the generally low rations being served to workers in the cities.

South America reported less grain and a decline in livestock production due to feed shortage. The wheat crop of Argentina was estimated at 17% below 1946. Tropical crops, sugar, coffee, etc., were increasing. Australia had a larger wheat crop and offered larger exports. South Africa had barely enough for its own needs.

China's 1947 crop production was estimated to be slightly better than the fair crop of 1946 and about equal to the prewar 1931–37 average. The civil war, poor transportation and financial troubles resulted in deficits in some regions reaching near famine conditions. Imports were effective in helping the coastal cities to maintain the people on the minimum diet. About 800,000 tons of rice and wheat were brought in from other coastal areas.

Burma, French Indo-China and Siam, which had an export surplus of 45% of their production in prewar years, reduced production during World War II as the result of the Japanese blockade and in 1947 were producing only about half the prewar amount, and exports had not recovered above 17% of the prewar amount. The recovery of these countries is essential to provide ample food for China and India.

India was very short of food following the 1946 harvest, and the crop of 1947 was only sufficient to replace stocks when the third successive year of short supplies was experienced in nearly all parts of the country. The division of the country intensified the need, since millions of people were taken from the land to cities in other areas where the people had no land and no allowance of food. Statistics of food production were delayed in India to avoid alarming the people to induce hoarding. Prices advanced with the shortage and this made the situation worse for the poor, who constitute about three-fourths of the people of India. From Dec. 1946 to Oct. 1947 more than 1,746,600 tons of grain were imported. Of this total about 787,000 tons came from the United States, 341,000 tons from Burma, 138,000 tons from Argentina and 125,000 tons from Turkey, while the rest came from a dozen other countries in smaller amounts. Very little grain was ever before shipped from the United States to India.

The Netherlands Indies were so chaotic because of military and political operations that an accurate survey of the food situation was difficult. Java and Sumatra were usually self-sufficient, but the Dutch in the cities lived on imports. Trade was so interrupted that some cities were near to starvation. Farming and trade were so disturbed that production of rice and other crops was 20% below the prewar level. Before the war this area usually exported more than 25% of its total food production.

The Philippines recovered much of their war losses in 1947 and were self-supporting again except for meat. Rice was relatively adequate after the good 1946 harvest and another good crop was harvested in 1947 which was about equal to prewar production. During the war the Japanese took much of the Philippine rice crop and left the Filipinos to subsist on corn and root crops, chiefly sweet potatoes and casara. The crop of beans and vegetables was increased in 1947 and hog and chicken production made rapid recovery. Copra and sugar production began to recover. Sugar mills, half of which had been destroyed by the Japanese, were being rebuilt.

Australia and New Zealand were expanding food production as rapidly as possible. Australia had a larger wheat crop than for two years and expected to increase exports. South America as a whole was in a good self-supporting position with nearly the prewar surpluses for export, except that the Argentine wheat crop was smaller than in 1946.

**World Food Organizations.**—The United Nations Foo Agricultural organization (F.A.O.) speeded its activities in ways during the year and adopted a more definite progra work at its third general conference at Geneva, Switzerla August. Missions of experts were sent to Greece, Polan South America at the requests of the countries involve survey the needs for improved production and distrib These missions made suggestions to the national govern and to the F.A.O. Other missions were started to Siam, gary and Venezuela to report in 1948.

Special conferences were held on timber, fish, cereals an diseases of animals. Reports were made on wheat, rice, and rural welfare. Studies were begun on many tech problems.

The World Census of Agriculture was planned to cov phases of the food supply in the year 1950. A special For office was set up in Geneva, and the headquarters of the fo International Institute of Agriculture at Rome was ma temporary European headquarters. The absorption of th stitute was almost finished and most of its staff were pens or employed by F.A.O.

The plan for the World Food council was approved b full conference of 54 governments in Geneva in August. council was to consist of 18 of the governments, meeting tervals between the annual sessions of the full conferenc keep the world food situation under review and to take a in emergencies. It would make recommendations only o basis of information gathered by its staff of experts.

The International Emergency Food council, which succe the Combined Food board of the war years, completed its and turned its staff, functions and files over to the World council of the F.A.O. at the end of 1947. During the yea Emergency council, which represented 35 nations, made cations of scarce food among the countries. The headqua of F.A.O. continued to be at Washington, D.C., although bers of its staff were working in many parts of the world

The International Federation of Agricultural Producers ganized in London in 1946, held another meeting in the Ne lands in June and adopted a constitution. A director was c and plans were made for a third annual convention in in May 1948.

Efforts to reach accord on a new world wheat agree between the principal grain growing and consuming nations continued at two conferences without success. About 16 na were interested, and more meetings were planned for 19 strive for accord. The International Trade organization unable to reach a final agreement at its Geneva meeting was in session at Havana, Cuba, at the end of 1947. The come of the latter meeting was thought to have much t with the trade in foodstuffs and to affect all agricultural age from a policy standpoint. (J. C. M

**Foot and Mouth Disease:** *see* VETERINARY MEDICINE

**Football.** Notre Dame and Michigan shared most of the ours in intercollegiate football during 1947 as marks were established for attendance and receipts. The ri between the Fighting Irish and the Wolverines for the myt national championship was as close as anything football known in many years.

Army, whose winning streak had begun in 1944, was h finally by Columbia. In the most surprising result of the se the West Point cadets, who had gone through 32 games wit defeat, lost to the Lions by the margin of a single point, after leading by 20-7. Still among the strong teams of the try despite the loss of the famous backfield combination of anchard and Glenn Davis and six other 1946 regulars, Army o was defeated by Notre Dame, 27-7. This game marked the spension of relations between the two teams, which had met nually since 1913.

Notre Dame went through the season with a perfect record r the first time after 1930, Knute Rockne's last year as head ach. Michigan, which lacked Notre Dame's size but was ex- ptionally fast and had one of the smartest attacks of the year, o won every game and gained sole possession of the Western nference championship for the first time after 1933. Fritz isler was voted outstanding coach of the year in the poll ken among the coaches of the country; Frank Leahy placed urth. The Heisman trophy, awarded to the outstanding player the year, went to Johnny Lujack, Notre Dame's brilliant arterback. Bob Chappuis, Michigan's famous halfback, was nner-up in votes received.

One other team of major status went through the season th a perfect record. Penn State, coached by Bob Higgins, n every game on its schedule for the first time since 1912 d was awarded the Lambert trophy as the leader of the east. uthern Methodist, with one of the year's outstanding backs Doak Walker, and Pennsylvania, with an all-American centre Chuck Bednarik and a highly talented back in Tony Minisi, re also unbeaten, though tied once.

Southern Methodist won the championship of the Southwest- n conference on the strength of its one-point victory over xas, which won all of its other games and had a great back Bobby Layne. Pennsylvania was the best in the east's Ivy oup.

The title in the Southern conference went to William and ary. Mississippi, with one of the most effective passing com- nations in history in Charley Conerly and Barney Poole, won disputed title to the Southeastern conference championship r the first time.

Southern California, unbeaten until its game with Notre ame, took the Pacific Coast conference crown. Oklahoma and ansas, which had one of the year's best ball carriers in Ray vans, tied for Big Six honours. Tulsa won the title in the issouri Valley and Utah in the Big Seven. Princeton was ng of the Big Three.

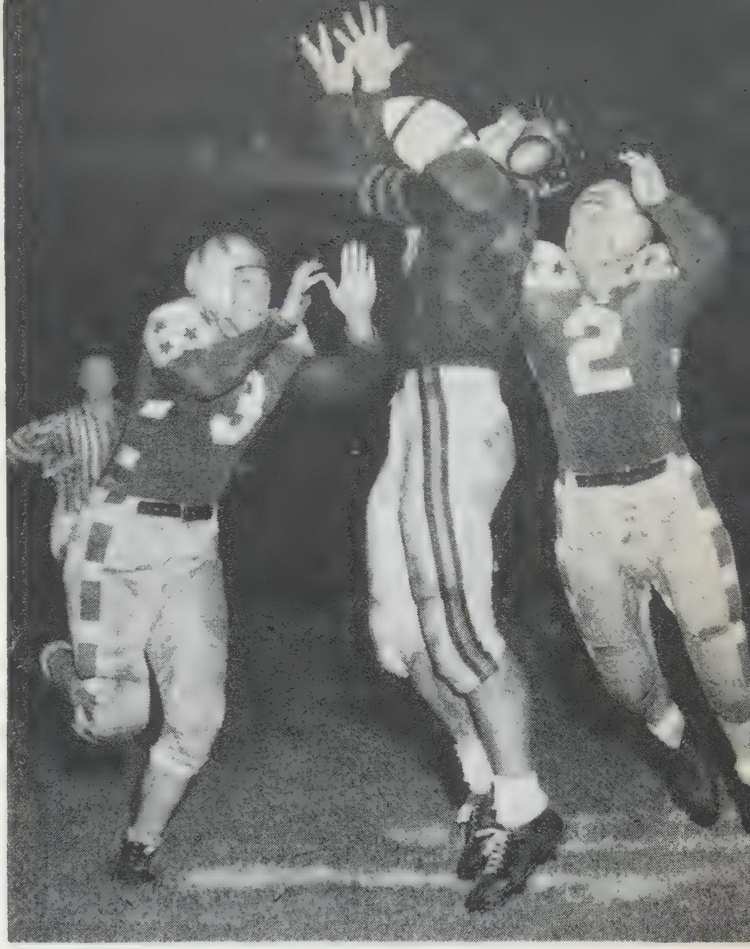
California, beaten only by Southern California and led by a w coach, Lynn Waldorf, Alabama, North Carolina, Georgia ech, Rice and Columbia were among the other strong teams the season.

Outstanding players in addition to those mentioned included e Steffy of Army, Harry Gilmer of Alabama, Bob Davis of eorgia Tech, George Connor, Ziggy Czarobski and Bill Fischer Notre Dame, Dick Scott of Navy, John Ferraro and Paul eary of Southern California, Chalmers (Bump) Elliott, Bob ann and Len Ford of Michigan, Jack Cloud of William and ary, Steve Suhey of Penn State, George Savistsky of Penn, ick Harris of Texas, Ike Owens of Illinois, Tom Fears of .C.L.A., Charley Justice of North Carolina, Dan Edwards of eorgia, Leo Nomellini of Minnesota, Rod Franz of California nd Bill Swiacki of Columbia.

Michigan, as champion of the Western conference, was in- ted to the Rose Bowl at Pasadena to play Southern California New Year's day, 1948. Crisler's Wolverines won by the top- eavy score of 49-0.

In the Sugar Bowl at New Orleans the contestants were Ala- ma and Texas. The decision went to Texas, 27-7. Southern ethodist and Penn State met in the Cotton Bowl at Dallas, ex., with the game resulting in a 13-13 tie. The Orange Bowl Miami, Fla., presented Georgia Tech against Kansas. The rmer won, 20-14.

Tremendous crowds attended the college games in all sections of the country during 1947. Notre Dame drew the year's largest gathering with Southern California in the Los Angeles coliseum—104,953 spectators. In all, 571,527 saw the Fighting Irish perform, breaking the 1929 figure of 560,000.



GEORGE GULYANICS (centre) of the Chicago Bears, fumbling a pass during the game with the College All-Stars at Chicago in July 1947. The All-Stars upset a 14-year record by defeating the Bears 16 to 0

Southern California attracted 102,000 when it played U.C.L.A., and 101,500 filled Philadelphia's Municipal stadium as Army thoroughly trounced Navy. President Truman, members of his cabinet and high ranking officers of the army and navy were in the crowd.

The T formation remained the most favoured style of attack, but the single wingback made a comeback. Teams that had abandoned it took it up again, some in conjunction with the T. Michigan used both, and Penn State, S.M.U., Pennsylvania and Mississippi attacked from the single wing. Notre Dame and Army continued to use the straight T. Defensively, the five- and six-man lines were much in evidence. A few teams, including Navy and Cornell, used a seven-man line with a diamond secondary.

The new substitution rule, permitting an unlimited number of one-man replacements, made it possible for more players to get into the games. It also resulted in the use of specialists as never before. Most coaches of large squads had offensive and defensive units in the line or backfield, or both. Michigan had a light offensive line and a heavier one for defense. Fast backs and passers were usually rested on defense, adding to their effectiveness on the attack. The continual substituting made it difficult for the spectators to keep track of players on the field. It also made it possible for the coaches to send in instructions as often as they wished and control the running of the team. But it was generally felt that the rule made for a better grade of football and for less injuries.

**Professional Football.**—The Chicago Cardinals won the championship of the National league for the first time after 1925 and the Cleveland Browns retained the title in the new All-America conference. The Cardinals won the Western division honours by defeating the Chicago Bears, 30-21 before a record crowd of 48,632 at Wrigley field, Chicago. In the east, the Philadelphia Eagles came through for the first time by trouncing the Pittsburgh Steelers, 21-0, in the play-off of a tie for first place.

The East-West play-off for the championship of the league resulted in a 28-21 victory for the Cardinals over the Eagles. The game was played on a frozen gridiron on Dec. 28, and only 30,579 turned out in Chicago's Comiskey park. Steve Van Buren of the Eagles, the league's leading ground gainer, was completely held in check while the Cardinals' Charley Trippi made touchdown runs of 75 yd. and 44 yd. and Elmer Angsman twice ran 70 yd. for scores. Philadelphia's Tommy Thompson threw 44 passes, of which 27 were completed for 297 yd., breaking the record made by Sammy Baugh of the Washington Redskins in the 1937 play-off.

The Cleveland Browns and the New York Yankees again won the sectional honours in the All-America conference. In the play-off the Browns defeated the Yankees in the latter's stadium, 14-3, before 60,103. Otto Graham of the Browns, with his passing, and Spec Sanders and Buddy Young of the Yankees were the offensive stars of the league. The New York Giants, hard hit by the loss of Frank Filchock, who was banned from the league, had their poorest season in years but picked up when they acquired Paul Governali, former Columbia passer.

The two rival leagues continued to war on each other. The conference's efforts to get together with the old circuit on a common draft and a postseason world series were rejected by the National, though the owner of the Eagles spoke in favour of a common draft. As a result of the warfare and the high bidding for players, few teams in either circuit made any money, and some of them suffered huge losses. Among the latter were the Chicago Rockets and the Brooklyn Dodgers of the conference. Jimmy Crowley, coach of the Rockets, retired from football. The Yankees and Browns, in a meeting during the regular season, played to a gathering reported as 70,060, the largest to see a professional game in New York city after Red Grange made his debut at the Polo Grounds almost a quarter of a century before.

**Canada.**—On the last play of the game, Joe Krol, brilliant halfback, kicked the point that enabled the Toronto Argonauts to defeat the Winnipeg Blue Bombers, 10-9, in the East-West play-off for the Grey cup and win the dominion championship for the third successive year.

The Argos qualified to represent the east by finishing on top in their own league, the Big Four, and then defeating the Ottawa Trojans, champions of the Ontario Rugby Football union. The Blue Bombers eliminated the Calgary Stampeders in the west.

The University of Western Ontario Mustangs completed their eighth undefeated season in the Intercollegiate union. They were prevented from competing for the Grey cup by a rule of the union forbidding postseason games.

There were many who thought the Mustangs better than the Argos.

The season was notable for the number of coaches brought across the border. Vic Obeck, former member of Lou Little's staff at Columbia university, was installed at McGill university. Bob Masterson, one-time end on the University of Miami team and the Washington Redskins, was assistant coach at the University of Toronto. Sam Fox, erstwhile New York Giant, took charge of the Ottawa Rough Riders. These men, trained in U.S. methods, took steps to organize clinics among the high school coaches, and the foundation was laid for the formation Canadian Rugby Football Coaches association.

Another player from across the border to play a p Canadian football was Frank Filchock, formerly of the York Giants. Barred from professional football in the Na league for failure to report a bribe offer, Filchock was as a player by the Hamilton Tigers without the sanction other clubs in the Big Four. In midseason he was grant eligibility card and remained with the Tigers as both and coach.

Virgil Wagner of the Montreal Alouettes, leading point in the Big Four, was awarded the Jeff Russell Memorial tr given annually for excellence of play and good sportsma

(A. D

**Great Britain.**—*Rugby.*—Weather dominated the sp the first three months of the year. It was so bad that Rugby union clubs went nine weeks without a game. It however, possible to play all the important matches on th pointed dates, and England and Wales were bracketed f championship, each losing only one match. Lancashire wa county champion, with a brilliant side led by veteran Jack ton, who also led England. Eng. Comdr. S. F. Coopper, secretary to the Rugby Football union since 1924, resigne was succeeded by the old England forward, F. D. Prentice the first time the universities match was played on a Satu rather than midweek, and it was won by Cambridge.

The leading Rugby league clubs were Wigan, Leeds Bradford Northern, the last-named club winning the cha cup at Wembley, by beating Leeds. In the autumn t sides from Australia (Rugby union), captained by W. M Lean, and New Zealand (Rugby league) visited Britai France.

*Association.*—It was the "Old Guard" who kept the flag in the international world and F. Swift, H. Carter, T. La S. Matthews and W. Mannion helped to make a superb En side undefeated champions. The English cup was won by ton Athletic, and the Scottish cup by the Rangers. The l championships were won by Liverpool and the Rangers, re tively. In heading the Division Three (Northern Section) Doncaster Rovers gained the record number of 72 points matches out of a possible 84.

**Foreign Exchange:** *see* EXCHANGE CONTROL AND EXCH RATES.

# Foreign Investments in the United States.

The value of foreign investments in the United States on 30, 1947, was estimated by the United States departme commerce at $17,395,000,000, an increase of $1,255,0 over the value of $16,140,000,000 at the close of 1946. rise was more apparent than real inasmuch as the U.S. of such international organizations as the International for Reconstruction and Development and the Interna Monetary fund rose from $474,000,000 at the end of 19 $2,714,000,000 at mid–1947. Exclusive of these hol therefore, the U.S. assets of foreign countries fell by $985 000 in this period.

At mid–1947 foreign long-term investments in the U States of $7,845,000,000 were $140,000,000 lower than a previous year end, largely as a result of net liquidatio about $90,000,000 of U.S. securities and a decline in se prices, which was partly offset by the reinvestment of ea of foreign-controlled enterprises operating in that co Foreign-country holdings of short-term U.S. assets (wi original maturity of one year or less) fell by $870,000,0

oes not include gold held in the United States for foreign account, including international itutions, amounting to $3,709,000,000.

ncludes $2,700,000,000 for international organizations, about $900,000,000 of imated holdings of U.S. currency and claims on the U.S. government, an omission estimate $500,000,000, and more than $100,000,000 of brokerage balances not included in data for individual countries.

ource: United States department of commerce.

The liquidation of these investments and the size of remain- g foreign investments in the United States provoked consider- le discussion during 1947. Sentiment was voiced that it was ly fair that countries calling on the United States for financial d should first make reasonable use of their own realizable sets, including those of their citizens. Others proposed finan- al aid without reference to the foreign assets in the United ates, but perhaps with the feeling that in the long run quidation would be harmful to those countries.

**Mobilization of Private Assets.**—The European countries o requested U.S. assistance had varying degrees of success mobilizing the investments of their nationals in the United ates. Great Britain had begun such mobilization in 1939. lthough substantial amounts were liquidated during World ar II, the value of British assets in the U.S. on June 30, 1947, ceeded $2,000,000,000, including those of citizens of other untries resident in England. Italy's dollar assets were rela- vely small and the Italian effort, if any, to acquire the foreign sets of its citizens was not generally known. France ap- rently met resistance from private French investors in its tempt to acquire dollar assets; an order of Jan. 1945 call- g for a census of such assets was followed in July 1947 by order vesting U.S. securities and compensating their owners French francs. Subsequently, the French government found necessary to request both the Swiss and U.S. governments aid it in locating French holdings not reported to it by its ationals. The latter governments were said to have refused supply the requested information on the grounds that such ata were confidential. No substantial liquidation of French- wned United States securities was reported during most of 947.

The Netherlands government, on the other hand, attempted encourage the voluntary liquidation of dollar securities held y Dutch investors, after taking ownership of privately held old and foreign currency. However, investors were reported to ck enthusiasm for the offer to exchange Netherlands 3% overnment bonds in return for their dollar securities. The wedish government requisitioned the short-term dollar assets of s nationals and called for registration of their U.S. securities. ittle information was available regarding the efforts, if any, f the other so-called Marshall plan countries to mobilize their ationals' holdings of securities issued in the United States.

Foreign governments faced the added difficulty of liquidating rned-in assets (in many cases the controlling interest of large companies) without serious loss. Moreover, there was a reluctance to liquidate U.S. assets because they earned dollar income and were relatively safe insofar as principal was concerned. In the case of Great Britain the concern may also have existed that injury to its traditional role as a supplier of banking and insurance services might follow depletion of its dollar assets. The prewar reliance upon foreign-exchange reserves as part of the legal reserve against domestic currency in circulation and deposits was hardly considered by the Marshall plan countries (and other countries) in view of the shortage of dollars readily available for current purchases. However, the amounts that should remain unliquidated for trade purposes were not always certain since the working dollar balances necessary to finance international transactions are not fixed sums derived by simple formulas, but vary according to the total volume of such transactions and a complexity of psychological factors, including confidence in a country's currency.

In the light of these circumstances it was not surprising to find that few new foreign enterprises were reported to have been established in the United States during 1947. Nevertheless, compilers of that country's balance of payments were led to suspect by discrepancies in their balance-of-payments data that the progressively difficult economic situation of foreign countries was inducing movements of capital from Europe and elsewhere to the U.S., despite exchange controls in European countries, and in a manner that went undetected in the United States.

**U.S. Controls.**—During 1947 the U.S. treasury department was apparently satisfied that a significant part of the U.S. currency and securities that had fallen into axis hands during World War II had been recovered. In April the department announced that it would no longer be necessary for persons receiving or importing U.S. currency of any denomination from foreign countries to submit it to a federal reserve bank for examination. Instead of a general control over imported securities, a list of "scheduled securities" which had been looted from axis-occupied countries during the war was issued by the treasury in July. The purpose of the list was to prevent the entry and sale of such securities into the United States by anyone except their rightful owners.

The treasury also further relaxed its control of foreign funds. By Dec. 1947 only the assets of the following countries remained frozen: Bulgaria, Germany, Hungary, Japan, Portugal, Rumania, Spain and Yugoslavia; also, assets of nationals of certain other countries which had not been certified by those countries to be free of axis interest. The U.S. assets of Poland, Austria, Sweden, and Italy had been unblocked during the year, and the Yugoslav government was reported to have been negotiating with U.S. authorities to release $56,000,000 of Yugoslav gold that had been frozen during the war.

The Office of Alien Property continued to vest property in the U.S. in which the axis had an interest, including liquid assets of hostile German and Japanese nationals that had been frozen earlier by the treasury department. The value of property vested during 1947 was relatively small, however, compared with the war years, and the attention of the office was apparently directed to supervising the administration of seized axis property and appraising U.S. and other claims against such assets. The largest axis interest vested during 1947 included the Dutch and German interests in the North American Rayon corporation and the American Bemberg corporation valued at approximately $15,000,000. The interests of nationals of both countries were seized inasmuch as a considerable German interest had existed in the parent of both companies, Algemeene Kunstzide Unie, N.V., a Dutch company. Although the Paris agreement on German reparations stipulated that each participant country should receive German assets within its borders as part of its reparations, the ultimate disposition of such property in the United States remained a matter for the congress to determine. Peace treaties between the U.S. and Bulgaria, Hungary, Italy and Rumania allowed for the return of properties previously seized by the Office of Alien Property. No formal decision was reached during 1947 with regard to the treatment of similar Japanese property.

Total payments of income to foreign investors during 1947 were probably little changed from the aggregate of $200,000,000 paid in the previous year. Nevertheless, sharp changes were anticipated in payments to individual countries. The U.S. department of commerce estimated that in 1945 payments to the United Kingdom from U.S. investments was approximately $86,000,000, of which about $43,000,000 was from British insurance companies operating in the United States. Payments in 1946 were estimated at $57,000,000, including $11,000,000 from insurance companies. For 1947 it was expected that the income from insurance company operations would decline further and that such business would even experience a loss, largely as a result of the explosions and fire at Texas City, Tex. It was expected that the liquidation of Netherlands holdings of about $50,000,000 in U.S. securities in the first half of the year would reduce income payments to that country.

The loss by Britain and Canada of more than a third of their short-term dollar assets had little effect on their receipt of income inasmuch as such assets, mainly bank deposits and short-term government obligations, yielded practically no income: Severe declines were also registered for other countries in the western hemisphere and in Europe. (*See* also EUROPEAN RECOVERY PROGRAM; EXCHANGE CONTROL AND EXCHANGE RATES.)

(M. AB.)

**Foreign Ministers' Conferences.** Between Jan. 14 and Feb. 25, 1947, deputies of the Council of Foreign Ministers met at London to begin the work of preparing treaties with Germany and Austria, in accordance with the agreement reached by the council in the preceding December. The deputies on the German treaty divided their time between discussion of the procedure to be followed in drafting the treaty and hearing the views of Allied states on the treatment of Germany. The western European Allies urged that Germany be organized as a weak confederation operating, however, as an economic unit. The Netherlands, Belgium and Luxembourg again requested minor territorial changes in Germany's western frontier, while Denmark felt that the Kiel canal should be placed under international control. Czechoslovakia also proposed small frontier rectifications designed to improve defense and communications, while Poland asked for confirmation of the Polish-German frontier as defined provisionally at Potsdam. The western Allies asked for moderate reparations and stressed the necessity for the restoration of German production and trade, while the eastern Allies and Greece asked for large reparation payments. South Africa opposed detachment of the Saar from Germany and proposed that its eastern frontier be moved to the east of the Oder.

Australia and Canada laid special emphasis upon broadening the procedure of peacemaking to permit active participation by all those Allies which had contributed military forces to the defeat of Germany. The Australian representative proposed that 18 Allies be admitted to discuss all aspects of the treaty at the council table, while South Africa suggested that they be represented rather on committees set up to consider various sections of the treaty. The French, British and U.S. deputies proposed that the Allies sit as observers at the council, with the right to discuss matters affecting their interests. The soviet deputy
opposed all proposals for broadening the procedure and i
moved that membership in the later general conferen
limited to those European Allies whose territories had
under German occupation; this arrangement, if adopted,
have deprived the British dominions of any voice in the
sideration of the treaty. A French compromise called fo
setting up of a committee of information and consultati
which all the Allies would participate. Lengthy discussions
ing led to no agreement on procedure, the deputies pres
four separate proposals to the council.

The deputies on the Austrian treaty heard Yugoslav c
for 1,200 sq.mi. in southern Carinthia and $150,000,000 i
arations from Austria. Czechoslovakia's claims for minor
fications in its frontier with Austria were referred to the
governments for direct negotiation, while Austrian repres
tives pleaded for an early treaty which would establish Aus
independence on a solid footing. The draft treaty present
the deputies to the council contained a considerable numb
agreed provisions and set forth the unagreed clauses in
conflicting versions. There was no sign of agreement o
more difficult questions, such as the Yugoslav territorial
or the definition of soviet claims to German assets in ea
Austria, but the progress made by the deputies held promi
the early conclusion of the Austrian treaty.

The positive achievements of the fourth session of the C
cil of Foreign Ministers, which met at Moscow from Mar
to April 24, were an agreement confirming the divisio
Prussia into a number of smaller states and a request t
United Nations to provide interim financial assistance t
future administration of the free territory of Trieste.
French, British and U.S. delegations also agreed on a sli
scale device under which deliveries of Ruhr coal to F
would be increased gradually. The principal issues involv
negotiating a German settlement among the major Allie
mained unresolved or were further exacerbated.

In the question of treaty-making procedure the soviet fo
minister emphasized the exclusive competence of the four A
but was willing for other Allied governments to be hea
questions which concerned them individually. Secy. of
George C. Marshall and Ernest Bevin urged that those A
which had provided military forces against Germany rece
fuller voice through membership in important commissions
that other states which had been at war with Germany sh
also be heard both by the council, on matters which aff
their interests, and at the general conference, on their vie
the treaty as a whole.

Bitter controversy developed over the question of the
man-Polish frontier. Marshall urged that the permanent
tier be located to the east of the Oder river, because of
historic German character of the area and because of Germa
need for agricultural land. Vyacheslav Molotov, holding
the frontier had been settled at Potsdam and needed onl
confirmed in the treaty, rejected a U.S. proposal to set
boundary commission to examine this and other frontier p
lems. He also declined to discuss the French claim, supp
by Bevin and Marshall, for the economic integration of
Saar with France.

Secretary Marshall proposed that Germany be organized
federal basis, reserving to the states, or *Länder*, powers no
pressly vested in the central government, while the soviet
posals envisaged a highly centralized state governed from Be
Marshall also favoured the setting up of a provisional gov
ment which would consist of the present heads of the Ger
*Länder* governments, while Molotov urged that a provisi
government consisting of elected representatives together
representatives of trade unions and antinazi organizations

aced in charge of German administration after it accepted the viet demand for $10,000,000,000 in reparation. The U.S. ap- oach, supported in the main by Bevin and by Georges Bidault, e French foreign minister, was that the creation of a central vernment must follow, not precede, the effective establish- ent of German economic and administrative unity through eps taken by the occupying powers.

There was again wide divergence over the question of repara- ons. While Molotov insisted on $10,000,000,000, which he serted had been promised at Yalta, Marshall and Bevin took e position that the idea of collecting reparations from current oduction had been discarded at Potsdam in favour of re- ovals of excess industrial equipment and acquisition of Ger- any's external assets, and that exports of current production ust be applied to pay for necessary imports. A partial meet- g of the soviet demand appeared possible when Marshall sug- sted that some reparation could be provided from current oduction to compensate recipients of reparations for the re- ntion in Germany of additional industrial equipment which ould no longer be available for removal under the proposed creased level of industrial production. This suggestion met th no response from the soviet delegation.

When Marshall pressed for favourable action on the U.S. oposal for a 40-year treaty guaranteeing the disarmament and militarization of Germany, Molotov on April 23 countered advancing a series of amendments which would have inserted to the treaty the entire range of soviet demands. Further dis- ssion seemed unlikely to indicate a way out of the impasse, d on the following day the council adjourned.

At Moscow the ministers also devoted much time to the Aus- ian treaty and agreed on a number of additional provisions. the questions of the Yugoslav claim to southern Carinthia and e definition of German assets they failed to advance toward agreement. The soviet government appeared determined to ld onto the extensive industrial properties which it was erating in eastern Austria; the other powers were unwilling withdraw from Austria if that meant leaving it under soviet onomic domination. However, before adjourning, the council pointed an Austrian treaty commission to continue the con- deration of unagreed provisions in the draft treaty.

The new commission, meeting at Vienna from May 12 to Oct. , undertook a detailed examination of the individual enter- rises which were claimed by the soviet authorities as German sets, with special attention to oil and shipping. Toward the ose of the conference a compromise advanced by the French legation proposed that a definite list of enterprises be agreed as satisfying the soviet claim to German assets, thus cutting ort the endless legal controversies; that enterprises trans- rred to soviet ownership not enjoy an extraterritorial status ithin Austria and that all other enterprises be returned to ustrian control. This proposal, together with the unagreed re- ort of the commission, went to the deputies, who began their ork on Nov. 6 at London. They again discussed treaty pro- edure at some length, and on Nov. 22 they were ready to eport to the ministers that they had been unable to agree on an genda for the new meeting of the council.

The fifth session of the Council of Foreign Ministers met at ondon from Nov. 25 to Dec. 15. It repeated, with growing cerbity, the disputes of the previous session. On Nov. 26 Iolotov made sweeping charges against the other Allies, ac- using them of striving for an "imperialist peace," of plotting oth to ruin German industry as an undesirable competitor and use it as "a base for military adventures." Turning to con- rete issues, the council came closer to agreeing on the role of e smaller powers in the peace-making, but again reached no onsensus of views on the German-Polish boundary, the economic integration of the Saar with France or the establishment of boundary commissions. Positions were unchanged concerning the steps necessary for the creation of a central government in Germany, but the exchange of charges was sharper, especially on the soviet side. The soviet delegation accused the United States of making huge profits out of Germany and of buying up industrial properties, and demanded that the agreement to unite the British and U.S. zones be denounced as a violation of the Potsdam agreement. Bevin and Marshall pointed in turn to the removals of current production from the soviet zone and to the establishment of a huge soviet industrial trust in eastern Germany.

On Dec. 8 Molotov demanded a share in the control of the Ruhr, cancellation of the bizonal agreement and assurance of $10,000,000,000 in reparations at 1938 prices; a soviet draft of that date set delivery of reparations ahead of German domestic consumption or payment of necessary imports. On Dec. 10 Marshall again refused to agree to reparations from German current production, which had been rejected at Potsdam, as the price of German economic and administrative unity, which had been agreed there. When no sign of a meeting of views appeared from these exchanges, Marshall proposed on Dec. 15 that the council adjourn. Although no date was set for a later session, the deputies were instructed to continue work on the Austrian treaty, and at their first meeting, on Dec. 17, it was noted with some encouragement that the soviet representative offered to present a concrete proposal defining the soviet claims to industrial property in eastern Austria. (P. E. M.)

**Foreign Missions:** *see* Missions, Foreign.
**Foreign Trade:** *see* International Trade.

**Forests.** Enrolment of students in the forestry schools of the United States reached record totals in 1947. Nearly 30 universities and colleges offered courses leading to a degree in forestry. A total of 7,000 students enrolled in undergraduate and graduate forestry courses was reported for the 1947–48 school year. The prospects were that the number of forestry graduates in the next few years would be greater than public forestry agencies and private forest industries could absorb. The United States forest service pointed out, however, that forestry practice currently was being applied to only a fraction of the nation's forest area. If and as sound forest management was extended, the need for men with technical forestry training would increase.

As part of a reappraisal of the postwar forest situation in the United States, the forest service conducted a study of the problem of wastage in the utilization of wood. A report of its findings was issued in 1947. It said that only 43% of all the wood cut in the forests winds up in useful products, other than fuel; 35% is not used at all. Of the 22% used as fuel, much is used wastefully or inefficiently, and much could be used to better purpose if efficient handling and processing techniques were developed.

Logging waste—tops and limbs of trees, cull logs and other material left in the woods after cutting accounts for 45% of the total waste; 49% is waste in the primary manufacture of logs into lumber, pulp and paper, veneer and other products; and 6% is wasted in secondary manufacture.

A major need, said the report, is greater integration of wood-using industries in timber-producing areas. One-product operations, still typical of the forest industries, tend to be wasteful. A variety of logging and manufacturing operations in a given locality can effect a more complete and advantageous utilization of the timber that is cut or that ought to be cut under good forestry practice. Encouraging developments along these lines

ACCESS ROADS to make more timber available were being built in many U.S. national forests during 1947. Logs are shown being loaded at California's Mendocino national forest, with the access road barely completed

by several forest industry concerns were cited. The report also recommended continued research to find ways of making old products with less waste or to devise new ways of using material now wasted; technical assistance to woodland owners and wood processors to get the results of research into use; and public aid in pioneering operations to establish the practicability of new waste-reducing or waste-consuming processes.

The forest service in 1947 invited bids for the purchase of timber in two large tracts in the Tongass national forest in Alaska. This action was expected to open the way for development of a pulp and paper industry in southeastern Alaska which would materially increase the supply of paper products in the United States, where paper products, especially newsprint, had been seriously short of demand during and after the war. Tongass national forest has extensive stands of timber which under sustained yield management could support a permanent, large-scale pulp and paper industry. Purchasers of the timber would be required by the forest service to follow cutting methods that would assure continuous timber growth.

Lyle F. Watts, chief of the forest service, in his annual report for 1947, emphasized the importance of vegetative growth on forest and range land watersheds for the conservation of water supplies, stabilization of soils and regulation of streamflow. Fire, overgrazing and overcutting of timber can cause serious damage to watershed values, he said.

> Muddy streams, dried-up springs, lowered water tables, eroding lands and reservoirs filled with silt, damaging floods every year—all these things are plain indications that much watershed land is not being handled as it should be.
>
> Damaged watersheds can be repaired. Rampaging streams can be brought under control. Water sources can be kept in good condition. And to a large extent, the kind of forest and range management that restores and maintains good watershed conditions will also make for increased timber supplies and increased livestock production. Recreation and wildlife also will benefit.
>
> Much of the wealth of our Nation has derived from our utilization of the soil, water, and forests which nature gave us. Fundamentally, our wealth is based upon the balance that existed between the water, land, and vegetative resources. That balance is being thrown out of kilter in many places. We shall do well to work for the restoration of that balance through wise and foresighted management of the land. We should work for a way of life that will not be under pressure to destroy the basis of its own existence.

Publications of the year in the forestry field included three forest reappraisal reports issued by the United States f service: *Wood Waste in the United States; Protection A Forest Insects and Diseases in the United States;* and *F Cooperatives in the United States.* The first issue of *Unas* a new bimonthly magazine of international forestry, appear July 1947, published by the division of forestry and forest ucts of the United Nations Food and Agriculture organiz The magazine was issued in English and French edition Spanish edition was planned later.

(C. E. F

**Europe.**—The problem of closing the gap between Eur timber needs and the available supplies of softwoods, wit causing lasting damage to the remaining forests, was the t of an important international timber conference held at Ma bad (Marianské Lázně), Czechoslovakia, in April and Representatives of 34 nations attended the conference, w was organized by the food and agriculture branch of the U Nations and the Czechoslovak government. The conference ommended that during the felling seasons 1947–48 and 194 all softwood-producing countries should either increase cuttings by 10% or achieve a comparable result by restric in consumption, and that reforestation and intensive and s tific management of existing forests should be carried o counter the effect of overcutting. The international contr forest pests and co-operation in the supplies of forest tree s and trans-plants were subjects recommended for investig by the appropriate committee of the United Nations. A for statistical conference was held in Rome early in the year Scandinavian countries, including Denmark, also held an portant forestry conference at Oslo.

In Germany heavy fellings in softwood forests were co ued, and large quantities of timber were exported as war rep tions to the Soviet Union, France, Great Britain and other c tries. In the British zone of Germany the supervision of ti production was returned to German control.

**Great Britain and the Commonwealth.**—An empire estry conference, the first after 1935, was held in Englan July. Thirty-six different forest authorities presented staten which were later summarized by the Central Statistical in the publication *Empire Forests and the War.* The sub discussed included land utilization and forest policy, surve world timber resources, forest management and forest prod research.

Reorganization of the Forestry commission enabled the program of afforestation to be well launched and an advi forest service to be established. A special engineering br was formed to deal with the planning and construction of f roads and bridges. In spite of the continued control o timber felling by licence, much timber was felled to meet u needs. Hedge-row and poor timber were also felled, owin the high prices obtainable for domestic fuel during the a shortage of coal.

In many of the crown colonies there was a slowing dow the heavy wartime exploitations of timber, but there was siderable development in the marketing of new or little-kn hardwoods species. The return of many officers of the col forestry services to general forestry duties, together with resumption of normal recruitment of junior officers, made sible the reorganization and consolidation of colonial f staffs. In many colonies scientific stock-mapping of the for was undertaken and the regeneration of felled areas begun.

Apart from the use of forests for direct timber product the year's most spectacular project was the Iraqi developm scheme, planned to make the country free from flood da and to increase the irrigated area to 15,000,000 ac. The poli changes in India and Burma brought to an end the Indian f service, founded in 1856.

(A. H. L

## ormosa

(Taiwan or T'ai-wan). Formosa is a large island in the western Pacific, separated from China to the est by the Straits of Formosa and from the Philippines to the uth by the Bashi and Balingtang channels. Under Japanese ıle the Pescadores (Bōkotō) and other outlying islands formed political division of the Taiwan government-general. Area, ,589 sq.mi., including Pescadores and neighbouring islands. op. (1946 est.), 6,250,403.

The capital is Taipei (formerly Taihoku) (326,407 in 1940); her large cities include Takao (152,265), Tainan (142,133) ıd Keelung (Kiirun) (100,511). Principal religions are Budhism, Confucianism, Taoism and Shintoism. In 1940 there ere about 60,000 Christians.

**History and Government.**—Formosa was ceded to Japan y China under the treaty of Shimonoseki in 1895 at the conusion of the Sino-Japanese War. The island was administered a Japanese colony until Japan's surrender in 1945, when nder the terms of the Cairo declaration of 1943, Formosa was laced under Chinese administration. In Oct. 1945, General hen Yi, governor of Fukien province from 1934 to 1941, asımed the governorship of Formosa for the Chinese National overnment. At the end of Feb. 1947, a rebellion began on the land, centred in the capital. The Formosans convoked an utonomous assembly to institute new laws, pending recognition f their demands by the Chinese government. By the end of Iarch, however, the rebellion was put down by Chinese troops. ı April Chen Yi was replaced as governor by Wei Tao-ming, ormer ambassador to the United States.

**Education.**—In 1941 there were 1,000 primary schools with 12,076 achers and 740,693 students; 6 normal schools with 225 teachers and 507 students; 4 colleges with 236 teachers and 1,385 students; and university with 345 students.

**Finance.**—Under Japanese rule, Formosan currency was based upon the ıpanese yen (valued at 23.43 U.S. cents in 1941) with the Bank of aiwan as the central bank. The Chinese introduced a special currency r Formosa based on the former yen notes.

**Trade and Communications.**—In 1939 there were 879 mi. of government ilroads, 1,624 mi. of private railroads and 500 mi. of tramways; there ere 10,000 mi. of roads of all types. There were 220 telegraph offices, 5 post offices and 123 telephone exchanges. In 1943 Formosa's overseas ade amounted to exports of about 400,000,000 yen and imports of 0,000,000 yen. During the first half of 1947, Formosa's most important ports were coal, sugar, fruits, tea and cement.

**Agriculture.**—Agricultural production in 1939 in short tons included: ce 14,540,000; sweet potatoes 1,400,000; sugar 1,270,000; bananas 0,000; oranges 29,700; meat and poultry 27,600; tea 15,400. The 1946 ce crop was estimated at 54,000,000 bu.

**Industry.**—During World War II Formosa produced sizeable quantities coal, cement, chemicals and salt.

## orrestal, James

(1892–    ), U.S. government official, was born on Feb. 15 in Beacon, N.Y. Ie studied at Dartmouth college, 1911–12, and at Princeon university, 1912–15. He enlisted in the U.S. navy in 1917 nd was assigned to its aviation force. Forrestal resigned from he navy with the rank of lieutenant in 1919 and resumed an arlier connection with Dillon, Read and Co., a Wall street anking firm, becoming its president in 1937. In Aug. 1940 he ecame undersecretary of the navy, serving in that capacity ntil the death of Secretary Knox, whom he succeeded on May 9, 1944.

Although originally opposed to a merger of the armed forces, e agreed (June 1946) to support the plan of President Harry . Truman to unify them. After the president signed (July 26, 947) the bill providing for the merger, he appointed Forrestal ead of the program as secretary of national defense. Forrestal vas sworn into office Sept. 17 by order of the president, then t sea on a battleship, returning home from the Inter-American Defense conference in Brazil.

On Oct. 1, Forrestal branded as "utter nonsense" soviet diplomat Andrei Vishinsky's charge that U.S. "big business" was seeking war; and on Oct. 20, he warned Russia that while Americans "hate the very idea of war," they believe that even war is preferable to such alternatives as living under a police state.

## Four-H Clubs.

The 4-H clubs in 1947 continued as an integral part of the co-operative extension service in agriculture and home economics. In 1947 the 4-H club program extended into practically every county in the United States, Alaska, Hawaii and Puerto Rico. The total 1947 enrolment of 4-H members was approximately 1,700,000. More than 175,000 volunteer 4-H club leaders, both adult and junior, assisted the county extension agents in carrying out the 4-H program in local rural communities.

Under the administration and supervision of the co-operative extension service of the United States department of agriculture and the land-grant colleges, rural young people between the ages of 10 and 21 continued their 4-H club groups of from 5 to 50 members. Each member took advantage of the opportunity to "learn by doing" and conducted a certain farm or home enterprise pertaining to agriculture or home economics and demonstrated to others what he had learned. Subject matter assistance was provided by the extension specialists located at the state colleges of agriculture. Each 4-H member kept a business financial record of his project work, wrote a story relating to his 4-H club experiences, made a public exhibit of his products and, at the end of the year, submitted his records to the county extension agents. Various incentives or recognition awards were provided to 4-H members who satisfactorily completed their work.

Local 4-H clubs continued to stress citizenship, leadership development, character building, community activities, group recreation, knowledge of subject matter, acquiring of skills and group organization in their 4-H programs.

The annual National 4-H Club camp was held June 11–18, 1947, in Washington, D.C., and was attended by 365 4-H members and leaders representing the states and territories, along with guests from Canada and several other countries.

The National 4-H Club congress was held Nov. 30 to Dec. 4 in Chicago, Ill., and was attended by 1,300 4-H members and leaders representing the states and territories, together with delegates from two provinces in Canada and international representatives from 11 other countries.

During 1947 the following was adopted as the official National 4-H Club pledge: "I pledge—My Head to clearer thinking, My Heart to greater loyalty, My Hands to larger service, My Health to better living, for my club, my community, and my country."

As an aid in further developing the 4-H program, co-operative extension agents and local volunteer 4-H leaders continued to use the following ten 4-H guideposts which were designed to outline a broad basis for 4-H activities in the postwar period: (1) Developing talents for greater usefulness; (2) joining with friends for work, fun and fellowship; (3) learning to live in a changing world; (4) choosing a way to earn a living; (5) producing food and fibre for home and market; (6) creating better homes for better living; (7) conserving nature's resources for security and happiness; (8) building health for a strong America; (9) sharing responsibilities for community improvement; (10) serving as citizens in maintaining world peace. (M. L.W.)

## France.

A republic of western Europe bounded on the north by the English channel, on the east by Belgium, Luxembourg, Germany, Switzerland and Italy, on the south by the Mediterranean sea, on the southwest by Spain and on the west by the Atlantic ocean. The country also includes the Mediterranean island of Corsica. Area: 212,737 sq.mi.; pop. (1946 census): 40,517,923. Chief towns (1946): Paris (cap., 2,725,374); Marseilles (636,264); Lyons (460,748); Toulouse (264,411); Bordeaux (253,751); Nice (211,165); Nantes (200,265). Languages: French, with some German in Alsace and Celtic in Brittany. Religion: no official church, mainly Roman Catholic with Protestant minority. President (elected Jan. 18, 1947): Vincent Auriol (*q.v.*); prime ministers: Paul Ramadier (*q.v.*) (Jan. 21–Nov. 23); Robert Schuman (*q.v.*) (from Nov. 24).

**History.**—On New Year's day, 1947, Interim Prime Minister Léon Blum in a broadcast appealed for co-operation of the public in a policy of price reduction so as to raise the real value of wages, which were to be stabilized. A government decree reducing prices with few exceptions by 5% was applied. The public had been profoundly alarmed by the increase of prices in 1946 (retail index figure: Jan. 1946=480, December=861) and welcomed warmly the hope of a reverse process. Blum's last act as prime minister was to visit the British prime minister, Clement R. Attlee, in London, where a joint communiqué was issued announcing an agreement to proceed with the negotiation of an alliance. (A 50-yr. treaty of alliance was signed at Dunkirk, on March 4, 1947, by Ernest Bevin and Georges Bidault.)

On Jan. 16 Vincent Auriol, Socialist and president of the assembly, was elected president of the republic. After Blum had refused to remain in office President Auriol asked Paul Ramadier, a Socialist, to form a government. Ramadier was elected prime minister by the assembly on Jan. 21. His cabinet included Communists, Socialists, Radicals, M.R.P. (*Mouvement Républicain Populaire*) and Independent Republicans, but with a disproportionate number of Socialists because the party accepted the responsibility of leadership. The Communists were granted the ministry of national defense but without powers of control over the other three service ministries.

The government had announced its intention of carrying on the Blum policy of stabilizing wages and reducing prices but was faced with the difficulty of reducing the cost of living when charges for electricity and gas had to be raised and the balancing of the budget required the abolition of subsidies. The C.G.T. (*Confédération Générale du Travail*) demanded an increase of the minimum wage to Fr. 7,000 a month. There was a four-hour protest strike of state and municipal servants which deprived Paris of both telephone service and traffic police on Feb. 14. Simultaneously with the protest strike the newspaper printers union (under independent leadership, not linked with either the Socialist or Communist parties) proclaimed a strike which kept Paris without newspapers for nearly a month.

In parliament divergencies between the Communists and the other coalition parties over policy in Indo-China led to violent scenes and repeated suspensions of the sitting. Although Ramadier in his first speech as prime minister had insisted that coalition solidarity was essential, he had to declare himself satisfied on March 23 when the Communist ministers were the only members of their party to vote the military credits for the far east, the rest abstaining. A similar divergence about the action to be taken in Madagascar after the rising there (*see* French Overseas Territories) emerged a week later.

On March 30 Gen. Charles de Gaulle emerged from retirement to make the first speech of a political campaign at Bruneval. He denounced the inadequate functioning of a state based on the interests of parties rather than of the nation. On April 7, speaking at Strasbourg, the general announced the formation of the R.P.F. (*Rassemblement du Peuple Français*, or Rally of the French People) and sharpened his attack against the Communists.

Trade union problems soon caused the final breach bet the Communists and the rest of the coalition. The Commu had in the two years following on liberation succeeded in d nating the organizations of the majority of the big unions also the C.G.T. executive committee. While taking care t inforce their position in the unions they had certainly us over long periods to discourage strikes. By April it had be evident that the government was not succeeding in sub tially reducing the cost of living which according to of statistics stood at 837 as compared with 856 in January. workers of France were therefore becoming impatient for increases to compensate them for the big increases of pric August, September and October of the previous year. T was growing impatience both with party control of the C. contrary to French labour traditions, and with the discou ment of strikes by the Communists. Almost simultaneous strike under noncommunist leadership broke out in the Renault works at the gates of Paris. In both the Socialist M.R.P. press appeared comments indicating satisfaction the Communists were losing their hold on the unions. The C munists reacted at once and overtly dissented from the gov ment's policy of continuing to stabilize all but the lowest gr of wages. On May 4 the entire Communist party including ministers voted against a motion of confidence in the gov ment which passed by reduced majority of 360 to 187 wit abstentions. On the evening of that day Ramadier summ his cabinet and (with the support of the president of the public) informed the Communist ministers that they had ce to be members of the government.

Ramadier's decision not to resign was approved by an o whelming majority of the Socialist deputies but by the Soci party's executive committee only on second thoughts and the narrow majority of 10 to 9. The national council of Socialist party authorized Ramadier and his Socialist collea to remain in a coalition which no longer included the C munists by only 2,529 votes to 2,125 after an all-night del

It was thus a government open to attacks on both flanks had to face a series of strikes in the early summer. In Ap had had to make the disagreeable announcement that the b situation was so bad as to make necessary both a reductio the ration and a serious deterioration of quality. By the en the third week in May there were bread riots in Lyons cau the resignation of the prefect, and riots by shopkeepers aga price control in Dijon which ended with the sacking of pu offices and the destruction of records. The government decl its intention of resisting threats of violence and strike ulti tums, but in point of fact the gas and electricity workers fo at the end of May that such an ultimatum took them more halfway to their goal. When negotiations with the railway were interrupted by a sudden strike all over France on Jun Ramadier announced that they could not be resumed till men had gone back to work, but they were resumed thro the mediation of the C.G.T. executive and practically all railway men's demands were granted by an agreement of June

So far the main disputes had been in the nationalized se of French industry. To prevent their spreading to the private sectors of industry, the employers federation and C.G.T. were authorized by the government to enter into di negotiations on wage and price levels, the results however to subject to government approval. This the government found self unable to give, though once more some concessions w made. Meanwhile, the government itself had to find funds, si the salary increases obtained by strikes had to be spread to ot professions and treasury bonds were not being renewed. government scheme not only increased taxation and the price

**RENCHMEN FLEEING IN PANIC** before the advance of armed colonial oops (left foreground) during a demonstration in support of the Communist-d general strike at Nice in Dec. 1947

bacco but by abolishing most subsidies increased the prices of ilk and bread. The bill was forced through the assembly by a ajority of 302 to 241 on June 24. Crowds of demonstrators ere mobilized outside the Palais Bourbon by the Communists nd there were sporadic protest strikes as far apart as Mareilles and the coal mines of the Nord. The strikes in the mines ecame general, the principal grievance being the quality of the read. A bank and department store strike broke out and a etallurgical strike was avoided by concessions, which were ien extended to the miners and bank clerks, bringing them ack to work at the end of June and the beginning of July. he cost of living had risen to 886 in May and 937 in June. July it was to go to 976 and a civil servants' strike was voided on July 14 only after a substantial increase in salaries ad been promised.

Meanwhile the Three Power conference on the Marshall proosal opened on June 27. The soviet refusal to co-operate left rance in the same camp with Great Britain and the United tates; since this followed the refusal of the soviet government the course of the Moscow conference to recognize French aims to the Saar (*q.v.*) and the conclusion on the same occaon of an agreement on German coal between France, Great ritain and the U.S., it was evident that France was no longer tting on the fence between the two groups of its allies.

At the end of August General de Gaulle stated that the R.P.F. ould run candidates in the municipal elections of Oct. 19.

The financial and economic situation was steadily worsening. The harvest, estimated at 3,630,000 short tons as compared with 8,360,000 in 1946, was one of the worst on record, and the daily bread ration was reduced from 8 to 6½ oz. at the end of August. Simultaneously, it was announced that because of the acute shortage of dollars all imports from the U.S. were suspended except fuel and wheat. A committee was formed to prepare radical cuts in expenditure so as to balance the budget at any price. These cuts were put at 23% by Ramadier in a broadcast of Oct. 8.

Parliament at last adjourned on Sept. 5, after giving Ramadier a last vote of confidence of 292 votes to 243 with 54 abstentions. Politics were now dominated by the trial of strength of the municipal elections.

The news broke that the French Communists had joined the Cominform (*see* Communism) on the same day (Oct. 5) that General de Gaulle delivered a strong anticommunist and anti-Russian speech to the biggest meeting of his career at Vincennes.

The last week before the polls a strike of the Paris transport system, originally launched by noncommunists but taken up with passion by the Communists, was followed by threats of renewed strikes by the electricity and gas, and railway workers. Big concessions brought the metro strike to an end and prevented the others.

The polling in the big towns on Oct. 19 constituted an immense success for the R.P.F. candidates who were supported by nearly all the right, by more than half the M.R.P. voters, by many of the Radicals and by some Socialists and former Communists. In Paris (52 seats out of 90) and a number of provincial towns the Gaullists won a clear majority. The Com-

FRENCH FARMERS harvesting a grain crop in southern France during the summer of 1947. Poor weather prevented the bumper crops needed to fill empty granaries and restrictions on grain consumption were increased during the year

munists lost much less heavily than the M.R.P. but the numerous Communist mayors were reduced to a relatively small number. The Socialists recovered sufficient ground from Communists in the Nord and in the Limousin to compensate for losses elsewhere.

Although results in the smaller communes showed less radical changes, it was clear that General de Gaulle now commanded support of about 35% of the country and the Communists still about 25%, leaving at most 40% of supporters to the moderate parties of the government coalition, who, however, still had a narrow majority in the assembly. The general declared in a haughtily worded statement that the only solution was a dissolution of the assembly after a change of the electoral law—for neither of which was there a majority in the assembly. It was believed that the general was not anxious to return to office at once.

Ramadier reduced his government to 13 ministers only and secured a majority of 300 to 280 with 18 abstentions on Oct. 30.

During the autumn the cost of living continued to rise rapidly. The index figure for August was 1,078, for November 1,336. In spite of the depressing record of unresolved political conflict and of failure to achieve economic equilibrium the situation had favourable elements. Coal production, alone in Europe, was above the 1938 level, being 104% of an average month in that year in July. On the same basis of comparison the general level of production was 101% in September, with steel at almost the same level as the over-all figure.

Negotiations with a view to a stronger government continued throughout the first weeks of November. In order to balance the budget the government found it necessary on Nov. 5 to raise the price of coal by 50% so as to do away with the subsidy, and to increase railway and, in Paris, Marseilles and elsewhere, municipal transport fares. After a strike of municipal services in Paris, a strike followed by street demonstrations broke out in Marseilles, and on Nov. 12 the mob succeeded in invading the law courts, where they liberated two accused, and the town hall, where the newly elected Gaullist mayor and his assistants were beaten up. Simultaneously, the government's increasingly strained relations with the U.S.S.R. were marked by a police raid on the soviet repatriates transit camp at Beauregard near Paris. Whatever may have been abuse of priv in the past, only three small children were found to be improperly.

While the situation in Marseilles was steadily worsenin the strikes had spread to Paris, the fall of the Ramadier go ment was provoked by the secretary general of the So party, Guy Mollet, who, with a disregard for the responsib weighing on those members of his party actually in office of other parties' views, announced that Léon Blum was rea take Ramadier's place, although the efforts to prepare a cession government had so far been fruitless. Blum on No fell 10 votes short of the 310 necessary for election t premiership (an absolute majority of all deputies is requir the constitution) because of his firmness in denouncing Gau with almost the same energy as the Communists. Robert man (M.R.P.), hitherto minister of finance, was elected pr on Nov. 22. After difficult negotiations he formed a go ment with a Gaullist sympathizer, René Mayer, as minist finance, but all other ministers drawn from those who voted for Blum.

He was immediately faced with a situation so grave tha retiring government's last act had been to call back to the ours 30,000 men prematurely released for reasons of econ At a meeting of the national committee of the C.G.T. on 14 a series of resolutions had been passed condemning the shall plan and the French government as instruments of imperialism and approving a project for what looked like was denounced by the noncommunist minority as bein month's agitation to end in a general strike at the end of cember; but the trouble broke out much earlier. Starting Marseilles, it spread to all ports, to Paris and to the coal of the north; and, by the last week in November, France on the verge of economic paralysis. The new government, cially its Socialist minister of the interior, Jules Moch, rea with vigour and for the first time found effective allies in noncommunist elements in the C.G.T. led by Léon Jouhau well as the Christian trade unions. While the Communist jority preached strikes, the minority preached negotiatio remedy the same grievances. Gradually violence grew. T were numerous acts of sabotage, culminating in a railway dent near Arras with 20 dead and 60 injured. The govern introduced two bills, one authorizing further calls-up of tr and the other greatly stiffening the penalties for use of viole threats of violence or sabotage in connection with strikes. T were passed after a week of Communist obstruction in th sembly, which was damaging to parliamentary prestige.

The strike tide turned; the railways, the post offices, a mi ity of the mines and many factories resumed work, though ports remained strike-bound and there were still railway tions occupied on Dec. 9. Violence rose as the strike rece reaching a peak in the first week of December, but follo by a lull during which negotiations were undertaken. T broke down on Dec. 8 over the refusal of the governmen grant automatic increases of wages when prices rose. M while, a total of 240,000 civilians had been called back to tary life to provide guards for railway lines, pits, factories post offices, to sweep streets and unload ships.

On the night of Dec. 9 the leaders of the C.G.T. reve the decision of the strike committee to continue the strike the grounds that it was better to preserve the trade union ganization for future struggles, thereby admitting that in m professions the will to strike was dwindling. On the same the soviet government denounced the Franco-soviet repatria agreement and broke off Franco-soviet trade negotiations. reply the French government terminated the special facili for the soviet repatriation mission which, the French claim ad abused its rights by subversive action, threatening the se-urity of France. (D. R. Gi.)

**Education.**—1945–46: Infant schools 3,473, scholars 286,000; elemen-ry schools 79,450, scholars 4,668,000; secondary scholars, boys 223,830, rls 160,329; universities 17, students 97,000.

**Agriculture.**—The production for 1939 and the estimated production for 47 of five crops were as follows:

| | (Production in 000's of short tons) 1939 | 1947 (est.) |
|---|---|---|
| heat | 8,920 | 4,033 |
| rley | 1,172 | 1,305 |
| ts | 5,233 | 3,734 |
| e | 868 | 466 |
| slin | 907 | 311 |

Production of wine for 1947 was estimated at 108,000,000 U.S. gal.

## ranco, Francisco

(1892– ), Spanish soldier and statesman, was born on Dec. 4 at El errol, Galicia. For his early career see *Encyclopædia Britan-ca*. In the early days of axis victories in World War II Franco firmed Spain's solidarity with Germany and Italy in the strug-e against "bolshevism." When Allied arms began to triumph, hastened to profess his neutrality and in 1945, following the llapse of Germany, he declared (May 20) that Spain was not "dictatorship." Then on Oct. 22 he issued a "bill of rights" hich included freedom of worship and expression and the right petition, provided these liberties did not run counter to the fundamentals of the state."

Franco, who survived verbal attacks made on his regime by e United Nations in 1946, set up a regency council on March 1, 1947, and on June 7 the cortes approved a bill giving him road powers for life and authority to choose his successor. The law of succession" bill was approved by more than 92% of e voters in a plebiscite held July 6, although many Spaniards ayed away from the polls. On July 18, Franco said the lebiscite proved that he had support of his countrymen and at the United Nations was not justified in attacking him. To elebrate the victory, he issued an amnesty, which did not, how-ver, include his political enemies. On Oct. 17, Franco assumed e right to create new (as well as revoke old) Spanish nobility tles. (*See* also SPAIN; UNITED NATIONS.)

## rederick IX

(1899– ), king of Denmark, son of Christian X and Alexandrine, former duchess of Iecklenburg-Schwerin. He became crown prince in 1912, on e accession of his father, and king on April 20, 1947, when is father died. On April 21 he was proclaimed king when remier Knud Kristensen called three times from the balcony of Christiansborg castle: "King Christian X has died! Long live His Majesty King Frederick IX." The new king responded with a simple pledge to try to be worthy of the same confidence the people had reposed in his father and a prayer for God's help.

Frederick lacked but an inch of his father's height of six feet, five inches. He was the first in the long succession of Danish rulers to be trained in the navy; the other 37 had all been army men. Frederick loved boats as his father loved horses, and he liked speed in any form; he had tested many a diesel train. His musicianship was also reputed to be of a high order.

In 1935 Frederick married Ingrid, daughter of the crown prince of Sweden, and they had three daughters—none of whom could succeed to the throne according to Danish law.

In October the royal pair made a brief visit to their relatives in Oslo and Stockholm and in November attended Princess Elizabeth's wedding in London. (F. D. S.)

## French Literature.

French letters during 1947 presented a picture of such density and diversity that any attempt to isolate a dominating current immediately suggested its own contradictions. For there were many currents, reflecting not only France's own situation but that of the post-war world in general, and the great themes of the time—liberty and moral responsibility of the individual in the group, decadence or survival of the sacred, the significance of aesthetic creation, science and conscience, force and right—were passionately debated.

Concurrent with increasing world tension around the first of these themes, a significant feature of the year was the participation of many prominent writers in national politics. André Malraux became the leading propagandist for the De Gaullist party, Rassemblement du Peuple Français; Louis Aragon, Paul Eluard and Tristan Tzara gave active support to the Communist party; François Mauriac and Jean-Paul Sartre, albeit from opposed points of view, attacked both these ideologies, and the surrealist leader, André Breton, declared a "plague on all their houses" in favour of "permanent Revolution of men and things" based on the teachings of the "Divine Marquis" (de Sade) and Sigmund Freud. Despite these preoccupations, however, literary creation was not only abundantly manifest but, in some respects, more interesting and varied than during the preceding year.

In the poetic field, a rather boisterous bid for the place occupied between the world wars by the surrealists was made by the lettrist group, under the leadership of Isador Isou, a Sorbonne student whose 400 page manifesto entitled *Introduction à une nouvelle poésie et à une nouvelle musique* attracted some attention. The real discovery of the year, however, was undoubtedly Henri Pichette, aged 23, attached to no group, and author of the poetic drama, *Les Epiphanies*. For some critics he was a genius, the poet they had been waiting for, and his play was an astonishing renewal of the dramatic art. For others, his art was only verbiage and mystification, representative of a false advance-guard, puerile and immature. In any case, even his opponents recognized an abundant, surging gift for verbal creation. What was interesting in the work of both Isou and Pichette, however, was their simultaneous attempt to modify their linguistic medium by an attack on the individual word. In this respect they differed from their distinguished immediate elder, René Char who, although supreme master of condensing emotion and thought into the simplest words, was content to leave both word and syntax untouched. Char's latest volume, *Le Poème Pulverisé,* received marked critical attention. Other poets who published during the year were Jean Cayrol, Aimé Cesaire (deputy from Martinique), Malcolm de Chazal (a newly discovered, highly lyrical poet from the Ile Maurice), Paul Eluard, Léon-Paul Fargue, Benjamin Péret, St.-J. Perse, Tristan Tzara.

Although critics agreed that the large number of novels published were for the most part of high quality, Albert Camus's *La Peste* (Prix des Critiques) was one of the few among them that aroused general, thoughtful discussion. The choice of André Gide for the Nobel literary prize was almost universally applauded. (*See* also LITERARY PRIZES.)

In the theatre, new plays were presented by Jean Anouilh, François Mauriac, Jules Romains, Armand Salacrou, Madame Simone and others less well known. Charles Péguy's *Jeanne d'Arc* was given in its entirety for the first time, under the supervision of the son of the poet. Other published plays included *Abélard et Heloïse* by Roger Vaillant; *Le Maître de Santiago* by Henry de Montherlant and *Théâtre Complet* by Roger Vitrac, former surrealist.

In the domain of philosophical thought, the concept of "existence" continued to offer one of the main themes of discussion: Emmanuel Mounier's *Introduction aux Existentialismes* and Jean Wahl's *Petite Histoire de l'Existentialisme* constituted accessible surveys for the lay public. Other volumes on the same subject were: *L'Existentialisme,* by Henri Lefebvre (who claimed that the young revolutionary philosophers of the 1920s were already existentialist); *Court traité de l'existence et de l'existant,* by Jacques Maritain; *Dialectique existentielle du divin et de l'humain,* by Nicolas Berdiaeff and *Existentialisme Chrétien: Gabriel Marcel,* by Etienne Gilson. *Karl Jaspers et la Philosophie de l'Existence,* by Michel Dufresne and Paul Ricoeur, included the first French translations from the works of this distinguished German philosopher. There also appeared a volume on *Descartes* by Jean-Paul Sartre; *De Bergson à Thomas d'Aquin* and *La Personne et le Bien commun,* by Jacques Maritain; *Introduction à la lecture de Hegel,* by Alexander Kojeve and under the title: *Principes élementaires de Philosophie,* a volume of posthumous notes by the Marxist philosopher, Georges Politzer. Gaston Bachelard announced that his study of "l'imagination matérielle" which already included volumes on fire, water and air, would be followed by a volume on earth, representing the element of weight and the symbol of nourishment. (*See* also PHILOSOPHY.)

Important essays of the year included Georges Bernanos' *La France contre les Robots,* in which he urged the French to reject over-industrialization; *Qu'est-ce que la littérature?* by Jean-Paul Sartre, a brilliant if often prejudiced study of the writer's place in society; *Méthode de Méditation,* by Georges Bataille; *Van Gogh ou le suicide de la société,* by Antonin Artaud; *Lettres sur la Bombe Atomique,* by Denis de Rougemont. Jean Paulhan, Maurice Blanchot and Pierre Klossowski discussed the works of the Marquis de Sade, and much interest was shown in such 19th century writers as Stendahl (Henri-Marie Beyle), Jean Rimbaud and Gerard de Nerval. Mention should be made too of such works as Charles Pichon's important *Histoire du Vatican,* Cardinal Suhard's *Essor ou Déclin de l'Eglise,* Jean-Paul Sartre's *Réflexions sur la question juive,* Pastor Marc Boegner's *Le Problème de l'Unité Chrétienne* and Louis de Broglie's *Physique et Microphysique.*

A number of important works on artistic subjects were published, including *Goya,* by André Malraux, *Psychologie de l'Art* by the same author; *André Masson et son Univers,* by Michel Leiris and Georges Limbour; *Schoenberg et son Ecole,* by the leader of the atonalist composers, René Leibowitz; *Juan* by Daniel Kahnweiler; *L'Enseigne de Gersaint,* a study of teau, by Louis Aragon.

More than 20 literary reviews, together with a half-c weekly and daily newspapers, continued to represent a medium for the exchange of ideas as well as an essential cle for the introduction of new talent. Special mention sh be made of *Temps Modernes, Fontaine, Critique, Esprit Nef, Arche, Psyché, Cahiers du Sud, Dieu Vivant, Cahiers Pléiade, Saisons, Poésie '47; Les Nouvelles Littéraires, Les tres Françaises, Le Figaro Littéraire, Gazette des Let Carrefour, Arts, Combat.*

In conclusion, it should be noted that Marcel Pagnol, Claudel and Etienne Gilson were elected to the French A emy. (M. Jor

## French Overseas Territories.

Under this headin grouped the over *départements,* the colonies (*territoires d'outremer*), the pr torates and the mandated territories, the total area of w (excluding Syria and Lebanon) is 4,605,633 sq.mi. and the population (est. Dec. 1939) 67,591,000. Certain essentia formation on the composing parts of the French colonial em —or *France d'outremer,* as it is officially called—is given in table.

**History.**—The new French constitution provided that French union consisted of the French republic (that is to metropolitan France and the overseas departments and t tories) and the associated territories and states. These la were certainly Morocco and Tunis, and perhaps Indo-Ch whose status was still indeterminate. The overseas departm were Algeria (three departments), Martinique, Guadelo French Guiana and Réunion (but not Corsica). In additio representation by 75 deputies in the assembly (13.7%) an in the Council of the Republic (32.5%), the constitution vided for the creation of a high council and an assembly of French union with mainly advisory powers. The council wa consist of nominees of the French government and of the a ciated states, the assembly of delegates elected one-half by French parliament and one-half by the territorial assem overseas. This federal organ was called for Dec. 10, 1947. legislation for setting up territorial assemblies had been pa for Algeria, West Africa and Equatorial Africa. The sulta Morocco refused to change the protectorate treaty for a cl bond with France, claiming instead restoration of Moroc sovereignty and a treaty of alliance. A similar situation a in Tunisia. In Indo-China the kings of Cambodia and of I were ready to enter the union, but the French plan was they should do so as part of an Indo-Chinese federation. principal member of this would be Viêt-Nam, whose gov ment France no longer recognized (although it still had agency in Paris). Institutions had also been prepared Madagascar.

**Indo-China.**—In Indo-China long negotiations as to meaning of the armistice agreement of March 6, 1946, wh recognized Viêt-Nam as "a free state having its government, parliament, its army and its finances within the framework the Indo-Chinese federation and the French union," were in rupted on Dec. 19, 1946, by a surprise attack, evidently ca fully prepared, by the Viêt-Nam troops on the French troo In the course of the spring and early summer of 1947 the Fre forces gained control of the principal towns and internal co munications of Viêt-Nam and during the autumn launched erations to cut communications with China and Siam. Nego tions were attempted, but broke down over the refusal of French to recognize the Viêt-Nam government as the *de f* vereign. They were ready to recognize Viêt-Nam as including ochin-China, but their views of the rights of the Viêt-Nam ere if anything more restricting than in 1946, since the con- itution laid it down that Paris was responsible for the co- dination of national defense and the policy necessary to assure , for criminal legislation and the political and administrative ganization of overseas territories. The French forces in Indo- hina were about 100,000.

**North Africa.**—In Algeria the new constitution gave equal presentation to the first electoral college, representing the 000,000 Europeans, and to the second, representing 8,000,000 Ioslems. The first included a certain number of Moslems on rounds of either education or service, and it was at one time oped that by gradual extension of this element a point would reached when the two colleges would be equal. The instinct self-defense of the European population, and the agitation of ie more extreme Moslem elements led by Messali Haj, impeded iis development.

In Morocco the sultan was the acknowledged leader of the itionalists. During a visit to Tangier (the first after the regime the protectorate was established) at the beginning of April ie sultan ostentatiously left out of his speech the only sentence eferring to France. The French government thereupon recalled ie civilian resident-general Eirik Labonne and sent out Gen. lphonse Juin in his place. An administrative reform substan- ally modernized the higher Moroccan bureaucracy so as to give ie sultan a better chance of forming and expressing an opinion n the measures put before him by the resident-general's staff, ut in other respects political change in Morocco was slight.

In Tunisia constitutional progress was greater, and an attempt initiate parliamentary government was made; but large parts f the administration were still in French hands and the princi- al nationalist party, the *Destour,* declined to co-operate. Politi- al censorship was abolished in Tunisia.

In North Africa there were two serious incidents, a strike in outhern Tunisia involving some bloodshed on Aug. 5 and 6 (73 asualties); and a nonpolitical outbreak in Casablanca by enegalese troops, involving about 60 casualties.

**Réunion and Madagascar.**—Abd-el-Krim, the former Riff eader, was brought on board a ship without escort from Réunion o as to exchange his exile there for exile in France. He left the hip (after some persuasion) while in Egypt and joined the pan- rab nationalists in Cairo, where Morocco was represented by he poet Allal el Fassi.

A rising broke out in the east of Madagascar which was still eing suppressed at the end of the year. It left great bitterness mong both Malagasy and Europeans. The three deputies and hree councillors of the republic representing the autochthonous opulation of the island were all under arrest awaiting trial on harges of organizing the insurrection. It should be mentioned hat they were elected by about 94,000 voters out of a popula- ion of 4,174,000. The colonial electorates appeared to be locally etermined. A total of 1,898,200 went to the polls, but except the electoral colleges reserved to Europeans less than half f the registered electors had so far used their votes. (*See* also ACIFIC ISLANDS, FRENCH.) (D. R. GI.)

**French Possessions in America.**—The four colonies of rance in the western hemisphere fall into three regional groups: 1) the islands of St. Pierre and Miquelon at the mouth of the ulf of St. Lawrence; each has certain dependent islets; (2) the rench West Indies, consisting of the two colonies of Martinique nd Guadeloupe, the latter with five small island dependencies; 3) French Guiana, a mainland colony in the northeastern part f South America, including French Guiana proper, a narrow oastal strip and the hinterland dependency of Inini.

*History.*—St. Pierre and Miquelon continued an uneventful readjustment to postwar conditions in 1947 and placed chief emphasis upon the further development of the fishing industry and processing of fish products, in which systematic developments had begun in 1946. The Caribbean colonies continued to co-operate closely with the expanded and increasingly active Caribbean commission, representing Middle American possessions of Great Britain, the United States, France and the Netherlands. Work continued in 1947 on the liquidation of the Devil's Island penal colony, off the French Guiana coast. By August 2,386 convicts had already been returned to their homes in France and North Africa, 800 more had completed their penal terms and were awaiting shipment and 2,718 were still serving sentence.

*Education and Religion.*—Schools in both Martinique and Guadeloupe, the colonies of largest population, are patterned after the French system. Attendance in Martinique represents about one-seventh of the entire population. Fort-de-France has a school of law and a technical training school. Guadeloupe has 113 free elementary schools attended by 25,691 pupils, and 3 secondary schools with 1,832 pupils; private schools enroll 2,500. The predominant religion in all four colonies is Roman Catholi-

cism.

*Trade and Communications.*—Exports from St. Pierre and Miquelon in the first six months of 1947 were valued at 66,700,000 francs, and imports in the same period at 49,300,000 francs. For all of 1946, exports were 59,600,000 francs; imports 81,900,000 francs. Chief exports of Martinique are sugar and rum; sugar exports in 1946 were 165,194 metric quintals (1945: 482,360 quintals). Exports from Guadeloupe in the first six months of 1947 were valued at 2,331,400,000 francs, and imports during the same period at 1,326,700,000 francs. For all of 1946, exports were 1,495,200,000 francs, and imports 1,115,500,000 francs. Guadeloupe's principal exports are sugar (81,380 quintals in first six months of 1947), rum and bananas. Exports from French Guiana include gold, precious stones, wood and rosewood essence; imports include foodstuffs and clothing, machinery, fuels. Martinique and Guadeloupe have, respectively, 750 mi. and 800 mi. of roads but no railways. French Guiana has a few hundred miles of roads near Cayenne and 62 mi. of narrow-gauge railway.

*Production.*—Processing of fish products constitutes the only important industry in St. Pierre and Miquelon. Sugar production in Martinique and Guadeloupe, respectively, in 1945–46 totalled 23,530 and 45,082 metric tons (1944–45: 11,062 and 28,439 tons); estimated production for 1946–47 was, respectively, 22,000 tons and 35,000 tons.

## Friends, Religious Society of.

Although no formal celebration was held, 1947 marked the 300th anniversary of the spiritual experience which led George Fox to found the Society of Friends. In 1947 the society was composed of 53 yearly meetings and annual conference groups with an approximate total membership of 164,300. About 116,600 members were in the United States and Canada, and about 22,700 in the British Isles. During the year the Switzerland general meeting was given the status of a yearly meeting, and the constituent meetings of the Pacific Coast association, located in Canada, the U.S.A. and Hawaii, organized the Pacific yearly meeting.

Partial return to normal peacetime conditions in the Society of Friends was reflected in the increasing number of Friends able to travel about the world in the ministry and in the holding of three important international Quaker conferences. At Easter time, the first conference of European Friends after 1939 was held at Ommen, the Netherlands; approximately 70 Friends from 12 countries were present. The message from this conference emphasized the fact that "the spiritual need of the world is greater even than the physical," and reviewed frankly the spiritual state of the European meetings in these words: "Our own hearts have been hardened and our characters warped through these (wartime) years of violence and dishonesty and panic selfishness; but to some of us it has been given to find through suffering a new sense of fellowship and new opportunity for serving our fellows." In July, more than 450 young Friends from all parts of the world met at Earlham college, Richmond, Ind., to discuss the theme of "Christian Dedication in Spirit and Work." In September, the first postwar meeting of the Friends World Committee for Consultation was held at Richmond, Ind., with 93 Friends from 18 countries in attendance. Plans were made for a World Conference of Friends to be held in 1952 and arrangements were made for representation in the United Nations Educational, Scientific and Cultural organization (U.N.E.S.C.O.) and the United Nations Economic and Social council. Thus the sense of a world Quaker community began to be recreated.

As the United Nations Relief and Rehabilitation administration (U.N.R.R.A.) ceased its operations, the burden upon private relief agencies such as those operated by Quakers became correspondingly greater. Friends Relief Service, the British
Quaker relief organization, had 180 workers in Austria, Fr
Germany, Greece and Poland; plans were made to close
operations or to hand them over to other groups in 1948.
needs of displaced persons in Europe and of refugees
prisoners of war in England also claimed the attentio
Friends Relief Service. The Friends Service council ha
workers in India, China, Madagascar and various Euro
capitals. Young British Friends carried on rehabilitation
in France and Germany under the Friends Ambulance
Post-War Service. In India and China, British, Canadian,
and New Zealand Friends worked with native personnel u
the Friends Service unit. The work in India centred in Be
and took the form chiefly of village reconstruction and me
relief. Medical centres and mobile units were maintaine
Honan Province, China, and in Yenan, capital of comm
China.

The American Friends Service committee, with the la
budget in its 30-year history, carried on relief and reconst
tion operations in 11 countries: Finland, Poland, France,
many, Austria, Hungary, Italy, Spain, India, China and Ja
There were several new developments in the work of this
mittee. Under the Quaker International Voluntary Service
gram many American and European young people volunte
their services in the rebuilding of war-shattered communiti
Europe; work camps for this purpose were conducted in
land, Poland and France. The program of International Se
Seminars, interrupted by World War II, was resumed; m
than 250 students from all parts of the world came togethe
seven seminars scattered over the United States to study
problems of world peace under the leadership of a distingui
faculty. At the invitation of the U.S. state department
committee undertook responsibility for the orientation prog
on two ships carrying exchange students between Europe
the United States. The social-industrial section, in additio
operating its work camps, institutional service units and
relations program, turned its attention to the field of econ
relations in an effort to see what special contribution Fri
might make in this difficult area. The peace section, while
tinuing its Institutes of International Relations, its peace c
vans and its work camps in Mexico, devoted much energy
mobilizing public opposition to peacetime conscription.

On Dec. 10 the Nobel peace prize was awarded jointly to
American Friends Service committee in Philadelphia and
Friends Service council in London in recognition of the con
bution of the Society of Friends to world peace. (*See*

## Fruit.

World fruit production was about average in 1
apples being estimated at 411,000,000 bu., of wh
North America provided 132,000,000 bu. Great Britain ha
record crop, twice the average size. Germany, Austria, Belg
and the Netherlands had better-than-average crops in spite
the dry weather. The Italian crop was at about the pre-W
War II level. U.S. production failed to reach the record tota
1946 by 4% but was 20% above average. Deciduous fruits,
less than in 1946, were also 12% above average.

**Apples.**—The U.S. crop in 1947 was estimated at 112,503,
bu., 6% smaller than the 1946 crop of 119,410,000 bu.
about the size of the average for 1936–45. The table on p.
shows production in 24 states for 1947, 1946 and the 10-yr. a
age, 1936–45. The western states produced almost half of
total crop, Washington alone yielding 30% of the commer
output. The differences in production by areas reflected
differences among varieties. Baldwins yielded two and one-
times the 1946 crop, Gravensteins one-third more, Greenin
Yellow Newton and Spy one-tenth more while other varie

| Total | 2,876,000 | 2,918,000 | 2,385,000 |

howed no increase or a loss. The Delicious variety continued grow in popularity as a commercial apple and constituted 1% of the total commercial crop in 1947. Winter varieties nounted to about four-fifths of the total because of better orage quality. The summer variety Gravenstein produced in alifornia, made up about half of the total of summer types.

Shipments began early and two-thirds were shipped from Vashington before October. The eastern crop was delayed in aturing. Imports from Canada amounted to more than 1,200 arloads, but this amounted to only about 2% of the United tates production. Exports were about 5,200,000 bu. in the ear 1946–47 ending July 1 and were expected to be smaller in 947–48. Storage stocks of apples increased in the fall of 1947 bove the 10,000,000-bu. level, about the same as in 1946.

Prices of apples in general were about the same as in 1946 ut below the average for the very small 1945 crop. The average rice to growers was $2.65 per bu. in 1947, compared with an verage of $2.46 for 1946. Prices ranged higher in New England in the east and in Washington and Idaho in the west.

**Apricots.**—The U.S. crop was estimated at 199,000 tons, ompared with 338,700 tons harvested in 1946 and a ten-year verage of 191,500 tons. In the three states growing nearly all is fruit, California produced 166,000 tons, Washington 28,000 ons, and Utah 5,000 tons. World production of dried apricots as estimated at 19,800 tons, of which 15,000 tons were proiced in the United States. Spain produced 2,100 tons and ustralia 1,300 tons.

**Avocados.**—U.S. production was estimated at 16,300 tons 1947, compared with 16,000 tons in 1946 and an average of 5,773 tons for 1936–45. California produced 14,000 tons and lorida 2,300 tons.

**Bananas.**—The supply from Central America became more oundant in 1947 as shipping improved, amounting to nearly ,000,000 bunches, somewhat less than prewar supplies.

**Cherries.**—The U.S. commercial crop grown in 12 states in 947 was estimated at 180,830 tons, 21% below the big crop of 229,620 tons harvested in 1946 but above the average of 169,157 tons for 1936–45. Sour cherries amounted to 98,810 tons and sweet varieties 82,020 tons. Michigan produced 49,500 tons of the sour cherries and New York 18,200 tons. Of the sweet varieties, Washington led with a crop of 29,200 tons; California produced 28,000 tons and Oregon 10,000 tons.

**Cranberries.**—The U.S. crop for 1947 was estimated at 784,700 bbl., about 13% below the big 857,000-bbl. crop of 1946, but 16% above the average of 638,830 bbl. during 1936–45. Massachusetts produced an estimated 485,000 bbl., Wisconsin 155,000 bbl., New Jersey 81,000 bbl., Washington 48,000 bbl. and Oregon 15,700 bbl.

**Dates.**—The U.S. date crop, all grown in California except for a very small amount in Arizona, was 10,250 tons, 41% below the 1946 crop of 17,400 tons, but above the average of 6,422 tons for 1936–45.

**Figs.**—California figs for drying were estimated at 33,000 tons in 1947, compared with 36,600 tons in 1946 and a ten-year (1936–45) average of 30,440 tons. California figs for fresh use and canning were estimated at 14,000 tons. Texas figs, mostly used for preserving, returned only 760 tons.

**Grapefruit.**—The 1947 U.S. crop was estimated at 62,270,000 boxes compared with a crop of 59,520,000 boxes in 1946 and an average of 44,593,000 boxes (1936–45). Low prices in the fall

EDIBLE GRAPEFRUIT left to rot along the Salt river near Phoenix, Ariz., where growers dumped tons of the citrus fruit which failed to meet retail requirements in 1947

caused delayed marketing.

**Grapes.**—The 1947 crop in the United States was estimated at 3,093,800 tons, 3% less than the record 1946 crop of 3,119,500 tons but 20% above the average (1936–45). Prices were much lower in 1947, less than half the 1946 average of $93.30 per ton.

**Lemons.**—The 1947 crop of California was estimated at 14,100,000 boxes, compared with 13,760,000 boxes picked in 1946 and an average of 12,186,000 boxes during 1936–45.

**Limes.**—The 1947 crop, all in Florida, was put at 190,000 boxes, compared with 170,000 boxes harvested in 1946 and an average of 135,000 boxes for 1936–45.

**Olives.**—The U.S. commercial olive crop, all grown in California, was estimated at 40,000 tons in 1947, compared with 48,000 tons in 1946 and an average of 43,300 tons for the period 1936–45.

**Oranges.**—The 1947 crop of the United States was estimated at 108,260,000 boxes or about 5% less than the record crop of 1946 but 30% above the average of the ten-year period 1936–45.

Table IV.—*U.S. Orange Production by States 1947, 1946 and 10-Yr. Average 1936-45*

(In thousands of boxes*)

| State | 1947 | 1946 | 10-Yr. Average |

## Fuel Briquettes.

The manufacture of fuel briquette carried on in at least 24 different c tries, but the scale of operations is usually small. World duction reached a peak of 86,500,000 short tons in 1943 which Germany produced 85%, France 4%, Belgium 1% the United States 2%; 97% of the total output was in Eur

**United States.**—The growth of the fuel briquetting indu in the United States is indicated in the table on p. 335 thousands of short tons.

In addition to the reg briquettes, there is a small output of "packaged fuel," wh consists of several cubical quettes wrapped and sealed wrapper, for convenience cleanliness in use. Product

*Data on U.S. Fuel Briquetting Industry*

*(In thousands of short tons)*

| | Production | Exports | Consumption | Fuels Used |
|---|---|---|---|---|
| 940 | 1,051 | 23 | 1,028 | 1,003 |
| 941 | 1,299 | 40 | 1,259 | 1,228 |
| 942 | 1,748 | 104 | 1,644 | 1,652 |
| 943 | 2,164 | 175 | 1,989 | 2,076 |
| 944 | 2,465 | 164 | 2,302 | 2,331 |
| 945 | 2,762 | 174 | 2,589 | 2,603 |
| 946 | 3,004 | 163 | 2,841 | 2,829 |

f packaged fuel reached a peak of 269,842 short tons in 1941, ut operations were hindered during the war years by shortages f labour and materials. Output dropped from 208,143 tons in 945 to 190,919 tons in 1946. (G. A. Ro.)

**uel Oil:** *see* PETROLEUM.

**uller's Earth.** Production of fuller's earth in the United States advanced from 296,368 short tons in 945 to 298,752 tons in 1946. Texas is the leading producer ollowed by Florida and Georgia, Illinois, California, Nevada, ennessee and Utah. The 1946 output lacked 11% of meeting he 1930 record. The refining of mineral oils takes 68% of the utput, absorbents use 16%, the refining of vegetable oils takes %, and 3% goes into rotary drilling mud. (G. A. Ro.)

**urfural:** *see* CHEMURGY.

**urniture Industry.** The 4,500 or more factories in the United States manufacturing wooden nd upholstered household furniture in 1947 produced the greatest dollar volume in the entire history of the industry, an estimated $1,425,000,000, a gain approximately 27% more than he $1,120,000,000 output of 1946. This record dollar volume, owever, did not represent an all-time high in unit production, ut was primarily the result of increased prices, which averaged bout 42% higher than the 1941 level. In total number of ieces, the industry showed a gain of about 20% after 1941, hen dollar volume totalled only $630,000,000, or approximately half that of 1947.

Practically the same results were registered by the other ,000 plants manufacturing metal, glass, plastic and other types f furniture, with a combined estimated volume of $300,000,000.

Bedroom and dining room furniture, living room tables, bookases, cabinets and other novelty furniture represented 60% of he 1947 production, while upholstered furniture accounted for 0% and kitchen furniture 10%.

The supply of upholstered furniture was practically normal t the year's end, novelty furniture was becoming quite plentiul and kitchen furniture was in good supply. But casegoods bedroom and dining room suites) were still being voluntarily ationed by manufacturers, who had more than 90 days' advance orders on their books and refused to inflate their backogs beyond that period because of the prospect of higher labour nd material costs during 1948.

In May the industry had a backlog of orders representing ix months' production, but large store buyers, fearing a recesion and having heavy inventories, began to cancel most of heir advance orders, expecting prices to drop. By September 0% of the industry's backlog had been wiped off factory books. urniture prices, however, remained firm, and consumers coninued to buy, so the larger stores began placing orders again nd furniture prices advanced about 5%. Late in the year anther 5% increase was found necessary to meet increased proluction costs and this brought another wave of buying. It was onservatively estimated that large stores would pay $10,000,000 more for the goods they cancelled than they would ave paid under the prices prevailing from May to September.

The July 1947 furniture markets in Grand Rapids, Chicago, New York, High Point, N.C., San Francisco, Los Angeles and the May market at Jamestown, N.Y., were "buyer's markets" in the full sense of the term. But the Jan. 1948 markets in those centres, like the November market in Jamestown, were expected to be "seller's markets" again with casegoods rigidly allocated.

Stylewise, Modern assumed complete supremacy over all traditional types, including 18th century English, French Provincial, Regency and Victorian, the other leading favourites. Mahogany remained the most popular furniture wood but walnut was enjoying renewed popularity and oak, maple, cherry and birch were holding their own.

There were few strikes in the industry during 1947 and employment was at the all-time peak of approximately 160,000 with pay rolls up 28% to approximately $250,000,000. Profits were expected to equal or exceed the 6.9% average of 1946, the best in the industry's long history.

Canada's 623 furniture factories were still operating at peak volume during 1947 but competition was growing. Indications were that the $60,000,000 volume produced represented the complete facilities of the industry and that only higher prices could bring further gains. Approximately 16,000 persons were employed by the industry and pay rolls for 1946 totalled $21,889,000.

The furniture industry in Europe was showing renewed life. From Sweden, Finland, France, Belgium, England, Scotland and Germany came reports of heavy production increases and some Swedish, Finnish, English and French furniture was being exported to the United States. At the big Hanover fair in Germany, a number of furniture manufacturers exhibited new lines and took heavy orders. The furniture industry in Europe was assured of strong demand for several years because of war losses suffered by home owners. (*See* also INTERIOR DECORATION.) (J. A. G.)

**Furs.** At the beginning of 1947, the U.S. fur industry was in the midst of drastic deflation. Fur apparel and fur skin prices declined as much as 50% in some instances, as compared with top prices in 1946.

Fewer garments were made and sold in 1947 than during the previous year, although consumers responded promptly to lower fur prices in the winter and spring. August fur coat sales were hampered by a sudden change in styles. It was not until fall that these styles were modified to meet consumers' approval. Retail business was excellent during the last quarter; fur coat prices were firm and carry-over of merchandise into 1948 was small.

The U.S. government's 20% tax on fur apparel produced $57,880,645 in revenue during the ten months through October. For the corresponding period in 1946, $68,537,093 was collected. Smaller collections were due to lower prices during the first nine months, removal of tax on most fur trimmed cloth garments and fewer sales.

Raw fur imports through September totalled $89,400,000, compared with $178,500,000 in 1946. Russian furs dominated U.S. imports but were less in value than in 1946 and included quantities of ermine, squirrel, Persian lamb, sable, marten, weasel, muskrat, kolinsky and mink. (Fur auctions in Leningrad were revived.) Shipments from China and Japan were limited, consisting mostly of Chinese lambskins, kidskins, weasel, kolinsky, Jap mink and marten. New Zealand and Australia supplied rabbit skins, mostly for the hat felt trade. Imports from Scandinavian countries were limited by lack of demand for silver and platinum foxes. Principal imports from South America were nutria, ocelot, rabbit, hare, and lambskins for mouton. Imports from Canada and Nova Scotia, valued at about $8,000,000, included mink, muskrat, beaver, otter, ermine, marten and silver fox. Shipment of processed

BRITISH AND FRENCH fur dealers inspecting samples at an international fur auction which opened at the Fur palace in Leningrad, U.S.S.R., on July 21, 1947

and manufactured furs from the U.S. to Canada was prohibited late in the year because of dollar shortage in the dominion. The U.S. imported about 5,000,000 Persian lambskins, most of which came from South-West Africa. Other sources were Afghanistan and the U.S.S.R.

U.S. exports of furs during the first nine months of 1947 were valued at $31,255,022, considerably more than in 1946; they were shipped to Great Britain, the Scandinavian countries and South America. London remained the most important U.S. outlet.

The most popular furs of the year were muskrat, mink, Persian lamb, mouton, weasel, beaver and nutria. It was a record year for the silver blue type of mutation mink; more than 150,000 skins were offered by the Mutation Mink Breeders association. Long-haired furs continued to be neglected, and silver fox farmers requested financial aid from the government. It was the first year since 1941 that insolvencies in the trade were numerous; they totalled 113 for 12 months ending with November, involving over $8,000,000. The trade quickly recovered from the break in prices during the first quarter, however, and was on a sound basis by the close of the year.

Skin prices advanced during November and December on all wanted furs, and muskrat sold as high as $4, wild mink as high as $74 in Canada, and mutation mink sold freely with the best types of silver blue going as high as $130. All mink breeders had a successful season, with demand favouring the standard type of ranch mink. Alaska seal sold up to $123 and Canadian beaver around $65–$75.

The London market held auction sales and distributed raw and dressed furs from all parts of the world in limited quantities, mostly to European merchants. British furriers were permitted to purchase raw furs under government regulations. Most of the skins purchased had to be exported. The British public was able to obtain limited quantities of fur apparel paying a 33% tax instead of the prevailing 110%.

Rising prices threatened the fur business with the menace of new inflation late in the year, and consumer resistance increased. Shortage of dollars throughout the world, inflation in numerous countries and Russian domination of eastern Europe prevented the fur trade from returning to a more normal state.

### Gandhi, Mohandas Karamchand

(1869–1948), du nationalist er, was born at Porbandar (Kathiawar), India. For his bi phy, see *Encyclopædia Britannica.* On Jan. 22, 1937, Ga announced his retirement from active Indian politics, bu 1940 he was as prominent as ever in Indian affairs of state April 1941 he announced that the Congress party had temp ily abandoned its aim of independence for India, but he affirmed his personal policy of nonviolence. After rejecting British proposals for postwar independence, Gandhi laun a new civil disobedience campaign for which he was impris in Aug. 1942. He was released in May 1944 because of fa health. Although he called the independence plan issued White Paper, May 16, 1946, the "best document the Br government could have produced in the circumstances,' voted against it; the party, however, approved it. Rouse Hindu-Moslem bloodshed, Gandhi initiated a protest fast ward the close of 1946. On Jan. 2, 1947, he began a wal tour of east Bengal villages to improve Hindu-Moslem tions.

While Gandhi disapproved of the partition of India, he luctantly accepted it, June 4; later he denounced the In princes for their independence claims. On Sept. 4, he end three-day fast after receiving assurances that Hindu-Mo rioting in Calcutta would not recur. On Jan. 13, 1948, he b another fast, lasting six days, against renewed communal fi ing between Hindus and Moslems. Seventeen days later he assassinated in the garden of Birla House, New Delhi, b young Hindu extremist named Godse. His death, which was signal for new waves of violence in India, was mourned thro out the world. (*See* also India.)

*Preliminary. †Mostly for repressuring oil fields; small amounts of surplus gas are ret to the ground for storage. ‡Includes manufactured gas, and not included in the consum total.

**Canada.**—Natural gas production in Canada increased f 48,412,000,000 cu.ft. in 1945 to 52,314,000,000 in 1946, sales decreased from 33,932,000,000 to 33,186,000,000. Proc tion and sales continued to increase in 1947. The ou through August was 35,960,000,000 and sales were 27,0 000,000.

**Mexico.**—Natural gas production in Mexico increased f 26,910,000,000 cu.ft. in 1945 to 27,170,000,000 in 1946, 16,360,000,000 in the first half of 1947. (*See* also Fede Power Commission.)

(G. A. Ro.

**Gasoline:** *see* Petroleum.

**asperi, Alcide de** (1881– ), Italian statesman, was born on April 3 at Pieve Tesino, then Austria-Hungary. After studying at the University of Vienna e started his public life as editor of *Il Nuovo Trentino* and ter was elected to the Austrian parliament as an Italian inority representative. After the union of his native province ith Italy, he was elected in 1921 deputy to the Italian parlia- ent. Already a prominent member of the Christian Demo- atic party (then called *Partito Popolare Italiano*), he opposed lussolini's dictatorship and in 1926 was sentenced to four ears' imprisonment for antifascist activities. When freed, he ecame an official of the Vatican library. During World War II e Gasperi took part in the resistance movement in Rome and n June 9, 1944, joined the first Ivanoe Bonomi cabinet as inister without portfolio. Minister of foreign affairs of the cond Bonomi (Dec. 10, 1944) and Ferruccio Parri (June 19, 945) cabinets, he was elected leader of the reconstructed hristian Democratic party and on Dec. 9, 1945, became prime inister. His first, second (July 12, 1946) and third (Feb. 1, 947) cabinets were coalition governments with Socialist and ommunist participation. On June 1, 1947, he formed a cabinet mposed mainly of Christian Democrats, without the Com- unists.

**aulle, Charles de** (1890– ), French army officer and statesman, was born Nov. 22 in Lille, rance. He was graduated from St. Cyr military college at aris shortly before the German invasion of France in 1914. ounded three times during World War I, he was captured by erman troops at Verdun in 1916, but escaped and saw further ction on the western front and in the near east.

De Gaulle's warnings to France not to place its trust in static efense were ignored by the French general staff, and he was roven right in 1940 when the Germans skirted the Maginot ne and overran France. He fled to London where he set up Free French regime, and returned to Paris after its liberation 1944 to head a provisional government. On Nov. 6, 1945, e constituent assembly elected him interim president of the ew provisional government. He resigned on Jan. 20, 1946, eclaring his intention to retire from politics. However, he ter appealed to his countrymen to reject the new constitution, ut was turned down by French voters, and on Dec. 28, De aulle said he would not be a candidate for the presidency, ating that he did not wish "to preside, powerless, over the owerlessness of the state."

He continued his attacks on the constitution throughout 947, and on April 14 announced he would head a new party, he *Rassemblement du Peuple Français* (Reunion of the French eople). The new party showed enormous strength in the ctober municipal elections, gaining nearly 40% of the entire ote. Consequently, De Gaulle (Oct. 27) called for dissolu- ion of the assembly and national elections, but his appeal was ejected by the government.

In his statements on foreign policy in 1947, he urged that rance should shun either side in the east-west rivalry, but re- ersed this position on June 29, declaring that France must lign itself with the U.S. in the event of an extension of the dangerous rivalry" between the U.S. and the U.S.S.R. (*See* lso FRANCE.)

**em Stones.** Information in regard to gem stones was relatively scarce during 1947, except for dia- nonds, which are covered under a separate heading. Most of he oriental gem centres were disorganized by Japanese occu- ation and had not yet returned to normal.

The United States imports included 544,711 carats of rough emeralds in 1946, but the origin was not reported and the value indicates low-grade stones. There were also included 11,902 carats of cut emeralds, the value of which was also relatively low. There was a marked increase in the value of imports of all kinds of precious stones in late years, with exceptional increases after 1943.

The following table shows the total dollar value of all gem imports, excluding industrial diamonds.

| | | | |
|---|---|---|---|
| 1937 | $43,951,220 | 1942 | $28,520,070 |
| 1938 | 28,304,956 | 1943 | 72,109,788 |
| 1939 | 40,488,136 | 1944 | 77,529,806 |
| 1940 | 37,769,135 | 1945 | 114,435,231 |
| 1941 | 33,777,215 | 1946 | 189,017,646 |

There was a similar expansion of imports after World War I, reaching a peak of $105,273,543 in 1919; during the inter-war period the highest valuation reached was $80,651,281 in 1926.

Such gem production as there is in the United States is limited to a variety of semiprecious stones which is estimated to have increased from $40,000 in 1945 to $325,000 in 1946. The leading varieties included in the domestic output are jade, agate, turquoise, variscite, but numerous minor varieties are found in small quantities. (*See* also MINERALOGY.)

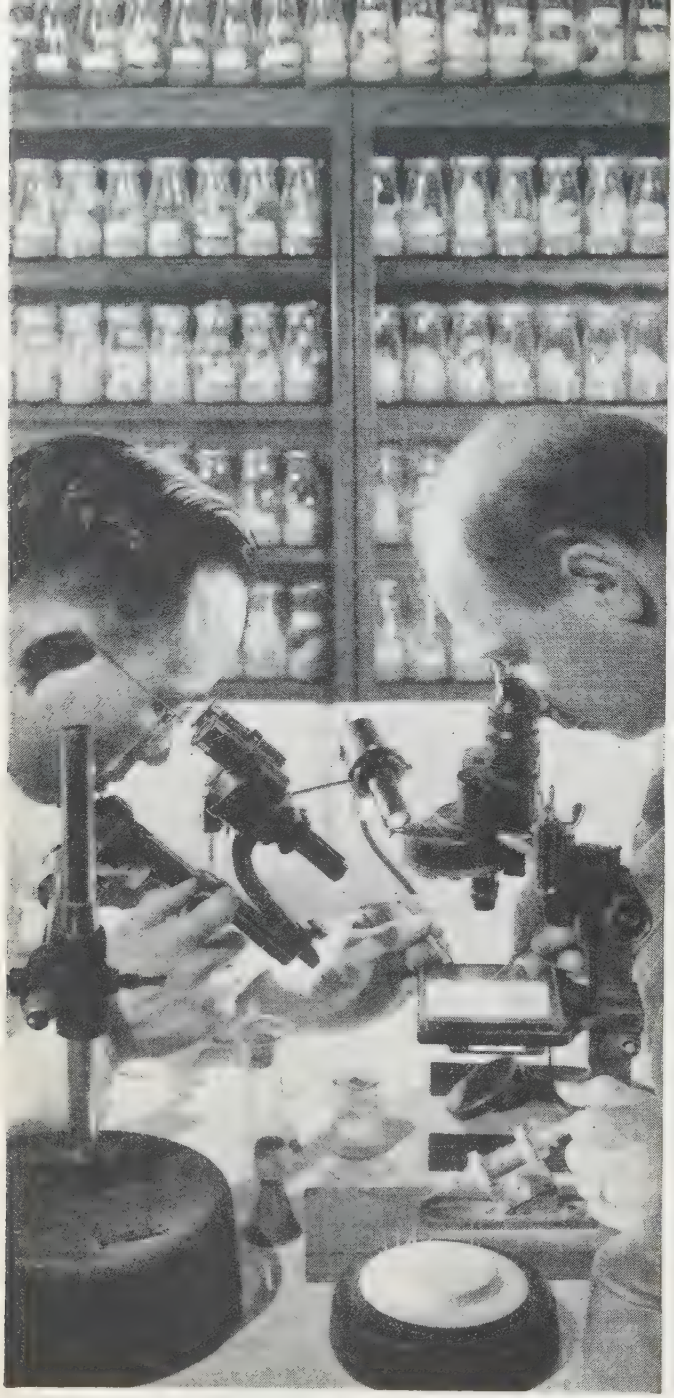
(G. A. Ro.)

**General Federation of Women's Clubs:** *see* SOCIETIES AND ASSOCIATIONS.

**Genetics.** **Radiation and the Human Germ-Plasm.**—In his Nobel prize lecture on "The Production of Mutations" before the Caroline institute, Stockholm, Sweden, H. J. Muller warned that humans are encumbered by innumerable mutations. Since the vast majority of these mutations are undesirable, their further random production should be rigorously avoided as far as possible. All high-energy radiation produces such mutations in man; radiologists were warned, therefore, to insist upon simple precautions to shield the gonads, whenever individuals are exposed to radiation, either in industry or in medical practice.

**Genetics of Micro-organisms.**—In a year of rapid advance in the genetics of micro-organisms, the work of W. S. Stone, O. Wyss and F. Haas on the induction of mutations in bacteria by irradiation of the substrate may be chosen as the most significant contribution. Stone and his colleagues irradiated nutrient broth with ultra-violet light and then demonstrated that the bacterium, *Staphylococcus aureus,* grown on this irradiated medium, underwent mutation to penicillin resistance and to streptomycin resistance much more frequently than when grown on control medium. They then demonstrated that the irradiation of the amino acid content of synthetic medium produced the mutations, while irradiation of the mineral salts had no effect. This method of inducing mutations should prove useful in the study of the physics and chemistry of mutation. In referring to the practical implications the authors suggest that: "a study of the effect of irradiated substrate on the development of cancerous tissue may prove profitable. If any of the activated mutators prove stable the phenomenon must be considered in nutrition and in safeguarding the use of atomic energy." (Wilson S. Stone, Orville Wyss and Felix Haas, "The Production of Mutations in Staphylococcus Aureus by Irradiation of the Substrate," *Proc. Nat. Acad. Sc.,* 33:59–66, March 1947.)

J. Lederberg demonstrated by the use of two strains of the bacterium, *Escherichia coli,* each carrying at least two different mutants producing biochemical or nutritional deficiencies in the organism, that recombinations of the normal or wild-type alleles of these mutants occurred when the two strains were cultured together. By using such strains, each carrying one alternative



GENETICISTS at the University of Rochester transplanting the eye tissue of a fruit fly with tiny glass surgical instruments to determine the effect of bodily environment on inherited characteristics—in this case, eye colour

allele of such factor pairs as those conditioning resistance or susceptibility to bacteriophage, he was able to demonstrate nonrandom recombinations. The facts led to the interpretation of the bacterium as a haploid organism containing one chromosome with genes arranged in linear order, the recombinations occurring when two such bacteria fuse to form a zygote. A tentative linkage map containing eight loci was constructed. The alternative hypothesis, that the recombination types are brought about by transforming substances released from the different cell types and inducing directed mutations, was made highly untenable by the experimental evidence. E. M. Witkin found that about one bacterium per 100,000 in a normal strain of *E. coli* mutated to a form resistant to the division-inhibiting and lethal effects of X-ray and ultra-violet radiation. Some of these mutant strains were also resistant to penicillin and sulfathiazole.

E. F. Oakberg and S. E. Luria demonstrated that resistance to sulfonamide in the bacterium, *S. aureus*, was the result of mutations and not a physiological adaptation as some wo formerly postulated. S. Emerson reported a strain of the m *Neurospora crassa,* in which sulfanilamide, usually an inhi of mould growth, was required for growth. The strain conta two mutants, one for sulfanilamide tolerance and the othe quiring a sulfonamide for growth.

**Natural Selection and Population Genetics.**—M. J. H reported that the stickleback fish, *Gasterosteus acule* showed intergrading of certain morphological characters, but the populations formed could be grouped into two distinct pl ological types, one adapted to a salt-water habitat and the o to fresh water. H. L. Carson and H. D. Stalker found that tain chromosome inversions in natural populations of the *Drosophila robusta,* showed a north-south gradient in their tribution over the range of the species in the eastern U. They reported two pericentric and many paracentric inversi In population cage experiments on *Drosophila pseudoobsc* T. Dobzhansky demonstrated that a population containin mixture of third chromosome inversions showed a cons selection in favour of flies heterozygous for the inversion against homozygotes. This mechanism would allow for the tention in a population of different gene combinations adapt to changing climatic and ecological factors.

**Geographical Society, American:** *see* SOCIETIES ASSOCIATIONS.

## Geography.

During 1947 geographers returned to the m diverse projects which had been interrupted World War II and prepared new programs to aid the solu of urgent postwar problems. The year was especially diffi because of the shortage of trained personnel, the many sh in positions from government services to academic work vice versa, and the increasing cost and difficulty of tra Nevertheless several ambitious programs were initiated many geographers prepared to visit the first major post geographical congress (International Geographical ur planned at Lisbon for Sept. 1948).

A critical spirit was more in evidence. During the geographers of all belligerent nations played essential parts military and economic planning. Once their reports were examined, it became evident that much of the work was has improvised, often by workers whose training did not fit th for particular tasks. This was no discredit to the geograph who worked hard to meet almost impossible deadlines but rat reflected the inadequate number of trained geographers av able as well as the limited vision of superiors who expected much in too little time.

On both sides of the Atlantic attention was repeatedly cal to the widespread lack of geographic knowledge. Few citiz in any country seemed to possess the geographic data necess to form reasonable judgments of world affairs; this was m strikingly illustrated in the U.S. by the Gallup Poll wh demonstrated that the majority of citizens could not ident even the major European and South American countries on outline map.

Many international acquaintanceships initiated before or d ing World War II were renewed, and requests from geograph in war-torn lands for aid in re-establishing their libraries not go unheeded. Publications were again exchanged.

Travel was facilitated by official missions which incluc geographers and by invitations to teach, especially in west hemisphere universities. Among the most successful of the ternational educational ventures was a summer school sponso

McGill university, Montreal, Canada.

**Publications.**—An outstanding publication of 1947 was the cond edition of *Aids to Geographical Research* prepared by e American Geographical society. This convenient handbook ts the major sources of geographic information as well as e U.S. geographers specializing in each field. *The Profes- onal Geographer*, a new journal of the American Society for rofessional Geographers, instituted a useful series of reviews overseas geography by publishing in its Dec. 1947 issue ticles by Maurice E. Perret on "Geography in Switzerland" d by Shannon McCune on "Geographical Journals in Asia."

Publications from continental Europe were again reaching her lands. Especially welcome were the long awaited volumes France in the *Géographie Universelle* series. Except in cen- al Europe most geographic periodicals had survived the war. he revival of German geography was implied by the appearance a creditable magazine, *Erdkunde: Archiv für Wissenschaft- he Geographie*, edited by Carl Troll and Herbert Lehmann. he French-Canadian *Revue Canadienne de Géographie* also peared in 1947.

**Mapping and Exploration.**—The war revealed both the emendous wealth of map data and the gross inaccuracies and ge gaps in existing maps. Even the U.S. had accurate detailed aps for only a fraction of its area. The army map service Washington, D.C., had taken the lead in cartographic work compilation, by distributing maps to selected depositories d by offering research positions to graduate students. Mean- hile, plans by the army and by the U.S. geological survey ere laid for accelerating the mapping of the U.S. by photo- ammetry.

Expeditions in unexplored areas were at work in the arctic, e antarctic and in Latin America under the auspices of the S. government. In general, exploration elsewhere was hin- ered by upset political situations and lack of funds. Reports in e *Geographical Review* and the *Geographical Journal* showed at intensive exploration of relatively well known lands had en more significant than dramatic ventures into areas which an had not hitherto seen. It is also noteworthy that many im- ortant contributions to geographic knowledge were made by soil ientists, agricultural experts, geologists and engineers with formal training in geography as such. The field of geography ad become so inclusive that thorough surveys must be by roups of specialists rather than by one man. Many studies geographers were especially valuable because of their syn- esis of more detailed findings into a unified regional picture.

**Long-Range Projects.**—The accomplishments of 1947 would ot be known for many years, but in the U.S. they would un- oubtedly include the activation of two long-range projects: e Centennial Studies project and the national atlas. The ommittee on Centennial Studies planned to celebrate the 100th nniversary (1952) of the American Geographical society by ublishing a volume of research studies which would sample, oth by method and area, modern geographic work in the U.S. nother committee drew up a plan to prepare a national atlas the U.S. comparable in scope with atlases already published France, Finland, the U.S.S.R. and several other European ountries. Both projects reflected the desire of U.S. geographers bring their findings together so that a proper evaluation could e made both of past accomplishment and the needs for future esearch.

In Canada the need to integrate geographic information was ecognized by the establishment of a geographical bureau under e department of mines and resources. Elsewhere hundreds of eographers were working in foreign offices, military agencies, braries, other government departments and on planning boards give guidance during the critical postwar reconstruction period. (*See* also CARTOGRAPHY; NATIONAL GEOGRAPHIC SOCIETY; SOCIETIES AND ASSOCIATIONS.) (O. P. S.)

**Geology.** The demand for well trained geologists, both on the part of educational institutions and industrial organizations, was greater during 1947 than could be filled. A number of important conferences were held and several articles published on the training of geologists. Plans were considered for the accrediting of geologic curricula in the colleges and universities of the United States. The number of undergraduate and graduate students majoring in geology reached an all-time high.

**General Geology.**—A basic textbook for beginning students in either geology or geography, entitled *Fundamentals of Earth Science*, by H. D. Thompson appeared in New York.

**Geomorphology.**—The fourth edition of C. A. Cotton's elementary text on *Geomorphology* was issued in New York and New Zealand. During 1946 there appeared in Liége, France, *Principes de Géomorphologie Normale* by Paul Macar.

**Glacial Geology.**—Developments in glacial geology were high-lighted by the appearance in New York of *Glacial Geology and the Pleistocene Epoch* by R. F. Flint. This presents information from the entire globe and indicates areas in which research is desirable. The British Glaciological society, founded in London in 1945, inaugurated a new scientific magazine, *The Journal of Glaciology.*

**Sedimentation.**—The expedition of the "Atlantis" into the northwestern portion of the Gulf of Mexico revealed that deposits clearly associated with the ice age occur within a foot or two of the surface of the sea floor over a large part of the Gulf.

Important evidence supporting the subsidence theory of the origin of coral reefs was revealed by core drilling for the United States navy on Bikini Island and by the results of studies by J. H. F. Umbgrove on the reefs of the East Indies published in the Aug. 1947 *Bulletin* of the Geological Society of America. The problem of geosynclines was thoroughly reviewed by M. F.

FIELD WORKERS for the U.S. bureau of mines drilling holes for blasting in oil shale cliffs near Rifle, Colo., in 1947. Diminishing U.S. oil supplies indicated a possible shift to synthetic fuels obtained from coal and shale

Glaessner and C. Teichert in the August and Sept. 1947 issues of the *American Journal of Science.*

The far-flung program of research formulated by the Research committee of the American Association of Petroleum Geologists presents eight projects in the field of sedimentology as indicated by S. W. Lowman in the March *Bulletin* of the association.

**Stratigraphy.**—A step forward in stratigraphy was the organization of the American Commission on Stratigraphic Nomenclature under the chairmanship of R. C. Moore. A model for future reports on facies relationships is *Memoir* 24 of the Geological Society of America by W. S. Pike, Jr., on the Upper Cretaceous of southwestern Colorado and adjacent states.

Of far-reaching importance is the series of ten papers constituting a *Symposium on Pennsylvanian Problems* assembled by H. R. Wanless for publication as Pt. II of the May issue of *The Journal of Geology.*

**Historical Geology.**—The second edition of the well known textbook on *Historical Geology* by R. C. Hussey, which gives special emphasis to North America, was issued in New York and London.

Other notable contributions introducing new concepts in this field were F. G. Snyder's "The Problem of the Lipalian Interval" and A. J. Eardley's "Paleozoic Cordilleran Geosyncline," which appeared in the May (Pt. I) and July issues respectively of *The Journal of Geology.*

**Structural Geology.**—The monograph by Hans Stille, *Einführung in den Bau Amerikas,* an outstanding work on the structure of North America and a portion of South America published in Berlin in 1940, has recently become available.

An expanded edition of J. H. F. Umbgrove's *The Pulse of the Earth* was published in English in The Hague.

**Vulcanology.**—*The Origin and Development of Craters,* published as *Memoir* 21 of the Geological Society of America, is based upon many years of study of Hawaiian volcanic activity by T. A. Jaggar.

**Petrology and Petrography.**—The third edition of L. V. Pirsson's *Rocks and Rock Minerals* (New York), revised by Adolf Knopf, constitutes a welcome addition to these fields. *Igneous Minerals and Rocks* is a new textbook on petrography by E. E. Wahlstrom published in New York.

**Applied Geology.**—In the June issue of the *Transactions* of the American Geophysical union there is a valuable contribution to hydrology by O. E. Meinzer entitled "Suggestions as to Future Research in Ground-Water Hydrology." The book *Elements of Soil Conservation* by H. H. Bennett, published in New York, brings this phase of geology up to date. J. B. DeMille's comprehensive work on *Strategic Minerals* (New York) is timely.

An important contribution to the rapidly expanding field of photogeology was W. G. Woolnough's "The Aeroplane in the Service of Geology," published by the Royal Society of New South Wales.

The trends of thought and lines of research being stimulated in mining geology were brought out in the "Report of the Committee on Research on Ore Deposits of the Society of Economic Geologists," W. D. Johnston, Jr., chairman, published in the September–October *Economic Geology.*

In the more practical phases of petroleum geology, increased attention was being given to more efficient conservation and secondary recovery methods, to possible sources of substitutes for petroleum, and to the exploration and development of foreign reserves, particularly in northern South America and the middle east. The current status of the world oil situation was summarized by K. F. Mather in "Petroleum—Today and Tomorrow," published in the Dec. 19 issue of *Science,* and in the "Review of Petroleum Geology in 1946" by F. M. Van W. S. Levings, and others, which appeared as the July *Qu* of the Colorado School of Mines. (*See* also MINER PALAEONTOLOGY, VERTEBRATE; SEISMOLOGY.)

(B. H. P.; F. M. V.

**George VI** (1895– ), king of Great Britain, Irela the British Dominions, was born at York c Sandringhan on Dec. 14; for his earlier career see *Encycl Britannica.* By the India Independence act King George from Aug. 15, 1947, to be emperor of India, but became i king of each of the new dominions of India and Pakist Canadian act of parliament also named him king of C These changes of title and a tour of his South African tories were outstanding events in the year. Sailing from mouth on Feb. 1 in H.M.S. "Vanguard," the king, accom by the queen and the princesses Elizabeth and Margar rived at Capetown on Feb. 17. For two months the royal ily travelled by special train through the self-governing and dependencies as far north as the Victoria falls d Zambezi river. At Capetown, Pretoria and Salisbury th opened sessions of the union and state legislatures; else he met massed assemblies of the native peoples headed by chiefs.

On the homeward voyage the royal family visited St. H and Ascension Island in the Atlantic.

Reviewing the tour at London guildhall where he was comed home on May 15, the king said: "Nothing will ever my belief that this old country is at heart as young an orous as it ever was." He inaugurated, during a two-day to Devon and Cornwall, the rebuilding of Plymouth, most bombed of British ports. On July 10 he unveiled in Westm abbey a memorial window to those who died in the bat Britain, and on Oct. 21 the statue of his father, King Geo on the lawns of the abbey. Royal presentation parties again held in the grounds of Buckingham palace on May 31 and a garden party on July 10. For the first time in years the ceremonial Trooping of the Colour was revived king's official birthday (June 12).

Other public occasions at which the king was present the reopening of Drury Lane theatre after its wartime oc tion (Jan. 23), the royal Chelsea flower show (May 20 fourth centenary of Trinity college, Cambridge (June 3 quincentenary of Eton college (June 15), the centenary of the royal Norfolk agricultural association (June 26 annual show of the royal agricultural society at Lincoln 2), an inspection of the home fleet on the Clyde (July 2 23), and the opening of a new storage reservoir for Lond Staines, Middlesex (Nov. 7). More purely social events att were race meetings at Epsom, Ascot and Newmarket, the national Horse show, the Royal tournament, the Wimb tennis finals and one of the cricket test matches (against Africa) at Lords (June 24).

On July 9, the king announced the betrothal of Princess beth to Lt. Philip Mountbatten, R.N. (created, Nov. 1 duke of Edinburgh, *q.v.*). The wedding took place in minster abbey on Nov. 20, before a congregation incl many members of the European royal families. On Dec. king broadcast to the peoples of the empire.

(L. D

**Georgia.** One of the original states of the union, locat the south Atlantic region, with an area of 5 sq.mi., Georgia is popularly called the "Empire State o South." Its population (excluding armed forces overseas 3,233,000 on July 1, 1947, an increase of 3.5% over the census of 3,123,723 (34.4% urban, 65.6% rural, 64.9%

ite, 34.7% Negro and .4% foreign-born). Atlanta, the capi- city, had a population of 302,288 in 1940. The four next gest cities were Savannah (pop. 95,996), Augusta (65,919), acon (57,865) and Columbus (53,280).

**History.**—The death of Governor-elect Eugene Talmadge on c. 21, 1946, only 23 days before the date for his inauguration, t great uncertainty as to who would be governor, for the con- tution of Georgia contained no specific provision covering this entuality. The only candidate's name that had appeared on e ballot in the Nov. 1946 general election was Eugene Tal- dge, nominee of the Democratic party; but in view of his ill- alth, aggravated by the strenuous campaign in the Demo- atic primary, some supporters of the Talmadge wing of the emocratic party were known, "as an insurance measure," to ve scratched the name of Eugene Talmadge on the election llot and to have written in the name of his son, Herman Tal- dge. It was also known that there were write-in votes for hers.

In an atmosphere of tenseness, the general assembly convened regular session on Jan. 13, 1947, and proceeded to canvass e election returns which showed that Eugene Talmadge had ceived 143,279 votes, Herman Talmadge, 675 votes; James V. rmichael, 669 votes; D. Talmadge Bowers, 637 votes; Ellis nall 122 votes; and 26 other persons votes of less than 15 ch. By a vote of 161 to 87, on Jan. 15 the assembly elected erman Talmadge as governor.

As early as Dec. 24, 1946, Gov. Arnall had announced that he garded Lt. Governor-elect Melvin E. Thompson as his rightful ccessor and that he would resign in his favour as soon as ompson was inaugurated. Backed by an opinion of Attorney eneral Eugene Cook that he (Arnall) should remain as gover- r for four more years under the constitutional provision stat- g that the governor should hold office "until his successor shall chosen and qualified," Arnall refused to relinquish the execu- ve offices in the capitol or the executive mansion; but, sup- rted by Adjutant General Marvin Griffin, Talmadge occupied th on Jan. 16. Arnall then set up an "executive office" in the pitol rotunda. Barred from this after a day, he retired to mporary executive offices in downtown Atlanta. On Jan. 18 hompson was inaugurated as lieutenant governor, and Arnall nounced his resignation as governor.

Several suits were brought in the courts seeking a judicial etermination of the controversy over the governorship. One perior court judge ruled in favour of Thompson and two ruled favour of Talmadge. On March 16, by a vote of 5 to 2, the ief justice dissenting, the state supreme court ruled that "in e circumstances appearing the General Assembly had no juris- ction to elect the Honorable Herman Talmadge or any other erson as Governor . . . thus creating the necessity of Governor rnall to continue in office . . . The voluntary resignation of overnor Arnall on Jan. 18, 1947, immediately imposed upon e Lt. Governor the duties of Governor." Talmadge immedi- tely vacated the executive office, saying that he would appeal to e people in the next general election.

The general assembly meanwhile had passed a bill abolishing l laws regulating primary elections. When submitted to Act- g Governor Thompson, he vetoed this bill. The assembly ad- urned without passing an appropriation bill.

On Oct. 24 the state supreme court invalidated a local bill thorizing the issuance of licences for the sale of beer and wine Butts county on the ground that the bill did not have at- ched to it a notice that it had been properly advertised, as re- uired under the constitution of 1945. This decision made it ear that some 350 other local bills enacted after 1945 would so be invalidated if contested. A home-rule bill designed to ve wide control in matters of local interest to cities and counties passed the legislature in 1947.

The principal state officers at the end of the year 1947 were: acting governor, Melvin E. Thompson; chief justice, W. Frank Jenkins; secretary of state, Ben W. Fortson, Jr.; superintendent of schools, M. D. Collins; attorney general, Eugene Cook; state auditor, B. E. Thrasher, Jr.; treasurer, George B. Hamilton; comptroller general, Zach D. Cravey.

**Education.**—For the school year ending in June 1947, there were 4,622 elementary schools (1,718 for white children and 2,904 for Negroes) with an enrolment of 594,947 pupils (367,310 whites and 227,637 Negroes) and a teaching staff of 15,940 (10,073 whites and 5,867 Negroes). High schools numbered 1,293 (746 white and 547 Negro) with a student enrolment of 151,352 (117,562 white and 33,790 Negro) with a teaching staff of 6,406 (5,077 white and 1,329 Negro). Expenditures for elementary and high schools during the year were $31,668,681. In the fall quarter, 1947, a total of 25,210 students were enrolled in the 16 units of the university system of Georgia, including 1,903 students in three Negro colleges. This was more than twice the number of students enrolled in 1939.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—For the fiscal year ending June 30, 1947, benefit payments by the state board of welfare for public assistance were as follows: old age, $13,688,-256; blind, $480,349; dependent children, $2,245,146. In June 1947, a total of 75,810 individuals received old-age assistance, with an average individual allowance of $17.02; 2,189 blind persons received benefits averaging $20.43; and 16,476 dependent children received benefits averaging $13.71. The steady increase in public assistance payments in Georgia is shown by the following totals of expenditures by years: 1938, $3,240,577; 1941, $5,328,710; 1944, $10,363,311; 1946, $11,262,813; 1947, $16,-413,752.

Total expenditures by the state department of health for the year ending June 30, 1947, were $7,627,904. In Oct. 1947, there were 1,143 patients in the state tuberculosis sanatorium (Batty hospital). On June 30, 1947, there were 9,018 patients in the Milledgeville State hospital. Current operating expenses for this hospital for the insane were $2,317,636 for the fiscal year ending in June, 1946.

During the year ending June 30, 1947, unemployment insurance totalling $4,954,497 was paid to 43,800 persons. In the same period, 75,200 veterans of World War II received $23,349,427 in unemployment payments.

On June 30, 1947, there were 5,515 prisoners in the various state and county institutions under the control of the state board of corrections. Total expenditures by this board for the fiscal year were $832,726.

A total of 5,213 persons were assisted by the state division of vocational rehabilitation. Expenditures of this division for the fiscal year ending June 30, 1947, were $1,139,497, including $836,958 from federal funds.

**Communications.**—On June 30, 1947, there were in Georgia 90,983 mi. of roads, of which 14,299 mi. were state roads and the remainder county roads. The total paved mileage, exclusive of city streets, was 10,478. Total expenditures of the state highway department for the fiscal year ending June 30, 1947, were $29,298,838. On Nov. 5, 1946, there were 6,442 mi. of main line railroad track in the state, of which 266 mi. were double-tracked; in addition there were 2,254 mi. of yard-switching and passing track. A survey of 1945 showed that Georgia had 958 mi. of developed navigable river channels.

On Nov. 1, 1947, there were 135 airports in Georgia. On that date the Civil Aeronautics administration estimated the approved airways in Georgia at 670 mi.

The Georgia Public Service commission estimated the total number of telephones in Georgia as 424,092 (385,592 of Southern Bell stations, as of Sept. 30, 1947, and 38,500 of independent stations, as of Dec. 31, 1946).

**Banking and Finance.**—On Dec. 31, 1946, there were in Georgia 267 state banks and 7 branches with total resources of $762,303,430, including $205,100,316 in loans and discounts, $321,382,413 in U.S. government securities bonds, and $197,277,290 cash in vaults and amounts due from approved reserve agents. Liabilities of these banks included $519,426,659 in demand deposits and $129,589,679 in savings deposits.

On Oct. 1, 1947, there were 44 federal savings and loan associations and 20 state chartered building and loan associations operating in Georgia. Total resources of these associations as of July 1, 1947, was approximately $135,000,000.

On June 30, 1947, there were 50 national banks in Georgia with total assets of $995,885,000, including U.S. government obligations of $402,-944,000, loans and discounts of $259,477,000, and cash balances with other banks of $275,990.000. Liabilities of these banks included deposits by individuals, partnerships and corporations, $716,854,000 (demand, $546,-513,000; time, $170,341,000); government deposits, $102,495,000; interbank deposits, $117,399,000; and capital accounts, $51,133,000.

For the fiscal year ending June 30, 1946, the total state receipts were $107,258,000, or $34.33 per capita. The chief sources of revenue were $27,284,991 from motor fuel tax, $15,182,916 from income tax, $16,-605,734 from U.S. grants and $10,727,070 from the alcoholic beverage tax. Chief expenditures were $38,351,251 for education, $33,964,279 for highways and $12,433,738 for public welfare. There was an unencumbered surplus of $15,395,814 in the state treasury at the end of the fiscal year. Unofficial sources indicate that the state income had increased approximately 20% in 1947.

On June 30, 1946, the total state debt outstanding (not including current operation obligations) was $8,271,302.17, but this amount was covered in full by cash reserves. The constitution of Georgia prohibits any increase in the state's bonded indebtedness.

**Agriculture.**—Crops produced in 1947 were valued at $466,491,000, an increase of 11% over the previous year, and exceeded only by the all-time high of $578,000,000 in 1919. The total harvested acreage of principal crops in 1946 was 7,243,000 ac., a decrease of 1,422,000 ac. from the 1935–44 average.

Cash receipts from farm marketing in 1946 amounted to $416,410,000

Table I.—*Leading Agricultural Products of Georgia, 1947 and 1946*

| Crop | 1947 | 1946 | Value, 1947 |
|---|---|---|---|
| Cotton, bales | 660,000 | 557,000 | $104,610,000 |
| Cottonseed, tons | 265,000 | 223,000 | 21,730,000 |
| Corn, bu. | 48,075,000 | 44,145,000 | 103,361,000 |
| Peanuts, lb. | 780,780,000 | 716,900,000 | 79,640,000 |
| Tobacco, lb. | 130,132,000 | 110,537,000 | 51,137,000 |
| Oats, bu. | 16,100,000 | 16,404,000 | 17,710,000 |
| Hay, tons | 696,000 | 728,000 | 14,616,000 |
| Commercial truck crops | | | 9,601,000 |
| Peaches, bu. | 5,810,000 | 5,628,000 | 9,296,000 |
| Velvet beans, tons | 272,000 | 286,000 | 8,704,000 |
| Wheat, bu. | 3,360,000 | 2,093,000 | 7,728,000 |
| Pecans, lb. | 26,555,000 | 16,000,000 | 7,515,000 |
| Sugarcane syrup, gal. | 4,070,000 | 4,025,000 | 5,698,000 |

(crops, $288,345,000; livestock and products, $119,761,000; government payments, $8,304,000).

The principal crops of 1947 are shown in Table I.

**Manufacturing.**—Employment in nonagricultural industries in Georgia reached a peak of 660,000 workers in 1943, about 35% higher than in 1939. In Oct. 1947, the number of nonagricultural workers was estimated at 608,000. Approximately half of these workers were employed in manufacturing industries (as contrasted to nonmanufacturing industries such as trades, services and finance). Two industries, textiles and lumber, employ more than one-half of all manufacturing workers in Georgia, and if four more groups are included—apparel, food processing, furniture and chemicals—82% of all manufacturing employment is accounted for.

**Minerals.**—In 1945 (latest complete year) the total value of Georgia's mineral production was $19,939,000. Minerals produced were asbestos, barite, bauxite, cement, clay, coal, fuller's earth, mineral waters, peat, sand and gravel, slate, stone and talc. The value of the principal minerals produced was as follows:

Table II.—*Leading Mineral Products of Georgia, 1945*

| Mineral | Value in 1945 |
|---|---|
| Clay | $7,108,321 |
| Stone | 4,799,320 |
| Barite | 1,056,035 |
| Iron ore | 616,524 |
| Sand and gravel | 350,264 |
| Talc | 296,163 |

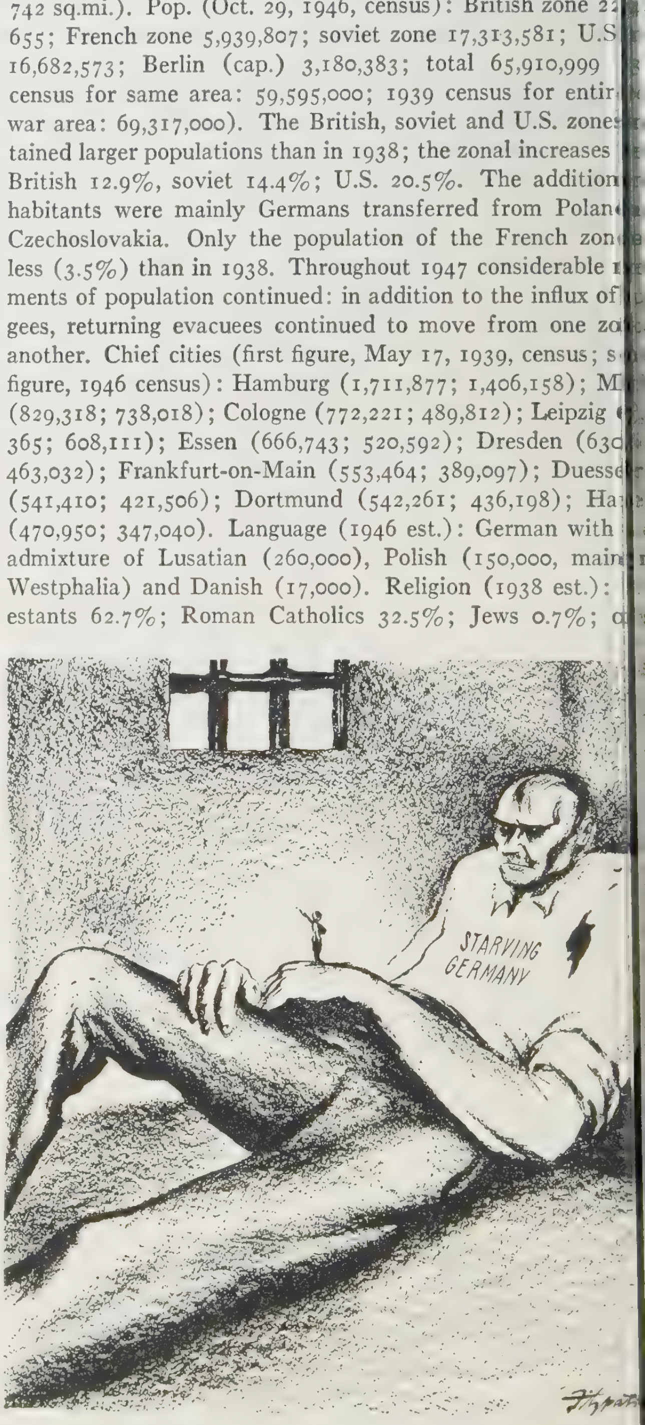
## German Literature.

The general picture offered by German literature in 1947 was one of stagnation. As was to be presumed, books published in 1947 were chiefly about the anti-Hitler conspiracy and about the concentration camps, in which an explanation of the rise and fall of nazi Germany was attempted. Such books, written mainly by politicians or chance-victims of gestapo terrorism, had nothing to do with creative writing. Books like Hans Bernd Gisevius' *To the Bitter End,* Rudolf Semler's sketchy revelations of his master Josef Goebbels, or Dr. Eugen Kogon's profound analysis of the roots and methods of S.S. control in *The S.S. State* were patriotic justifications of an unsuccessful action, attempts at personal exculpation, or denunciations of a fallen foe. Some of them might be of value to the historian: their human value, as that of the nazi regime, was negligible because they lacked the moral qualities demanded of the serious political writer. These moral qualities were, however, present in Theodor Haecker's *Tag- und Nachtbuecher* (*Day and Night Books*) posthumously published in 1947, in which the well-known Roman Catholic essayist and first interpreter of Soren Kierkegaard followed the events inside nazi Germany from 1939 to 1945. Haecker was born in 1889, a south German who lived in Austria, and died on April 9, 1945. As early as 1935 the nazis had forbidden Haecker to speak and to lecture in public; his translation of Kierkegaard's *Diaries* was allowed to be published but his own works were banned. The *Tag- und Nachtbuecher* were in 1947 the only documents of faith to have come from postwar Germany and were filled with a human and religious belief in the necessity of the catastrophic end of the reich, for the sake of secular and extramundane justice. Little recovery was noticeable from the deterioration of writing during the nazi rule. The nebulous, woolly diction of blood-and-soil mysticism seemed to have taken possession even of politically irreproachable writers like Ernst Wiechert. Some translation into German was done but scarcely any creative German writer except Haecker and, at a distance, Werner Bergengruen in his *Dies Irae,* had yet made an attempt to explain to his own people and to the world abroad what it was that had come to pass in Germany great German writers, Thomas Mann and Hermann Hess already left their mother-country.

(J.

## Germany.

A country of central Europe bounded north by the North sea, Denmark and the sea, on the east by Poland, on the south by Czechosl Austria and Switzerland, and on the west by France, L bourg, Belgium and the Netherlands. According to a decla signed in Berlin on June 5, 1945, the country was und supreme authority of the four Allied powers—the United Great Britain, the U.S.S.R. and France—and divided int zones. Area: British zone 42,724 sq.mi.; French zone sq.mi.; soviet zone 46,584 sq.mi.; U.S. zone 36,869 sq.mi. lin (*q.v.*) 341 sq.mi.; total 143,245 sq.mi. (Jan. 1, 1938 742 sq.mi.). Pop. (Oct. 29, 1946, census): British zone 2 655; French zone 5,939,807; soviet zone 17,313,581; U.S 16,682,573; Berlin (cap.) 3,180,383; total 65,910,999 census for same area: 59,595,000; 1939 census for entir war area: 69,317,000). The British, soviet and U.S. zone tained larger populations than in 1938; the zonal increases British 12.9%, soviet 14.4%; U.S. 20.5%. The addition habitants were mainly Germans transferred from Polan Czechoslovakia. Only the population of the French zon less (3.5%) than in 1938. Throughout 1947 considerable ments of population continued: in addition to the influx of gees, returning evacuees continued to move from one zo another. Chief cities (first figure, May 17, 1939, census; s figure, 1946 census): Hamburg (1,711,877; 1,406,158); M (829,318; 738,018); Cologne (772,221; 489,812); Leipzig 365; 608,111); Essen (666,743; 520,592); Dresden (63 463,032); Frankfurt-on-Main (553,464; 389,097); Duess (541,410; 421,506); Dortmund (542,261; 436,198); Ha (470,950; 347,040). Language (1946 est.): German with admixture of Lusatian (260,000), Polish (150,000, main Westphalia) and Danish (17,000). Religion (1938 est.): estants 62.7%; Roman Catholics 32.5%; Jews 0.7%;



"BREAD OR A BIGGER JAILER" was how Fitzpatrick posed the 1947 lem of Germany, in the *St. Louis Post-Dispatch*

RMAN PRISONERS OF WAR, discharged in 1947, are shown boarding a ound robin" train travelling past most large cities in the U.S. occupation ne. Each prisoner jumped off the train as it neared his home

ɪ%. Military governors and commanders-in-chief: British ne, Lieut. Gen. Sir Brian Robertson; French zone, Gen Joseph erre Koenig; soviet zone, Marshal Vasili Sokolovski; U.S. ne, Gen. Lucius Clay.

**History.** — Elections for the three provincial assemblies *andtage*) took place in the British zone in April 1947. The P.D. (*Sozialdemokratische Partei Deutschlands,* or Social emocratic party of Germany) with more than 3,000,000 votes d 173 seats gained the largest representation. The C.D.U. *Christlich-Demokratische Union,* or Christian Democratic ion) with about 2,750,000 votes and 144 seats were the run- rs-up, and after them came the K.P.D. (*Kommunistische rtei Deutschlands*) with 890,000 votes and 76 seats.

The three landtage in the French zone were elected in May. ne C.D.U. secured an absolute majority of votes cast (984,- o), with the S.P.D. second (572,000).

Most interesting of the year's elections, however, were those the Saar which the French government had already, in Dec. 46, separated economically from the rest of its zone of cupation by the erection of a tariff barrier. Three of the four arland parties declared themselves in favour of an economic nalgamation with France, only the Communist party opposing ch a possibility. It was noteworthy that 92% of the electorate ted, so that little use was made of the opportunity to express position to "economic annexation" by abstention from the lls. This tacit assent of the Saar population to "economic nexation" to France was no doubt in part explicable by the pe of better material conditions (*see* Saar).

Two important German problems came nearer solution in 47—those of the prisoners of war and of denazification. The Four Powers agreed at Moscow to repatriate all German prisoners in their hands before the end of 1948. On July 5 the last German prisoner of war in U.S. hands was repatriated. After the Moscow conference the British government accelerated repatriation of German prisoners to a rate of 15,000 a month from Britain (as from Dec. 1, 1947, 20,000), and 5,000 a month from the middle east. The official Russian figure of German prisoners in Russian hands by March 1947 was 890,000. Repatriation of considerable batches of prisoners from Russia took place during the year. The number of German prisoners still in France by Sept. 1947 was 468,000; in Yugoslavia about 80,000; in Poland about 40,000; in Belgium about 36,000 and in Czechoslovakia about 10,000.

It became increasingly clear during 1947 that the immense numbers of persons implicated (3,250,000 in the U.S. zone alone), and consequently the time factor involved, were likely to bring denazification to a fairly speedy end, at least in the British and U.S. zones. On Oct. 4 the British military government, following the example set by the U.S. authorities in 1946, handed denazification over to the German *Länder* governments under decree No. 110 which laid down a detailed scale of categorization and punishment for former nazis, but included a proviso that dismissals should cease after Jan. 1, 1948. Up to Aug. 31, 1947, 337,000 nazis had been dismissed from posts in the British zone and up to June 30, 210,000 had been similarly dealt with in the U.S. zone.

The process of denazification should not be confused with the punishment of war criminals and of members of the organizations (*e.g.,* gestapo and certain S.S.) classified as criminal by the judgment of the Nuernberg tribunal. Military government courts in all four zones continued to try war criminals. (*See* War Crimes.)

*Economic.*—The most important development in the economic

RUSSIAN OFFICERS supervising the removal of steel girders from the Siebel plant in the soviet zone of occupation, as part of German reparations to the U.S.S.R.

field was the creation, after the failure of the Moscow Four Power conference in April, of a German economic council in Frankfurt-on-Main for the fused British and U.S. zones. The economic council and its organs were composed of 54 members elected by the 6 provincial assemblies and the 2 free cities on a proportional party basis, an executive committee of 8 appointed by the provincial governments and 5 functional directors (economics, food, finance, post and communications) appointed by the executive committee with the assent of the council. Its decrees are, after approval by the military government, binding upon the Land governments.

Efforts were made by the British and U.S. authorities to step up industrial production and increase exports so as to promote imports of food and of essential equipment in the two zones. In March a $600,000,000 credit for the period Jan. 1, 1947, to June 30, 1948, was promised, and an Anglo-U.S. Joint Export Import agency (J.E.I.A.) was set up. A drive for increased coal production in the Ruhr was launched in January by the creation of a points system to discourage absenteeism among the coal miners. Under this scheme a miner working every shift during a month received clothing, furniture, bacon and liquor supplementary to his wages. Under a further measure in September miners exceeding a certain output received U.S. food parcels. The coal production drive was so successful that 275,000 short tons of coal were produced on Oct. 24, 1947, compared with 204,000 on Oct. 23, 1946, and during the first 9 months of 1947 more than 55,000,000 short tons of coal were produced compared with 45,000,000 during the corresponding period in 1946. Similar production improvements were not, however, achieved in other sectors of industries in the British and U.S. zones. The figures for raw iron production, for instance, were: Jan.–Sept. 1946: 1,544,000 short tons; Jan.–Sept. 1947: 1,523,000; raw steel: Jan.–Sept. 1946: 1,871,000 short tons; Jan.–Sept. 1947: 2,167,000. After the exceptionally severe winter, industrial production in the British zone sank in February to 26.4% of 1936. By Oct. 1947 it had risen to 39.5%, which was the best month's output since the capitulation.

The efforts to increase exports from the British and U.S.
zones were forwarded by a relaxation of restrictions. G
exporters were as from October permitted to conclud
tracts up to $5,000 without prior submission to J.E.I.
startling increase in exports was, however, revealed in the
statistics. Between Jan. 1 and Oct. 31, 1947, $164,000,0
actually exported from the two zones.

In the soviet zone the policy of extracting reparation
forward. On Jan. 15 Marshal Vasili Sokolovski announce
dismantling of industrial plants was terminated, except
case of certain coal-mine equipment. Nevertheless, sever
tories—for example, Richard Dietsch (textile) at Gey
Hochfrequenz (electrical equipment) at Radeberg—we
mantled during 1947 in completion of the 1946 dismantli
gram. In September a start was made in the eastern zon
the dismantling of a further 750 mi. of railway track.

The conversion of a large number of firms in key ind
in the soviet zone into soviet concerns was energeticall
ceeded with during 1947, with the undoubted intention of
ing reparations from current production. According to the
zone production plan for the second quarter of 1947, out
total production of Rm.1,800,000,000, more than a q
(Rm.440,000,000) was to be furnished by these soviet
panies.

Anglo-U.S. reparations policy after the failure of the M
conference was to define the limits of the reparations
exacted from the two western zones so as to give German
ers and managers an assurance of the permanent ind
structure that would be left to them. In pursuance of this
a level of industry plan was published on Aug. 30. Unde
plan German industrial capacity to be left intact in th
western zones would be approximately that of 1936. Th
portant steel industry was to be left a capacity of 11,7
short tons a year.

Following the publication of the level of industry plan,
of plants to be dismantled, either as war industry or as r
tions, was issued on Oct. 16. It comprised 682 installa
including 302 arms factories, 224 machine-making works, 9
and steel firms and 42 chemical concerns. Decisions o
mantling in the so-called forbidden industries—alum
vanadium, beryllium, ball bearings, synthetic ammonia,
thetic rubber and synthetic oil—as well as in the shipbu
industry, had still to be made. In all other respects the lis
announced as the final statement of reparations claims o
British and U.S. zones. (*See* also REPARATIONS.)

The drastic policy of expropriation and socialization i
soviet zone, which had been initiated by the Saxon pro
government (after the referendum held in July 1946 on th
ject of the future of 1,760 expropriated nazi and "reactio
concerns), was proceeded with in 1947. On May 30, 194
Thuringian assembly passed a law for the nationalization o
eral and coal concerns. A similar law was passed in May b
Sachsen-Anhalt assembly. By October 400 firms were na
alized in Thuringia, and 545 in Sachsen-Anhalt. In Saxony
firms were nationalized, 278 handed over to municipalitie
district (*Kreis*) authorities, 73 to co-operatives and 379
resold to private persons.

In the British zone a decree ordering the breaking-
trusts and cartels employing more than 10,000 workers
promulgated by military government in January. A start i
plementing this policy was made in the steel industry in
17 new separate firms were created by Sept. 30, 8 out o
United Steel concern, 2 out of Hösch of Dortmund, 2 o
Klöckner and 1 each out of Otto Wolff, Mannesmann and K

Labour shortage, resulting from the manpower depriva
of World War II and from the fall in the German worker's
put, became a serious problem, particularly in the British

viet zones. In the soviet zone the difficulty in securing labour work on dismantling and in the ore mines in Saxony, where anium was being sought, led during the summer to drastic ethods of compulsory recruitment. Many thousand workers ere summoned to the German labour offices and ordered to edetermined industrial areas. Ration cards were taken away enforce compliance. In the Saxon mining areas the com- lsorily recruited miners were put into labour camps guarded Russian detachments.

*Nutrition.*—In the British and U.S. zones the normal con- mer's daily ration was fixed at 1,550 calories. Supplementary tions, were, however, issued to heavy and very heavy workers. the British zone in September and November these amounted 1,150 and to 2,500 calories extra per day, and 5,000,000 embers of the working population received them. According former Pres. Herbert Hoover's findings in April 1947, mothers d small children were being adequately nourished, but chil- en between the ages of 6 and 20 were seriously undernour- ied. The black market flourished. The black market price of tter in the British zone, for example, was more than 100 nes the legal price. As a consequence about 50% of the butter tput of the German peasants in the 2 zones was diverted into egal channels. (*See* also ANTI-SEMITISM; FASCISM; FOREIGN INISTERS' CONFERENCES; OCCUPIED AREAS, ADMINISTRATION .) (D. A. SN.)

**Education.**—U.S. zone (1947): elementary schools 10,506, teachers ,588, scholars 2,326,424; secondary schools 476, teachers 7,979, schol- 221,812; vocational schools 791, teachers 3,791, scholars 314,825. ench zone (1946): elementary schools 5,289, teachers 12,568, scholars 3,477; secondary schools 228, teachers 2,719, scholars 74,000. British ne (1947): juveniles under supervision of welfare office 5,170; ju- iles under welfare education 14,838; total school children fed daily ,89,600.

About 106,000 students were registered in the universities of the 4 nes, of whom 20% were women. The students were distributed among zones as follows: U.S. zone 49,504; British zone 31,974; soviet zone ,878; French zone 11,509.

**Finance.**—Zonal budgets: U.S. zone (actual 1946–47): revenue Rm. 93,000,000; expenditure Rm.4,299,000,000. British zone (actual 1946– ): revenue Rm.7,617,200,000; expenditure Rm.5,416,700,000; emer- icy revenue Rm.528,300,000; emergency expenditure Rm.2,348,300,- o; soviet zone (est. 1947–48): revenue Rm.8,500,000,000; expenditure n.8,300,000,000; French zone (ordinary 1946–47): revenue Rm.1,664,- 4,621; expenditure Rm.970,217,600; expenditure (extraordinary 1946– ) Rm.1,186,127,420. Currency: Reichsmark (Rm.)

**Communication.**—U.S. zone: railways (1946): tickets sold 307,074,000; ight carried 128,897,425 short tons. Motor vehicles registered (June 47): cars 151,880; trucks 98,394, buses 3,119; road tractors 21,937; ilers 61,125. Civil aviation (Jan.–June 1947): passengers arrived 56; departed 6,087; freight arrived 125 short tons; left 32 short tons. lephones (July 1947): 513,525. British zone: railways: track open une 1947) 7,489 mi.; passengers carried (1946) 610,800,000; freight rried (1946) 99,780,360 short tons. Motor vehicles (July 1947): cars d ambulances 78,538; tractors 34,707; motorcycles 88,697; coaches d buses 3,171; miscellaneous 6,005; horse-drawn vehicles 715,644. rman merchant shipping (including Bremen, 1947): 466,188 tons dead ight. Radio receiving sets: 3,012,331. French zone: railways (1946): ick open 3,221 mi. Motor vehicles (1946): cars 30,489; trucks 18,525; ses 370; tractors 8,117; motorcycles 28,386. Telephones (Oct. 1946): ,739.

**Agriculture.**—Production of principal commodities is shown in Table I. her crops (1946) in short tons: oil seeds 41,000; potatoes 6,420,000; gar beets 2,798,800; fodder beets 9,136,700; turnips 2,050,800. Live- ock (1946): cattle 4,275,000; pigs 3,060,000; sheep 1,003,000; horses 8,000. French zone (in short tons): production (1946): cereals 935,870; tobacco 7,714; potatoes 2,259,320; sugar beets 383,940; wine 37,527,600 U.S. gal. Livestock (1946): horses 164,239; cattle 1,692,258; sheep 272,063; pigs 7,108.

## Gibraltar.

British fortress colony, situated on a narrow peninsula covering the western outlet of the Mediterranean sea and running southwest from the southwest coast of Spain: the territory consists of a long high mountain known as "The Rock," with a flat sandy plain, raised only a few feet above the level of the sea, lying to the north. Area: 2 sq.mi.; pop. (est. 1939): 20,000. Languages: Spanish and English. Religion: (civil population) mainly Roman Catholic. Executive authority is vested in a governor (appointed by the British crown) assisted by an executive council. Governor: Lieutenant General Sir Kenneth Anderson (appointed in 1947).

**History.**—Early in World War II it was found necessary, as a matter of military precaution, to remove "useless mouths" from what might, almost at any moment, become a beleaguered fortress. In all, some 16,700 persons were evacuated from Gibraltar. At the end of 1946 the number still awaiting repatriation from camps and hostels in the United Kingdom was about 2,100; by Oct. 1947 the figure was still more than 1,000. Every effort was made to speed up repatriation, but the local shortage of housing accommodation presented a serious obstacle. A housing scheme costing £1,750,000 was inaugurated early in the year; and it was decided, as one means of financing this scheme, to float a loan which, it was hoped, would produce at least £1,000,000. In order to provide the interest and sinking fund on the loan, a government lottery was opened by the governor in Oct. 1947. It was expected to bring in a revenue of £48,000 per annum. The question of the future composition of the Gibraltar legislative council (the establishment of which was approved in principle in Nov. 1945) was under consideration during the year.

**Finance and Trade.**—The legal tender of Gibraltar consists of local government notes and United Kingdom silver and copper coinage. Revenue (1946) £480,000; expenditure £685,000. The revenue of the colony is derived from port dues, rent on crown property, licence duties and fees and import duties. (J. E. SH.)

## Gide, André Paul Guillaume

(1869– ), French novelist and essayist, was born on Nov. 21 in Paris. For his early career, see *Encyclopædia Britannica*. A flaunter of convention, Gide brewed many a literary storm in the 1920s. Publication of *Corydon*, a defense of homosexuality, touched off a quarrel with Catholic churchmen; his autobiography, *Si le grain ne meurt* (*If I Die*), was regarded as a shockingly cynical work; in 1927 his *Travels in the Congo*, an exposé of French colonial exploitation written after his African travels, brought down on him the wrath of rightist critics.

Embittered by capitalist "iniquities," Gide sought solace in Marxism, but disillusionment with the communist experiment followed a trip to Russia, 1935–36. He stated his objections to communism in two works, *Return from the U.S.S.R.* (1937) and *Afterthoughts on the U.S.S.R.* (1938). Thenceforth, his former leftwing laudators denounced him as a "reactionary"; Gide, however, remained a confirmed antifascist. He gave aid to the loyalists in the Spanish civil war and refused to support Vichy during World War II.

Long considered by the Swedish academy for the Nobel prize in literature, Gide finally won it Nov. 13, 1947, over such distinguished competition as François Mauriac, T. S. Eliot and Benedetto Croce. The Nobel committee did not single out any specific work for mention, but Gide himself declared that he considered *Les faux monnayeurs* (*The Counterfeiters*) his most important book. His *Journal* was published in English translation in 1947.

### Girl Scouts.

In 1947 Girl Scouts of the U.S.A. celebrated the 35th anniversary of its founding in Savannah, Ga., by passing the 1,000,000 mark in girl membership. Focal points of the year's activities were a 27-nation International encampment for high-school age Girl Guides and Girl Scouts at Camp Barree, Pa., and the 29th biennial Girl Scout national convention at Long Beach, Calif.

At the International encampment, girls from every state in the nation, Puerto Rico, the Philippines and 26 other countries met for three weeks to discuss world scouting and youth's part in world affairs. The 29th biennial Girl Scout national convention, Nov. 4 to 7, with a record attendance of 2,600 women and men from all parts of the country, mapped out a "plan of work" for two years.

Agriculture was announced as a new field of activity for Girl Scouts of all ages. Among the 30 new proficiency badges added were 8 in the field of agriculture—beekeeping, dairying, fruit raising, home gardening, landscaping, poultry raising, rabbit raising and truck gardening.

"Clothes for Friendship," a project under which Girl Scouts would undertake to send 1,000,000 garments—100,000 wardrobes of new or reconditioned clothing—to children in Europe and Asia, was launched at the convention.

The convention amended the name of the national organization from "Girl Scouts" to "Girl Scouts of the United States of America." Mrs. C. Vaughan Ferguson, national president, was re-elected for a second term of two years. Dr. Mary H. S. Hayes became chairman of the executive committee, succeeding Mrs. Paul T. Kammerer.

On Sept. 30, 1947, there were 353,560 Brownie Scouts (girls 7 through 9) in 20,082 Brownie troops; 615,017 Intermediate Scouts (girls 10 through 14) in 32,197 troops; and 61,518 Senior Service Scouts (girls 15 through 17) in 4,624 troops. Total Girl Scout membership was 1,030,095. There were 293,867 men and women who were troop leaders, associate Girl Scouts or who served on troop committees, boards of directors, etc. Total Girl Scout and adult membership was 1,323,962. Girl Scout troops were organized in every state and U.S. possession. Headquarters of Girl Scouts of the U.S.A.: 155 E. 44th St., New York 17, N.Y. (C. M. R.)

**Girl Guides, Great Britain.**—The outstanding event of the year was the Guide and Scout International Folk Dance festival and rally, when teams of dancers from six European co the U.S.A., Great Britain and Ulster gave displays in I the Midlands and Scotland. In conjunction with the f 1,500 First Class guides from all parts of Great Britain a week-end camps around London and took part, with th teams, in a march past in the Mall, when Princess Eli Chief Ranger of the British empire, took the salute. T the first occasion on which the new guide uniform was It consisted of a bright blue shirt, navy skirt and navy b

The World Committee of Girl Guides and Girl Scouts London in October, and Miss M. W. Kydd, former chie missioner for Canada, was welcomed as the new director World bureau. Two new headquarters training centre opened at Broneirion in Wales and Lorne in Ulster. (M. A

### Glass.

Statistical information on world glass manu was unobtainable in 1947, but it was understoc the factories of central Europe were still in a crippled con Belgium and France had active factories, although those tries, as well as Great Britain, suffered from fuel shortag

In 1947, the U.S. glass industry reached new high le employment, wages, volume and value of product. Stil pered by shortage of soda ash, and in the winter mon some lack of fuel and transportation, the industry was lated by demand for flat glass for automobiles and bui and by the high level of spending for domestic glasswar total value of products reached $600,000,000. Little of crease could be attributed to rise in prices, which remain markably stable in comparison with those of most cons goods.

U.S. plate-glass production for the year exceeded 250,0 sq.ft., and window glass filled 20,000,000 boxes of 50 sq.ft Despite the renewed competition of tin cans and paper c ers, the number of glass bottles and jars manufactur proached 17,000,000,000. Two billion lamp bulbs, in addi millions of radio tubes and Christmas-tree ornaments, we duced during the year. Fine glassware and luxury items w great demand, although the production of common tur approximately 70,000,000 doz., declined somewhat from this was also true for common tableware and kitchen glas

Cheaper natural gas in the southwestern states attracte glass plants, particularly to Oklahoma. At the same tim last glass plant in the city of Pittsburgh, historically a of the industry, ceased operations.

The number of patents relating to glass has steadily de from a high of 323 in 1941 to 122 in 1947. However, imp developments continue. For example, a process for pr photographs by ultra-violet light, developing permanent co prints within the glass itself, was in use; new processes announced for drawing glass tubing automatically in larger the techniques of toughening by heat treatment heavy po plate glass for doors, and of bending thin plates in ma pairs for curved safety-glass automobile windows were f improved. (S. R.

### Gliding.

Gliding in 1947 was marked by the establis of three new international records. In the Paul B. MacCready, Jr. set a goal and return mark of 2 on July 16, 1947. Virginia Bennis (Mrs. Stephen) gained ft. of altitude on July 17, 1947, establishing a new interna women's altitude mark. In Sweden, Lt. Axel Persson s 8,050 metres (26,410.74 ft.) on July 12, 1947, to a new national altitude record for men.

The Soaring Society of America held its 14th Annual S ontest at Wichita Falls, Texas, July 4–20, with 79 pilots com-eting in 65 sailplanes. New U.S. national soaring records in ddition to the two already mentioned were as follows: single-lace distance for men: John Robinson, July 19, 1947, 333 mi.; ingleplace distance for women: Virginia Bennis, July 14, 1947, 4 mi.; singleplace goal for women: Virginia Bennis, July 8, 947, 52 mi.; twoplace goal for men: Eugart Yerian and pas-enger, July 13, 1947, 207 mi.; twoplace goal and return for nen: Lyle Maxey and passenger, July 15, 1947, 104 mi.

There were three flights exceeding 300 mi., 32 flights between oo and 300 mi., 149 flights between 99 and 100 mi. There ere 10 flights with a minimum altitude gain of 10,000 ft. bove point of release. Richard J. Comey, flying a Schweizer -21, earned the title of National Soaring Champion.

Flying in Texas during the 14th Annual Soaring contest, Charles Wingfield set a new distance record of 215 mi. for British pilots, as well as a goal and return record of 146 mi.; Eric Nessler established a distance record of 319 mi. for French pilots.

The British National Gliding contest was held at Bramcotte, Nuneaton, June 22–29, with 32 pilots competing. There were 5 flights between 100 and 200 mi.

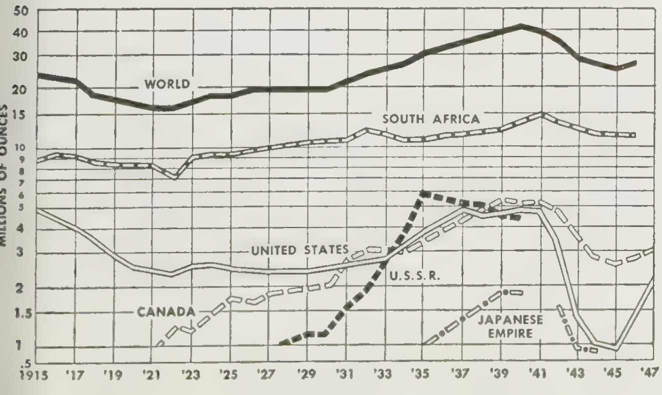
In Germany gliding enthusiasts of the royal air force staged a ontest at Oerlinghausen May 17–23. The Kircheim school in he U.S. zone was ordered closed. (B. Sk.)

**Gold.** The year 1947 was conspicuous for three developments with respect to gold. It saw the stocks of the metal in he United States recross their previous high point of $22,799,000,000, established in Nov. 1941; it saw the development of ively black markets in many parts of the world, and it saw he Dominion of Canada place a premium on newly mined gold n order to stimulate production.

The net gain in monetary gold stocks by the U.S. for the ear was $2,250,000,000, the largest after 1940 and the largest n the nation's history with the exception of 1934 (when the rice of gold was officially raised from $20.67 an ounce to $35), 1939 and 1940. The increase, moreover, would have been even greater but for the fact that the government drew down $687,500,000 in February for use in the International Monetary Fund. The Soviet Union, whose holdings were believed to be in he neighbourhood of $2,500,000,000, would rank second to he U.S., and the United Kingdom, with $2,360,000,000, third. The U.S. total of $22,829,000,000 did not include metal that was held in that country physically but the title to which resided elsewhere. This is the so-called "earmarked" gold, and at the end of Nov. 1947 it amounted to $3,573,800,000.

In most countries it is illegal to buy or sell gold at a premium over the statutory price. As a result of inflation and the chronic weakness of many currencies, however, the practice became fairly widespread during the year, with the price ranging generally from $42 to $50 or its equivalent and occasionally much higher, as compared with the official U.S. purchase price of $35.

It is traditional, because of the metal's fixed price, that gold mining is prosperous in bad times and nonprosperous in periods of boom and high prices. This, coupled with the shortage of dollars, explains the action taken in Nov. 1947 by Canada in paying a bounty of $7 an ounce on all gold produced in excess of that for the previous year.



GOLD PRODUCTION: world total and output of the principal producing countries, as compiled by *The Mineral Industry*

Table I.—*Analysis of Changes in Gold Stock of United States*

(In millions of dollars)

| Period | Gold stock at end of period | Increase in gold stock | Net gold import or export (—) | Ear-marked gold: decrease or increase (—) | Domestic gold production |

*Includes gold in the Inactive Account amounting to 27 million dollars on Dec. 31, 1936, and 1,228 million on Dec. 31, 1937.

†Change reflects primarily gold subscription to International Monetary Fund.

‡Not yet available.

§Gold held under earmark at the Federal Reserve Banks for foreign account including gold held for the account of international institutions amounted to 3,573.8 million dollars on Nov. 30, 1947. Gold under earmark is not included in the gold stock of the United States.

‖Preliminary.

From *Federal Reserve Bulletin*, Dec. 1947.

Jan. 24, 1948, was a notable anniversary in the annals of the gold mining industry in the U.S. It was just 100 years earlier that gold was discovered at Sutter's Mill, Calif., a discovery which was the signal for the most excited gold rush in the country's history. (*See* also FEDERAL RESERVE SYSTEM.)

Table I shows the significant changes in the gold position of the U.S. in 1947 and the principal influences producing them. (E. H. Co.)

**World Production.**—Production data are lacking for so many countries in Europe, Asia, Africa and Oceania that world totals can be no more than rough estimates, but Table II shows outputs so far as they were available at the close of 1947 from the major producers.

Table II.—*World Production of Gold*

(Thousands of fine ounces)

| | 1941 | 1942 | 1943 | 1944 | 1945 | 1946 |
|---|---|---|---|---|---|---|
| United States | 4,832 | 3,583 | 1,381 | 1,022 | 929 | 1,462 |
| Canada | 5,345 | 4,841 | 3,651 | 2,923 | 2,697 | 2,833 |

| Southern Rhodesia | 790 | 760 | 657 | 593 | 568 | 545 |
| South Africa | 14,407 | 14,127 | 12,804 | 12,280 | 12,225 | 11,918 |
| Australia | 1,497 | 1,154 | 751 | 658 | 635 | 2 |
| Total (est.) | 40,160 | 36,300 | 29,160 | 26,700 | 26,300 | 27,800 |

**United States.**—Mine production of gold increased from 954,572 oz. in 1945 to 1,574,505 oz. in 1946 and to 2,090,013 oz. in 1947. Monthly outputs were increasing regularly but had attained only half the rate prevailing in 1941.

**Canada.**—Canadian production rose from 2,696,727 oz. in 1945 to 2,832,554 oz. in 1946.

The improved output continued into 1947 with a total of 3,035,161 oz.

**South Africa.**—The production rate in 1947 was about the same as in 1946, slightly less than 1,000,000 oz. monthly.

## Golf.

The United States enjoyed in 1947 one of its most successful golf years after 1934, as attested by an over-all total of 5,121 contestants in the 4 championships conducted by the United States Golf association. The Professional Golfers' Association of America practically covered the calendar in its tournament schedule. Meanwhile, public-links and daily-fee golfers were multiplying their prewar numbers by at least ten, World War II having stimulated interest among thousands of war-plant workers who found the game an ideal outlet for exercise.

Highlights of the year 1947 were the several successes scored by U.S. golfers in international play. Frank Stranahan, husky Toledo, O., amateur, missed winning the British open title by one stroke. Willie Turnesa and Dick Chapman, teammates on the victorious United States Walker cup team and both former holders of the U.S.G.A. amateur crown, went to the final of the British amateur, with Turnesa rallying from a five-hole deficit to beat Chapman in the final.

The United States Walker cup team normally would have met the British in the United States, but because of unusual conditions in the United Kingdom, the U.S.G.A. agreed to accept the responsibility of sending the U.S. golfers overseas. The matches at St. Andrews, Scotland, found the visitors no better than even after the Scotch foursomes at a 2–2 score. The Britons fought hard through the early stages of the singles, but the U.S. contestants, led by Marvin (Bud) Ward of Spokane, Wash., came back to win 6 of the 8 singles for an 8–4 triumph.

The U.S. men were not long home when the prodigious Mrs. Mildred (Babe) Didrikson Zaharias, later voted the woman athlete of the year, became the first woman of the U.S. to win the British women's championship. Her victory marked the 17th consecutive win for the gifted Texan, who shortly after resumed her professional status.

The international professional Ryder cup series appeared doomed to postponement until Robert A. Hudson, Sr., Portland, Ore., wholesale grocer and packer, bid for it and secured it for the Portland Golf club in November. Once again, the U.S. ran away with the contest, winning 11–1. Only Sam King, who defeated Herman Keiser of Akron, O., was able to score a point for the invaders.

While U.S. golfers were scoring overseas, two others were crossing the northern border and bringing back Canadian championships, Stranahan winning the amateur and Grace Lenczyk the women's. The Canadian open was captured by the remarkable Arthur d'Arcy (Bobby) Locke. The South African, having beaten Sam Snead of Virginia in an exhibition series in South Africa wherein he took 12 of 16 matches, accepted Snead's invitation to try U.S. courses. He won six tournaments, including the Goodall man-to-man competition and finished well up in such fixtures as the Masters' and the Western.

Leading money winner of the year was the popular and colourful Jimmy Demaret of Texas, whose total earnings of $27,936.83 topped Locke's $24,327.50. Demaret, who on Easter Sunday, became the third man in history to win the treasured Masters' championship twice, also captured the P.G.A.'s Vardon trophy for low-scoring average, beating out Ben Hogan by a fraction of a stroke.

LEW WORSHAM teeing off on the 17th hole during the U.S. national
golf tournament at St. Louis, June 15, 1947. Worsham won the title
Sam Snead by a single stroke on the last hole

Pacing all women golfers among the amateurs was 112
Louise Suggs of Atlanta, Ga. The little southerner first acc
plished what no other woman in the history of the Wom
Western Golf association ever had done—to win the west
open and amateur two years in a row. She encored the o
title by defeating her clubmate, Dorothy Kirby, 4 and 2
Atlanta, then came back later in the summer to run away f
young Carol Diringer of Ohio, 9 and 8, in the amateur. By
time she had become the favourite for the women's natio
title, and fulfilled the prediction by winning the champions
2 up, from Miss Kirby.

The U.S.G.A. open at St. Louis, Mo., produced the t
play-off in the last three years in which it was held. Lew W
sham, former sailor from Virginia, appeared to have the
won after Locke, Ward and Ed (Porky) Oliver had falte
Worsham, a comparative newcomer, finished with a regula
72-hole score of 282, which was tied by Snead.

In the 18-hole play-off, Worsham won 69–70 on the
green, by sinking his $29\frac{1}{2}$-in. putt after Snead had missed
$30\frac{1}{2}$-in. putt.

The U.S. amateur, which in 1947 returned to the British
match-play system employed in 1934–35–36, saw Robert (Sk
Riegel, sometime resident of both Los Angeles, Calif., and F
adelphia, Pa., beat out Johnny Dawson, 45-year-old Chicago
by a 2 and 1 margin, on Pebble Beach's foggy shores.
public-links title went to Wilfred Crossley, onetime New E
lander from Atlanta, Ga., who defeated Avery Beck of Rale
N.C., 6 and 5. They were the survivors of the largest U.S.
entry of the year, 2,633 golfers having sought admission.

The Professional Golfers' championship was won by
Ferrier, the Australian who had become a United States citi
Ferrier proved that the putter is mightier than the driver
winning the Detroit final from hard-hitting Melvin (Chi
Harbert, 2 and 1.

The national intercollegiate championships were captured
Dave Barclay of the University of Michigan and Shirley S
of Michigan Normal college. (C. Bt.

## overnment Departments and Bureaus.

he following are the leading officers of the more important overnment departments and bureaus of the United States. he date for the information is Dec. 31, 1947.

| Department or Bureau | Name | Post |
|---|---|---|
| epartment of State | *Marshall, George C. | Secretary |
| | *Lovett, Robert A. | Under-Sec'y |
| | Bohlen, Charles E. | Counselor |
| | Armour, Norman | Asst. Sec'y |
| | Thorp, Willard L. | Asst. Sec'y |
| | Norton, Garrison | Asst. Sec'y |
| | Saltzman, Charles E. | Asst. Sec'y |
| | Peurifoy, John E. | Asst. Sec'y |
| epartment of the Treasury | *Snyder, John W. | Secretary |
| | Wiggins, A. L. M. | Under-Sec'y |
| Bureau of the Comptroller of the Currency | Delano, Preston | Comptroller |
| Treasurer of the U.S. | Julian, William A. | Treasurer |
| Bureau of Customs | Johnson, William R. | Commissioner |
| Bureau of Internal Revenue | Schoeneman, George J. | Commissioner |
| Bureau of Narcotics | Anslinger, Harry J. | Commissioner |
| Bureau of the Mint | Ross, Mrs. Nellie Tayloe | Director |
| U.S. Savings Bonds Division | Clark, Vernon L. | Nat'l Director |
| *U.S. Coast Guard | Farley, Joseph F., Adm. | Commandant |
| ational Military Establishment | *Forrestal, James | Sec'y of Defense |
| Joint Chiefs of Staff | *Leahy, Wm. D., Fleet Adm. | |
| | *Eisenhower, Dwight D., Gen. of the Army[1] | |
| | *Denfeld, Louis E., Adm. | |
| | *Spaatz, Carl, Gen. | |
| War Council | *Forrestal, James | Chairman |
| Munitions Board | Hargrave, Thomas J. | Chairman |
| Research and Development Board | Bush, Dr. Vannevar | Chairman |
| Department of the Army | *Royall, Kenneth C. | Secretary |
| | Draper, William H. | Under-Sec'y |
| Women's Army Corps | Hallaren, Mary A., Col. | Director |
| Department of the Navy | *Sullivan, John L. | Secretary |
| | Kenney, W. John | Under-Sec'y |
| Chief of Naval Operations | *Denfeld, Louis E., Adm. | Chief of Naval Operations |
| Women's Reserve of the U.S. Naval Reserve | Hancock, Joy B., Capt. | Director |
| *U.S. Marine Corps Headquarters | Vandegrift, Alexander A., Gen.[2] | Commandant |
| Women's Reserve of the U.S. Marine Corps Reserve | Hamblet, Julia E., Maj. | Director |
| Department of the Air Force | *Symington, W. Stuart | Secretary |
| | Barrows, Arthur S. | Under-Sec'y |
| epartment of Justice | *Clark, Tom C. | Att'y-Gen. |
| Solicitor General | Perlman, Philip B. | Solic. Gen. |
| *Federal Bureau of Investigation | Hoover, J. Edgar | Director |
| Bureau of Prisons | Bennett, James V. | Director |
| Immigration and Naturalization Service | Miller, Watson B. | Commissioner |
| ost Office Department | *Donaldson, Jesse M. | Postmaster Gen. |
| epartment of the Interior | *Krug, Julius A. | Secretary |
| Bureau of Land Management | Johnson, Fred W. | Director |
| Office of Indian Affairs | Brophy, William A. | Commissioner |
| Geological Survey | Wrather, William E. | Director |
| Fish and Wildlife Service | Day, Albert M. | Director |
| Bureau of Reclamation | Straus, Michael W. | Commissioner |
| National Park Service | Drury, Newton B. | Director |
| Bureau of Mines | Boyd, James | Director |
| Division of Territories and Island Possessions | Davis, James P. | Director |
| epartment of Agriculture | *Anderson, Clinton P. | Secretary |
| | Dodd, Norris E. | Under-Sec'y |
| *Agricultural Research Administration | Lambert, W. V. | Administrator |
| Bureau of Animal Industry | Simms, Bennett T. | Chief |
| Bureau of Agricultural and Industrial Chemistry | Howard, L. B. | Chief |
| Bureau of Dairy Industry | Reed, O. E. | Chief |
| Bureau of Entomology and Plant Quarantine | Annand, P. N. | Chief |
| Bureau of Plant Industry, Soils and Agricultural Engineering | Salter, Robert M. | Chief |
| Bureau of Human Nutrition and Home Economics | Stiebeling, Hazel K. | Chief |
| Office of Experiment Stations | Trullinger, R. W. | Chief |
| Bureau of Agricultural Economics | Wells, O. V. | Chief |
| Extension Service | Wilson, M. L. | Director |
| *Farm Credit Administration | Duggan, Ivy W. | Governor |
| *Farmers Home Administration | Lasseter, Dillard B. | Administrator |
| Forest Service | Watts, Lyle F. | Chief |
| Office of Foreign Agricultural Relations | Wheeler, L. A. | Director |
| Production and Marketing Administration | Gilmer, Jesse B. | Administrator |
| Commodity Credit Corporation | Gilmer, Jesse B. | President |
| Federal Crop Insurance Corporation | Geissler, Gus | Manager |
| Rural Electrification Administration | Wickard, Claude R. | Administrator |
| Soil Conservation Service | Bennett, Hugh H. | Chief |
| epartment of Commerce | *Harriman, W. Averell | Secretary |
| | Foster, William C. | Under-Sec'y |
| Bureau of the Census | Capt, James C. | Director |
| Bureau of Foreign and Domestic Commerce | Taylor, Amos E. | Director |
| *National Bureau of Standards | Condon, E. U. | Director |

## Graphite.

Graphite production is rather widely distrib
with significant outputs in at least a dozen
ferent countries. The United States output is relatively
and the bulk of the supply is obtained by imports. The sa
data on the production and supply of natural graphite i
United States are as follows, in short tons:

| | 1942 | 1943 | 1944 | 1945 |
|---|---|---|---|---|
| Production . . . . . . . . . . . . | 7,120 | 9,939 | 5,408 | 4,888 |
| Shipments. . . . . . . . . . . . . | 7,253 | 9,597 | 5,768 | 5,334 |
| Imports. . . . . . . . . . . . . . | 43,752 | 28,713 | 26,053 | 36,132 |
| Flake . . . . . . . . . . . . . | 6,031 | 5,311 | 6,191 | 2,883 |
| Lump, chip, dust . . . . . . . . . | 4,152 | 1,012 | 1,568 | 5,207 |
| Amorphous . . . . . . . . . . . | 33,569 | 22,390 | 18,294 | 28,042 |
| Mexico. . . . . . . . . . . . . | 23,933 | 21,679 | 17,269 | 25,879 |
| Ceylon . . . . . . . . . . . . . | 13,209 | 480 | 1,688 | 2,166 |
| Madagascar . . . . . . . . . . . | 5,850 | 5,655 | 6,271 | 6,665 |
| Exports. . . . . . . . . . . . . . | 4,095 | 3,010 | 2,230 | 1,308 |

The graphite industry in the United States was never he
and even under war demand operated only with conside
difficulty. Peacetime outputs were negligibly small and
outputs covered only a fraction of the demand. While the
output was greater than in 1945, it was much less than in 1
and in addition shipments lagged well behind production.

(G. A. R

## Gray, Carl R., Jr.

(1889– ), U.S. railway exec
and administrator of veterans' af
was born on April 14 in Wichita, Kan., and was educate
the University of Illinois. He worked for several railr
until the U.S. entry into World War I. He joined the arm
1917, and was mustered out in 1919 with the rank of lieute
colonel, after which he worked for Montgomery Ward and
eral other midwest firms in a managerial capacity until
when he became an industrial manager for the Chicago
North Western railway. By 1937 he was an executive
president of the Chicago, St. Paul, Minneapolis and Omaha

He was called into the armed forces in 1942 and the
lowing year went overseas to take charge of military tr
portation in the European theatre. In Sept. 1945, he was
vated to the rank of major general and made director ge
of the military railway service, European theatre. With
war over, he was relieved of duty in Feb. 1946 and returne
his old civilian post until Nov. 21, 1947, when Pres. Harr
Truman announced that Gray had accepted the governm
post of administrator of veterans' affairs.

## Great Britain & Northern Ireland, United Kingdom of.

An independent kingdom in no
western Europe, the United K
dom comprises the main island of Great Britain, with nume
smaller islands off the English and Scottish coasts, and the
northeastern counties of Ireland. It is a constitutional m
archy, with a king and parliament of two houses, the house
lords consisting of about 800 hereditary peers, 24 spiritual pe
16 Scottish representative peers, a number of Irish represe
tive peers (in 1947, 8; vacancies no longer filled) and a
life peers who have held high judicial office; and the house
commons, numbering 640 members, elected by universal
frage. Area: 93,371 sq.mi. (excluding Channel Islands, 75 sq.m

le of Man, 221 sq.mi.); pop. (est. June 30, 1947, members : the armed forces excluded): 48,367,000; England and Wales 2,006,000; Scotland 5,022,000; Northern Ireland 1,339,000. ap.: London (pop. est. June 30, 1947): city and metropolitan olice districts 8,244,370; city and metropolitan boroughs only, 862,000. Chief towns: Glasgow (June 30, 1938) 1,131,500; irmingham (est. 1945) 1,001,600; Liverpool (est. 1939) 864,- 00; Manchester (est. 1945) 624,300; Sheffield (est. 1938) 520,- 00; Leeds (est. 1938) 494,000; Edinburgh (June 30, 1946) 53,100; Belfast (Jan. 1, 1939) 443,500; Bristol (est. 1938) 15,000; Hull (est. 1938) 318,700. Language: English is almost niversally spoken, but in Wales (according to the 1931 census) % of the population spoke Welsh only and 31% spoke both nguages; in Scotland 15% spoke Gaelic only and 2.7% spoke oth languages; in the Isle of Man 528 spoke English and lanx. Religion: National Episcopal established church in ngland, Presbyterian established church in Scotland. King: eorge VI; prime minister: Clement R. Attlee.

**History.**—The year 1947 was one of repeated disappoint- ients and steady perseverance, introduced by a winter of excep- onal cold aggravated by a breakdown in fuel and electricity upplies. It ended on a note of almost unrelieved austerity. upplies to the home consumer were cut to the minimum as a esult of the virtual exhaustion of the nation's dollar resources, nd an energetic production drive was initiated. All political arties were as one in demanding a return to the "Dunkirk pirit" of sacrifice and in promising the country a long period f hard exertion and small reward. The marriage of Princess lizabeth to Prince Philip, duke of Edinburgh, on Nov. 20, hough celebrated with restrained festivity, came as a welcome onic to the public spirits and was an occasion of joy through- ut Britain.

*The Dollar Crisis.*—On Feb. 22 the government issued a Vhite Paper on the economic state of the country. At the end f 1946 Britain was exporting at the rate of about 115% of the 938 level and importing at the rate of about 70%. Neverthe- ess, the adverse balance of trade, principally because of the lmost complete disappearance of invisible exports, amounted o £450,000,000. In 1947 imports were to be increased to be- ween 80% and 85% of the 1938 level. The government set an xport target of 140% of the 1938 level to be achieved by the nd of 1947. On March 27 the prime minister announced that n interdepartmental planning staff would be formed under Sir Edwin Plowden as chief planning officer. His powers were con- ined principally to the collection and distribution of informa- ion.

During the year exports fell far short of the government's opes. During the first six months they never rose above 102% f the average quarterly volume for 1938, and in the third uarter they rose only to 114%. Meantime prices of U.S. raw aterials increased with the demand and the government's im- ort program proved far more costly than had been expected. British political commitments overseas were also a heavy bur- en. Finally, on July 15, Britain's commitment, under the erms of the Anglo-American loan agreement, to convert sterling t request into any currency specified by the holder, came into peration.

In May Hugh Dalton, the chancellor of the exchequer, re- ealed that Britain's war debts amounted to £3,000,000,000. The danger that these immense sterling assets would be with- rawn and converted into dollars made it necessary to conclude greements with the principal creditor countries, Argentina, Brazil, Egypt, India and Iraq. These agreements provided in ll cases for the freezing of a large part of the accumulated terling assets, and for the release of small amounts for current xpenditure. They did not affect the obligation to convert sterling not frozen, and on July 15 a run on sterling began. Since the dollar shortage was universal most holders of sterling sought conversion into dollars. The government was accordingly forced on Aug. 20 to suspend the entire Anglo-American loan agreement, including the convertibility clause. Out of £1,100,000,000, £1,000,000,000 were used up to Aug. 29, when the remainder was frozen. On Dec. 5 the remainder of the loan was made available to Britain.

LONDONERS queued up for coal rations in Feb. 1947. Lowered coal output, one of the greatest single factors in Britain's economic crisis, was further decreased by wildcat strikes in September

*New Economic Policy.*—On Aug. 13 a bill was passed enabling the government to extend the powers conferred by the Supplies and Services (Transitional Powers) act of 1945, to deal with the dollar crisis. On Sept. 29 Sir Stafford Cripps was appointed minister for economic affairs, with the duty of directing and coordinating the activities of the ministries concerned with production. On Oct. 7 Clement R. Attlee announced a complete reshuffle of his cabinet. From Aug. 6 onward new import cuts were announced, including a total suspension of imports of food, films and tobacco from the U.S., and new export targets were fixed. Britain was to aim at exporting at the rate of 143% of the average monthly volume of exports in 1938 by the middle of 1948, and at 164% by the end of 1948. The new program was intended to reduce the dollar deficit to £250,000,000 annually by the end of 1948. Raw materials were to be strictly rationed under a scheme which would give a high priority to the export industries. On Aug. 21 the minister of agriculture announced a plan for increasing home agricultural production by £100,000,000 by the year 1951–52.

*Trade Discrimination.*—In pursuit of the policy of nondiscrimination, laid down by the Anglo-American loan agreement, Britain agreed in August to the terms of the draft charter of the International Trade and Employment organization, and concluded a number of trade agreements embodying the most-favoured-nation clause. It was, however, possible for the government to divert trade, by means of bulk purchases, to the soft-currency countries, and ministers stressed that this policy was necessary until the dollar crisis was over. Early in September talks were held between commonwealth representatives in London. Dominion governments announced plans for saving dollars and increasing production in order to help Britain, and on Oct. 9 South Africa announced a loan of £80,000,000 in gold.

*Fiscal Policy.*—The first budget of 1947, introduced by Dalton on April 15, was balanced at £3,451,000,000, and showed a surplus of £269,633,000; but this was composed largely of nonrecurring assets (*e.g.,* sales of war material, etc.). The only direct dollar-saving expedient in the budget was an increase of 50% on the tobacco duty. By the autumn it was clear that a more stringent fiscal policy was necessary, and Dalton introduced an emergency budget on Nov. 12. Its chief purpose was to put some check upon inflation, by retaining the existing scale of subsidies of food and clothing, increasing the purchase tax on a large range of articles, raising the price of beer and spirits and doubling the profits tax. In October Sir Stafford Cripps revealed plans by which capital expenditure was to be cut by £200,000,000, so that labour and materials could be diverted into the export industries.

The day after introducing his supplementary budget, Dalton resigned from his position as chancellor of exchequer, and Sir Stafford Cripps, minister for economic affairs, was appointed to succeed him. This unexpected change was announced a few hours after Dalton had apologized to the house of commons for what he described as "a grave indiscretion" on his part. In answer to a question about a newspaper (the *Star*) forecast on the budget, he said that as he was entering the chamber to make his budget speech he replied to questions put to him by the lobby correspondent of that newspaper.

*Coal.*—On Jan. 1 the mines became national property under the Coal Industry Nationalization act of 1946. A long period of exceptionally cold weather in February and March disorganized the transport of coal, and stocks proved inadequate. On Feb. 10 the government suspended supplies of industrial electricity over a large part of England for about a fortnight. It was estimated that the breakdown of industry involved resulted in a loss of £300,000,000 in national production. On May 5 the five-day week in the mines promised by the government in 1946 came into operation. By the middle of October 159,000,000 long tons of coal had been produced, as compared with 155,000,000 in 1946. This left the nation about a week behind its target of 200,000,000 long tons for 1947. The weekly average figur output per manshift rose from 1.03 in 1946 to 1.11 in Oct. The net increase in the number of persons employed i mines was 23,100. On Oct. 14 the government's coal prod target for the six months (Nov. 1, 1947–May 1, 1948) w nounced as 101,250,000 tons, as compared with a producti 97,500,000 tons the previous winter. In August a protracte official strike in south Yorkshire pits revealed considerabl satisfaction with the administration of the Coal board eventually ended in the miners' favour. Further disputes out in Scotland and south Wales, and the government c ered the advantages of a greater measure of decentralizati the control of the mining industry. The target, however practically reached, the output for 1947 being 199,700,00 tons as compared with 191,790,000 in 1946. Throughout the Emanuel Shinwell, minister of fuel and power, was subject intense criticism from the opposition, until he left the ca on Oct. 7 to become minister of war.

*Housing.*—The original housing target of 240,000 was doned as a result of the coal crisis; 125,513 houses were pleted by Sept. 30 and 267,100 were under construction. government announced its intention to complete the latt soon as possible, but could set no new target because of c the import of timber.

*Palestine.*—On Feb. 14 the London conference betwee government and representatives of the Arab states ended i rejection of Ernest Bevin's proposals for a five-year transi British administration in Palestine, accompanied by the gra transfer of power to local and democratically elected assem The Jewish agency had refused to participate in the confer Faced with this deadlock the government referred the que to the United Nations assembly, which in May appointed a mittee of nine to report on the position in Palestine. The mittee presented a majority and a minority report to the as bly in September, the former recommending partition an latter the creation of a federal state in Palestine. The Je agency agreed in principle to partition but both proposals rejected by the Arabs. In a speech to the assembly on Sep Arthur Creech Jones, the British colonial secretary, annou Britain's intention to terminate the mandate and withdraw Palestine at the earliest practicable date. Speaking in the h of commons on Dec. 12, Foreign Secretary Bevin stated May 15, 1948, was the latest date Britain would accept fo surrender of the mandate. (*See* PALESTINE.)

*Commonwealth and Empire.*—On July 2 Attlee annou

BRITISH TRUCKS, used in carrying mail, are shown lined up at a London post office during the teamsters' strike which halted shipments of food and mail in Jan. 1947 at the dominions office would be renamed the commonwealth lations office. On June 25 the colonial secretary announced e creation of a colonial development corporation with borrow-g powers up to £100,000,000. One of its chief objects was to the encouragement of food production in the colonies. (*See* so BRITISH EMPIRE and separate articles.)

*Foreign Affairs.*—On March 4 an Anglo-French military alli-ce was signed at Dunkirk, pledging both countries to assist ch other in resisting German aggression and in preventing ermany from preparing for aggressive war. On Jan. 27 Bevin nounced the breakdown of the Anglo-Egyptian negotiations r the revision of the 1936 treaty, resulting from the failure of e two governments to agree on the meaning of the clause in e draft treaty which related to the Sudan. In September gypt denounced the 1936 treaty and appealed to U.N. to secure e immediate withdrawal of British forces. The U.N. Security ouncil failed to reach any decision and the dispute remained n the agenda.

The main preoccupation of British foreign policy during the ear was Germany. On April 17 Lord Pakenham was appointed ancellor of the duchy of Lancaster, with responsibility for ritish administration in Germany, and the control commission as incorporated in the foreign office. On Aug. 29 it was an-ounced that the British and U.S. authorities had decided to crease the level of steel production permitted in western Ger-any to 10,700,000 metric tons. The level agreed upon for the hole of Germany in 1946 was 5,800,000 tons. The Soviet nion persistently accused the western powers of trying to tablish a western German state under their protection. Bevin plied that no decision of this kind would be taken until every hance of reaching agreement on a central authority for Ger-any was exhausted.

Throughout the year Britain and the U.S. consistently pro-sted against undemocratic conduct by eastern European gov-rnments, and in September the U.S.S.R. protested to U.N. gainst "war-mongering" by Britain, the U.S., Turkey and reece. In July the British and French governments summoned European economic conference in Paris to assess Europe's eed for U.S. economic aid under the Marshall plan and to dis-uss plans for economic co-operation. The conference ended in he appointment of a series of technical committees. On Sept. 1 ach of the powers represented at the conference informed the .S. government of its needs. Pre-occupation with the imme-iate dollar crisis made it impossible to formulate any long-term lans for co-operation.

The winding-up of the Indian empire and the creation of the wo dominions of India and Pakistan (*qq.v.*) was attended by assacres in the Punjab so bloody as to obscure the relative ase with which the change had been brought about in the rest f the country.

*Parliament.*—The following important legislation was passed uring the year: a bill for the nationalization of the electricity ndustry; a bill for the nationalization of transport; a town and ountry planning bill giving the government and local authori-es increased power over the use to which land is put; a national ervice bill, imposing one year's compulsory national service on l men between the ages of 18 and 26; and a bill enabling a ubject to sue the crown. (T. E. U.)

**Education.**—In 1945–46: primary (up to 11 years): England and ales: departments maintained and assisted by local authorities 23,991, cholars 3,735,680; Scotland: schools 2,087, scholars 375,757; Northern eland: schools 1,649, scholars 186,664; secondary: England and Wales: hools 4,366, scholars 1,268,531; direct grant secondary schools 189, cholars 85,372; Scotland: schools 983, scholars 354,286; Northern Ire-nd: schools 76, scholars 21,021; universities (1945) students: England ,443; Wales 2,750; Scotland 10,571; Northern Ireland 2,663.

**Finance.**—Budget (est. 1947–48): revenue £3,451,000,000; expenditure ,181,367,000. Actual 1946–47: revenue £3,341,223,358; expenditure £3-7,345,955. Notes in circulation (Sept. 1947) £1,359,000,000. Public bt (internal and external, Dec. 31, 1946) £24,785,000,000. Gold and U.S. dollar reserves (June 1947) £591,000,000. Exchange rate (1947) £1=402.7 U.S. cents.

King: Paul I; prime ministers: Demetrios Maximos (Jan. 24–Aug. 29, 1947); Constantin Tsaldaris (Aug. 30–Sept. 7, 1947); Themistocles Sophoulis.

**History.**—The outstanding events during 1947 were the enunciation in the United States of the Truman doctrine and the publication of the report of the United Nations Balkans Investigation commission. The consequence of these two events was the transfer from Great Britain to the U.S. of the main burden of financial aid to Greece. Great Britain continued to maintain in Greece a military mission for the training of the Greek army and a police mission for the training of the police and gendarmery. The U.S. mission for aid to Greece advised the Greek government on all economic matters and supervised the spending of the sums voted by the U.S. congress for general relief, reconstruction and the equipment of the Greek forces. A military mission headed by Maj. Gen. William C. Livesay cooperated with the Greek army command in an advisory capacity.

The U.N. Balkans Investigation commission, established by the resolution of the Security council Dec. 19, 1946, assembled in Athens on Jan. 29, 1947, and subsequently visited various places and examined a large number of witnesses in Greece, Yugoslavia, Bulgaria and Albania, proceeding on April 7 to Geneva, Switzerland, where it drafted its final report. This report, which was submitted to the Security council on June 25, was approved by eight countries (Australia, Belgium, Brazil, China, Colombia, Great Britain, Syria and the U.S.) but rejected by the U.S.S.R. and Poland. France, while accepting the facts as stated in the majority report, did not subscribe to the conclusions on the ground that the drawing of conclusions was a matter for the Security council. The findings of the majority on the commission were: (1) that Yugoslavia, and to a lesser extent Albania and Bulgaria, supported the guerrilla warfare in Greece; (2) that Yugoslavia had established a camp at B
where Greeks were subjected to political indoctrination ai
at overthrow of the Greek government, and were sent ba
Greece to join the rebels after receiving political and mil
training; (3) that Albania had established a camp at E
where political and military training for Greek refugees
provided; (4) that Bulgaria facilitated the crossing of fro
by Greek guerrillas, provided hospital facilities for them
supplied them with arms; (5) that Yugoslavia and Bul
openly supported a Macedonian separatist movement (th
port qualified this finding with the comment that Greek p
cution of Macedonian Slavs provided "a fertile breeding gro
for such a movement). The report blamed both sides fo
merous minor violations of frontiers and made a numb
recommendations, including the establishment of a perma
commission in the troubled area.

In the discussion of the report by the Security council
U.S. resolution supporting the implementation of the com
sion's recommendations was finally put to vote on July 29.
countries supported it, with Poland and Russia voting again
The U.S. reaction to this use of the veto by the U.S.S.R.
the inclusion of the Greek question on the agenda of the
general assembly, which on Oct. 21 adopted (by a vote of
6, with 10 abstentions) a U.S. resolution calling upon Alb
Bulgaria and Yugoslavia on the one hand and Greece on
other to: (1) establish normal diplomatic and good-neighbo
relations among themselves; (2) establish frontier conven
for the control of frontiers and the pacific settlement of
tier disputes; (3) co-operate in the settlement of prob
arising from the presence of refugees in the four states,
(4) study the practicability of concluding agreements for
voluntary transfer of minorities. This resolution also prov
for the establishment of a commission with headquarter
Salonika to observe compliance by the four governments
cerned with the recommendations, and to assist these gov
ments in the implementation of such recommendations.
commission held its first meeting in Athens on Nov. 25.

In the economic sphere, active U.S. interest in Greek af
was initiated by the dispatch to Greece in January of a mis
headed by Paul Porter to examine economic conditions
erally, and to consider what measures were necessary for re
struction of the country. On March 3, the Greek govern
sent to the U.S. government an urgent appeal for financial
and for equipment for the armed forces. On March 12,
speech to a joint session of congress, President Truman
nounced that "Greece must have assistance if she is to bec
a self-supporting and self-respecting democracy. The Un
States must supply that assistance." For this reason, Presi
Truman asked congress to grant $350,000,000, and to give
mission for U.S. military and civil personnel to go to Gre
President Truman's proposal was approved by congress
May 22; a U.S. mission headed by Dwight P. Griswold arr
in Athens on July 14, 1947, and took up the task of the adm
tration of this aid. A number of agreements were subseque
signed between the mission and the Greek government r
lating execution of the aid program. On Nov. 17 it was
nounced that a joint U.S.-Greek general staff would be for
to direct military operations against the rebels and that
officers would be attached in an advisory capacity to G
operational units.

The political situation in Greece went through a numbe
significant developments during the year. On Jan. 24, the
clusively Populist government of Constantin Tsaldaris gave
to a broad-based coalition under the premiership of Deme
Maximos in which all the other parties represented in the ch
ber of deputies were included with the exception of the Lib

party, which remained in opposition. This opposition broke up on Aug. 29 as the result of dissensions between the co-operating parties, and was succeeded for a brief period by another one-party government under Tsaldaris. The Liberal leader, Themistocles Sophoulis, was eventually prevailed upon by the British and U.S. representatives in Athens to agree to participate in the government, and on Sept. 7 a Liberal-Populist coalition government was formed under the premiership of Sophoulis, with Tsaldaris as deputy premier and minister of foreign affairs.

On Sept. 14, this government enacted a new amnesty act by which any rebel surrendering to the authorities within 30 days would not be prosecuted for offenses committed by him in so far as they related to rebellion or sedition, and would be immediately set free. The response to this amnesty, which was subsequently extended for a further month to Nov. 14, was not encouraging—the total number of persons who gave themselves up amounted to 9,066—and on the expiry of the amnesty the government announced that vigorous military measures would be taken to suppress the rebellion.

Despite the improved political situation, the internal state of Greece deteriorated considerably during the year from the point of view of security and public order. Guerrilla activities increased, and several large-scale attacks were launched by armed bands on many frontier towns. The most serious of these attacks was made on July 13 by a band of about 1,500 rebels which entered Greek territory from Albania and attacked Konitsa. The attack was eventually driven back across the frontier by Greek armed forces sent to that area. At the same time the Athens police found evidence of a communist plot to create disturbances in the capital, and a large number of arrests were made, about 15,000 people being deported to the Aegean Islands as a preventative measure under the emergency powers accorded to the government by parliament. In October an emergency press law was passed giving the judicial authorities power to order the suspension of any newspaper inciting to rebellion; the communist newspapers *Rizospastis* and *Eleftheri Ellada* were suspended.

On Dec. 24 a broadcast proclamation (coming, according to the Greek government, from Belgrade) announced the formation of the "provisional democratic government of Free Greece" with Gen. Markos Vafeiades as prime minister. The aim of the rebel government was to achieve a "speedy liberation of the country from foreign imperialists and their lackeys." All the ministers of the rebel government were known members of the Greek Communist party. On Dec. 26 the Greek government outlawed the Communist party and all its organizations; about 500 communists were arrested in the Athens area.

On April 1 King George II died suddenly of a heart attack and was succeeded by his brother Paul. The smoothness with which the change of reign was effected showed that the question of the monarchy was generally regarded as having been finally settled.

In October the peace treaty with Italy was ratified, with effect as from Oct. 28. The ratification marked the formal incorporation of the Dodecanese Islands (*q.v.*) into the kingdom of Greece. The peace treaty with Bulgaria was also ratified by Greece in October. (A. A. P.)

**Education.**—(1938) Primary schools 8,339, scholars 985,018; high schools 407, scholars 92,687; universities 2, students 7,230; institute of technology, students 521.

**Banking and Finance.**—Budget (est. April 1, 1946–March 31, 1947): revenue Dr.1,401,783,000,000; expenditure Dr.1,576,714,000,000; (est. April 1, 1947–June 30, 1948, 15 months) revenue Dr.2,753,000,000,000; expenditure Dr.2,960,000,000,000. Bank note circulation rose from Dr.364.000,000,000 (April 1946) to Dr.779,000,000,000 (April 1947). Exchange rate (official): $1 = 5,000 drachmas.

**Trade and Communications.**—(1946) Imports Dr.435,444,000,000; exports Dr.201,174,000,000. Total amount of United Nations Relief and Rehabilitation administration supplies (July 1, 1945–June 30, 1947) $350,500,000 ($46.7 per head of population). Railways open to traffic
(Dec. 31, 1946) 1,388 mi. Motor vehicles licensed (trucks, Dec. 31,
10,450. Gross tonnage of shipping (Dec. 1946) 556,601. Greece
43,000 telephones, 8,694 mi. of telegraph lines and 45,000 radi
ceiving sets in 1946.

**Agriculture.**—Production in thousands of short tons (1946):
848; rye 55; barley 176; oats 110; maslin 44; maize 176; ric
pulses 57; potatoes 168; sesame seed 3.3; cotton 44; tobacco 44;
oil 90; currants and raisins 88. Livestock pop. (Dec. 1946): horses
000; mules 115,000; cattle 600,000; sheep 6,000,000; goats 3,13
pigs 400,000; donkeys 325,000; water buffalo 56,000; poultry 7,50

### Green, William

(1873– ), U.S. labour leader, was
March 3, in Coshocton, O. He spent
of his youth as a miner, and at the age of 27 was a subdis
president of the United Mine Workers of America. He
elected president of the American Federation of Labor,
Under Green's administration, the A.F. of L. remained pred
nantly a crafts union. When the Committee for Industrial
ganization (later known as the Congress of Industrial Orga
tions), a group of ten unions affiliated with the A.F. o
opened its campaign to establish industrial unions, Green
fused to sanction the operation. This led the C.I.O., then u
the guidance of John L. Lewis, to break away from the pa
body in 1937.

During World War II, Green abided by the promise he
made to President Franklin D. Roosevelt to observe la
peace for the duration. After the war, he took violent ex
tion to the "monstrous" Case strike-control bill in 1946
to the Taft-Hartley law in 1947. He called the latter la
"tragic mistake" (July 9) and predicted that labour would
the Republicans their "worst defeat" in the 1948 preside
elections if Robert A. Taft were the party's candidate. On S
1, 1947, Green urged all U.S. workingmen to defeat in the
federal elections all candidates with an antilabour record
implement this program, the A.F. of L. organized (Dec
Labor's Educational and Political League, a group simila
C.I.O.'s Political Action committee, and supported by volun
contributions. On Oct. 13, Green rejected C.I.O. Presi
Philip Murray's bid for joint political action, asserting
agreement on "organic unity" must come first.

### Greenland.

The world's largest island (839,782 sq.mi., al
705,000 sq.mi. covered by an ice cap), in
North Atlantic ocean, northwest of Iceland. A Danish pos
sion, it came under temporary United States protection in
Capital, Godthaab. A population of 21,066 (Dec. 31, 1944
scattered in small settlements on the west coast, with a
1,000 on the east coast; 492 in all are listed as Europ
(largely Danes) and the rest are native Greenlanders. S
of the governors are Godthaab in the south and Godhavn in
north.

**History.**—The year 1947 was filled with rumours and de
and suspicions regarding Greenland. It was rumoured that
United States wanted to buy the island, and that the Da
request for discussion with Norway of their 1924 Greenl
treaty was related to the question of sale to the United Sta
Copenhagen denied that there had been any such discussion,
Washington denied it. It was rumoured that uranium had
found in Greenland, and the rumour was given some sig
cance because it was mentioned by Comm. Donald B. Mac
lan, veteran Greenland explorer who had led his 25th trip to
far north during the summer. It was rumoured that the Un
States was establishing a new defense base in Greenland;
state department denied it.

Only a few facts were clear. The basic fact was that
arctic was of primary strategic importance in the new air
and in a time of Russian-U.S. tension. The communists bot
Russia and in Denmark were forcing discussion of Greenla
and of the United States-Danish treaty of 1941 by which

nited States had assumed certain responsibilities in the island, ined certain rights and protected Danish sovereignty there ring World War II. In May a request was made by Denmark the United States for talks about a revision of this treaty. his reply Secy. of State George C. Marshall renewed a pledge willingness to consider revision, and stated specifically: Greenland remains of the greatest importance as a link in the fensive system of the United States and of the Western emisphere." Experiments of an undisclosed nature were conicted on the island by the United States during the summer. mid-October the Danish foreign minister, Gustav Rasmussen, rived in the U.S. to discuss withdrawal of U.S. troops. On ov. 17 Eske Brun, of the Greenland office in Copenhagen, anounced that U.S. soldiers had evacuated their air base at ngmassalik, Greenland.

**Trade and Finance.**—Greenland's most important export is cryolite, ich is used in the manufacture of aluminum; the world's only large mmercial mine is in southern Greenland (62,231 short tons exported 1939). There are 16,000 sheep and a meat factory at Julianehaab, and ring 1947 about 350,000 kr. was spent to build a shrimp plant there; so 120,000 kr. to improve salt fishing. One wooden ship was in service tween Greenland and Denmark, and a steel ship was being built, to be ady in 1949. The Greenland administration was allowed 5,000,000 kr. the tentative Danish budget for 1948–49. (1 krone = 20.877 U.S. nts in 1947.) (F. D. S.)

**renada:** *see* WINDWARD ISLANDS.

**rindstones:** *see* ABRASIVES.

**riswold, Dwight Palmer** (1893– ), U.S. government official and politician, as born on Nov. 27 in Harrison, Neb. After having been raduated from the University of Nebraska in 1914, he worked his father's bank. Griswold was an army captain during World War I, serving in the Mexican border patrol. After the ar, he returned to banking until 1922 when he became editor nd publisher of the *Gordon Journal*, a weekly, in Gordon, Neb. 1940, running on the Republican ticket, he was elected govrnor of Nebraska. He was twice re-elected, but lost his party's omination for a fourth term in 1946. He then went to Germany as civilian director of internal affairs and communications the U.S. zone.

On June 5, 1947, Pres. Harry S. Truman named Griswold to ead the Greek aid program. Arriving in Greece on July 14, he et to work immediately to patch up the Greek economy. But his task was complicated by political dissension in the country. However, after the formation on Sept. 7 of a Liberal-Populist oalition government headed by the aged Themistocles Sophouis, Griswold stepped up the flow of supplies to the Greek army nd also gave strong support to the Sophoulis policy of conciliation and amnesty for guerrillas.

However, Griswold was not entirely satisfied with the Greek rmy's conduct of the war against the guerrillas as was evilent in his statement of Nov. 7 that the regular army had reeived sufficient arms and matériel to end the rebellion.

**Gromyko, Andrei A.** (1909– ), soviet diplomat, was born July 5 in the village of Stayre Gromyki in the Gomel region of the U.S.S.R. He graduated rom the Minsk Institute of Agricultural Economics in 1934, nd in 1939 he became counsellor in the U.S.S.R. embassy in Washington. Gromyko succeeded Maxim Litvinov in Aug. 1943 s soviet ambassador to the United States and also to Cuba. He headed the U.S.S.R. delegation at the Dumbarton Oaks conference in 1944, attended the San Francisco conference in 1945 nd was named chief soviet delegate to the United Nations rganization.

One of the U.N.'s "stellar" attractions, by virtue of his steadast role as the "lone dissenter," Gromyko staged his celebrated walkout (March 27, 1946) from the council sessions during the Iranian debate. On April 10, he was made permanent soviet delegate to the security council, and on Dec. 29 it was disclosed that he had been promoted to deputy foreign minister.

In 1947, Gromyko took issue with the U.S. plan for international control of atomic energy, contending (March 5) that it was directed against the independence of other nations. On May 19, he said the U.S. monopoly in atomic energy development was an "illusion" and predicted that other nations in time might also achieve dominance in production of atomic weapons.

He was equally vehement in his denunciations of attempts made by the western powers to limit use of the veto in the U.N. security council. He also opposed the so-called Truman doctrine, warning Sept. 27 that U.S. policy in the Balkans might lead to a collapse of the United Nations, and the U.S. "Little Assembly" plan, declaring on Oct. 17 that "the word compromise is not in the Soviet glossary on this issue."

**Guadeloupe:** *see* FRENCH OVERSEAS TERRITORIES.

**Guam.** Largest island of the Marianas group in the Pacific, Guam is in 13° 26′ N. lat. and 144° 39′ E. long. and is about 5,100 mi. from San Francisco and 1,350 mi. from Yokohama. Area, 206 sq.mi.; pop. (1947), 24,139; military and civil service personnel totalled 36,388. Capital, Agaña (10,004).

Guam is administered by the U.S. navy. The governor is a naval officer appointed by the president of the United States. The congress of Guam, a popularly elected two-house legislature, has advisory powers only. Natives serve as associate justices of the court of appeals and as commissioners of municipalities. Guam has unorganized territorial status, and the native Chamorros are nationals of the United States. Rear Adm. Charles A. Pownall was governor in 1947. In May 1947 a civilian committee appointed by the navy department recommended citizenship for the natives and advised that consideration be given toward establishment of a civilian agency for administration of Guam and other Pacific possessions.

**Industry and Trade.**—Copra production, formerly the main industry, had not recovered in 1947 from heavy damages suffered during World War II. Fruits, vegetables and grains are grown for home consumption. All manufactured products are imported from the United States. Of the natives 25% were employees of the U.S. government in 1947. The 587 small business enterprises owned by Guamanians had gross sales of $938,600 in 1946.

**Finance and Education.**—Government receipts from May 31 through Dec. 31, 1946, amounted to $178,261.87, while government pay rolls for the last six months of 1946 aggregated $1,117,026.40.

Of the children of school age 95% (est.) were enrolled in school. There were 19 elementary schools, 1 junior high school and 1 senior high school. A small number of natives are sent to the United States at the expense of the naval government for higher education.

Little progress was made in the reconstruction of towns and villages damaged by the war. Plans called for improved housing and modern sanitation. Claims for war damages totalled $7,859,770.50.

BIBLIOGRAPHY.—U.S. Navy Dept., *Information on Guam Transmitted by the United States to the Secretary-General of the United Nations Pursuant to Article 73 (e) of the Charter;* Laura Thompson, *Guam And Its People* (1947). (P. A. V.)

**Guatemala.** A Central American republic bounded by Mexico, British Honduras, Honduras and El Salvador. Area: 45,452 sq.mi.; pop. (1945 est.), 3,546,624, of whom more than half were Indians, the remainder largely of mixed blood. Capital, Guatemala City (1946 est. pop.), 225,000. Other urban centres (1940 census) are: Antigua Guatemala (12,601), Chiquimula (10,868), Comalapa (10,461), Mazatenango (14,227), Puerto Barrios (15,784), Quezaltenango (33,538) and Zacapa (14,443). Language: Spanish; religion: predominantly Roman Catholic. President in 1947: Juan José Arévalo.

**History.**—The Arévalo administration weathered a stormy year in 1947 by resorting to drastic political measures. The cabinet was reorganized twice, in January and in June, because of ministerial resignations; a public demonstration in March protested the new electoral law (under which the administration secured majorities in the January congressional elections) and an attempt to overthrow the government in September was discovered and immediately crushed. All opposition was effectively throttled as the result of new legislation restricting political activities considered by the government as dangerous to public security.

The ministry of national defense, on March 4, cancelled all licences for carrying firearms. The alien act was modified on March 16 to give the president increased authority to deport foreign agitators; and a new law, effective April 30, imposed stringent censorship on public expression through the press and radio. The death penalty, affecting persons attempting to overturn the government, was abolished by congress on Sept. 13. On Sept. 17, however, constitutional liberties affecting freedom of the press and assembly were suspended by presidential decree when an alleged plot against the existing administration was discovered. Two soldiers and a civilian were arrested. Charges that the Communist party was behind the attempt were denied in October by President Arévalo.

In its foreign affairs Guatemala accepted a British proposal to submit the dispute over British Honduras (Belize) to the jurisdiction of the International court, but on condition that the case be judged on its equity rather than on its purely legal merits. The new government in Nicaragua was denied recognition in June, and in July diplomatic relations were suspended with the Trujillo administration of the Dominican Republic. Ratification of an agreement with El Salvador for the construction of an international bridge over the Paz river (signed May 25, 1946) was published on March 18. Fifteen hundred Salvadorean families were invited by President Arévalo to settle on and develop assigned farm lands in Guatemala.

**Education.**—The government's program of expanding educational facilities (2,784 schools enrolled 152,274 students in 1943) continued in 1947 with the extension of compulsory military training from one to two years. The first year was being used mainly in teaching draftees to read, write and speak Spanish. The University of San Carlos had an enrolment of 1,620 students under 250 professors in 1945. For public education during the fiscal year 1946–47, the national budget allocated $3,609,821. There were 39 motion picture theatres in the country with a total seating capacity of 16,500 as of Jan. 1, 1947.

**Finance.**—The monetary unit is the quetzal, maintained at par with the U.S. dollar. The budget for 1946–47 estimated revenues at $28,125,174, including a treasury surplus of $625,000 from the previous year and a reserve of $1,000,000 in U.S. war bonds. As of Jan. 1, 1947, the public debt was $2,186,735, while the margin of income over expenditures during the first three months of 1947 was $2,469,111.

**Trade and Resources.**—Exports for 1946 totalled $36,678,000 ($30,436,000 in 1945), and imports were valued at $36,201,000 ($23,349,000 in 1945). About three-quarters of the trade was with the United States. The leading shipments in 1946 were: coffee (829,272 bags of 132 lb.), bananas (10,649,313 stems), chicle (3,296,000 lb.), cabinet woods, chiefly mahogany (2,250,000 bd.ft.), ordinary woods, chiefly pine (3,650,000 bd.ft.), cinchona bark (495 tons), essential oils, chiefly citronella and lemon grass, (327,431 lb.). Livestock in 1945 included 640,063 cattle, 365,912 sheep and 40,317 goats. Coffee production for the 1947–48 crop year was estimated at 1,080,000 bags. Permission for petroleum exploration in more than 1,200,000 ac. in Petén province was granted to a private company in July 1947.

**Communications.**—In 1945 railroad lines, mostly public, totalled 723 mi., and of the 4,800 mi. of highways, 2,400 mi. were improved. There were 2,373 automobiles, 322 buses and 2,016 trucks. In 1947 air transportation continued to expand, and the government laid plans for river traffic development. Rail transportation between Puerto Barrios and the interior bogged down, however, causing severe congestion in that port during the early months. There were 4,079 mi. of telegraph lines, 2,327 telephones and 8 government radio broadcasting stations serving about 5,000 receiving sets. (*See* also BRITISH HONDURAS.)

**Gustavus V** (1858– ), king of Sweden, of whom graphical account will be found in the *En pædia Britannica,* ascended the throne in 1907 and long 1947 had attained the rank of Europe's oldest living mo In June he celebrated his 89th birthday and in December much ceremony, the 40th anniversary of his reign.

Gustavus was the grand old king, still interested in sp well as in statecraft (he hooked two 15-lb. pike on his day). On Jan. 26 the king's eldest grandson, Prince Gus Adolphus, 40, was killed in an aeroplane crash in Copenh Denmark. This prince's father, Crown Prince Gus Adolphus, is next in line for the throne, and after him, the prince's one-year-old son, Prince Carl Gustav (there are older sisters). The king's youngest brother, artist Prince E (82) died on Aug. 18 in Stockholm, Sweden—which left brothers: Carl (86), Oscar Bernadotte (88) and the king. (F. D.

**Gymnastics.** Already a veteran of two previous Oly games, Frank Cumiskey of Union City, advanced toward a third berth by winning the all-around c pionship in the A.A.U. gymnastic tournament. Cumis dominance led the Swiss Gymnastic society of Union Ci its 17th national team title with 56.5 points. The Acroth team from the University of Chicago finished second wit The nationals, held at Dallas, Tex., attracted 175 men an women entries and brought a new record of 3.4 seconds i 20-foot rope climb by Garvin E. Smith of Los Angeles college.

Helen Schifano of the Elizabeth, N.J., Turners dethr Philadelphia's Clara Schroth as the women's champion. scored 230.6 points to Miss Schroth's 225. (M. P. W

**Gynaecology and Obstetrics.** The use of caudal, dle block and block analgesias in obstetrics continued to have their advo during 1947, but their popularity seemed to be waning. Den as an obstetric analgesic and mild amnesic agent for the and second stages of labour continued to find new followe

The routine use of prenatal vitamin K to counteract bleeding tendency of the newborn was dealt a severe blo Edith L. Potter, who presented the seemingly justified co sion that no decrease in infant or foetal mortality coul expected to result from the routine administration of vitami to all women during labour.

Electrotherapy for various gynaecological and obstetrical ditions such as control of labour, treatment of cervical sten restoration of postpartum muscular tone, development o fantile uteri, etc., continued to have many advocates in fo literature, especially French. Few others, however, had f convincing reason to adopt these measures.

The toxaemias of late pregnancy, although occurring less frequently in most clinics, were often discussed during year. The most logical explanation for the decreased incid of late pregnancy toxaemias was better prenatal care; not the better medical management of pregnancies but also importance of proper diet was more generally understood the public. With reference to the aetiology of late toxaem the weight of evidence now pointed to a dietary deficiency, only during pregnancy but also during the years preceding p nancy. High protein and high vitamin (especially the B c plex) diet apparently plays a role in preventing and trea late toxaemias. This undoubtedly was not the last word seemed established as one of the major factors in toxaemias

General use of the antibiotics caused a further decrease in naternal mortality caused by infection. In spite of plasma and he availability of blood for transfusion, haemorrhage was the eading cause of maternal mortality in most statistics presented on this subject during 1947.

Meigs' syndrome, originally thought to be characteristic of ibroma of the ovary, was found also in association with other olid ovarian tumours. Cases were described with carcinoma (without pleural metastasis), granulosa cell tumour, thecoma and Brenner tumour. There was still no clear-cut knowledge of he mechanism involved, although there had been much conecture and experimental work on the problem.

The efficacy of penicillin in the treatment of syphilis in the pregnant woman rendered the use of the arsenicals and heavy netals obsolete. Mary S. Goodwin and J. E. Moore and others pointed out that the incidence of abortion in women under penicillin therapy was no greater than in clinic patients generally. The concentrated seven to ten day treatment program, n addition to a hitherto unsurpassed efficacy as agreed by yphiologists and pediatricians alike, had immeasurably greater value from a social and practical standpoint than did the old prolonged therapy.

M. E. Davis and Edith L. Potter demonstrated intrauterine espiration by injecting thorotrast into the amniotic fluid and lemonstrating it in the lungs of the foetus as found on X-ray. This supported the classic work of Franklin F. Snyder and Morris Rosenfeld on foetal respiratory movements.

Herbert Thoms, one of the leading exponents of external pelvimetry, had discarded his previous opinions and decided that even outlet digital measurements were unreliable. This, with his previous opinion that inlet measurements were often nisleading, suggested that no external digital measurement was of much value. He suggested a general pelvic survey including careful palpation and two flat X-ray films, one showing the birth canal from above, downward from which certain inlet and nidplane measurements may be determined, and a second film taken laterally, from which certain inlet, midplane and outlet neasurements may be obtained.

Major defects in congenitally anomalous babies born of mothers who suffered rubella (German measles) in the first three months of pregnancy were associated with only one constant ocus of anomaly, a hypoplastic adrenal cortex. This suggested but did not prove that the deficiency of adrenal cortex is responsible for all developmental anomalies secondary to maternal rubella. Other filterable virus diseases were being incriminated as a cause for congenital anomalies, but none with such frequency as rubella.

D. N. Danforth pointed out that the cervix is predominantly fibrous in nature, being composed of only about 15% smooth muscle, but the uterine tissue above the cervix is predominantly smooth muscle. He believed that it is this fibrous nature of the cervix which explains why it is refractory to stimuli which cause such tremendous growth and contractile response elsewhere in the same uterus.

Increased knowledge of the Rh factor and of the sensitivity of negative mothers to the antigen suggested to several workers that it might be possible to desensitize the mothers to this antigen. Experimental work in progress was not reported, but high hopes were held for favourable results.

(P. T.)

## Gypsum.

Gypsum production is widely scattered in small amounts among approximately 50 different countries, but the United States produces nearly half the total and Great Britain, Canada and France account for more than another third. World production is estimated to have been 11,400,000 short tons in 1946, about the same as in 1937, as compared with a peak of 14,300,000 tons in 1929 and a war period low of 7,700,000 tons in 1945.

**United States.**—The basic data of the gypsum industry of the United States are shown in the following table in thousands of short tons.

*Data of Gypsum Industry in the U.S., 1940–46*

(Thousands of short tons)

| | 1940 | 1941 | 1942 | 1943 | 1944 | 1945 | 1946 |
|---|---|---|---|---|---|---|---|
| Mine output | 3,669 | 4,789 | 4,698 | 3,878 | 3,761 | 3,812 | 5,629 |
| Imports | 1,405 | 1,348 | 394 | 231 | 342 | 509 | 1,457 |
| Supply | 5,104 | 6,136 | 5,092 | 4,109 | 4,104 | 4,320 | 7,087 |
| Sales | 4,632 | 5,760 | 4,953 | 4,186 | 3,838 | 3,987 | 6,381 |
| Crude | 929 | 1,321 | 1,458 | 1,234 | 1,056 | 1,148 | 1,641 |
| Industrial | 123 | 152 | 145 | 164 | 200 | 158 | 207 |
| Building | 3,580 | 4,287 | 3,360 | 2,788 | 2,582 | 2,681 | 4,532 |

Demand for gypsum was sharply increased in 1946 by the revival of building activity and the domestic production jumped to 18% above the war construction peak and failed to equal the 1925 record high by only a few thousand tons. The 1946 output advanced 48% over 1945 and 50% over the low of 1944. Imports expanded even more sharply, almost doubling in 1946, and exceeding the former 1929 high by 41%. The combined domestic output and imports gave an available supply which topped all previous records.

The building trades took 69% more gypsum in 1946 than in 1945 while sales of crude gypsum increased 43% and industrial gypsum 31%.

**Canada.**—Gypsum production more than doubled in 1946, increasing from 839,717 short tons in 1945 to 1,833,717 tons in 1946.

The rate of production continued to increase in 1947, the total through August being 1,480,973 tons. (G. A. Ro.)

## Haakon VII

(1872– ), king of Norway, of whom a biographical account will be found in the *Encyclopædia Britannica,* was born Prince Charles of Denmark, second son of Frederick VIII (and brother of Christian X). Upon the separation of Norway from Sweden he was elected king by the Norwegian storting (Nov. 18, 1905) and took the old Norse name of Haakon, and that of Olav for his son, the crown prince. Haakon married Maud (1869–1938), youngest daughter of King Edward VII of England.

As usual, King Haakon held himself in the background during 1947, but he worked diligently at the problems of reconstruction of Norway and was a steadfast rallying point for citizens of all parties. He received a royal visit in October from his nephew Frederick IX of Denmark and Queen Ingrid. In November, he journeyed to London for the marriage of Princess Elizabeth. Like many a simple citizen, he had his salary raised to help meet rising costs of living—from 700,000 kroner to 1,000,000 kroner (about $220,000). Haakon's 75th birthday (Aug. 3) was celebrated both in Norway and by Norwegians around the world; especially impressive was the festival arranged by the storting at famous Eidsvold in September. A popular contribution was taken to buy the king a yacht—but only after the king had indicated he would give the money to charity and the people demanded that this gift should be really for Haakon himself.

(*See* also NORWAY.) (F. D. S.)

**Haiti.** A West Indian republic occupying the western third of the island of Hispaniola or Haiti. Area, 10,748 sq.mi.; pop. (1941 est.) 2,719,000. Racial distribution is estimated to be 95% Negro and almost all of the remainder mulatto. An estimated 1,600 foreigners, approximately 575 of whom were North Americans, lived in the country in 1946. The capital is Port-au-Prince (pop. est., 125,000); other cities are Gonaïves (20,000), Les Cayes (15,000), Cap Haïtien (15,000), Jacmel (10,000), St. Marc (10,000), and Jeremie (8,000); only about 10% of the total population is urban. French is the official language, but a patois called creole is widely spoken. The official religion is Roman Catholicism but many persons in remote areas practise the folk religion of voodoo. President in 1947: Dumarsais Estime, inaugurated Aug. 16, 1946.

**History.**—The year 1947 began almost simultaneously with the taking effect of Haiti's 11th constitution, which went into operation Dec. 23, 1946. The new law provided for a unitary government subdivided into five territorial departments. The legislative branch is bicameral, including a chamber of deputies of 37 members elected on a population basis, and a senate of 21 members chosen by departments; deputies and senators serve, respectively, for four and six years. The executive branch is headed by a president, elected by the chamber of deputies and the senate joined in national assembly, serving a six-year term and not eligible for immediate re-election. He is assisted by secretaries of state, who must be at least five in number.

The United States and Haiti on Jan. 3, 1947, agreed to extend to June 30, 1948, the program of aid to agriculture begun in 1944. Under terms of the extended agreement, the United States would contribute $50,000 and technical and administrative assistance to the extent of $175,000 and the Haitian government would contribute $175,000. President Estime on April 12 swore in a new cabinet. Some suggestions of political discontent were heard during 1947 but the administration remained in control.

**Education.**—Literacy is estimated at only 8% of those more than ten years of age. Educational statistics are of doubtful accuracy. Figures for 1946 indicated about 850 primary schools with approximately 85,000 pupils, 35 intermediate schools with about 6,000 enrolled and 6 schools of higher education, though these latter were not organized as a university.

**Finance.**—The monetary unit is the gourde, fixed by law at 20 cents U.S. currency. Government receipts in the first ten months of the fiscal year beginning Oct. 1, 1946, were 54,437,854 gourdes; expenditures in the same period were 48,172,294 gourdes. The unobligated treasury balance July 31, 1947, was 9,319,473 gourdes compared with 5,250,306 gourdes one year earlier. The government early in the year announced a new sugar export tax amounting to 17.4% ad valorem; the previous tax had averaged 13.2%. President Estime on May 19 announced an internal loan designed to pay off United States bondholders; this was followed by passage of a "financial liberation law," published in *Le Moniteur* July 14, to implement the government's policy. It authorized the floating of an internal loan of $10,000,000 in order to retire all outstanding A and C bonds of United States loans of 1922–23, the balance to be used for a program of economic rehabilitation. It was assumed that completion of the retirement would terminate the executive agreement of Sept. 13, 1940, with the United States. The above-mentioned obligations, as of June 30, 1947, amounted to 26,924,051 gourdes. The only remaining regular foreign debt was a public works contract of 1938, with a 1947 balance of 13,350,000 gourdes; in addition Haiti had a contingent obligation in connection with an Export-Import bank loan of $5,000,000 in 1941 to S.H.A.D.A. (Société Haitiano-Américaine de Developpement Agricole) for agricultural development.

**Trade.**—Exports from Oct. 1, 1946, to June 30, 1947, were valued at 120,136,000 gourdes compared with 114,117,000 for the entire fiscal year 1945–46. Imports during the same nine months were valued at 100,826,000 gourdes compared with 79,608,000 for the whole year 1945–46.

**Agriculture.**—Sugar production in 1946–47 was 49,284 short tons, of which 20,519 tons were allocated for domestic consumption; the balance was earmarked for sale to Great Britain. Production of molasses in 1946–47 was 2,510,958 gal., of which all but about 150,000 gal. was designed to be sold to the United States. Production of lint cotton in 1947 was 1,680,000 kg. compared with 2,447,715 kg. in 1946; the large drop was accounted for by excessive rainfall and extensive boll weevil damage; the 1936–46 annual average was 3,441,594 kg. The rice crop in 1947 was expected to be normal and corn prospects were considered good. Sisal production in the first six months of 1947 was 19,040,111 lb.; that figure included 14,469,627 lb. of line fibre, 463,418 lb. of white tow and 4,107,066 lb. of flume tow. Anticipated production of sisal for the second half of 1947 was 23,175,000 lb. The estimate of coffee production for 1947–48 was 403,600 bags of 60 kg. (1946–47: 400,000 bags)

**Harbours:** *see* Rivers and Harbours.

**Harriman, William Averell** (1891– ), U.S. dipl tist and government off was born on Nov. 15, the son of E. H. Harriman, rail magnate. After graduating from Yale university in 1913, he tered railroading, eventually becoming chairman of the Ill Central and the Union Pacific railroads as well as a partn Brown Brothers, Harriman and Co. He entered the govern in the early New Deal days, serving in a number of agen In March 1941 he was sent to Great Britain as lend-lease ministrator, and he was ambassador to the U.S.S.R. from 1943 until his resignation in Feb. 1946. Appointed ambass to Great Britain on March 23, he served in this post Sept. 22 when Pres. Harry S. Truman named him successo Henry A. Wallace as secretary of commerce. The follo day, Harriman expressed the view that his department sh remain out of foreign politics. On June 22, 1947, Harri was named by the president to head one of three commit formed to study the effect of the foreign aid program on U.S. domestic economy. The 19-man group of civilians hea by Harriman in its reports issued Nov. 8, estimated that cost of the European recovery program through 1951 w range from $12,000,000,000 to $17,000,000,000, and warned insistence by the U.S. that recipient nations adopt the U.S. enterprise system would constitute "unwarranted interfere in their internal affairs.

**Hartley, Fred Allan, Jr.** (1903– ), U.S. politic was born on Feb. 22 in H son, N.J., and attended Rutgers university, New Brunsw N.J. A Republican, Hartley entered politics at the age of Six years later, he was elected to the house of representati the youngest member of the 71st congress.

Re-elected nine consecutive times, Hartley became chair of the powerful house education and labour committee after G.O.P. victory in the 1946 national elections. At the time declared that the party victory in 1946 had given the Repu n leaders a mandate "to protect the public from violence, ss of output and class hatred due to increasing labour disites . . ."

In line with this philosophy, he submitted to congress the artley labour bill. Although passed by the lower house in pril 1947, it was criticized as unnecessarily harsh in the senate id after innumerable debates in joint committees, a comomise measure, known as the Taft-Hartley labour law, nerged.

Although voted by both houses, the Taft-Hartley bill was toed June 20 by Pres. Harry S. Truman who contended the easure would increase rather than lessen labour strife. Howver, the house promptly overrode the veto the same day, and e senate, on June 23.

Some time later, Hartley announced his decision to retire om politics after the close of the 80th session, but he denied uly 29) that fear of a defeat at labour's hands had impelled s decision.

## arvard University.

Founded in 1636, Harvard university in Cambridge, Mass., is the oldt institution of higher learning in the United States.

In 1947, all nine faculties were teaching about 50% more udents than normally. Three-fourths of these students were terans. During the year, the university was concerned with veral new educational programs. Harvard college was applyg experimentally the principles of a faculty committee report "General Education in a Free Society" (1945). In the fall 366 students were participating voluntarily in 15 courses conrned primarily with the students' preparation for responsible tizenship.

The faculty of arts and sciences created two new departents: social relations, to promote closer collaboration among ciologists, social and clinical psychologists and social anthrologists; and engineering sciences and applied physics, to bring e knowledge of pure physics to bear on problems of practical gnificance. The new departments serve both undergraduates d graduate students.

New projects started or completed during 1947 included: e Lamont library for undergraduates; a new cyclotron; the omputation laboratory, to house large-scale calculating maines. Gifts during the academic year 1946–47 totalled $7,648,48.18. (For statistics of endowment, enrolment, faculty, library lumes, etc., *see* UNIVERSITIES AND COLLEGES.) (W. M. PN.)

## awaii.

The territory of Hawaii consists of a group of eight large islands and numerous islets in the Pacific ocean etween latitude 18° 55′ and 22° 15′ N. and between 154° 50′ nd 160° 30′ W. longitude. The total area is 6,433 sq.mi. The lands are of volcanic origin. From southeast to northwest, ey are Hawaii, Kahoolawe, Maui, Lanai, Molokai, Oahu, auai and Niihau. In addition, stretching northwestward beond Niihau more than 1,100 mi. is an archipelago of rocks, eefs and shoals which includes Midway (longitude 177° 22′ .). Likewise, 960 mi. south of Honolulu and included as a art of the city and county of Honolulu lies Palmyra, a coral toll consisting of 55 islets, 5 mi. long and 2½ mi. wide. The rgest island in the territory and the youngest, geologically, is awaii, with an area of 4,021 sq.mi. The capital of the terriory is Honolulu, situated on the island of Oahu. It is a comletely modern city with a population (1947 est.) of 268,913, xclusive of military and naval personnel. The population of e territory in 1940 was 423,330 and had expanded to an estiated 525,477 in 1947, exclusive of military and naval personel. The racial composition of this population, in addition to e native Hawaiians and the Caucasians from the mainland, is Japanese, Chinese, Korean, Filipino and Portuguese. However, 86% of the population is native-born. Hawaii's chief crops and the bases of its industry are sugar and pineapples.

Ingram M. Stainback took office as governor on Aug. 24, 1942, and was reappointed July 13, 1946. Joseph R. Farrington was territorial delegate in congress in 1947.

**History.**—On March 19, 1947, the U.S. house public lands committee unanimously approved Hawaii's statehood bill; on June 30 the house of representatives passed it by a vote of 196 to 133 and sent it to the senate.

Early in December the senate public lands committee directed the chairman of the subcommittee on territories and insular affairs, Senator Guy Cordon of Oregon, to hold hearings in Hawaii on the subject of statehood and report findings to the second session of the 80th congress as soon as possible.

The Sugar act of 1948 passed in the 80th congress would permit sugar plantations to schedule operations with confidence, for the annual quota for Hawaii of 1,052,000 tons of sugar gives the territory a level of production upon which to base sound economic practices of planting and harvesting. Hawaii's normal production is about 1,000,000 tons. Three marginal sugar plantations were closed during the year.

**Finance.**—The net bonded debt of the territory on June 30, 1947, was at a record low mark of $10,996,000, a reduction during the fiscal year of $3,741,000. Sinking fund assets totalled $2,973,326, leaving a net indebtedness of $8,022,674, a 72% reduction in eight years.

On the basis of gross income-tax collections, total business transacted in the territory in the first six months of 1947 was $545,722,854, while in the like interval of 1946 the total was $480,132,492. Cash on hand and in banks on June 30, 1947, amounted to $34,857,363, as compared with $36,331,622 on the same date in 1946.

**Production.**—Hawaii's production of sugar for the first 11 months of 1947 totalled 853,965 tons. This represented an increase of 211,248 tons over the same period of 1946. The number of cases of solid pineapple packed during the year ended May 31, 1947, increased about 13% over the 1946 fiscal year. The juice packed was approximately 5% less.

**Trade and Commerce.**—For the first 10 months of 1947, bank clearings were up 13.2% and retail sales 15.1%.

Shipment of goods to the continental U.S. for the first six months of 1947 was valued at $87,290,063. Goods purchased from the mainland in the same period amounted to $183,715,499. Total trade with the continent from January to June was $271,005,562. (I. M. S.)

## Hay.

The U.S. crop of all kinds of hay in 1947 was larger in total tonnage and in yield than in 1946 and exceeded the 10-year (1936–45) average. Total production was estimated at 102,500,000 tons, compared with 100,739,000 tons in 1946 and a 10-year average of 94,490,000 tons. Acreage harvested was 75,291,000 in 1947; 74,173,000 in 1946 and 72,373,000 average during 1936–45. Average yield in 1946 was 1.36 tons per acre.

About one-third of the total crop was alfalfa, another third mixed clover and timothy and about one-eighth wild hay.

The large new crop together with the large carry-over on farms provided one of the largest supplies of hay on record. The quality of the new crop, however, especially alfalfa, was low because of rains during the harvest season. Late cuttings were better, especially in the far western states. The leading hay states were: Wisconsin 6,918,000 tons, New York 6,300,000 tons, California 6,098,000 tons, Minnesota 5,687,000 tons and Iowa 5,154,000 tons.

The price of hay at the farm stood at an average of $17.50 per ton in Jan. 1947, declined slowly to $15.10 in July, then advanced to $18.10 in December. The price for all hay varied greatly in different regions, from $29.00 per ton in North Carolina in December to $9.90 in North Dakota. Alfalfa prices varied from $38.00 per ton in North Carolina to $14.50 in North Dakota.

**Hayseed.**—Production of the six major seed crops (alfalfa, red, alsike and sweet clover, lespedeza and timothy) was estimated at 457,300,000 lb. in 1947, 20% less than was harvested in 1946.

The alfalfa seed crop at 1,699,400 bu. was the second largest on record, exceeded only in 1946. Red clover seed output was the smallest in five years, 1,194,800 bu. compared with 2,141,800 bu. raised in 1946. Alsike clover yielded 366,200 bu. of seed, about 18% less than in 1946 but above average. Sweet clover returned the second smallest crop in 24 years, amounting to 564,400 bu. The lespedeza seed crop of 153,960,000 lb. was the smallest in seven years. Timothy returned a large crop of 1,641,400 bu., 24% above that of 1946 and 10% above average. The Sudan grass seed crop was small, only two-fifths of the ten-year average of 50,302,000 lb.

Redtop grass seed, mostly grown in Illinois and Missouri, yielded a crop of 15,900,000 lb. The strong demand for all kinds of hay tended to reduce seed harvest of all varieties. (*See* also ALFALFA; SOYBEANS.)

accurate diagnoses in circulatory diseases

## Heart and Heart Diseases.

The scientific exhibit of the centennial meeting of the American Medical association in 1947 presented late advances in knowledge of the heart and of its diseases. A notable exhibit dealt with the most common noncyanotic kinds of congenital defects—chiefly, opened ductus arteriosus and aortic coarctation, both of which could now be corrected surgically in youth. Another booth was devoted to cyanotic types of congenital defects, in particular the tetralogy of Fallot. The pioneers in this field, Alfred Blalock and Helen Taussig of Baltimore, had operated successfully on hundreds of children, now pink, who had been blue before operation.

The serious problem of rheumatic heart disease continued to point up the need for adequate, world-wide community programs to put into effect what was already known about the disease. Many researches were in progress during 1947. Remarkably encouraging results were secured by the curative effects of adequate amounts of penicillin in the great majority of cases of subacute bacterial (malignant) endocarditis, a disease implanted on many cases of congenital and rheumatic heart defects and formerly almost always fatal.

Cardiovascular syphilis fortunately had already begun to yield to advances in the prevention and early treatment of syphilis itself. The cardiovascular diseases of middle age and older were attacked by studies of changes in the coronary arteries. Other research concerned hypertension and hypertensive heart disease and their management by diet and sympathectomy.

The two chief laboratory methods of cardiovascular examination, electrocardiography and X-ray study, were improved by the use of the unipolar and precordial leads in electrocar
raphy and with catheterization of the heart, diodrast studies
electrokymography. The last-named technique opened a
field of investigation. Devised by George C. Henny, Be
Boone and W. Edward Chamberlain of Philadelphia, it re
by "magic eye" and galvanometer the movement of the
border or change in density of the heart shadow seen o
fluoroscopic X-ray screen.

The American Heart association with its many affiliated
groups throughout the country emphasized the growing dev
ment of world-wide interest in the study and treatment of
disease and of the need for establishing community public h
programs in this field.

Registration of the pulmonary blood pressure by use o
cardiac catheter and Hamilton manometer was another si
cant development of 1947. The application of this techniqu
Lewis Dexter of Boston made it possible in 1947 to disc
the reason for previous surgical failure in the case of a y
man with chronic constrictive pericarditis and to point the
after discovery of considerable pulmonary hypertension, t
cure by resection of the pericardium posteriorly from the
ventricle and left auricle, where constriction had produce
effect like mitral stenosis on the decorticated (freed)
ventricle.

(P. D. W

**Helicopter:** *see* AVIATION, CIVIL.

**elium.** The production of helium in the United States was reported in 1947 for the first time after the fiscal ear 1939–40, when 9,450,855 cu.ft. were recovered. War de- and increased output to 16,173,430 cu.ft. in 1940–41, 29,962,- o cu.ft. in 1941–42, 58,951,155 cu.ft. in 1942–43 and a peak 137,268,144 cu.ft. in 1943–44, dropping back to 128,440,909 u.ft. in 1944–45 and 63,403,345 cu.ft. in 1945–46. These figures re to be compared with a prewar output that averaged around 000,000 cu.ft. annually.

During the war years, the prewar plant at Amarillo, Tex., was nlarged and four other plants were erected. Data on these ants had not been made public but it was known that pro- uction capacity had been increased severalfold. One of the war ants was dismantled, but the remaining plants had a capacity excess of 250,000,000 cu.ft. per year. The Amarillo plant and ne at Otis, Kan., and a third at Shiprock, N.M., had been aced in a standby condition leaving only the plant at Exell, ex., in operation.

It was announced late in 1946 that industrial consumption of elium was expected to exceed 1,000,000 cu.ft. a month, and les to private users were reported at 1,367,880 cu.ft. in Oct. 947.

(G. A. Ro.)

**emp.** The U.S. hemp crop for fibre was all grown in Wisconsin in 1947. About 5,200 ac. were planted and 900 ac. harvested; the total crop amounted to 4,655,000 lb. ive hemp mills were operated in 1947 under government ontrol.

The hemp seed crop, all grown in Kentucky, amounted to 91,000 lb. compared with a crop of 212,000 lb. in 1946. The 947 acreage was 600 ac., and the yield 485 lb. per acre. Out- ut was smaller than expected because of floods on lowlands.

(J. C. Ms.)

**irohito** (1901– ), emperor of Japan, was born April 29, the son of Emperor Yoshihito. For his early career, ee *Encyclopædia Britannica.* On Pearl Harbor day, Dec. 7, 941, he proclaimed the nation at war with the United States nd the British empire. During the early part of World War II, hen Japan was amassing victories, the emperor remained in emi-seclusion. Toward the end of the war, however, he ad- itted in an imperial rescript that the situation was "truly rave." After the Potsdam declarations, the atomic bombings nd Russia's entry into the war, the Japanese indicated they ere willing to end the conflict provided the emperor retained is prerogatives. President Truman answered (Aug. 11, 1945) hat Hirohito would be permitted to retain his throne for the ime being, subject to the authority of the supreme Allied com- ander. Thus Hirohito on Aug. 15 (Tokyo time), 1945, broad- ast to his subjects that he had ordered acceptance of the "pro- isions of the joint declaration" of the Allied powers. He later lamed Hideki Tojo, former premier, for "misusing" his war re- cript, and pledged that any social reforms in Japan would be ade by constitutional means. In a rescript issued Jan. 1, 1946, he emperor declared to be false the "conception that the em- eror is divine and that the Japanese people are superior to other aces and fated to rule the world."

In 1946, the emperor made several tours among his subjects s an "ordinary mortal"; later the new constitution (promul- ated Nov. 3) reduced the throne to the status of a national ymbol. The following year, Hirohito was absolved of war guilt harges by Joseph B. Keenan, chief Allied prosecutor, who tated (Sept. 25, 1947), that a "thorough investigation" con- inced him there was no available evidence to support these charges. In a speech at Hiroshima Dec. 7 (Pearl Harbor anniversary), Hirohito urged Japan to work for peace and never contribute to another Pearl Harbor.

**Hodgson, William Roy** (1892– ), Australian diplomat, was born at Kingston, Victoria, on May 22 and was educated at the School of Mines, Ballarat, and at the Royal Military college, Duntroon. In World War I he served in the 2nd field artillery brigade, A.I.F., and took part in the Gallipoli landings, 1917. He was attached to the general staff at Melbourne from 1921 until 1934, when he became assistant secretary, department of external affairs. In the following year he was appointed secretary, and in 1945 became Australian minister to France. He was adviser on foreign affairs to the Australian delegation at the Imperial conference, 1937. He attended the Australian-New Zealand aviation conference, Oct. 1944; the civil aviation conference at Chicago, 1944; San Francisco conference, 1945, and the United Nations general assembly, London 1946.

In March 1947 Hodgson succeeded Paul Hasluck as permanent Australian representative to the United Nations, where he was acting representative, during the absences of Herbert Evatt, on the Security council. In June 1947 he was chairman of the Atomic Energy commission, and also a member of the Commission on Conventional Armaments.

**Hogs.** The number of hogs in the United States on Jan. 1, 1947, was estimated at 59,901,000 head, 7% less than the 61,301,000 head reported a year earlier and 32% below the wartime peak of 83,852,000 head in 1944. The total pig crop of 1947 was 84,138,000 head, about 1% above the 1946 total. The government asked for an increase of 15%, but growers were cautious in view of the high price of corn. Much of the increase in production during World War II was due to new producers raising hogs with purchased feeds. As feed prices rose the new producers were forced out of business and there was a great drop from 1943 to the prewar level in 1944. Hog production being largely dependent on the corn supply, the strong demand for grain for export directly reduced the pork output.

Hog slaughter in 1947 was below the level of 1946 during the first half of the year and did not increase during the rest of the year because of the great pressure to conserve grain. The total slaughter of 1946 was 17,900,000 head.

Prices of hogs to producers were supported at $15.60 per cwt., Chicago basis. The actual average received by producers was $21.80 per cwt. in Jan. 1947, rose to $26.40 in March, held steady at about $24.00 until September when the average rose to $27.20, then declined to $24.20 in December. These high prices were attributed to the prospect of a smaller corn crop, the government drive to save grain for export and the general price level increase.

The goal for 1948 represented a sharp reduction from that of 1947; the spring pig crop was to be 6% below that of 1947 at 50,000,000 head.

World hog production in 1947 was below the 1946 level; increases in the United States did not offset the declines in Argentina, Brazil and Europe. The hog slaughter of Europe was less than one-half of pre-World War II levels, and Australia and New Zealand only three-fourths. South America was producing more than in prewar years. Canada had a decline of about 4,000,000 head in commercial hog slaughter, although total production was still 25% above prewar levels. A long packing-house strike delayed slaughter seriously. ## Home Economics.

The American Home Economics association membership reached 17,504 in 1947—866 more than in 1946. The following ten-point program of work was agreed upon at the national annual meeting in June 1947:

(1) Intensive study of problems of the family and institution groups.
(2) Improvement and extension of home-making instruction.
(3) Further improvement of professional education and stimulation of continued professional growth.
(4) Encouragement of investigations and research for the development of functioning programs in home economics and for the contribution of new knowledge in all areas of home economics.
(5) Interpretation of home economics to members, administrators, potential recruits, parents, various organizations and agencies and to the general public.
(6) Interpretation of consumer needs to education, business, civic and governmental agencies and, conversely, interpretation of the work of these groups to the consumer.
(7) Support and promotion of legislation to improve family welfare on local, state, national and international levels.
(8) Development of an active program of recruitment of workers to include effective vocational guidance.
(9) Improvement in the professional standards and status of home economics.
(10) Study of better ways and means of interpreting home economics to visitors, students and professional workers from other countries.

The association's program for 1947 included co-operation or affiliation with the following groups: Guidance of Rural Growth; National Council on Family Relations; International Federation of Home Economics Instruction; National Council of Family Life; United States information centres in occupied areas; the National Conference on Family Life; and Women's Joint Congressional committee. Continued support was given to International Scholarships for Foreign Students to study in the United States. Five scholarships were awarded to graduate students during 1947—two from China, two from India and one from the Netherlands.

Members of various committees of the association represented it at conferences called under the auspices of the commission for international educational reconstruction; the U.S. national commission of the United Nations Educational, Scientific and Cultural organization; the Institute of International Education for Advisers of Foreign College Students; and the International Scientific Management congress.

Guided by its legislative committee, the association supported appropriations for the bureau of human nutrition and home economics, the women's bureau, the office of education and the division of labour standards. The school lunch program, rent control, housing; and the flammable fabrics bill were also supported.

The Association sponsored a consumer interests program, a program of criteria for evaluating college programs of home economics, and an apprentice training program for graduate home economists planning to enter business.

**Bureau of Human Nutrition and Home Economics.**—The food research program of the bureau of human nutrition and home economics during 1947 emphasized studies of the nutritive contributions of different foods to the diet, comparative costs, and nutritional requirements. The bureau investigated methods whereby these facts could be applied by families in different circumstances to the purchase of food, the preparation of hea meals and the preservation and care of food in the home. were collected and analyzed regarding the quantities of dif foods and other goods and services consumed by families in ous regional and economic groups.

In textiles, the bureau studied the comparative usefulnes cost of fabrics and garments differing in material, constru design and finish.

Housing studies included research in the needs of famili efficiency and comfort and the development of plans for houses, including adequate work and storage centres. Sele care and use of household equipment was also stressed.

Although its budget was reduced in 1947 by $246,000, th reau distributed 5,250,000 copies of 118 technical bulleti addition to charts and photographs.

**Home Economics Extension Service.**—A total of 3,07 homes were assisted during 1947 by the home economics e sion programs—an increase of 4.92% over the averages fo preceding 5-year period. The membership of home demor tion clubs reached 1,162,346, an increase of 7.67% ove average for the same previous 5-year period. This total w addition to 2,157,883 girls enrolled in 4-H club projects v came under the guidance of extension leaders. During the 629,305 families were assisted through projects dealing family relations and child development; 608,122 through ects in home management and family economics; 793,4 buying food, clothing, household equipment and supplies; 2, 574 with clothing and textile problems; 2,995,513 with h and safety projects including improved diets, child fee prevention of colds and other health measures.

**Land-Grant Colleges.**—A subcommittee of heads of economics departments of land-grant colleges developed a for regional organization parallel with that of the experi station directors. Regional programs were set up for studi the fields of nutrition and housing, and the projects appr were allotted funds for research. The subcommittee also se criteria for judging research projects in home econo Spurred by the lack of well-trained leaders and resear within the field, the subcommittee studied methods of dev ing home economics research in land-grant colleges. (*See* Food Research.)

## Honduras.

A republic of Central America bounded Guatemala, El Salvador and Nicaragua. A 59,160 sq.mi.; pop. (1945 census), 1,200,542, including appr ately 35,000 tribal Indians. The capital is Tegucigalpa (pop. 5,715 in 1945). Other principal cities are San Pedro Sula (22,16) and La Ceiba (12,185); smaller urban centres are Puerto ortés (approx. 8,000), Choluteca (5,000), Santa Rosa (6,000) nd Tela (9,000). Religion: Roman Catholic. Language: Spanh. President in 1947: Gen. Tiburcio Carías Andino.

**History.**—Political information emanating from Honduras uring 1947 was meagre and mostly from anti-administration ources. Rumours of unrest included a futile attempt by exiles rom Nicaragua to occupy El Paraíso on Jan. 9, a shift in the arrison command at La Ceiba in April, and official persecution f the opposition press, especially on April 25 at San Pedro Sula.

Speculation on potential candidates for the Oct. 1948 presiential election continued, but without any clarification by June. he leading contenders for administration support were Juan Ianuel Gálvez, minister of national defense and former atorney for the United Fruit Co., Gen. Abraham Williams, the ice-president, and Pres. Carías Andino himself. José A. Funes, he only congressman who opposed the 1936 coup d'état, which laced Gen. Carías Andino in power, was considered the most kely choice of the opposition.

**Education.**—In 1946, 60,574 students (approximately 45% of the chilen of school age) received instruction from 2,116 teachers. The 26 secndary schools enrolled 5,226 and the national university, 433. The 946–47 budget allotted 950,734 lempiras for public education. As of an. 1, 1947, there were 30 motion picture theatres with a total seating apacity of 21,000.

**Communications.**—The banana area of the north was served by 922 mi. railroad; the main towns by 1,201 mi. of highway and 63 airfields. he government operated 2,646 mi. of telephone and 16,497 mi. of teleraph lines. There were 1,542 mi. of privately-operated telegraph lines nd four commercial radio broadcasting stations.

**Finance.**—The monetary unit is the lempira, officially valued at 49.02 ents U.S. on Sept. 15, 1947. The budget for 1946–47 estimated expendiures and revenues to balance at 14,482,493 lempiras, national defense aking the largest appropriations. As of June 30, 1946, the external debt mounted to 2,723,875 lempiras; internal, 10,666,335.

**Trade and Resources.**—Exports during 1946 were valued at $14,100,000 nd imports at $19,600,000. For the first five months of 1947, exports otalled $7,300,000 and imports $13,500,000. The main shipments in 946 were bananas (14,183,557 stems), silver (approximately 3,000,000 roy oz.), gold (approximately 21,000 troy oz.), coconuts (approximately 0,000,000 units) and coffee (approximately 160,000 bags of 132 lb.). anana exports were up 30% during the first quarter of 1947.

## Ioover, Herbert Clark

(1874– ), U.S. statesman and 31st president of the United tates (1929–33), was born Aug. 10 in West Branch, Ia. For his arlier career see *Encyclopædia Britannica.*

Hoover headed several food investigating missions for President Harry S. Truman in 1946 and 1947. His 1947 mission, nnounced on Jan. 22, was to study and recommend solutions or meeting food and collateral problems in central Europe. In is numerous reports on his findings, Hoover recommended rompt increase of food rations to German people in the Anglo-J.S. zones and immediate restoration to full production of Gernan light and heavy industries; emergency relief to Austria nd placing of relief to foreign countries on a repayment rather han a gift basis. He blamed the Soviet Union (May 26) for the conomic paralysis of Germany and Japan and warned (June 5) that continued "over-exporting" of the national resources vould impair U.S. economy.

On July 16, President Truman selected Hoover to head a bipartisan commission to survey operations of the federal government and recommend ways to simplify its vast structure. Fornally accepting the post Sept. 29, Hoover said it would be his 'last public service."

## Hops.

U.S. production of hops was estimated at 50,098,000 lb. in 1947, compared with 53,171,000 lb. in 1946 and a ten-year average (1936–45) of 40,742,000 lb. Acreage was 39,700, about the same as in 1946 but above the ten-year average of 33,990. The average yield was above average, 1,262 lb. per acre. The Washington crop was good but that of Oregon light and below average. Spread of the mildew disease in Oregon greatly reduced the harvest. California production was slightly smaller than in 1946. The price of hops in the open market was 68 cents per pound in Jan. 1947 compared with 23 cents parity; it declined to 64 cents by midyear and to 60 cents in December. (J. C. Ms.)

*U.S. Hop Production by States, 1947, 1946 and 10-Year Average*

(In pounds)

| State | 1947 | 1946 | Average 1936–45 |
|---|---|---|---|
| Washington | 20,358,000 | 19,720,000 | 12,685,000 |
| Oregon | 16,150,000 | 18,800,000 | 17,180,000 |
| California | 13,590,000 | 14,651,000 | 10,878,000 |

**Hormones:** *see* ENDOCRINOLOGY.

## Horse Racing.

Although lacking the pari-mutuel handle of the year before, many were the noteworthy accomplishments of horse racing in the United States during 1947. Among them were a record attendance of an estimated 110,000 at the Kentucky Derby; a record prize pool of $53,934,075 for 3,134 racing programs; and a new all-time money winner in Stymie, who boosted his grand total to $816,060 and gave promise of becoming the first equine millionaire in 1948.

Armed, Calumet Farm's six-year-old gelding, was rated the outstanding horse of the year. He won $376,325 with 11 first places in 17 starts. His most lucrative triumph was in the Special at Belmont park, Long Island, N.Y., where he defeated Assault by eight lengths to capture the $100,000 prize. Other leading money winners of 1947 and their totals were: Stymie, $299,775; Phalanx, $269,250; But Why Not, $225,300; Bewitch, $213,675; and On Trust, $208,575. A record number of 22 horses won more than $100,000 each during the year.

With Armed leading the way, Calumet Farm, owned by Warren Wright of Chicago, Ill., became the first racing establishment to win $1,000,000 in a single campaign. Calumet Farm colours accounted for $1,402,436 in 1947 and contributed the champion two-year-old colt in Citation and the champion two-year-old filly in Bewitch.

Three new tracks operated in 1947—Lincoln Downs, Lincoln, R.I., Golden Gate fields, Albany, Calif., and Sunshine park at Oldsmar, Fla. The 21 states in which there was thoroughbred racing in the U.S. amassed a total revenue of $90,846,537 during the year. The pari-mutuel turnover was $1,685,462,181, approximately $145,000,000 less than in the record year of 1946. Total attendance in the 21 U.S. racing states was 25,991,153.

Winner of the 73rd running of the Kentucky Derby was Maine Chance Farm's Jet Pilot. Phalanx, owned by C. V. Whitney, was rated the best of the three-year-olds however, on his $269,250 winnings for the year. Phalanx scored 6 victories in 16 starts, topped by the Belmont Stakes. Faultless won the Preakness. But Why Not was voted the best filly in the three-year-old division on her 7 triumphs in 13 engagements. She scored her biggest successes at Arlington park, Arlington Heights, Ill. with victories in the Matron and Classic.

Scoring eight successive successes while racing in the Kentucky and Chicago areas, Calumet Farm's Bewitch became the leading two-year-old of the year. She won $213,675 in annexing such features as the Debutante, Hyde Park, Arlington Lassie, Princess Pat stakes and the Washington Park Futurity.

Other winners of outstanding stakes run in 1947, with net value to winner, included: Santa Anita Handicap, Olhaverry, $98,900; Santa Anita Derby, On Trust, $81,750; Belmont Futurity, Citation, $78,430; New York Handicap, Rico Montre, $73,700; Hollywood Gold Cup, Cover Up, $73,500; Empire City Gold Cup, Stymie, $73,000; American Derby, Fervent, $70,950.

As a contract rider for Calumet Farm stables, Douglas Dodson rode the Warren Wright crest as the leading money-winner of all times. His mounts earned $1,429,949. He scored 141 firsts, 100 places and 75 shows in 647 tries. Johnny Longden led in number of wins—316—and finished second in the money circle with $1,304,025. Two other jockeys also were over the $1,000,000 line, Eddie Arcaro, steering home $1,221,479 worth of winners, and Ted Atkinson scoring with $1,070,260.

William Molter, west coast trainer, repeated as the leading conditioner of the year with 155 winners. Money honours, however, went to Horace A. "Jimmy" Jones, who topped the list with the saddling of $1,334,805 worth of mounts for Calumet Farm. Molter was second with $833,970.

Bull Lea, chief sire of the Calumet Farm stables, easily added to the Warren Wright monopoly when his get earned $1,259,418 in 1947. Next in line was Alibhal, whose offspring accounted for $833,397 in winnings. The longest-priced winner of the season was Toby J., a 225-to-1 shot at Tanforan, San Bruno, Calif. The biggest daily double pay off came Aug. 27 at Dade park, Owensboro, Ky., $7,711.20.

The "sport of kings" was saddened by the death of Man o' War, most famous of all thoroughbreds, on Nov. 1, 1947, near Lexington, Ky. He died of a heart attack at the age of 30. Other prominent horses who died during 1947 were: Beau Pere, 20 and Blue Larkspur, 21. (M. P. W.)

**Canada.**—During the 329 days of horse racing in Canada in 1947 a total of $48,519,909 was wagered at 36 meetings, a decrease of $147,835 from the amount wagered at 305 days' racing at 33 meetings in 1946. Prize money paid in 1947 t $2,323,675, an increase of $508,585 over 1946.

ASSAULT (left) starting to move up during the handicap race which he won by three lengths at Aqueduct, N.Y., in June 1947. Winnings in this race brought his life-earnings to $576,670, an all-time record in horse racing to that date

Of the total of $48,519,909 wagered in 1947, Ontar counted for $29,034,232 in 126 days' racing; British Col was second with $8,895,929 wagered during 70 days' r Manitoba was third with $4,134,448 wagered at 28 days' r Alberta fourth, with $3,220,272 during 40 days' racing; Q fifth with $2,491,268 and 50 days' racing; Saskatchewan with $743,760 wagered during 15 days' racing.

From every dollar wagered at race meetings the dor government took 5%, the tax deducted by the provinces r from 5% to 10% and each racing association was allowed centage ranging from 7% down to 3% according to the amount wagered. In Canada, all betting at race meetin what is known as running horses, must be under the pari-n system supervised by the department of agriculture. (C. C

**Great Britain.**—The first of the classic races, the Two sand Guineas, resulted in an easy victory for A. J. Dewar dor Minstrel, who won by eight lengths from Saravan and jirao in a field of 15 starters. He started favourite for the (1½ mi.) but met with his first defeat, Baron de Wal French-bred Pearl Diver winning by four lengths from I and the maharaja of Baroda's Sayajirao. This latter colt consistent performer, but took some time to come to hi form; this was found in the St. Leger, which he won by a from the French horse Arbar, with Migoli third.

Both the One Thousand Guineas and Oaks were won by Pierre Corbière's French filly Imprudence; but althoug French horses, Souverain, Chanteur II and Field Day, fill first three places in the Ascot Gold Cup, their successes w the whole less sweeping than in the previous year. Sir Joh vis's Reynard Volant put up a fine performance in winnin Ascot Stakes (2½ mi.), Mrs. F. Senior's Trimbush gain fifth success of the season in defeating the French Lauren the Doncaster Cup (2¼ mi.), and Capt. D. Fitzgerald's V way won the Cesarewitch (2¼ mi.). The Royal Hunt Stewards' Cup at Goodwood, and the Cambridgeshire, th the most popular races over shorter distances, were won, r tively, by Master Vote, Closeburn and Fairey Fulmar. among the two-year-old colts were Cobbler, whose victory Middle Park Plate was his fourth consecutive win, Bir Greetings, Leader, Pride of India, Black Tarquin, Deliriun Babu and Anschluss; the best of the fillies were Fair I Queenpot (both of whom were daughters of Big Game Careless Nora.

Gordon Richards was champion jockey for the 20th tim 269 winners in 835 rides. The Aga Khan was both the le owner and breeder, and Fred Darling, who retired at the e the season, was the leading trainer. (F. M. I

## Horses.

The horse disappeared more rapidly in the U States during 1946 and 1947 than in any pre years on record. The decline which had been accelerating the tractor came into use about 1910 was speeded in 19 the large number exported, by the larger number of older l slaughtered and by a reduced rate of breeding. The total ber was estimated at 7,251,000 head on Jan. 1, 1947, com with 8,053,000 head in 1946 and an average of 10,259,00 for the ten years 1936–45. The decreases were greatest in in north central states where tractors were increasing rapidly in number. The number of colts was only 3% total, which is not enough to replace the death loss in h Horses were the only class of livestock that declined in value during 1946 due to the fact that the value per he $59.20 was only $2 more than a year earlier. Total esti value of horses Jan. 1, 1947, was $429,133,000, the lowest

**ORGAN BROOD MARES** and their foals trotting to pasture at a farm near iddlebury, Vt., where husbandrymen of the U.S. department of agriculture orked to improve and perpetuate the U.S.-bred Morgan horse in 1947

ears of record. The average value of horses sold was steady rough 1946 and 1947 at around $56 per head.

Shipment of horses to the stockyards slaughter houses in- eased in 1946 to more than 21,000 head compared with 13,000 ead in 1945 and an average of about 7,000 head in the pre- ous five years. Total receipts at stockyards of both horses d mules for both sale and slaughter was 658,198 head in 1946, 2,130 head in 1945 and an average of about 280,000 head the previous five years, indicating the increasing rate of quidation. About 116,000 head of horses and 89,057,000 lb. horsemeat were exported in the fiscal year 1946–47.

The number of horses in the world likewise was estimated to e declining slowly because of mechanization of farming and terrupted breeding operations during World War II. No dequate world livestock census was available. The best es- mates put the total at 75,200,000 head, compared with an verage of 94,700,000 during 1934–38. The greatest decline was the Soviet Union where the total was only half the prewar vel. A slight increase was estimated in 1947 in the Soviet nion, Asia and South America. The increase in tractors in e United Kingdom made it possible to reduce the number of orses by one-fifth during the war and these are unlikely to be placed.

**Mules.**—The number of mules in the U.S. was estimated at ,773,000 head on Jan. 1, 1947, compared with 3,010,000 a year arlier. The rate of decline was about 20% in the north central tates but only 3% in the south Atlantic states. Average value dvanced during the year from $133 to $141 per head. The arket price of mules was $106 per head in Jan. 1947, rose to 109 in July, then declined again to $96 in December. Exports mounted to 23,000 head in the fiscal year ending June 1947, ompared with 4,000 head shipped in 1946. The U.S. army use f mules had practically ceased. World estimates of the num- er of mules indicated a slight decline in all countries except pain. (*See* also SHOWS, ANIMAL.) (J. C. Ms.)

**lorse Shows:** *see* SHOWS, ANIMAL.

**lorticulture.** In July 1947 congress passed a bill amending the quarantine act of 1912 by giving the .S. department of agriculture authority to limit the entry of ursery stock as a means of preventing the introduction of addi- onal plant pests and diseases. In October the secretary of griculture announced a public hearing to consider regulatory ction under this amendment. At this hearing, held in Novem- er, representatives of various state boards and of nursery and orist organizations recommended severe limitations and regulations, to be imposed at the earliest possible moment. Strong opposition to such action was expressed by representatives of horticultural and garden organizations and institutions, by plant and seed establishments and organizations in the U.S. and by representatives of the British and Canadian governments. It was argued by these protestants that the action proposed would, in effect, constitute a tariff and prove a serious obstacle to the efforts of other countries to re-establish their economies and attain recovery with a minimum of aid from the U.S. A decision was being awaited with great anxiety by such countries as England, France, Belgium, Denmark and the Netherlands.

In effect, August 1, the department of agriculture placed restrictions on the importations of cut flowers from most countries into continental U.S., Puerto Rico and Hawaii. Countries not affected were Canada, Labrador and Newfoundland. This action was taken because of the greatly increased movement of cut flowers by aeroplane. Cut flowers found to be carriers of insects or diseases must be destroyed or shipped out of the country unless adequate treatment could be given. The department began to require permits in advance for shipping in the flowers of gardenias, camellias, rhododendrons, roses and lilacs.

Congress enacted legislation providing federal control of weed killers, rodenticides and pest control devices. Labels "Poison" must appear on preparations containing poisonous substances.

The Dutch elm disease was found to be spreading rapidly in many eastern states, requiring the removal of large numbers of infected trees.

Aeroplane spraying of woodlands was extended to control the gypsy moth, this method having been found effective, quick and reasonably inexpensive, one-half pound of DDT dissolved in one gallon of oil being sufficient to cover an acre.

New soil treatments were found successful in controlling Japanese beetles, thus reducing the rapidity of their spread, but quarantine measures were continued in all or parts of 14 eastern states.

It was found that 2,4-D could be used effectively in controlling crab grass when applied to germinating seedlings but less so when used on mature plants.

Progress was made in the development of selective weed killers for various crops, including gladioli, but they need to be used when the weeds are small. By this method the weeds are killed, but the crops are not injured, the amount of hand labour required thus being greatly reduced. This method gave promise of lowered costs in the production of certain food crops.

Lily bulbs were again reported coming into the U.S., although in a limited way. Before World War II, importations from Japan totalled 25,000,000 annually. Production of these bulbs increased rapidly on the Pacific coast, but the 1947 crop probably did not exceed 10,000,000. A limited number of Madonna lily bulbs were shipped into the U.S. from northern France.

Prepared lily of the valley pips began arriving in the U.S. from Denmark. These indications of a slow recovery in commercial horticulture abroad did not change the fact that in most countries the emphasis was on the production of food crops for home use and for seed. However, an abnormally cold winter, followed by severe drought, caused heavy losses, in some instances 50%, in the northern countries. Italy was better off, with a surplus of vegetable seeds, which were sold to other European countries in competition with shipments from the U.S. Indications were that the European seed business, once very large, was well on the way to recovery. The Netherlands concentrated on the cultivation of bulbs for shipments abroad as the best method of solving its economic ills, but a very hard winter caused considerable damage to tulips. An extremely hot summer followed, with production falling below normal. Most of the other bulbs fared better, but much damage was suffered by the iris crop.

Interest in ornamentals was revived in England to such an extent that spring and fall shows were on a scale and standard comparable with prewar years. Attendance and receipts were large.

The propagation of roses was continued in England, Ireland and France, new varieties being sent to the United States to compete with originations there. The All-America Rose winners announced for distribution in 1948 were Diamond Jubilee, buff; Nocturne, dark red; San Fernando, bright red; Taffeta, carmine rose; Pinkie, light rose pink.

Reports from Canada, which has a large seed business, indicated a reduced crop of vegetable seeds, especially in British Columbia, but a satisfactory yield of flower seeds.

The George Robert White medal of honour for 1947 was awarded by the Massachusetts Horticultural society to Ernest F. Coe, known as the father of the Everglades National park in Florida, which was opened by the government late in 1947. (*See* also BOTANY; VEGETABLES.) (E. I. F.)

**Hospitalization Insurance:** *see* INSURANCE.

**Hospitals.** Hospitals during 1947 made progress toward the expansion of existing facilities and met the challenge of problems resulting from high admissions of patients, dangerous shortages of personnel—including nurses, technicians, medical record librarians and others—and difficulties in balancing budgets.

In hospital construction, the federal Hospital Survey and Construction act, commonly known as the Hill-Burton act, encouraged all states to take inventories of their hospital resources, a requirement of the legislation for those states wishing to qualify for a portion of the $75,000,000 grant available for the construction of badly needed new installations. In addition, every state developed a hospital plan based on the number of beds required to serve adequately the health needs of its rural and metropolitan citizens, another requirement of the hospital bill.

Construction on a limited number of hospitals was initiated during 1947, through the help of federal funds. There was also considerable planning for additional hospital facilities to be constructed and financed independently, without the assistance of the government.

Throughout the year, the expansion of U.S. hospital facilities progressed in spite of the fact that special studies revealed that alarming numbers of beds—32,000—were closed because of a shortage of graduate nurses and other professional and technical workers necessary for the proper operation of a hospital. In an attempt to solve the shortage of nursing personnel—a shortage resulting from increased demands for this professional service
not only by hospitals but by industry, other institutions an
federal and military services—an extensive national stu
nurse recruitment program was conducted under the directi
numerous organizations interested in nursing, hospitals an
general field of health. The campaign resulted in the enrol
of approximately 40,000 new student nurses—an increas
one-third over the number recruited in 1946 and the la
number admitted to schools of nursing during any peace
year.

While many hospitals were obliged to increase their
during the year to meet increased operating costs, the p
continued its demand for hospitalization. There was, how
some indication at the end of 1947 that higher hospital
were reducing hospital occupancy. Nonetheless, the new
did not affect significantly the 40,000,000–50,000,000 of
population who held membership in hospital prepayment p
This tremendous group protected by hospital insurance
tinued to utilize hospital facilities to the full extent of
needs.

The year 1947 saw some adjustments in premiums cha
for prepayment hospital policies, an increase deemed neces
by those hospitals which wished to continue maintaining
standards of service in the face of doubled and tripled adva
in their operational costs. In spite of some increases, the
centage of the total population insured under Blue Cross
payment plans and by commercial hospital insurance po
went up, while enrolment in medical prepayment plans gre
an even more rapid rate.

The shortage of hospital beds and the increased numb
physicians in private practice focused attention during the
on the need for a judicious apportionment of hospital be
staff physicians. There was also an increased interest in
question of the place of the general practitioner on the hos
staff, particularly in view of a trend toward relating the
tice of the individual physician to his competency in specia
fields of medicine.

Progress was made toward planning an integrated hos
system which would afford the maximum service to the p
with a minimum of investment. In developing a national
state program of this scope, both hospital administrators
representatives from the public health services were draw
gether on many common problems and worked hand-in-
toward the establishment of voluntary patterns for an integ
hospital system. (*See* also VETERANS' ADMINISTRATION.)

**Great Britain.**—The National Health Service act, which
came law in Nov. 1946, provided for the nationalization o
the hospitals in England and Wales, and was followed
similar act covering Scotland. The operative date was fixe
July 5, 1948, and the year 1947 was therefore a perio
transition. The first important step was the division by
minister of health, Aneurin Bevan, of England and Wales
14 regional hospital areas based on the well-known undergr
ate teaching hospitals. Four of these were centred on Lon
northwest metropolitan region (Charing Cross, Middlesex,
versity college, Royal Free and St. Mary's); northeast m
politan region (the London and St. Bartholomew's); south
metropolitan region (Guy's and King's college) and the so
west metropolitan region (St. George's, St. Thomas' and W
minster). The remaining ten regional hospital areas were
tred on teaching hospitals in the large cities of the provin

ion of neglect and backwardness in mental hospitals, due to understaffing
nd lack of qualified personnel, was the aim of the U.S. National Committee
or Mental Hygiene in 1947

Iewcastle Royal Victoria, Leeds General infirmary, Sheffield
oyal infirmary, Addenbrooke's at Cambridge, Radcliffe infir-
nary at Oxford, Bristol Royal, Cardiff Royal infirmary, Bir-
ningham United and the Queen Elizabeth, Liverpool Royal in-
rmary and Manchester Royal infirmary.

Members of the first regional boards were appointed by the
ninistry of health in July 1947, and by the autumn officers had
een appointed and the new boards had begun to function.
Ieantime, however, the hospitals continued to be controlled by
neir voluntary committees and by the local authorities. Great
trains arose from three sources. First, development was ham-
ered by the restrictions imposed on buildings and supplies, and
nany hospitals were able only in part to overtake arrears in
naintenance and repair work. Second, rising prices and the
egotiation of national wage scales for employees forced up the
ost per bed still further, and figures published in October
nowed that the cost per bed at London voluntary hospitals had
sen from £233 in 1938 to £490 in 1946. The rise continued
nd compelled many of the voluntary hospitals to seek financial
ssistance from the ministry of health, though the traditional
oluntary support from the public was remarkably well maintained. Third, shortage of nursing and domestic staff became still more acute.

So serious was the shortage that many beds in local authority hospitals had to remain closed in spite of heavy demands; the number of beds available for the sick in the London area during the winter months of 1946–47 fell to a lower level than at any time during World War II, and indeed lower than for many years past; and great anxiety was caused to all responsible for the admission of patients to hospital. A national campaign for part-time nurses met with some success.

A report prepared by a working party on the recruitment and training of nurses, published in September, drew attention to the high percentage of wastage of student nurses during training (estimated to approach 50% of entrants) and attributed this to four principal factors—an obsolete system of discipline, an unsympathetic attitude on the part of the senior staff, defective catering arrangements and excessive pressure of work. The working party therefore recommended: (1) that nurses in training should be accorded full student status; (2) that greater care be taken in the selection of student nurses and the use of psychological methods of selection; (3) that special training courses be devised for senior staff prior to appointment as ward sisters, etc., and (4) the reduction of the training week to 40 hr. In addition it proposed that the training should be made more comprehensive and recommended for all nurses a new two-year basic training course.

These proposals were referred by the ministry of health to the Royal College of Nursing and other interested bodies for comment. They at once incurred much criticism, especially on the ground that elimination of repetitive nursing duties and a shortening of the training period would detract from the practical bias long characteristic of nursing in Great Britain and might easily lead to an academic and at the same time shallow approach. (A. G. L. I.)

## Hotels.

Except for fires, the record of the hotel industry in 1947 was a projection of trends which began to be apparent toward the end of the preceding year. Demand for rooms continued at high levels, although two or three points below 1946; food sales held up, while beverage business declined. In particular, patronage of entertainment restaurants decreased during the year at an accelerated rate. The disappointing New Year's eve was an emphasis of the decline.

Because of the dubious profit outlook and a tightening money market, there was little new hotel financing and no new hotel construction, with the exception of a small penthouse hotel built on top of a department store structure in a midwestern city. The expansion of large hotel chains proceeded more cautiously, although the smaller chains continued to acquire a number of properties.

Hotel rehabilitation progressed slowly because of shortages of equipment and supplies. Some restaurant remodelling took place; many of the new rooms were well designed. One alteration cost the extraordinary figure of $70 a square foot.

It was significant to analysts that hotels were no longer following the upward curve of business volume. The consumer dollar was being spent more selectively, possibly for two reasons: the increasing availability of heavy consumer goods, and a wave of nostalgic sentimentality that diverted spending toward gift and holiday buying.

The customary lulls in hotel and restaurant activity during Thanksgiving and Christmas were intensified in 1947; new lows in occupancy were recorded, especially at the end of the year.

Hotel management was thus confronted with the problem of curtailing expenses to meet, in some measure, these valleys of patronage. With an uncertain labour supply and an unpredictable variation in demand for accommodations, it became inadvisable to reduce operating personnel, the method used in depression periods before the war.

Strong resistance, both public and legislative, developed toward increases in hotel room rates and restaurant charges. State police and health powers, not hitherto employed, were called upon in an effort by communities to limit rates, even to a greater degree than those imposed under the war powers of the federal administration. Rental increases were confined to an arbitrary figure of 15%, whether or not this figure applied to buildings offering no services or furnishings whatsoever, or to hotels with elaborate and costly transient accommodations.

By the end of the year, the legality of many ordinances and statutes had not been decided. The result was a confusion of practice that added to the many vexations of determining hotel policy.

The industry could no longer turn to tradition for guidance. Even the problems which were not new had reached such proportions that fresh solutions had to be discovered. Direction was handicapped by lack of an adequate technology. The few trade schools had not adjusted their teaching to meet these altered conditions.

Hotel management was also handicapped by an almost complete absence of new labour-saving machinery. For instance, dish washing, now costing three times as much per 100 units as the prewar figure, was carried on with machines virtually unchanged from the models of 20 years ago. A few hotels ordered pot-washing machines supplied by a concern which had manufactured these devices for other fields of endeavour. The only radically new equipment available was an electronic range which had barely passed the experimental stage. It was extremely costly and in use only in a few hotels.

In general, hotels needed the mechanized efficiency long enjoyed by heavy industry. The resistance to higher room rates, food and beverage prices and the continued increase in labour and other costs made greater efficiencies in hotel operation imperative. This could be accomplished only by extensive study, improvement and expansion in mechanical methods.

As 1947 drew to its close, a number of hotels had engaged experts, some from universities and some from efficiency engineering concerns, to make elaborate time studies and to do job evaluation. Unfortunately, there was no accumulated experience to guide them.

Personnel turnover was running 400% in many large properties, with a minimum cost of $25 for each job change. High wages paid in the manufacturing fields proved a temptation to hotel employees.

In presenting their annual demands, labour officials placed stress upon the cost of living and the widening gap between wage rates in hotels and outside industry. Hotel management recognized that this situation had brought about a crisis that necessitated a complete review of previous hotel practice.

Since prices in hotel restaurants and bars were as high as they could possibly go, it seemed probable at the end of 1947 that transient room charges would have to be revised substantially upward, perhaps to a degree that would bring the "break even" point to the normal level of 67% to 70% occupancy.

(E. By.)

## Housing.

The acute housing problem in the United States was not solved in 1947 despite increased production and more speedy completions. Although housing starts mounted almost to the number built in the 1925 peak year of housing production, the estimated 825,000 new units did not equal the
900,000 new families. Nor did it add up, along with the 776
units (permanent and temporary) built in 1946, to the goa
2,700,000 set for the two years 1946–47. When this goal was
it was stated that, when met, it would still leave 1,958,000 f
ilies without homes and that the families ill-housed would
be ill-housed, for the figures did not include replacements.
this reckoning, at the end of 1947 approximately 3,056
families still needed homes and approximately 4,100,000 ho
in need of major repair still needed repair or replacem
(12,663,000 of the 41,700,000 dwelling units in the U.S. in
were either in need of repair or without a private bath
flush toilet.)

On the basis of figures compiled by the U.S. bureau of
census, the Institute of Life Insurance reported that more f
ilies were living doubled up in 1947 than ever before. The st
of population surveys made in April showed that about 2,7
000 married couples or 8.3% of all couples living in pri
households, were sharing living accommodations with other
sons at that time. The high cost of living was also a fa
causing home sharing.

Great emphasis was placed upon the necessity of buildin
large number of homes for rent, but only about 8% of th
built were for rent. Building also lagged in many of the la
cities. In the first 8 months of 1947 the number of nonfed
family units started in 46 of 92 large cities surveyed was be
that started in the same period in 1946, which was a very
construction year.

Urban construction suffered because high land and const
tion costs in these areas made it practically impossible for
builder to build within the top cost limit of $1,800 per r
set by the Federal Housing administration for FHA insu
rental projects. Builders and mortgage investors unprote
by FHA insurance were afraid to put money into rental hou
built at high cost when there was a possibility that the p
erties might have to compete in future years with new impro
construction built at lower cost.

Congress enacted no new positive housing legislation in 1
It ended building controls, relaxed rent control and repe
the 1946 veterans' housing program. The Taft-Wagner-Eller
comprehensive housing bill was reported out by the se
banking committee but was not passed by the senate; it sta
in committee in the house. A very small amount of pu
housing authorized before the war was permitted to proceed
the passage of the McCarthy bill. Local housing authorities
been unable to start construction on 13,317 urban housing u
and 10,000 units in rural sections because construction c
were well above the price limitations set by the old U.S. H
ing act. The McCarthy bill authorized cities to go ahead if t
were willing to make up added costs out of their own fund

Representative Donohue (Dem., Mass.) proposed governm
"subsidy loans" in H.R. 1754 to absorb the difference betw
what veterans could afford to pay in rent and current cos
building rental housing. Loans would be made both to l
housing authorities and to private building sponsors—ba
building and loan associations, veterans' co-operatives, in
ance companies, developers. Loans would not have to be re
until all other charges had been met. If sponsors found it
possible to repay, the loans would become subsidy grants.
legislation, introduced late in the regular session, received s
cient notice to warrant expectations of attention in 1948.

On May 27, President Harry S. Truman sent a messag
congress proposing the creation of a new housing agency. Ur
the Reorganization act of 1945 the president had the powe
effect this reorganization unless congress passed a two-th
vote against it. Opponents of the measure, though vocal.
not muster sufficient votes against it in the senate. There

n July 27, 1947, the National Housing agency, created as a mporary agency under the president's war powers was super- ded by the Housing and Home Finance agency, a permanent ousing agency.

Stating frankly that it recognized the serious need for hous- g in the U.S. but had not yet agreed on a definite long-range ousing policy, congress authorized an investigation of all hases of housing just before adjournment of the regular session. n the meantime, congress made severe cuts in the appropria- ons of all of the units of the Housing and Home Financing gency (HHFA). The office of the housing expediter, which had een separated from that of the administrator of the National ousing agency early in the year, was kept separate by con- ressional action and was given rent control administration hen the Office of Price Administration expired. However, it as given a lean budget and had barely enough staff to admin- ter rent control and no staff to expedite housing construction.

An additional $35,500,000 was appropriated to complete the oving of temporary housing erected during the war from their cations, and re-erecting them to provide shelter for veterans.

Public law 239, approved by the president on July 25, 1947, arted the two-year period for the removal of temporary war ousing which was provided for by the Lanham act. This meant at all temporary war housing, except that which was needed or orderly demobilization, must be removed by July, 1949.

On Aug. 5 the president approved a $200,000,000 increase in e amount of mortgage insurance permitted under Title VI of e National Housing act. The law permitted the president urther to increase the authorization by an additional $200,- 00,000, bringing the total Title VI authorization to $4,200,- 00,000. Title VI, the main prop of the emergency-housing rogram, was given an additional $750,000,000 in the special ession, but the discussion at that time cast doubt upon 1948 ction to enlarge and extend Title VI beyond its March 31, 48 expiration date.

Public law 132, continuing the life of the Reconstruction Finance corporation until June 30, 1948, eliminated the authority of the RFC to provide a secondary market by purchasing mortgages guaranteed or insured under the G.I. Bill of Rights.

By the year's end the home builders and consumers were in a dilemma about new housing. They had seen the black market flourish under price control; they had seen building materials bootlegged and houses sold with expensive side-sales. And when all controls were lifted, prices skyrocketed. Price control was imperfect and the free market had not brought the desired relief. Allocation of scarce materials was said to be the answer. Others suggested price control limited to scarce materials. By mid-December, congress had not taken any action.

Action upon rent control was also awaited, for the Federal Rent Control act was due to expire Feb. 29, 1948. Under the provisions of the Housing and Rent act of 1947 passed July 1, landlords and tenants were permitted to agree "voluntarily" to a rent increase not exceeding 15% with a lease running through Dec. 31, 1948. Hotels were exempted and dwelling units completed after Feb. 1, 1947, were exempted from rent control unless their construction had been assisted by allocation of priorities. Eviction controls were eased, and enforcement of rent ceilings was weakened. In his message to congress on signing the bill, President Truman termed the law "most unsatisfactory" and "inadequate." In his message opening the special session of congress on Nov. 17, the president asked congress "to extend and strengthen rent control."

On Sept. 9, the Veterans' administration created a stir by attacking the high percentage of defective or inferior dwellings being sold to veterans and by promising disciplinary action against offending builders and mortgage lenders.

An even greater stir was created on Aug. 27 when a federal grand jury indicted the National Association of Real Estate Boards (N.A.R.E.B.) and the Washington Real Estate board on charges of violating the antitrust laws with "universal conspiracy to restrain trade in the housing field by fixing commission rates for real estate dealers."

Everyone considered housing a serious problem by the year's end. There were few technical solutions at hand. The usual palliatives, subsidies and tax exemptions, were suggested as means of getting housing built for families of moderate and low income. Some emphasis was placed upon the responsibility of state governments to supply assistance. At least nine states passed veterans' housing legislation in 1947.

**American Legion Housing Bill.**—The American Legion prepared a bill which was introduced the first week of the special session by Representative Edith Nourse Rogers, Senator Edward Martin and Representative Gordon L. MacDonough. It authorized any five or more veterans to establish "Veterans' Homestead associations" as nonprofit organizations to build, sell, purchase, rent, maintain or operate housing for veterans of World War II. Each member would pay $100 to be applied to his purchase or as rent security on housing limited in cost to $10,000 per unit. Permanent financing was to be provided by 40-year tax-exempt bonds secured by all of the associations' property and guaranteed as to principal and interest by the federal government. Earnings of the homestead association were to be exempt from all taxation. The bill authorized appropriations of $200,000,000 to the Federal Works administration to provide 50% grants for construction of utilities; *i.e.*, highways, schools, playgrounds, bus and fire stations, etc.; $100,000,000 for loans to associations and guarantee of association bonds; and other funds to cover Veterans' administration expenses. The act would be operative for 10 years following the declaration ending war.

The bill, carrying these frank and hidden subsidies was expected to receive favourable action in 1948 because no vocal legislative opposition was anticipated just before the national election. Many feared that, because the bill lacked protective features, veterans might not reap the advantages which the subsidies would warrant but that they might be taken by promoters and by inefficiencies due to inexperience. Efforts were being made to have the bill "tightened" to avoid such possibilities. (*See* also ARCHITECTURE; BUILDING AND CONSTRUCTION INDUSTRY; BUSINESS REVIEW; CENSUS DATA, 1947; FEDERAL WORKS AGENCY; MUNICIPAL GOVERNMENT.) (D. RN.)

**Housing and Home Finance Agency.**—The Housing and Home Finance agency was established on July 27, 1947, under Reorganization Plan No. 3 of 1947, submitted by the president and approved by the senate. The reorganization plan groups the principal permanent housing functions of the government in a single agency. With establishment of the HHFA, the wartime National Housing agency was abolished.

The HHFA covers remaining war housing responsibilities and housing functions that before World War II were scattered among 13 agencies in 7 departments and independent establishments of the government. It includes the office of the administrator and the following constituent operating agencies: the Federal Home Loan Bank board, the Federal Housing administration, and the Public Housing administration. The FHA and the PHA each have a commissioner as the administrative head of its organization, while the Federal Home Loan Bank board is composed of a bipartisan group of three. All are appointed by the president and confirmed by the senate.

In addition, the plan established the National Housing council on which the administrator, the constituent agencies, and other government departments with direct housing functions are represented. The council includes the administrator of the HHFA, who serves as its chairman, the commissioners of the FHA and the PHA, the chairman of the HLB board, the secretary of agriculture, the chairman of the board of the Reconstruction Finance corporation, and the administrator of Veterans' affairs, or designees of the latter three.

The National Housing council, which meets at least once each month, serves as a medium for securing the most effective use of all the housing functions and activities of the federal government, for obtaining consistency between these act
and the general economic and fiscal policies of the govern
and for avoiding duplication and overlapping of activitie

The administrator of the Housing and Home Finance a

munities and organizations, a total of 260,000 accommoda
for veterans would be provided by this program, more
half of which would be located at educational institutions fo
use of student veterans. By mid-1947 more than 85% o
total program had been completed. (*See* also LAW.)

(R. M. F

**Canada.**—The Government's housing target of 80,000 com-eted units in 1947 reached only 74,000 units, but that was tter than 62,500 units in 1946 and 48,000 units in 1945. (The st prewar years, the late 1920s, averaged 57,000 units an-ually.) Chief bottlenecks continued to be soil pipes, nails, rdwood flooring and wallboard.

In the 12 months to May 1947, prices of building materials creased 7½%, construction wage rates 15%, and construction sts in general 11%. Another major obstacle to the comple-on of more homes in urban areas was the lack of serviced land, actically all of which had been used by the expanding program.

To encourage construction, the government took various eps. In February, owners of new housing units were allowed epreciation at double rates, amortization periods were extended nd priorities on material were broadened. In September, con-ols covering everything from nails to plywood, from millwork fittings, were lifted. In December, housing was given steel iority.

The crown-owned Central Mortgage and Housing corporation pened a Better Farm House competition late in the year, organ-ed on a provincial basis, and offered $3,600 in prizes. The Cor-oration estimated that in 1947 about 130,000 Canadians wanted rent houses and 45,000 wanted to buy them. (C. Cy.)

**Great Britain.**—Post-war housing policy in Great Britain was overned by the need to make up the ground lost by the virtual oppage of house-building during World War II, to replace ouses destroyed during the war, and to house the increased umber of families requiring separate dwellings. At the end of e war it was estimated that 750,000 dwellings would be re uired to meet the immediate needs and a further 500,000 to eplace slums. By Nov. 1947 accommodation provided totalled 6,972 family units, more than half of which consisted of new ermanent and temporary houses and the remainder of existing remises requisitioned by local authorities or converted by pri-ate owners, or unoccupied war damaged dwellings which had een repaired.

In view of the heavy demand for houses, the high cost of uilding and the shortage of materials at the end of the war, ome order of priority in housing was necessary, and the gov-rnment decided that the criterion should be relative need. From rewar experience they considered that the greatest need was to e found among those who wanted houses to rent, and priority as accordingly given to houses built for renting. Local author-ies, who built for renting before the war and were in the best osition to judge relative need in their areas, thus became the atural agents for the government's policy. By means of gov-rnment subsidies they were able, in spite of the increased cost f building, to let their houses at rents which those who needed hem could afford to pay. The building of houses by private nterprise for sale was controlled by licences, so that the reater part of the available labour and materials was directed nto local authorities' schemes. Private builders were, however, ill doing most of the house-building, because most local author-ies did not actually build their own houses but relied on the rivate builder working under contract.

In spite of high costs and shortages the postwar council ouses were better than those built before the war. Expert con-deration was given to the design and equipment of local au-ority houses during the war and resulted in larger and better-quipped houses in the present schemes. The three-bedroom ouse for the family of five was the most common type pro-ided by local authorities, but houses of varying sizes were rovided for larger or smaller families, as well as for single or d people.

While most of the council houses were of the traditional rick-built type, a place in the program was given to prefabricated methods of building which economized on certain types of labour and materials. A program of temporary prefabricated houses was launched before the end of the war to meet the immediate postwar demand while the building industry was getting into its stride. These houses were supplied by the government and built on land provided and serviced by the local authorities, who paid an annual charge for the houses to the government, controlled the lettings and fixed the rents. In this program prefabrication produced well-built houses whose occupants were well satisfied with them. The government also launched two large schemes for permanent prefabricated houses: a steel-framed house known as the B.I.S.F. (British Iron and Steel federation) and intended for urban areas, and the Airey house, constructed of prefabricated concrete units and designed for rural areas. The B.I.S.F. and Airey houses were of the three-bedroom type. Other types of prefabricated houses were also being provided by local authorities.

Progress on the building of new houses during 1947 was handicapped by the severe winter, the fuel crisis and the continuing shortage of some important building materials. During 1946 efforts had been concentrated on securing a start on housing by every local authority. Though successful, these resulted in the letting of contracts for more houses than could be completed in reasonable time with limited resources of labour and materials, and policy for 1947 was directed toward establishing a more balanced program. A White Paper, published in January, envisaged the completion, by the end of the year, of 240,000 permanent houses out of a cumulative total of 600,000 in tenders approved and licences issued, with 60,000 temporary houses completed in the same period. By the end of March, however, it became obvious, as a result of the severe weather and the fuel crisis, that this program could not be achieved, and efforts were directed to the completion of as many as possible of the houses already under construction. The latest figures (Nov. 30, 1947) showed that 180,154 permanent houses had been completed out of a cumulative total of 512,631 in tenders approved and licences issued. The corresponding figures for Dec. 31, 1946, were 58,206 and 366,222 respectively. Thus, although progress on the completion of houses fell below expectations, a better balance between houses planned and houses completed was achieved in the program as a whole. The temporary house program was well on the way to completion with a total of 135,298 houses finished by Nov. 30.

**Europe.**—Housing in Europe faced difficulties similar to those of Great Britain, but in many cases greatly increased by war destruction. Countries such as France and the Netherlands were concentrating on the replacement of war-destroyed houses. Working-class housing in most European countries had been provided by subsidized private enterprise and state-aided housing associations and it appeared that these agencies would carry out most of the postwar housing. Their task was made difficult by greatly increased building costs and shortages of materials and labour. These were problems for the consideration of the newly-formed Housing Panel of the Economic Commission for Europe, which held its first meeting in Geneva at the beginning of Oct. 1947. (J. Cw.)

## Houssay, Bernardo Alberto

(1887– ), Argentine physiologist, was born on April 10 in Buenos Aires, Argentina. He studied pharmacy and medicine in his native city, secured his M.D. degree in 1911 and thereafter was associated with the University of Buenos Aires in various academic posts, becoming at one time director of the Institute of Physiology at the Faculty of Medicine. One of Argentina's outstanding scientists, he was honoured by about 40 universities the world over for his research on diabetes, endocrinology and the toxic effects of snake, spider and scorpion bites.

In 1946, Dr. Houssay fell out with the government of Gen. Juan D. Perón and resigned under pressure his professorship in physiology at the University of Buenos Aires. A year later (Oct. 23, 1947), he was awarded the Nobel prize in medicine jointly with Drs. Carl and Gerty Cori of the United States. Specifically, the Argentine scientist was singled out for his discovery of the significance of the hormone produced by the pituitary gland.

Irked by the honour given to an opponent of the Perón regime, *Epoca,* a government newspaper, charged that the award to Houssay had been made on "political grounds." Dr. Houssay's reaction to this accusation was that "little things" ought not be confused with the "big."

## Hungary.

A republic of southeastern Europe bounded on the west by Austria, on the north by Czechoslovakia, on the east by Rumania and on the south by Yugoslavia. Area: 35,912 sq.mi. (in 1947). Pop. (1941 census) 9,316,613, (est. 1946) 9,309,000; chief cities (pop. 1941): Budapest (cap., 1,164,963; pop. 1944, 832,800); Szeged (136,752); Debrecen (125,933); Kecskemét (87,269). Languages: Hungarian, with some German, Slovak, Croat, etc. Religion: mainly Christian (Roman Catholic, Greek Catholic and Evangelical) with Moslem minority. President: Dr. Zoltan Tildy; prime minister: Lajos Dinnyes.

**History.**—In January about 100 arrests were made by the political police, alleging a plot by an organization called the "Hungarian Community" headed by Gen. Lajos Veress de Dalnok. A people's court subsequently sentenced General Veress and the deputy George Donath and others to death; still others were sentenced to hard labour. On appeal in October two of the death sentences were commuted and many of the prison terms were reduced, but Donath was executed on Oct. 3. Foreign observers and Hungarians abroad dismissed the plot as it was presented in its official version—which spoke of an attempt to restore Adm. Nicholas Horthy's regency—as implausible, but the case made it evident that highly placed elements of the former Hungarian armed forces and administration contemplated anticommunist changes in the event of the withdrawal of the soviet forces. The plot had far-reaching political consequences. Parliament refused to waive the immunity of deputy Bela Kovacs, general secretary of the Small Landholders' party, but he was arrested by the soviet authorities. A strongly worded U.S. and British protest against this arrest was turned down by the soviet president of the Allied Control commission in Budapest, Gen. V. P. Sviridov.

In February, at the congress of the Social Democratic party, substantial progress was registered by the socialist group, led by vice-premier Arpah Szakasits, which favoured a close cooperation with the communists. Communist and socialist warnings were given to the Small Landholders' party that unless they collaborated more fully with the left wing parties the coalition would be ruptured.

The political scene was dominated by this impending crisis in the coalition until the last days of May, when Prime Minister Ferenc Nagy, on vacation in Switzerland, was requested to resign office,

PEACE MONUMENT memorializing the defenders of Budapest in World W
which was built by Russian occupation forces in Hungary and erected
above the city on the Buda side of the Danube in April 1947

turn, on the grounds that the inquiry into the Kovacs case
produced evidence against his closest collaborators and ag
himself. He refused at first to comply with this request c
resign office, but after communicating several times with B
pest by telephone, he consented to sign his resignation on
dition that his son, aged four, who he feared would be reta
as a hostage in Hungary, be brought to Switzerland to join
As soon as the document of resignation was signed, he left
the United States. A joint declaration of Agrarian lea
against soviet interference and communist predominanc
southeast Europe was published by Nagy in the United St
with Vladimir Maček for the Croat, Milan Gavrilovich for
Serb and G. M. Dimitrov for the Bulgarian Peasant par
Nagy's successor, Lajos Dinnyes, was appointed on May
Several Hungarian government representatives in foreign c
tals, including Paul Auer in Paris, Ferenc Gordon in Bern
Istvan Szegedy-Maszak in Washington, did not accept the
cial explanation that, as Dinnyes was a member of the S
Landholders' party like his predecessor, no substantial cha
had occurred, and sent in their resignations. Father Bela Va
president of the national assembly, and other eminent S
Landholder politicians took refuge abroad.

The assembly elected in Nov. 1945 was dissolved and
elections were announced for Aug. 31, 1947. Dezsö Sul
leader of those Small Landholders who were dissident or
had been expelled under communist pressure from the pa
and who were grouping under a new name as the Freedom pa
was barred from the election. Under the leadership of Zo
Pfeiffer, however, the Freedom party stood for the elec
under the new name of the Independence party. Other opp
tion groups were a new Democratic People's party with Cl
tian-social tendencies (led by Istvan Barankovics, a well-kn

tholic journalist), and the Radical party, which had no suc- s in the 1945 election, but whose ranks were now swelled Karoly Peyer, Social Democratic leader, and veteran Social emocrats who disapproved of the trend of their party. Many squalifications in the new electoral law reduced the number of ctors by about 500,000, and led to protests by the British and S. representatives of the control commission. On Aug. 31 the ctions took place: 3,007,027 votes (60%) were counted for e government coalition, which retained 269 seats, and 1,989,- 6 votes (40%) for the opposition, which received 143 seats. nong the coalition parties, the communists increased (in com- rison with Nov. 1945) from 17% to 21%, the Small Land- lders were reduced from 57% to 15% and the socialists from % to 14%. The most favoured among the opposition groups re the People's party (16%) and the Independence party 4.4%).

On Sept. 16 the peace treaty came into force, and the Allied ntrol commission, presided over by General Sviridov, with- ew, although soviet forces remained to protect the lines of mmunication with their occupation zone in Austria. The in- rnal scene showed symptoms of tension between communists d socialists; the meeting of European Communist parties in land and the establishment of the Cominform in Belgrade in tober rendered the position of the Social Democratic cabinet nisters uneasy, because they were regarded as representing ks with western socialism and especially with the Labour vernment in Britain.

In November Karoly Peyer and Zoltan Pfeiffer, deprived of rliamentary immunity, took refuge abroad to avoid arrest; e validity of the mandate of the 49 deputies of the Freedom rty was contested. A stricter control was established over ungarian passports. Meanwhile, the communist leadership it- lf seemed to undergo an internal crisis. Vice-Premier Matyás akosi's illness was officially announced, and authoritative pub- statements on behalf of the party were usually made by rnest Gerö, minister of communications.

On Dec. 8 in Belgrade Marshal Tito and Dinnyes signed a eaty of friendship, co-operation and mutual aid between Yugo- avia and Hungary. (B. Me.)

**Education.**—(1939) Elementary schools 8,103, scholars 1,104,910; gher schools 263, scholars 79,435. (1942–43) Budapest only: nursery hools 111, scholars 11,174; elementary schools 234, scholars 73,483; condary schools 83, scholars 31,643; universities 2, students 12,858; her colleges 14, scholars 2,454. There were six universities in the whole Hungary.

**Finance.**—Revenue (1946–47) 4,045,876,000 florints; expenses, 4,420,- 5,000 florints. Note circulation (Aug. 1947) 1,754,000,000 florints; gold serve U.S. $30,000,000; commercial bank deposits 505,000,000 florints; rrency: florint which superseded the pengö in 1946. 1 florint=0.0757 g. e gold.

**Trade and Communication.**—Foreign trade: imports (1946) 370,800,000 rints; exports (1946–47) 92,400,000 florints; communications: roads 946) 18,508 mi.; railways (1946) 5,416 mi.

**Mineral and Industrial Production.**—(July 1946–June 1947) in short ns: coal 956,500; pig iron and ferroalloys 273,600; steel ingots and stings 533,600; cotton fabric 119,200; crude petroleum 709,600.

**Agriculture.**—(est. production 1947) in short tons: wheat 1,324,000; e 539,900; barley 448,600; oats 206,500; potatoes 2,105,600; sugar ets 1,357,500; fodder turnips 2,682,000; melons and watermelons 264,- o; green paprika 19,400; tomatoes 73,260; onions 53,750; sunflower ed 173,560; tobacco 19,450. Livestock pop. (1947): cattle 1,404,758; rses 456,897; pigs 2,106,417; sheep 474,003; goats 88,618; fowls 66,161; geese 859,555; ducks 878,279; turkeys 124,752. (*See* also UMANIA.)

**unting:** *see* WILDLIFE CONSERVATION.

**usseini, Haj Amin el** (1900– ), Arab politician and grand mufti of Jerusalem, as born in 1900 and educated at El Azhar university in Cairo, gypt. Husseini, appointed grand mufti of Jerusalem in 1921, as the prime instigator of antisemitic disturbances in Pal- tine. Forced to flee from the Holy Land in July 1937, usseini made his way to Rome and Berlin after the outbreak of World War II and broadcast anti-Jewish propaganda over axis radio channels to the middle east. (Husseini denied in a statement made May 12, 1947, that he had ever plotted with the nazis against the Jews.) After Germany's collapse, he crossed into Switzerland, but that country deported him to France. However, he escaped from France under mysterious circumstances and on June 20, 1945, he turned up in Alexandria, Egypt.

In 1947 Husseini, still an exile of Palestine, resumed his role as chairman of the Arab Higher committee and issued violently anti-Jewish statements from Cairo. Opposed to partition of Palestine, he rallied many Moslems to his cause and organized the National Treasury, ostensibly for the purpose of raising defense funds. On Oct. 8 the mufti made a dramatic arrival in Alia, Lebanon, to confer with the Arab League council on military measures to oppose partition.

**Hutchins, Robert Maynard** (1899– ), U.S. educator, was born on Jan. 17 in Brooklyn, N.Y. His father, William James Hutchins (1871– ), minister and theologian, was subsequently president of Berea college in Berea, Ky. Hutchins left Oberlin college, Oberlin, O., in 1917 to enlist in the U.S. ambulance corps, winning the *Croce di Guerra* in action with the Italian army. Entering Yale university, New Haven, Conn., in 1919, he received his A.B. in 1921 and his LL.B. (*magna cum laude*) in 1925, subsequently receiving honorary degrees from many colleges and universities. In 1923 he was appointed secretary of Yale university and in 1927 dean of its law school. In 1929, at the age of 30, he became the fifth president (and, in 1945, the first chancellor) of the University of Chicago, where his reforms and proposals for reform made him one of the best-known and most controversial figures in the history of U.S. education.

In 1947, Hutchins returned to his university post after a year's leave of absence in which, as chairman of the board of editors of Encyclopædia Britannica, Inc., he devoted himself to the spread of adult education through the reading and discussion of great books and established the Great Books foundation for the organization of community discussion groups and the training of group leaders all over the U.S. and Canada.

Prior to his assumption of the editorial board chairmanship, Hutchins was chairman of the executive committee of Britannica's board of directors, a director of Encyclopædia Britannica Films Inc., and editor in chief of a set of great books scheduled for publication in the near future.

His university activities in 1947 included the consolidation of the famous Chicago college plan of a four-year liberal arts curriculum beginning with the usual junior year in high school. He announced the establishment of the Cancer Research foundation at the university and completed the establishment of the Institute of Radio-Biology and Biophysics and the Institute of Metals, for research in the physical and biological adaptations of atomic energy. Although he opposed the entrance of the United States into the war in 1940 and 1941, the University of Chicago, under his administration, played a central role in the development of the atomic bomb.

In 1947 he also campaigned, in speeches and writings, for international civilian control of atomic energy and against peacetime military conscription. Calling for immediate world organization and the abandonment of national sovereignty as the only hope of saving civilization from atomic destruction, he headed the Committee to Frame a World Constitution, which completed and circulated among world scholars and political leaders a draft of a world constitution.

Hutchins was also chairman of the Commission on Freedom of the Press, which declared in its report, *A Free and Responsi-*

*ble Press,* published in 1947 by the University of Chicago Press, that "the press must be accountable. It must be accountable to society for meeting the public need and for maintaining the rights of citizens and the almost forgotten rights of speakers who have no press. It must know that its faults and errors have ceased to be public vagaries and have become public dangers. The voice of the press, so far as by a drift toward monopoly it tends to be exclusive in its wisdom and observation, deprives other voices of a hearing and the public of their contribution. Freedom of the press for the coming period can only be continued as an accountable freedom." (M. S. Mr.)

**Hygiene, Industrial:** *see* Industrial Health.

## Ibn-Sa'ud

(1880?– ), king of Saudi Arabia, was born about 1880 in Riyadh, the son of 'Abd-al-Rahmān, leader of the Wahabi sect of Arabs. Ibn-Sa'ud was christened 'Abd-al-'Azīz Ibn-'Abd-al Rahmān Ibn-Faisal Ibn-Sa'ud. For his early career, see *Encyclopædia Britannica.*

In 1933 Ibn-Sa'ud granted concessions for exploitation of his oil-rich lands to U.S. oil companies. The rentals from these leases made him independently wealthy; it was estimated that when Saudi Arabian oil output reached its anticipated peak in the early 1950s, the king would receive about $50,000,000 annually.

Ibn-Sa'ud was neutral during World War II, although he favoured the British. Opposed to the establishment of a Jewish homeland in Palestine, he criticized Pres. Harry S. Truman's appeal for admission of more Jewish immigrants into the Holy Land and in a letter to the president, Oct. 17, 1946, declared that Truman's statement violated previous presidential promises to the Arabs. Early the following year (Feb. 18, 1947), Truman conferred a Legion of Merit medal on the Arabian ruler for services to the Allied cause in the war; the medal was accepted by Ibn-Sa'ud's eldest son, then in Washington.

**ICC:** *see* Interstate Commerce Commission.

## Ice Cream.

Total U.S. production of ice cream in 1947 was estimated at 622,400,000 gal., 12% less than in 1946, but 42% above the average for 1941–45. The output increased about 80% when the controls of manufacture were removed in Sept. 1945; in 1946 the high record production of 740,470,000 gal. was reached. The amount of milk and cream available was about the same in 1947 as in 1946 but the public demand slackened somewhat as prices rose. Sugar was available in ample amounts.

States of highest production were Pennsylvania, New York, Illinois, California and Ohio. Per capita consumption was estimated at about 18 lb. in 1947 compared with nearly 20 lb. in 1946, and 10 lb. in prewar years. (J. C. Ms.)

## Ice Hockey.

Canada, as usual, scored a "double" in National Hockey league competition. Les Canadiens of Montreal won their fourth straight league title, and the Toronto Maple Leafs captured the Stanley cup with playoff decisions over Montreal, four games to two, in the final. The National Hockey league, the major circuit of the sport, virtually reached the saturation point of its seating capacity with league, team and game attendance records. The six teams played to 99.6% of their seating capacity, with Chicago again leading the circuit with a record total of 521,831 customers for 30 home games. The Chicago Black Hawks also drew the largest crowd to witness a hockey game, a turnout of 20,004 on Feb. 23 for a clash with Boston. The most amazing aspect of the Chicago attendance records was that the Black Hawks were in last place most of the season. In all, the National Ho league drew 2,424,260 fans, almost 425,000 more tha 1946–47.

Montreal and Toronto finished first and second, respecti in regular league play, with Boston and Detroit third fourth, to make up the playoff field. The Canadiens def Boston and Toronto eliminated Detroit, both by four g to one, in the semifinals.

Max Bentley of Chicago again closed the season as leading individual scorer with 29 goals and 43 assists, bu linquished the Hart trophy—emblematic of the league's " useful" player—to Maurice Richard of Montreal. Richar the league in goals with 45.

William Durnan of Montreal established a new recor winning his fourth straight Vezina trophy as the league's standing goalie. The Calder trophy, awarded the outstan rookie of the year, went to Howard Meeker of Toronto, Robert Bauer of Boston won the Lady Byng trophy as league's most gentlemanly player.

Four members of the Montreal Canadiens were named t coaches' all-star team—Bill Durnan at goal, Kenneth Rea and Emile Bouchard at defense and Maurice Richard at wing. Milton Schmidt of Boston, centre and Doug Bentle Chicago, left wing, completed the team.

Hershey, Pa., emerged as American league champion w four-out-of-seven-game victory over Pittsburgh in the pl final. Hershey won the eastern division race, while Cleve topped the western sector.

Kansas City, Mo., again won the U.S. Hockey league c pionship by defeating Omaha, Neb., in the playoff final, games to one. Kansas City finished second to Omaha in northern division race, while Dallas, Tex., won the sout division.

Dartmouth college tied the University of Toronto for intercollegiate hockey crown, their playoff game resulting 2–2 deadlock. The Dartmouth team, playing as the Han N.H., Indians, won the National Amateur Athletic union c pionship with a 6 to 2 victory over Boston Amateur ass tion. Czechoslovakia won the world's amateur hockey title.

(M. P. W

## Iceland.

An island republic of the North Atlantic. A 39,768 sq.mi.; pop. (census 1940): 121,474; 1945) 126,000. Capital: Reykjavik, the only large town ( 1945 est. 46,000). Religion: Lutheran Christian. Presid Sveinn Björnsson. Prime minister: Olafur Thors (whose year-old coalition government resigned on Oct. 10, 1946, continued to function on an interim basis until Feb. 3, 19 after Feb. 3, Stefan Johann Stefansson.

**History.**—The long government crisis lasted all through autumn of 1946. It had been inaugurated by Communist o sition to the new agreement with the United States. Accor to this agreement U.S. military personnel were withdrawn Keflavik airport, but a small civilian staff remained and Ar cans were to have rights to use the field as long as the occupation of Germany continued. On this issue the two C munist ministers left the government, but a new ministry not formed until Feb. 1947. Replacement of the Commu by the two Progressives gave the administration a shift to the right.

Iceland's inflation, serious during World War II, became r troublesome in 1947. The price index, using 100 for 1939, at 285 at the opening of 1946, 302 in Oct. 1946, 310 in 1947 and 325 in Oct. 1947. One of the pieces of foresigh the war period was to set aside 300,000,000 kr. as a re struction fund. This profit from war trade and occupation ing used in 1947 to buy machinery. The adverse balance of ade was therefore nothing to cause concern. A favourable ring fishing season made prospects bright, but the summer ought disaster. While drought plagued western Europe and uch of the U.S., Iceland was soaked with rain; hay would not y, and farmers with livestock were in a precarious position. eantime, the summer herring fishing was largely a failure, and eland's chief means of obtaining foreign exchange suddenly sappeared. Hence, prices rose and the country had to revoke nport licences for all but essential goods.

Before these events had brought discouragement, however, eland had contributed to U.N.R.R.A. and in voluntary aid to her countries 27,400,000 kr. since the end of World War II. nis was about 215 kr. per capita, a rate higher than that of ny other country except the U.S.

The most earnestly debated international dispute was Icend's demand for the return of manuscripts illustrating Icend's golden age in literature, collected by Danes and long ld in Danish collections. The Danish prime minister finally nounced that if Iceland had a moral right to the manuscripts should have them regardless of juridical rights and without mpensation in any form.

**Finance.**—Monetary unit: króna=15.4 U.S. cents. Notes in circulation ec. 31, 1945) 177,410,000 kr.; gold reserve (Dec. 31, 1945) 5,736,000 . Bank deposits were 452,421,000 kr. in July 1943. Note circulation mped from 24,580,000 kr. in Jan. 1941 to 123,810,000 kr. in Aug. 43; loans in the same period from 92,137,000 kr. to 170,594,000 kr. ld reserves and bank capital remained in 1946 practically at the 1939 ures. The government budget of 1939 had balanced at about 19,000,o kr. In 1945 expenditure was 143,000,000 kr. and revenues 165,000,o kr., giving a surplus of 22,600,000 kr. For 1947 the estimates were: penditures 146,000,000 kr., revenues 136,000,000 kr.

**Trade and Communication.**—In 1945 exports totalled 267,261,000 kr. d imports 319,755,000 kr.; 90% of the exports went to Great Britain d most of the rest to the United States while about 65% of the imrts were supplied by the United States and 21% by the United Kingm. Exports were almost entirely fish and fish products (95%); imrts consisted chiefly of: fuels and lubricants 26,000,000 kr., metal and ineral products 39,000,000 kr., machinery and appliances 31,000,000 ., textile products 56,672,000 kr., food products and tobacco 40,000,o kr. and wood cork and paper 26,000,000 kr. In 1946 and 1947 trade as shifting to the U.S.S.R. because of the inability of Britain and the nited States to use Iceland's fish at a good price.

Iceland has no railroads, but in 1944 highways totalled 3,107 mi. nere were 1,923 passenger cars, 192 buses, 1,991 trucks and 172 motorcles. Also in 1944 there were 11,500 telephones and 27,339 radio ts in Iceland.

American Overseas Airlines inaugurated a Washington to Reykjavik rvice March 17.

**Agriculture.**—For 1944 the chief crops were: field hay 140,000 metric ns, meadow hay 80,000 metric tons and potatoes 8,000 metric tons. Of e population, 30.6% was engaged in agriculture. The planted and eded area covered 135,000 ac. Livestock (1944) numbered: sheep 610,o, cattle 40,000, horses 60,000, goats 2,000, hogs 1,000, poultry 75,000 d fur bearers (fox and mink) 5,000.

**Fisheries.**—Of the population 15.9% was engaged in fisheries, and the tal product was 461,314 metric tons (1944).

BIBLIOGRAPHY.—Halldor Laxness, *Independent People* (1946); Helgi Briem, *Iceland and the Icelanders* (1945). (F. D. S.)

## ce Skating.

Ken Bartholomew, former G.I. from Minneapolis, Minn., returned to the U.S. throne he ccupied in 1942 by winning the national speed skating chamionship. He dethroned a fellow townsman, Bob Fitzgerald, by inning the final mile event of the nationals after each was tied or first with 140 points. Gerry Scott, also of Minneapolis, won ne women's senior speed title. She was intermediate chamion in 1946.

Mario Trafeli, 18-year-old Wayne university football player, on the North American speed title, defeating Ray Blum of aterson, N.J., 90–80. Betty Mitchell of Winnipeg, Man., won oth the North American and Canadian senior women's chamonships. Frank Stack of Winnipeg annexed the men's Canadian tle. Al Casale of Bloomfield, N.J., and Marion Hanley of New ork city were senior victors in the eastern speed tests, while lum and Miss Hanley triumphed in the mid-Atlantic chamonships.

Lasse Parkkinen of Finland won the world's speed crown, while Aake Segffarth of Sweden won the European championship.

BARBARA ANN SCOTT, of Ottawa, Canada, at Davos Platz, Switzerland, where she took the women's championship title in the European figure skating competition on Feb. 1, 1947

Richard Button of Englewood, N.J., and Barbara Ann Scott of Ottawa, Ont., highlighted the figure skating, both in America and Europe. Button out-pointed Hans Gerschwiler of Sweden in the world's championship but lost the title on the decision of the judges. Miss Scott won the women's world title, with Daphne Walker of England second and Gretchen Merrill of Boston, Mass., third.

Button retained his national figure-skating championship and also added the North American title to his laurels. Miss Merrill captured both the national and North American championships. Other national titlists were: pair—Robert Swenning and Yvone Sherman of New York city; dance—Lois Waring and Walter Bainbridge of Washington, D.C. (M. P. W.)

## Idaho.

One of the far northwestern states of the U.S., belonging to the group regionally designated as the Pacific northwest and part of the original Oregon territory, Idaho is the 12th largest state with an area of 83,557 sq.mi. It was admitted as a territory by Pres. Abraham Lincoln in 1863 and became a state on July 3, 1890. It is popularly known as the "Gem state." Pop. (1940) 524,873, of which 66.3% was rural, 33.7% urban; (est. 1944) 531,573; (est. 1948) 560,000. The estimated population in leading cities for 1947 was Boise 34,300; Pocatello 24,500; Idaho Falls 19,800 and Twin Falls 16,200. There were 3,537 Indians in the state in 1940.

**History.**—State officers, all elected for the first four-year term in Idaho's history, were all Republican and took office on Jan. 6, 1947. Gov. C. A. Robins was the first chief executive ever to be elected from the northern panhandle section of Idaho. Other officials were: lieutenant governor, Donald S. Whitehead; secretary of state, J. D. Price; attorney general, Robert E. Smylie (appointed in November to succeed Robert Ailshie, deceased); auditor, N. P. Neilson; treasurer, Leila D. Painter; superintendent of public instruction, Alton Jones. The state senate and house were both of a large Republican majority, and U.S. congressional officers were Sen. Henry C. Dworshak, Republican; Abe McGregor Goff, representative from the first congressional district, and John Sanborn from the second, both Republicans, and Glen Taylor, Democrat, elected to the senate in 1944 for the six-year term. The state legislature adopted the Peabody institute survey recommendations, which completely revised the public school system of Idaho and gave higher salary increases to teachers.

**Education.**—The school problems were greatly increased with the reorganization plans adopted by the legislature. The University of Idaho southern branch at Pocatello was granted complete status as a four-year college by the legislature and became known as Idaho State college. Lewiston Normal school in north Idaho was granted similar status and renamed Northern Idaho College of Education and Albion normal became Southern Idaho College of Education with a four-year course. Total school population in elementary, high school and colleges and universities, in both public and parochial schools, totalled 121,904. Elementary enrolment showed a substantial increase in 1947 with 85,982 students and 2,988 teachers. High school enrolment was 30,286 students with 1,318 teachers. Universities and colleges showed an enrolment of 5,636 students with 400 instructors.

**Communications.**—During the calendar year of 1946 the Idaho highway department expended $5,119,408 for construction of highways and $3,386,994 for maintaining highways. It was estimated that the department would expend $7,800,000 for construction of highways during the calendar year 1947, and $2,700,000 for maintenance.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—There are two institutions for the insane—one at Orofino and one at Blackfoot; a home for the feebleminded at Nampa; a school for the deaf and blind at Gooding and a state industrial school (reformatory) at St. Anthony, which was put under a new program in charge of M. F. Pratt, who came to Idaho from the famed Boys Town in Nebraska. The state tuberculosis hospital is at Gooding. The penitentiary located at Boise had an average of 213 inmates during the year 1947, with an ultimate capacity of 400.

**Agriculture.**—Main sources of income in southern Idaho are potatoes, sugar beets, beans, fruit, hay and dairying.

Table I.—*Principal Agricultural Products of Idaho, 1947 and 1946*

| Crop | 1947 | 1946 |
|---|---|---|
| Wheat, bu. | 40,449,000 | 34,846,000 |
| Corn, bu. | 1,012,000 | 1,092,000 |
| Oats, bu. | 7,348,000 | 7,216,000 |
| Barley, bu. | 10,767,000 | 9,345,000 |
| Sugar beets, short tons | 1,732,000 | 1,246,000 |
| Dry beans, cwt. | 2,325,000 | 2,142,000 |
| Dry peas, cwt. | 1,998,000 | 2,106,000 |
| Hay, tons | 2,430,000 | 2,430,000 |
| Potatoes, bu. | 29,480,000 | 41,160,000 |

Table II.—*Mineral Production in Idaho, 1946*

| Production | Unit | Value |
|---|---|---|
| Zinc | 138,750,000 pounds | $12,205,000 |
| Lead | 119,700,000 pounds | 12,089,700 |
| Silver | 5,985,000 troy ounces | 4,835,800 |
| Phosphate | 478,000 tons | 2,151,000 |
| Gold | 41,550 troy ounces | 1,454,250 |
| Antimony | 11,113,404 pounds | 1,055,231 |
| Cadmium | 494,501 pounds | 475,877 |
| Tungsten | 17,271 units W03 | 357,202 |
| Copper | 1,950,000 pounds | 313,950 |
| Mercury | 900 flasks | 79,200 |

**Mineral Production.**—Average figures for 1946 were made available late in 1947, since strikes and portal-to-portal legal procedure had held up the compilation. (C.A. Rs.)

**Illinois.** A north central state of the United States, admitted to the union in 1818, nicknamed the "Sucker state," sometimes called the "Prairie state." Total area 56,400 sq.mi. of which 55,947 sq.mi. are land. Pop. (1940) 7,897,241, including 3,957,149 males and 3,940,092 females; 7,504,202 white, 393,039 nonwhite. The census bureau estimated Illinois population on July 1, 1947, to be 8,221,000. Population classed as urban in 1940 was 5,809,650, rural not on farms 1,119,488, rural farm 968,103. Chicago (3,396,808) is the largest Illinois city, followed by Peoria (105,087); Rockford (84,637); East St. Louis (75,609); Springfield, the state capital (75,503).

**History.**—The outstanding 1947 event in state affairs was reapportionment of the state's congressional representation on the basis of the 1940 census. The legislature had refused to redistrict the state since 1901. The new apportionment created 26 districts of approximately equal population and increased the representation of the Chicago area from 10 to 13. Equally important was the equalization of districts in Chicago which had in 45 years reached such a degree of inequality that the 7th district had nearly 1,000,000 inhabitants and the adjoini district only 112,000. Dwight H. Green, Republican, wa ernor of Illinois in 1947.

Industrial and trade activity were at high rates in 1947 employment relief payments to the temporarily jobless dr to a low mark of 50,000 per week. Claimants for unen ment aid were 26% less in 1947 than in 1946. A total of 2 claimants were paid benefits.

The legislative session of 1947 was notable for spe money. A grand total of $1,008,427,622 was appropriated governor's estimated operating budget of $822,164,160 f 1947–49 biennium was raised to $871,339,600. The general was tapped for $15,000,000 for increased operating costs various state departments.

At the close of 1947 one-fourth of the state's 915,000 War II veterans had been paid the bonuses due them und service recognition law of 1946 which by referendum auth issuance of $385,000,000 in state bonds to pay $10 for month of home service and $15 for every month of ov service. Illinois taxpayers in the year 1946 also paid a to $3,545,699,996 in federal taxes of all kinds.

**Education.**—Public schools in Illinois in 1947 had 1,250,000 e tary and high school pupils. Of these, 257,228 were enrolled in C grade schools, a gain of 8,503 over the year before. Illinois is amo states contributing the lowest percentage of state funds to local bodies. This amount was raised from $54,646,216 in 1946 to $81 909 in 1947. The sum of $14,066,159 was appropriated for the teachers' colleges, and $60,083,000 for the University of Illinois ( nent improvements excluded).

**Social Insurance and Assistance, Public Welfare and Related Progra** Appropriations for public assistance (social welfare) during 1947 t $212,957,870; for state institutions (exclusive of permanent im ments) $69,034,745; penal institutions, $12,558,980.

The Illinois old age pension averaged $41 paid to 127,000 pens The state insists that children support aged parents. Total publ appropriated for the two year period 1947–49 was $212,637,870.

**Communications.**—The state highway commission placed under co $33,000,000 worth of highway improvements during 1947. The a before World War II was $21,000,000 per year. In addition, $15,00 for the program of farm-to-market roads was contracted for in The legislature in 1947 appropriated $112,062,256 for state high and $114,672,173 for local roads and streets, including farm-to-m roads projects. The Illinois highway system consisted of 13,683 high-type paved roads connecting with 75,000 mi. of minor feeder and lanes, of which 50,000 mi. were unsurfaced. Illinois had 11,76 of railway servicing 80% of the communities of the state.

**Banking and Finance.**—Banks operating under state charters in I on June 30, 1947, numbered 501. State banks outside of Chicag $1,341,349,051 of deposits. Within Chicago, state banks held depo $1,624,033,930. There were 375 national banks in the state. Total of all banks amounted to $11,653,742,000 including U.S. gover obligations of $5,886,299,000. Deposits amounted to $8,788,572,00 clusive of government and interbank deposits.

State tax collections increased in 1947. The sales tax amount $137,148,979 for the first 11 months of the year, a gain of $24,5 over 1946. State levies on 20,560,510 gal. of alcoholic liquors am to $3,419,345. The state debt consisted of $150,000,000 in nonc bonds due in 1954 and 1959, in addition to the soldier bonus bond and to be issued.

**Agriculture.**—Because of high prices, Illinois crops of 1947 were $1,300,000,000, an all-time high despite reduced yields of corn, oa soybeans.

Table I.—*Leading Agricultural Products of Illinois, 1947 and 194*

| Crop | 1947 | 1 |
|---|---|---|
| Corn, bu. | 343,492,000 | 514,3 |
| Soybeans, bu. | 65,196,000 | 75,0 |
| Oats, bu. | 117,005,000 | 168,6 |
| Wheat, bu. | 19,361,000 | 19,5 |

**Manufacturing.**—The value of products manufactured in Illinois in according to the last manufacturing census was $4,794,860,73 number employed was 688,800; total wages and salaries were 453,881. The principal industries and their value were: meat pa $479,501,224; steelworks and rolling mills $207,301,815; petroleu fining $122,933,528; tractors $121,550,621.

Table II.—*Production of Coal and Petroleum in Illinois, 1945, 1944 and*

| | 1945 | 1944 | 19 |
|---|---|---|---|
| Bituminous coal, net tons | 72,525,000 | 76,791,449 | 72,6 |
| Petroleum, bbl. | 75,210,000 | 77,413,000 | 82,2 |

**Mineral Production.**—Because of car shortages and frequent shut Illinois coal production in 1947 was disappointing, falling about 13 000 tons under the 1945 figure and 4,000,000 under the 1946 esti oduction of 63,767,000 tons. Only intensive drilling of new wells kept inois from showing a greater decline of oil production. Value of Illinois neral production in 1945 was $332,489,000. (L. H. L.)

**linois, University of.** George Dinsmore Stoddard, who became president of the Univer-y of Illinois in July 1946, was formally installed in May 1947.

New records in enrolment were set for the fall semester of 47 on the university's four campuses: at Urbana-Champaign ,449; Chicago professional schools of medicine, dentistry and armacy 1,381; Chicago undergraduate division at Navy pier 550 and Galesburg undergraduate division 1,682—a total of ,062 resident students.

The university completed during the year one of the largest deral housing programs in the nation, providing living space 492 temporary buildings for 3,931 persons.

The institute of aeronautics, a pioneering venture launched in 45 as a horizontal administering unit for all university aero-utical activity, had become in 1947 a leader in this field nong institutions of higher learning. Flight instruction, in-uding night flying, was provided at the 762-ac. airport and rious research projects were launched.

Operated on a similar basis was the institute of labour and dustrial relations, which was engaged in research, extension ograms and on-campus instruction. The new bureau of educa-onal research and service gave emphasis to assisting individual hool systems.

There was created in 1947 an institute of communications search which planned research and graduate teaching in a wide ea.

Under construction in the newest building on the Urbana mpus was a betatron designed to generate more than 300,000,000 volts energy and expected to produce cosmic-ray effects the laboratory. The betatron was invented in 1940 by Prof. onald W. Kerst of the university's physics department.

Major buildings under construction at Urbana included labo-tories for mechanical engineering, electrical engineering and emistry, and a dormitory for women. All were planned for mpletion by the fall of 1948.

A university regional planning committee of 40 members, orking with community leaders, neared completion of a study nd recommendations for development of a 16-county area in outhern Illinois, where there was a labour surplus and wide-pread dependency. (For statistics of endowment, enrolment, culty, library volumes, etc., *see* UNIVERSITIES AND COLLEGES.)

**literacy.** During the year 1947, intensive literacy campaigns were being developed in all corners of the world. hose in the Latin American countries were particularly reward-ng. The National Literacy campaign in Honduras was for the enefit of all illiterates over the age of 15. Honduras was di-ided into 17 departments. The capital of each of the depart-nents had a literacy commission and every village had its sub-ommission. Private individuals and teachers were under obli-ation to teach at least five persons a year. Teachers who par-cipated in the program were given preference for appointments ne following year and their work counted toward promotions. Vhen a student could read and write, his teacher applied for an xamination for him and a literacy certificate was issued to the udent when he had passed the examination.

In Nicaragua all literates between the ages of 15 and 70 were bliged to teach reading and writing to illiterates between the ges of 12 and 50.

Guatemala patterned its literacy campaign after the Mexican iteracy law of Aug. 1944. Penalties enforce the law and awards f merit, including gold medals, stimulate efforts and achieve-nents.

April 16, 1947, marked the beginning of the all-out campaign of the Brazilian ministry of education to reduce illiteracy. The 1940 census showed 52% of the people over 19 years of age were illiterate. Ten thousand teaching centres were organized; the textbooks which were adopted for the program use the system of Frank C. Laubach.

Statistics of the United States office of education showed approximately 10,000,000 adults in the United States who could not read or write. From 20% to 33⅓% of elementary and high school children failed to achieve the reading standards of their respective grades. Among solutions offered in conferences on functional illiteracy were remedial clinics in all public school systems and an intensive adult education program.

Dr. James Yen was the founder of the Mass Education movement in China. His program involved teaching the people how to read and write and also involved giving them knowledge and training to improve their living standard. Health, government, citizenship and agriculture were taught.

Food, clothing and housing problems made educational reform in Germany doubly difficult. There were in 1947 more than 2,000,000 school children between the ages of 6 and 18 in the U.S. zone, and 32,000 teachers. Lack of qualified teaching personnel and the school building shortage impeded educational reform and progress. Of former teachers 70% were denied teaching licences by the German denazification courts. This void had to be filled by inexperienced and inadequately trained teachers.

Japanese statistics stated that 99% of school-age children attended primary school before World War II. The United States Educational mission to Japan concluded that, because of the difficulty of their script, the majority of Japanese people were familiar with only 1,000 characters, which enabled them to read little more than newspaper headlines. The fact that only the most desirable students were selected for secondary school work kept literacy at a low level. The United States Educational mission proposed language reform, decentralization of school administration, new teaching methods, intensive adult education, an upward revision of compulsory education, and co-educational, tuition-free and tax-supported schools. This education was to cover nine years of schooling.

**Immigration and Emigration.** Almost 80,000,000 aliens and citizens were admitted to the United States during the fiscal year ended June 30, 1947, while approximately the same number departed. By far the greatest number, 97%, were persons who crossed and recrossed the land borders. Arrivals and departures during 1946 and 1947, exclusive of border crossers, travellers between the U.S. and the insular possessions, and agricultural and railway track labourers admitted from Mexico, were as reported in the table.

*Arrivals and Departures of Aliens and Citizens*
*During Fiscal Years Ended June 30, 1946 and 1947*

| | 1947 | 1946 |
|---|---|---|
| Arrivals: | | |
| Aliens admitted | 513,597 | 312,190 |
| Immigrant | 147,292 | 108,721 |
| Nonimmigrant | 366,305 | 203,469 |
| U.S. citizens | 437,690 | 274,543 |
| Aliens debarred | 4,771 | 2,942 |
| Departures: | | |
| Aliens | 323,422 | 204,353 |
| Emigrant | 22,501 | 18,143 |
| Nonemigrant | 300,921 | 186,210 |
| U.S. citizens | 451,845 | 230,578 |

During the fiscal year 1947, 147,292 immigrant aliens were admitted to the U.S. for permanent residence. This represented a 35% increase over the 108,721 immigrants admitted in 1946 and was the largest number admitted in any year after 1930. The principal countries from which these immigrants came were: Canada (23,467); England (20,147); Germany (13,900); and Italy (13,866). Among the immigrants were 17,018 displaced persons who were admitted under the president's directive of Dec. 22, 1945. There were 70,701 quota immigrants admitted, or 46% of the permissible quota of 153,929, and 76,591 nonquota immigrants. The principal groups of nonquota immigrants consisted of 25,736 wives, 101 husbands and 1,375 alien children of citizen members of the U.S. armed forces admitted under the act of Dec. 28, 1945, and 35,309 natives of nonquota countries, chiefly Canada and Mexico. Aliens admitted for temporary stay and resident aliens returning from a brief sojourn abroad totalled 366,305.

There were 323,422 aliens who departed during the fiscal year 1947. Of those who departed 22,501 were emigrants or aliens who left a permanent residence in the U.S. for residence of a year or more abroad. The principal countries to which emigrants went were China (2,249); Great Britain (2,134); Eire (1,851); and France (1,148). The remaining 300,921 aliens who departed were nonemigrants who had been admitted temporarily and resident aliens who planned to return to the U.S. after a temporary stay abroad.

During the fiscal year, 4,771 aliens seeking admission for 30 days or longer and 2,664 aliens who wished to come in for less than 30 days were excluded from entry into the United States.

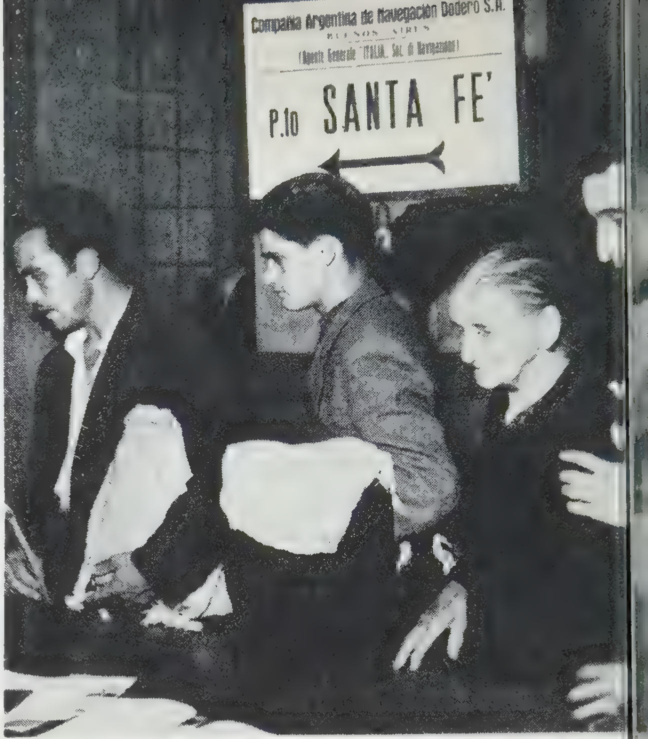
Authority for the importation of agricultural labourers was continued by congressional authorization until Dec. 31, 1947. As of June 30, 1947, there were in the U.S. 64,522 agricultural labourers, most of whom came from Mexico.

The continued increase in the number of illegal entrants, primarily at the Mexican border, who were attracted by the higher wages and better living conditions prevailing in the U.S., caused a greater number of deportations and voluntary departures of deportable aliens than in any previous year on record. The immigration border patrol apprehended 193,657 deportable aliens. During the fiscal year 1947, 18,663 aliens were deported, 195,880 aliens who had been adjudged deportable were permitted to depart at their own expense without warrants of deportation, and 88 destitute aliens were returned to their own countries at the expense of the government of the United States. (*See* also ALIENS; CENSUS DATA, 1947; REFUGEES.)

(W. B. MI.)

**Great Britain and Commonwealth.**—Emigration from the United Kingdom is stimulated by both push and pull as in all normal population movements. Dissatisfaction with conditions in the home country were partly economic (shortage of congenial accommodation, shortage of consumer goods), partly personal, and to a smaller degree, political. Unemployment, a large expulsive factor at various periods in the past, was not a general factor in 1947.

On the whole, the pull of the new country must be considered greater than the push from the old. Among the personal factors were the experience gained and the attachments formed during World War II in various parts of the British empire. Twenty-three thousand service men and women had been released overseas from the three services.



Compañia Argentina de Navegación Dodero S.A.
P.lo SANTA FE'

ITALIAN EMIGRANTS at Genoa preparing to board ship for Argentina. 100,000 applications pending, an agreement between the two nation signed on Feb. 21, 1947, providing for unlimited admission of Italians Argentina

The dominions needed population: Australia with a population of 7,000,000 and Canada with 12,000,000 were actively planning for immigration. South Africa found it politically and socially desirable to increase its white population. New Zealand could absorb more people. The rate of absorption was limited by some general factors, others were specific. The question of housing was one common strong limiting factor. nomically and geographically, Canada was in the stronger tion: the distance was not so great and building materials more readily obtainable. Canada's needs were, in the main workers in primary occupations such as mining, lumbering farming, whereas Australia needed predominantly worker secondary industries: builders, metalworkers, textile opera and technicians of various kinds. South Africa wished t tract more specifically skilled workers: printers, refrigera and radio engineers, toolmakers, diesinkers, blacksmiths coppersmiths.

Transport was difficult to obtain throughout the year movements to all these countries would have been la Ontario took vigorous action and put on special air traffic. movements were about 8,000 to South Africa, 7,000 to Can 6,000 to Australia and 6,000 to New Zealand.

The need for labour in the United Kingdom led to the br ing in of displaced persons from Europe, mainly Balts. T emergency volunteer workers totalled between 20,000 and 25 persons. Between 2,000 and 3,000 distressed relatives of sons resident in the United Kingdom were also admitted. though not, technically speaking, immigrants, the member the Polish Resettlement corps, who were remaining in the c try, and those refugees from nazi oppression who had bee the country for some years and were being granted British zenship added several tens of thousands to the permanent p lation of the country.

The total influx during 1947 exceeded the total outflow, in this respect the year was not typical, since the determi factors of the situation still lay in abnormal, immediate p war conditions.

## Income and Product, U.S.

Preliminary estimates the national income the gross national product of the United States for 1947 s bstantial increases over the 1946 figures. The national income se to $203,200,000,000 in 1947, as compared with $178,200,-00,000 a year earlier, while the gross national product attained record total of $231,400,000,000, as against $203,700,000,000 1946. In the case of both these measures of over-all busi-ss activity, the primary influence accounting for the expan-on in dollar value was the inflationary trend of prices which rsisted throughout the year.

**Meaning of National Income and Gross National Prod-t.**—National income as understood in this survey represents a mmation of the net earnings of the various factors of pro-ction derived from their association in current economic pro-ction. Both money income and income in kind are included, long as they are derived from participation in current pro-ction. Such income receipts as relief, unemployment bene-s, pensions, gifts, capital gains or losses and gains from il-gal activities are excluded since they do not represent earn-gs derived from current productive activity. The incomes cluded in the compilation are net incomes; that is, in the case business enterprises, the incomes are counted after deduc-on of costs of doing business and after allowance for deprecia-on and indirect business taxes. The estimates are limited to ose incomes which are ordinarily derived from the market onomy. Thus, the value of the services of housewives is not cluded, whereas the income derived from government em-oyment is included. It is well to emphasize that the national come is not simply the sum of money incomes of all persons the U. S., such as might be reported for income tax purposes.

The gross national product, as measured by the U.S. depart-ent of commerce, represents a summation of three major mponents: (1) the market value of goods and services flow-g to consumers, (2) the value of the gross output of capital ods retained by private business, and (3) the cost value the goods and services produced or purchased by govern-ent. The gross national product differs from the national in-me in that no allowance is made for depreciation and other serves (which constitute business expenses in the computation income) or for indirect taxes paid by business.

Taken together, the national income and national product timates provide a comprehensive picture of the current eco-omic activity of the U.S. as a whole. The two sets of estimates present the receipts (national income) and expenditures (na-onal product) sides of a consolidated national account show-g the major transactions that occurred during the year rela-ve to current production of goods and services. The data are seful in giving quantitative expression to economic trends nd problems of the national economy as well as in comparing ne operations of an individual business firm with the national tals for all economic activity.

**Revision of National Income Data.**—The department of commerce pub-shed a special *National Income Supplement* to the *Survey of Current usiness* in July 1947, which contained thoroughly revised national in-me statistics for the period 1929–46. It also provided a description of e general approach used in estimating the official figures for the U.S. come and gross national product and a series of definitions of the vari-s aggregates. The revised statistics were presented in much greater de-il than previously in a series of more than fifty tables.

While many of the changes made in the national income estimates ere offsetting, the net effect of the conceptual and statistical revisions as to raise the general level of the national income and the national roduct estimates. This was particularly the case in the data for the ar period.

**Changes in U.S. National Income, 1929–47.**—Estimates of national in-me from 1929–47 are shown in Table I.

The estimates in the accompanying tables are in terms of dollars, and nsequently are affected by the general level of prices as well as by the ysical quantity of goods and services produced. Since for many pur-ses the physical quantity of national production, or real national in-me, is required, a series reflecting changes in this volume is also shown Table I, average prices of 1939 being used as a base.

In assessing the importance of the rise in national income over a eriod of time, it is essential to take account of the increase in popula-on. As population rises, there are more persons to share in the goods eing produced for present and future consumption and also more hands available for contributing to total output. The changes in income produced per capita, after adjustment for fluctuating prices, are shown in Table I.

Table I.—*National Income in Current and 1939 Dollars*

| Year | Current dollars Total (In 000,000,000s, of dollars) | 1939 Dollars Total (In 000,000,000s, of dollars) | 1939 Dollars Per capita |
|---|---|---|---|
| 1929 | 87.4 | 70.5 | $579 |
| 1930 | 75.0 | 62.0 | 504 |
| 1931 | 58.9 | 54.5 | 439 |
| 1932 | 41.7 | 42.6 | 341 |
| 1933 | 39.6 | 42.1 | 335 |
| 1934 | 48.6 | 49.1 | 388 |
| 1935 | 56.8 | 56.2 | 442 |
| 1936 | 64.7 | 64.0 | 500 |
| 1937 | 73.6 | 70.1 | 544 |
| 1938 | 67.4 | 66.1 | 509 |
| 1939 | 72.5 | 72.5 | 554 |
| 1940 | 81.3 | 80.5 | 610 |
| 1941 | 103.8 | 97.9 | 735 |
| 1942 | 136.5 | 118.7 | 881 |
| 1943 | 168.3 | 141.4 | 1036 |
| 1944 | 182.3 | 148.2 | 1073 |
| 1945 | 182.8 | 145.1 | 1040 |
| 1946 | 178.2 | 130.1 | 921 |
| 1947* | 203.2 | 130.3 | 905 |

*First three quarters actual; last quarter estimated.

By the end of 1946, the job of reconversion was virtually completed so that during the year 1947 only a gradual increase in output could be accomplished. For the year as a whole, however, the level of output was above that of 1946, since the trend in the earlier year was more sharply upward. This increase in total production in part accounts for the expansion of the national income from $178,200,000,000 in 1946 to the record total of $203,200,000,000 in 1947. Much more significant, however, was the substantial rise in prices that occurred during the year as a result of the inflationary potential that had been built up during the war. It may be seen from Table I that after adjustment for the change in the cost-of-living index there was only a small increase in the national income over the level of the preceding year. It is highly probable that the figures in the table in terms of 1939 dollars understate the increase in real output since the cost-of-living index is not representative of the entire range of goods and services covered by the national income.

**Distributive Shares of the National Income.**—The fact that the economic situation in 1946 was dominated by the effort to reconvert industry to a peacetime basis, while that of 1947 was subject to strong inflationary pressure with only a moderate increase in production, is reflected in the changes in the distributive shares of national income, shown in Table II. The main differences between the two years can be seen in the trends of wages and salaries and profits.

The downward trend of wages and salaries was reversed in 1947, when this component of the national income increased to $123,200,000,000 from $111,100,000,000 in 1946. While this rise was considerably less than the increases recorded during some of the war years, it is significant that it was occasioned by only a moderate increase in employment. There was little change in the average length of the work week and employment increased by less than 500,000 persons. Hence, the primary influence accounting for the increase in wages and salaries was the higher rates of pay that were in effect in 1947.

The several categories of business income recorded the marked increases that can be expected in a period of rapidly rising prices. Unincorporated business and professional income increased from $19,700,000,000 in 1946 to $22,400,000,000 in 1947. This rise was of about the same magnitude as that of the preceding year, though it was generated much more by higher prices than by an increased volume of business. As the prices of farm products rose appreciably, net farm income also advanced from $15,200,000,000 in 1946 to $18,300,000,000 in 1947, a larger increase than was recorded in the preceding year.

Table IV.—*Personal Income and Disposition of Income*

(In 000,000,000s of dollars)*

| Item | 1939 | 1945 | 1946 | 1947 |

| Less: Personal consumption expenditures | 67.5 | 121.7 | 143.7 | 164.5 |
| Equals: Personal saving | 2.7 | 29.0 | 14.7 | 11.1 |

*Detail will not necessarily add to totals because of rounding.
†First three quarters actual; last quarter estimated.

Corporate profits recorded a substantial rise in 1947. Profits before taxes increased to $28,200,000,000 during the year, from $21,100,000,000 in 1946, while after allowance for tax liabilities the estimated increase was from $12,500,000,000 to $17,000,000,000. The large demands upon corporate funds that arose through the higher value of inventory holdings and through the need for business expansion and modernization, probably limited the increase in dividends in 1947. There was, however, an increase of $1,000,000,000 over the level of 1946, which is a sizeable rise for this type of income.

**Gross National Product.**—The latest available data on the gross national product are shown in Table III. In 1947, this measure of the value of total output increased to the new high level of $231,400,000,000, as compared with $203,700,000,000 a year earlier.

From the standpoint of judging the character of the economic boom, it should be recognized that the fundamental impetus to expansion in 1947 came from the record level of investment demand. Gross private domestic investment reached a figure of $30,500,000,000, up 24% from 1946 and more than 3 times the 1945 figure. Moreover, the huge demand for goods from abroad resulted in an unusually large net balance on the foreign account. Net foreign investment in 1947 amounted to $8,400,000,000, as compared with $4,800,000,000 in 1946.

It may be seen that all components of gross private domestic investment were higher in 1947 than in 1946. New construction increased by more than $2,000,000,000 to reach a total of $10,600,000,000, while expenditures for producers' durable equipment rose from $12,400,000,000 in 1946 to $17,600,000,000 in 1947. On the other hand, the increase in inventories during 1947 of $2,300,000,000 was less than in 1946 and, in total, not particularly large in relation to the size and trend of gross national product. The effect of inventory accumulation on the business situation should not be minimized, however, since the rate of accumulation was greater in the second half of the year than in the first half.

Perhaps more important than the changes in government expenditures in 1947 was the fact that government as a whole was operating at a significant surplus of receipts over expenditures. This is indicative of the pressure of private buying, particularly of investment goods, which was more than enough to absorb the government surplus. In 1947, total government purchases of goods and services declined moderately from the year before, the change being from $30,700,000,000 to $28,000,000,000. The drop in the expenditures of the federal government was somewhat larger, from $20,700,000,000 to $17,300,000,000, but this was partially offset by an increase in expenditures of state and local units from $10,000,000,000 in 1946 to $12,200,000,000 in 1947. It may be noted that government outlays as a whole were far above their prewar level of $13,100,000,000.

With prices appreciably higher and even the volume of goods available greater, consumer expenditures in 1947 rose to the record level of $164,500,000,000, from the 1946 figure of $143,700,000,000. All the major categories of consumer expenditures showed sizeable increases: durable goods purchased increased from $14,900,000,000 in 1946 to $19,700,000,000 in 1947 and expenditures on services rose from $41,700,000,000 to $45,700,000,000. More unexpected, perhaps, was the sizeable increase in the case of nondurable goods, where expenditures increased to $99,10
000 from the level of $87,100,000,000 in 1946.

**Use of Consumer Income.**—Data on the disposition of personal i
are shown in Table IV. It may be noted from the table that dis
income in 1947 increased much less than consumer spending. As
sult, there was a further decline in current personal savings, thou
was necessarily less spectacular than in 1946. The trend of saving
been downward from their peak during the war of $35,600,000,
1944 to a level of $14,700,000,000 in 1946. In 1947 there was a f
decline to $11,100,000,000. (*See* also BUDGET, NATIONAL; BU

(1,489,883); Madras (777,481); Hyderabad (739,159); La
(671,659). Principal languages: northern India (Indo-Ar
Urdu, Hindi, Bengali, Panjabi, Rajasthani, Gujarati and M
thi; southern India (Dravidian): Telugu, Tamil, Kana
Malayalam. Principal religions: Hindu (65.6%); M
(24.3%). Ruler: George VI, king emperor; viceroy and
ernor-general: Admiral Earl Mountbatten of Burma.

**History.**—On Feb. 20, 1947, the British prime min
Clement R. Attlee, announced in the house of commons th
cision of the British government to transfer power by a dat
later than June 1948 to an Indian government which, resti
the sure support of the people, would be capable of main
ing peace and administering India with justice and effici
If a constitution were not worked out by that time, the B
government would consider the question of handing over e
to some form of control government for British India,
some areas to the existing provincial governments. At the
time it was stated that Field Marshal Lord Wavell was t
succeeded as viceroy by Admiral Earl Mountbatten of Bu
The latter took over office on March 22.

The prospect of the withdrawal of British rule was vi
with uneasiness by the Indian minority parties, despite th
surances on the part of political leaders that their rights w
be respected, and trouble broke out in various parts of the c
try. The Sikhs, originally a militant Hindu sect who had
fered bitter persecution at the hands of the Mogul empero
the 18th century, had a traditional aversion to Moslem do
tion. The Punjab had been administered with conspicuous
cess by a unionist coalition cabinet of Moslem, Sikh and H
ministers under Sir Khizr Hyat Khan. In March the Mo
league forced the premier to resign, but since it was unab
form an alternative administration with the requisite maj
in the legislature, the province was taken over by the gove
Sir Evan Jenkins. Street fighting between adherents of the
parties broke out in Lahore, Amritsar, Multan and other c
of the Punjab. A serious situation developed in the North-
Frontier province. There the population was almost ent
Moslem, but there was a strong party, led by Abdul Gh
Khan, the "Frontier Gandhi," which supported the Indian
tional congress. A large section was in favour of an i
pendent Pathan state. On the other side of India, rioti
Calcutta was growing in intensity, and there was oppositio

obscure pending further decisions.

the part of the Hindu majority in Assam to inclusion in Pakistan. It was becoming more and more evident that existing provincial boundaries would have to be readjusted to meet the requirements of a system based upon racial and religious differences.

Matters now assumed so serious an aspect that the viceroy, after prolonged consultation with the Indian leaders, was convinced that the transfer of power at an earlier date was unavoidable, if disaster was to be averted. Since Indian leaders were unable to agree to a plan, partition was the only alternative.

Earl Mountbatten of Burma flew to England to lay his views before the cabinet. On July 5 a bill was laid before parliament which provided for the establishment of the dominions of India and Pakistan, to which would be transferred all the powers hitherto exercised by the British government. Full legislative authority in each dominion would be vested in its constituent assembly; and existing arrangements about posts, telegraphs, customs, communications and other subjects common to both would remain in force. The defense forces would be divided so as to give an army, navy and air force of approximately equal strength to each. To decide whether Bengal and the P
should be partitioned, the legislative assemblies of the
provinces would be asked to meet in two parts, one repr
ing the Moslem majority districts and the other the rest
province. If a simple majority of either part decided in f
of partition, division would take place and arrangements
be made accordingly. The future of the North-West Fr
province would be decided by a referendum held unde
aegis of the governor-general in consultation with the prov
government.

It was originally intended that Earl Mountbatten of B
should be governor-general of both dominions, but sinc
Moslem league refused to accept an Indian union, it was de
that he should be governor-general of the dominion of I
with its capital at Delhi, while Mohammed Ali Jinnah sh
be governor-general of Pakistan, its capital being fixed a
seaport of Karachi in Sind, and not, as was expected, at La
The prime ministers of the two dominions were Jawah
Nehru and Liaquat Ali. The Indian Independence bill
passed without opposition, the date of the transfer of p
being fixed for Aug. 15. Both Bengal and the Punjab ha

oted for partition, a boundary commission, consisting of four gh court judges, was set up for each, under the common chair- anship of Sir Cyril Radcliffe.

Independence day was celebrated with rejoicings by Indians l over the world. The withdrawal of British troops was begun. oon, however, rifts began to appear. The members of the oundary commission being unable to agree, the chairman was oliged in both cases to make an award. In eastern India, engal was divided into western and eastern Bengal, the bound- y line following the Ichamati and Ganges rivers northward to arjeeling. Calcutta was thus in the dominion of India; but the ylhet district, with its Moslem majority, was transferred from ie Indian province of Assam to Pakistan. This was effected in omparative calm, and Calcutta was spared the worst horrors communal strife, mainly because of the influence of Mohan- is Gandhi.

In the Punjab, on the other hand, matters took a serious turn. he partition line was drawn to follow the course of the Sutlej nd Ravi rivers, and ran between Amritsar and Lahore. Thus, mritsar, the sacred city of the Sikhs, was left in their hands. had, however, the effect of cutting the Sikh community in vo, 2,000,000 being in the eastern Punjab (dominion of In- a), and 1,750,000 in Pakistan; moreover, many important ikh shrines and landed estates were on the western side of the ver. This led to a concerted attempt on the part of the Sikhs eliminate the local Moslems, which in its turn provoked sav- ge reprisals. The result was a mass migration of Sikhs and indus on the one hand into the dominion of India, and of Ioslems into Pakistan on the other. Convoys of refugees flee- ig by road and rail were violently attacked and in many cases irtually annihilated. Both dominions did their best to ensure ife transit for the refugees, but this was rendered difficult by ie reluctance of troops and police to take resolute action gainst their coreligionists. By the middle of September, it was stimated that 4,000,000 people were on the move, and it was ifficult to imagine the toll of human misery involved.

By October the authorities had the situation under control, ut the economic consequences were likely to be serious. Crops ere unreaped and irrigation neglected; and this, in a coun- ry where "water is gold," was disastrous. Both dominions ere faced with the problem of resettling immense numbers of isplaced persons, and providing them with food, clothing and mployment. On the other hand, it should be borne in mind hat the disorders were confined to northern India; in the south, he transfer of power was on the whole peacefully effected.

*The Indian States.*—It was laid down in the Indian Inde- endence act that when British rule terminated, the sovereignty f the crown over the states would lapse and would not be trans- erred to successor governments. After some hesitation, most f the rulers agreed to sign instruments of accession to one or ther dominion, but the nizam of Hyderabad, the premier In- lian prince, declared that he would remain an independent overeign, though he was prepared to negotiate treaties with oth India and Pakistan. The minor states of the Deccan, Gujarat and Kathiawar formed confederations for the purpose f joining the Indian union. One result of the transfer of power vas to accelerate the introduction of constitutional government n all the leading states. Sardar Patel, head of the states depart- nent at Delhi, pointed out the necessity of surrendering defense, xternal affairs and communications to the central government; n other matters, the government of India would scrupulously espect the autonomous existence of the princes and not interfere n their domestic affairs.

A difficult position arose in cases where a Moslem prince uled over a mainly Hindu state and vice versa. In most in- stances the ruler prudently deferred to public opinion in the matter of accession. But in Kashmir, where the ruling prince was a Hindu and 85% of his subjects Moslems, a serious position arose, which might well have resulted in civil war between the dominions. Moslem tribesmen from the North-West Frontier province invaded the state and marched on the capital, Srinagar. They were with difficulty driven back by Indian forces dispatched by air from Delhi. In the little principality of Junagadh in the Kathiawar peninsula, where the reverse was the case, there were violent protests against accession to Pakistan, and it was reported that the government of India had landed forces to support the people's claim. (*See* also BURMA; FAMINES.) (H. G. RN.)

**Education.**—Recognized institutions in the Indian dominions (1945–46): primary schools for boys 147,014, for girls 20,827; scholars (boys) 8,834,742, (girls) 3,268,445. Secondary schools for boys 14,835, for girls 2,234; scholars (boys) 3,051,075, (girls) 554,443. Special schools for boys 9,710, for girls 787; scholars (boys) 379,185, (girls) 50,472. Training and professional colleges for men 104, for women 19; students (men) 36,467, (women) 2,392. Higher education: arts and science colleges for men 390, for women 64, universities 16; all students (men) 157,069, (women) 18,408. Unrecognized schools: for boys 10,318, for girls 3,246; scholars (boys) 333,287, (girls) 133,966.

**Finance.**—Central government revenue (actual 1946–47) Rs.3,361,-900,000, (est. 1947–48) Rs.2,794,200,000; expenditure (actual 1946–47) Rs.3,814,700,000, (est. 1947–48) Rs.3,278,000,000; notes in circulation (June 30, 1947) Rs.12,200,000,000; gold reserve (April 1947) U.S. $274,000,000; sterling securities (Dec. 1946) Rs.11,179,481,000; currency: rupee (Rs.1): Rs.100,000=1 lakh (written Rs.1,00,000); Rs.10,000,000=1 crore (written Rs.1,00,00,000). Exchange rate: Rs.1 =30.17 U.S. cents.

**Trade and Communication.**—Overseas trade (1946): imports Rs.2,264,-000,000; exports Rs.2,592,000,000. Communications: roads (1943): total extra municipal roads maintained by public authority 296,066 mi., of which 126,374 mi. were fit for motor transport in all weathers and 95,316 mi. in fair weather; railways (1944): route mileage, broad gauge 20,673 mi.; metre gauge 16,008 mi.; narrow gauge 3,827 mi.; under construction (1944–45) 30 mi.; passenger miles (1944–45) 37,590,722; ton miles 28,410,562. Shipping: monthly average (1946) entered 407,000 net tons; cleared 370,000 net tons. Radio licences (1947) 239,672; telephones (1945): exchanges 2,800, subscribers *c.* 125,400.

**Agriculture, Manufacturing and Mineral Production.**—See the table for figures on production in India.

*Leading Agricultural and Mineral Products of India*

| Commodity | Year | 000 short tons |
|---|---|---|
| Rice | 1946 | 44,080 |
| Wheat | 1946 | 9,964 |
| Maize | 1940 | 2,341 |
| Barley | 1941 | 2,530 |
| Cane sugar (raw) | 1946–47 | 6,245 |
| Tea | 1943 | 275 |
| Rubber | 1946 | 17.1 |
| Tobacco | 1944–45 | 461 |
| Jute | 1946 | 1,189 |
| Cotton (000's bales of 400 lb. each) | 1946–47 | 3,566 |
| Linseed | 1946–47 | 390 |
| Rape and mustard seed | 1946–47 | 1,122 |
| Groundnuts | 1946–47 | 3,911 |
| Sesamum | 1946–47 | 362 |
| Coal | 1946 | 28,356 |
| Iron ore (metal content) | 1939 | 2,193 |
| Pig iron and ferroalloys | 1946 | 1,481 |
| Steel ingots and castings | 1946 | 1,379 |
| Manganese ore (metal content) | 1941 | 539 |
| Chrome ore | 1939 | 27.5 |
| Bauxite | 1946 | 16.5 |
| Gold (000s of fine oz.) | 1946 | 168 |
| Petrol (000's U.S. gal.) | 1946 | 125,044 |

**Industry.**—Total number of factories (1943) 13,209; average number employed daily (1944) 2,520,251; cotton (1946): yarn spun 659,800 short tons, piece goods woven 3,931,000,000 yards, number of mills (1945) 417, average number employed daily 509,778; mines (1943): average number employed daily 349,361; registered unemployed (Dec. 1946) 317,524.

**India, Dominion of.** The dominion of India consists of nine provinces, viz., Assam, capital Shillong; West Bengal, capital Calcutta; Bihar, capital Patna; Bombay, capital Bombay; Central Provinces, capital Nagpur; Orissa, capital Cuttack; East Punjab, capital Jullundur; United Provinces, capital Lucknow; Madras, capital Madras. Thus, the India union covers the greater part of the peninsula up to the river Sutlej, excluding eastern Bengal. The inhabitants are predominantly Hindu by religion, with a strong Moslem element in the United Provinces and especially in the old Mogul capitals of Delhi and Agra. The East Punjab is the home of the Sikhs, originally a reformed Hindu sect founded by the *guru* Nanak, A.D. 1469–1538. In Bombay and the Central Provinces, the leading race is the Marathas, the chief inhabitants of the Deccan plateau. To the south of the Narbada river is Dravidian India, comprising the Tamil and Telugu-speaking peoples of the Madras presidency and the Kanarese-speaking people of the Carnatic. There are also numerous aboriginal tribes, mostly inhabiting tribal areas in the wild and hilly country of central India and Orissa, and separately administered.

Pop.: 320,000,000 (approximately); area: 1,221,000 sq.mi. Capital: Delhi. National flag: a tricolour of saffron, white and green, bearing in the centre the Asoka wheel (*dharma chakra*, or wheel of the law). Governor general: Admiral Earl Mountbatten of Burma; prime minister: Pandit Jawaharlal Nehru; president of the constituent assembly (replacing the Indian central legislature): Dr. Raja Prasad Sinha. (For history *see* INDIA. *See* also PAKISTAN, DOMINION OF.)

Situated in the dominion of India are numerous groups of states. The leading ones are the Sikh states of the Eastern Punjab; the states of Rajputana; the Maratha states, Central India, Gujarat and the Deccan; the Moslem state of Bhopal; and in southern India, Hyderabad, Mysore, Cochin and Travancore. The minor states had formed federations. Most of the states, except Hyderabad, signed instruments of accession to the dominion during 1947. The ultimate solution regarding Hyderabad, Jammu and Kashmir, and Junagadh remained obscure pending further decisions. Each province has parliamentary government. The drafting of a new constitution was in the hands of a constituent assembly, elected by the provincial legislatures and meeting at Delhi.

The chief commodities are cotton in Bombay and Gujarat and jute in Bengal. There are coal mines and iron and steel works at Jamshedpur in Bihar. Agricultural crops are chiefly rice, millets, sugar cane, pulses, ground nuts and tobacco. Tea is grown in Darjeeling and Assam in the northeast, and in the Nilgiris district of Madras. (H. G. RN.)

## Indiana.

An east north central state of the United States with the popular name of "Hoosier," Indiana was admitted to the union Dec. 11, 1816, as the 19th state. Total area of the state is 36,325 sq.mi., including 314 sq.mi. of inland lakes and rivers. It ranks as the 37th state in size and 10th in population (1946 est.) with 3,858,000. The 1940 official census showed the population to be 55.1% urban and 44.9% rural; 93.2% native white, 3.2% foreign-born white and 3.6% Negro. Capital: Indianapolis (pop. 1940, 386,972), the largest city. Other cities: Fort Wayne (118,410); Gary (111,719); South Bend (101,268); Evansville (97,062); Hammond (70,184); Terre Haute (62,693); East Chicago (54,637); Muncie (49,720); Anderson (41,572).

**Political History.**—The 85th general assembly met for its regular 61-day, biennial session at the beginning of 1947. Its principal acts were to raise the minimum pay for teachers, divorce the sale of liquor from politics, provide for a referendum on a soldiers' bonus, outlaw the Ku Klux Klan and similar organizations, enact a series of public health measures and authorize large expenditures to rehabilitate state institutions, prohibit strikes in public utilities, create a three-cent cigarette tax, provide for a central revenue department to collect almost all state revenues and change the budgeting, purchasing and accounting methods of the state. Elected officers of the state in 1947 were Ralph F. Gates, governor; Richard T. James, lieutenant governor; Thomas E. Bath, Jr., secretary of state; Frank T. Millis, treasurer; Alvan V. Burch, auditor; Cleon H. Faust, attorney general; Ben H. Watt, superintendent of public instruction. All were Republicans.

**Education.**—The number of public schools in the state in 1946–47 was 2,493. Enrolment in the elementary or common schools was 4 with 11,776 teachers. Enrolment in the high schools (grades 9–1 169,702, with 9,655 teachers. Parochial schools had an enrolm 48,373 in the elementary grades and 9,415 in high school. For th 1946–47, the state added $33,410,066 to the $61,900,182 spent b units of government for the support of schools. The state provide 487,242 for the 4 state colleges.

**Social Insurance and Assistance, Public Welfare and Related Progr** In 1946–47 the state's welfare program cost $29,982,654, of which 663,152 was furnished by federal funds, $8,055,561 by state fun $8,263,941 by county funds. Old-age assistance cost $19,837,923, assistance $749,396, aid to dependent children $3,485,591 and chil fare $1,305,891. Receipts of the state for unemployment insuran the year ending June 30, 1947, were $17,360,287. Benefits paid ou $8,550,557, not including federal payments to war veterans.

In 1947 the state maintained nine institutions for mental cas cluding an epileptic village; seven homes, hospitals and schools; university hospitals and six correctional institutions. As of June 30, inmates of mental institutions totalled 12,803 and inmates of corre institutions 5,421.

**Communications.**—Total mileage of state highways on June 30, was 10,465 out of a total of 76,700 mi. of roads in the state. Ex ture of the state highway commission on roads in the fiscal year 19 amounted to $27,572,067. There were 6,660 mi. of steam railroads main tracks) and 241 mi. of electric railroads. The estimated num telephones in the state at the end of 1947 was 835,000. There we airports.

**Banking and Finance.**—On June 30, 1947, there were 368 state and trust companies with total resources of $1,449,179,045 and deposits of $1,360,837,300. There were on Oct. 6, 1947, 125 na banks with total resources of $1,597,764,000 and total depos $1,506,587,000. State savings and loan companies numbered 173 Dec. 31, 1946, with resources of $152,232,508. The assets of t federal savings and loan companies as of the same date were $206,23

On June 30, 1946, the state had a balance of $107,938,177. I the fiscal year the state treasurer received $357,045,155 and dis $336,719,176, leaving a balance on hand June 30, 1947, of $128,26 As the state constitution strictly limits borrowing, there was no debt in 1947.

**Agriculture.**—Corn yield fell to 43 bu. per acre in 1947, compare 51 bu. in 1946, yet was only 1 bu. under the 10-year average. Prod was 18% less than in 1946, whereas the national decline was Heavy rains in the spring delayed corn planting until late in June. and hay also were smaller crops. Wheat and soybeans increased 1946 and so did fruit.

*Leading Agricultural Products of Indiana, 1947 and 1946*

| Crop | 1947* | 19 |
|---|---|---|
| Corn, bu. | 191,135,000 | 233,6 |
| Wheat, bu. | 35,811,000 | 29,3 |
| Oats, bu. | 34,320,000 | 55,0 |
| Soybeans, bu. | 28,176,000 | 26,1 |
| Rye, bu. | 840,000 | 6 |
| White potatoes, bu. | 3,750,000 | 4,4 |
| Barley, bu. | 520,000 | 6 |
| All tame hay, tons | 2,284,000 | 2,4 |
| Tobacco, lb. | 12,950,000 | 13,6 |
| Mint for oil, lb. | 897,000 | 6 |
| Apples, bu. | 1,489,000 | 1,3 |
| Peaches, bu. | 725,000 | 5 |
| Watermelons, melon | 3,600,000 | 4,14 |
| Tomatoes for processing, tons | 415.8 | |

*Estimated.

**Manufacturing.**—During World War II, Indiana received gover contracts for war supplies amounting to $9,000,000,000 and ranke in the U.S. in war production. The year 1947 saw resumption of p production in automobiles and automotive bodies and parts, steel, e cal machinery, furniture, glass and farm implements. Much meat pa flour milling, food canning and drug compounding were also do the state.

**Mineral Production.**—In the fiscal year 1946–47, 10,911,638 to coal were taken from 46 shaft mines. Strip mines and mines empl less than ten men were not included in these figures. (H. H.

## Indiana University.

Return to normal peacetime o tion marked the year of 1947. Th the war-stimulated enrolments continued and even incre instruction, research, faculty and staff, housing and studen tivities approached or reached a normal standard. The fa was greatly strengthened by a larger number of additions in any previous year. But it was not alone in numbers also in eminence of scholarship that the gain was made.

Research activities were increased and broadened. C pleted was a nine-year study of the sex behaviour of the A ican male, made by Dr. Alfred C. Kinsey and associate the department of zoology. The genetics group in the department, whose contributions received attention in continued its work. Likewise research went forward in nu physics, literature, social sciences and other divisions of ysical sciences.

Student and faculty housing, initiated after the war, was mpleted; construction was begun on a new student residence ll group to accommodate 1,000 students and two apartment ildings to house married students. Temporary buildings oved from military installations and re-erected relieved in part e classroom, laboratory and office shortage.

Gifts to the university increased and included $90,000 in ants for research by the school of medicine in cancer and ildren's diseases and a documentary collection to the general prary containing 8,500 items relating to the life and times of eneral La Fayette. (For statistics of endowment, enrolment, culty, library volumes, etc., *see* UNIVERSITIES AND COLLEGES.) (H. B. Ws.)

**dians, American.** Congress became fully aware during 1947 of the plight of the 62,000 avaho Indians. Starvation had become a threat on the reserva- on, and sickness was widespread. Ten Navahos were dying of berculosis for every white U.S. citizen. Publicity given to ese problems led many Congressmen to visit the reservation ring the congressional recess. While citizens contributed od, clothing and money, the special session passed a bill thorizing expenditure of $2,000,000 for emergency aid to avahos; $500,000 was appropriated immediately for direct lief.

The commercial fish-canning companies challenged in the urts the incorporation of coastal fishing areas in the Karluk servation in Alaska set up in 1943. The lower court in Alaska d the circuit court of appeals for the north circuit decided in vour of the companies, and the department of the interior commended that the case be appealed to the supreme court. July congress, with the approval of the secretary of the terior, passed a bill authorizing the department of agriculture sell timber in the Tongass national forest, including some reas which the secretary of the interior had decided several ears before belonged to the Indians. Indians in the village of ake, which had such lands, and in Kasaan, which claimed cer- ain land, declared this legislation an infringement of their rights nd entered into contracts with timber interests in the United tates for the sale of $20,000,000 worth of timber in the Indian reas.

Trial suits were filed in Arizona and New Mexico on behalf f Indians who were refused the right to vote. These were the nly two states still denying the ballot to Indians. The Social ecurity board also challenged the refusal of Arizona and New Mexico to admit reservation Indians to social security benefits.

A contract was negotiated with the Choctaw-Chickasaw tribes roviding for the sale of 300,000 ac. of coal-bearing tribal lands o the federal government for $8,500,000.

The interior department appropriation act for 1948 carried evere cuts in appropriations for administration of the Indian ervice, for the Alaska Native service and a reduction in esti- nates for Indian education. A threatened cut of one-third in he funds requested for schools, however, was defeated. (W. W. B.)

**ndo-China, French:** *see* FRENCH OVERSEAS TERRITORIES.

**ndonesia, The United States of:** *see* NETHERLANDS NDIES.

**ndonesian Republic:** *see* NETHERLANDS INDIES.

**ndustrial Health.** The medical profession was unable to meet the continuing demand for ealth services in industry during 1947 and plans were made for reating a reservoir of qualified personnel. The resident physician system adapted to industrial medical operations seemed to offer the most promising method of training and recruitment. Early in the year criteria were developed to define the standards which should govern teaching methods. According to plan, all trainees would receive adequate experience in health conservation, administrative methods, environmental hygiene and industrial medicine and surgery.

A field study of industrial health methods and costs was completed by the Industrial Hygiene foundation. Preplacement physical examination was found to be the most universally employed single activity, followed by first aid and emergency dispensary services and periodic physical examinations. Laboratories of industrial hygiene were increasing rapidly in the plants themselves in place of entire dependence on governmental or independent consulting facilities. Health and safety education were found to be at rather low levels. Cost studies demonstrated that small plants can and do avail themselves of excellent industrial health services. Original investments for small plant industrial health departments ranged from $500 to $3,000 and the upkeep from $300 to $700 per month. Over-all annual per capita expenditures for adequate industrial health services were found to lie between $10 and $12.

A symposium on beryllium and its effects on workers was conducted by the Saranac laboratory of the Edward L. Trudeau foundation to inquire into a number of puzzling characteristics of this substance. The metal has come into considerable prominence recently in metallurgy, fluorescent lamp manufacture and in the production of fissionable materials. Exposure may manifest itself in acute or in delayed forms which some observers regard as separate and distinct conditions. Pathogenesis of either form is far from clear and much additional investigation is necessary. Concern is expressed because of the large numbers of workers engaged in lamp manufacture in small uncontrolled plants or in homes without realization of the hazardous nature of the employment.

The year 1947 saw the completion of the medical survey of the bituminous coal mines areas conducted by personnel assigned from the bureau of medicine and surgery of the U.S. navy. As a result the new 1947 employment contract between the United Mine Workers and the soft coal mines operators contained some significant changes. Added income was provided by raising the royalty to ten cents per ton on all coal mined and the separate funds dealing with medical-hospital services and general welfare were combined under a single board of trustees. A medical advisory board was appointed whose chairman became the director of the health services division.

During the year also, the Hawaiian Sugar Planters association made intensive studies of medical care, hospitalization and industrial health services with a view toward increased efficiency through central administration. In contrast to the former perquisite system, the new program was to be based on mutual contributions by workers and management.

A number of states enacted occupational disease legislation. The Iowa occupational disease law specified a series of compensable diseases and provided for payments in case of partial disability under definite circumstances as well as for total disability and for death. A medical board acting in advisory capacity to the industrial commissioner is provided for in the law. The Nevada occupational disease act incorporates specific diseases which are compensable. The workmen's compensation act of New York was amended in relation to silicosis and other dust diseases and made provision for proper medical consultation, medical and surgical care and hospitalization. South Dakota passed an occupational disability law with a schedule of compensable diseases and created a medical panel whose findings would be advisory to the workmen's compensation commission. Similarly in Tennessee and Texas, schedule laws were passed and in the latter state a medical committee was set up to examine claims and make reports to the compensation board regarding all medical questions. In Montana and Vermont commissions were authorized to survey the need for occupational disease legislation. (C. M. Pn.)

**Canada.**—The industrial health division of the federal department of national health and welfare conducted an aggressive 1947 drive to raise standards. It distributed more than 100,000 health posters and pamphlets to industries. An illustrated monthly, *Industrial Health Bulletin,* was circulated to 25,000 English and 10,000 French-speaking subscribers.

The division co-operated with Nova Scotia, Saskatchewan and Alberta in specific studies of silicosis and lead and carbon monoxide poisoning. Especially assigned and trained personnel were employed to carry out estimations of the air contamination thought responsible for specific diseases. As an outcome of this type of intergovernmental work, two of the provinces concerned set up their own permanent industrial health agencies.

Investigations were carried out by the division to establish the health hazards associated with the operation of agricultural machinery. Information was provided to industries about the effectiveness of ultra-violet light and glycol sprays in the control of air-borne infections, the assessment and control of carbon tetrachloride hazard, the control of dermatitis and the status of ozone in the control of carbon monoxide poisoning.

At the end of the year the federal industrial health laboratory was engaged on the problem of developing a simple and rapid method for determining the presence, and estimating the amount, of methyl bromide in the air of plane hangars where toxic methyl bromide was stored for fire control purposes.

Looking to the health of its 120,000 employees the federal government took steps to improve working conditions in offices, research plants and stations across the dominion. Parliament passed an act creating compensation for industrial disease contracted by government employees. (C. Cy.)

**Great Britain.**—The increase in membership of the Association of Industrial Medical Officers indicated the interest in the health and welfare of their workers shown by both the private employer and the public corporation. Particularly significant was the decision to appoint a chief medical officer to the National Coal board and to the British Electricity authority.

The problem of providing an efficient medical and nursing service for the small factory employing less than 250 people, of which there were well over 200,000 in Great Britain, was formidable. Under the Nuffield trust, the Slough Industrial Health service developed its medical and nursing services for a large number of small units on a training estate and maintained, in conjunction with it, a modern recuperation centre for industrial diseases and injuries.

The universities of Edinburgh and Manchester both had a successful year in preparing doctors for the diploma in industrial health. In London, training courses were arranged by the London School of Tropical Medicine and Hygiene. The universities of Glasgow (which started its first training course), Durham and Birmingham were becoming centres of intellectual interest and research in the problems of health in industry. Birmingham inaugurated a post-graduate course for those already engaged in the practice of industrial medicine. The Medical Research council developed its own laboratories for dealing with toxicological problems and inaugurated a series of committees dealing with special subjects, for example, industrial toxicology and occupational medicine.

The Royal College of Nursing and the University of Birmingham in conjunction with the Birmingham Accident hospital, and the University of Manchester, through its short postgraduate courses, continued to train industrial nurses.
were 9,000 nurses engaged in British industry. Their w
dealing with the problems of injury and health in the f
was of vital importance. (*See* also ACCIDENTS; DERMATO
MEDICINE.) (A. J.

**Industrial Production:** *see* BUSINESS REVIEW.

## Infantile Paralysis.

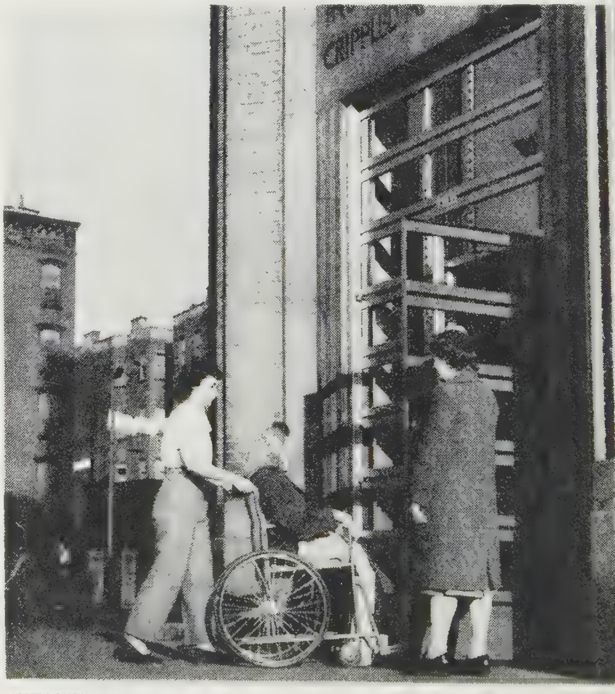
Approximately 11,000 cases o
omyelitis were reported i
United States during 1947. Major outbreaks of the diseas
limited to Delaware, Idaho, North Carolina and Ohio, w
California, Illinois, Michigan, New York and Pennsylvani
tinued to report relatively large numbers of scattered
This was the fifth consecutive year in which the nation
cidence exceeded the average for the period over which sta
had been available.

In addition to these definite cases of the disease,
America experienced many thousands of cases of a peculi
fantile paralysislike disease from which recovery was inva
complete within from two to five days. This disease wa
jected to intensive clinical and laboratory studies because
possibility that it might be a form in which there is no
pling, but as a consequence of which there may be prod
of immunity to subsequent attacks of the virus.

Whereas the number of cases of infantile paralysis
1947 in the United States was considerably less than in
the reverse was true for such countries as Austria, Ca
China, England, Germany, Hungary and Japan.

Research in infantile paralysis indicated progress towar
ter understanding of the disease process, in further amelio
of its crippling aftereffects, and in saving lives.

The distribution of the virus in the nervous tissues of t
perimental animal was studied. The virus can first be de
in the spinal cord on the day preceding paralysis. Peak c
trations of the virus are achieved within one day after it i
detected, and maximal concentrations are maintained o
period of approximately two days. Following this, there
rapid diminution in the concentration of the virus, with



INFANTILE PARALYSIS victim entering the Institute for the Cripple
Disabled in New York city. Dedicated in 1947, the institute was desig
utilize the composite science of rehabilitation developed during World

lete disappearance after approximately two weeks. This sud-en upsurge and diminution in the propagation of the virus ould indicate that the virus finds a fertile field for growth hen it reaches previously uninfected nervous tissue, but that ich growth of the virus is soon made impossible by the de-elopment of some inhibiting substance.

Experimental studies on the oscillating bed as an adjunct to e treatment of infantile paralysis showed considerable promise. ot only did this method of treatment appear to conserve cer-in elements important in metabolism (*i.e.*, calcium and nitro-en) but it also appeared to be of importance in maintaining ontrol of the circulation of blood and the normal pH of the rine. Furthermore, this method of treatment was shown to be ffective in cases of the disease with respiratory difficulties. Fol-owing the acute phase, patients were transferred from the espirator to the oscillating bed, which provided adequate as-stance to the paralyzed muscles of breathing. The use of the scillating bed in such cases seemed to be of importance, not nly because of the specific benefits and the fact that the atient was more readily available for all forms of treatment, ut also because the procedure prevented the patient from be-oming "wedded," in the psychological sense, to the respirator.

Considerable progress toward saving lives resulted from an tensified investigation of bulbar infantile paralysis—a serious orm of the disease affecting the nerve centres which con-rol breathing, circulation of blood, control of temperature and wallowing. This form of the disease had accounted for the reat majority of the deaths in infantile paralysis. New methods f treatment, which seemed to promise a reduction in fatality, vere designed to increase the amount of oxygen in the circulat-ng blood, including such procedures as administration of xygen-helium mixtures, sometimes administered by positive ressure, and control of the secretions of the pharynx by ade-uate suction, postural drainage and tracheotomy. Also, con-tant attention to the oxygen level of the circulating blood ould now be maintained by means of a device called an oxi-neter.

Finally, during 1947, there was important progress toward clearer understanding of the mechanisms of immunity in in-antile paralysis. In monkeys and human beings, convalescent rom an attack, relatively little antibody (virus-inactivating ubstance) is detectable in the circulating blood. There are, on he other hand, large quantities of infantile paralysis-inactivat-ng substance in the central nervous tissues of the convalescent monkey, and it was surmised that the presence of this substance n the brain and spinal cord might prevent a second attack of he disease with the same strain of the virus. It would appear from these studies that resistance to infantile paralysis is not so much the result of the presence of antibody in the circulating blood as the concentration of virus-inactivating substance within the brain and spinal cord.

Of potentially greater importance were the observations (1) that the concentration of antibody in the circulating blood can be progressively increased by continued intramuscular injections of live virus, and (2) that when the antibody in the circulating blood has increased approximately 1,000 times, it appears to spill over into the central nervous tissues, after which the monkey is found to be solidly resistant to large quantities of the virus even when injected directly into the brain. It remained to be seen whether or not these important observations could be reproduced with the various types of human infantile paralysis viruses which are capable of causing disease and with infantile paralysis virus which has been inactivated and is therefore incapable of causing disease.

(*See* also Ear, Nose and Throat, Diseases of; Epidemics; Nervous System.) (H. M. Wr.)

**Infant Mortality.** Infant mortality in the United States dropped sharply from 1946 to 1947 according to provisional data covering the first nine months of both years. For each of the first nine months the rate in 1947 was well below that of 1946, the period as a whole showing an improvement of 12%. For all of 1946, the estimated number of infant deaths (deaths under one year of age) was 112,649, and the infant mortality rate 34.5 per 1,000 live births. Only ten years previously, the infant mortality rate was at the relatively high level of 57.1 per 1,000 live births.

In 1945, the latest year of complete record for the United States, the infant mortality rate for the white population was 35.6 per 1,000 live births; for the Negro population, 56.2 per 1,000; and for other races, 74.3 per 1,000. There was a striking contrast in mortality between large and small communities. Thus, in 1945, the rate was only 34.8 per 1,000 live births in cities of 100,000 population or more. For smaller cities, of 25,000 to 100,000, the rate was 38.1, while in communities of 10,000 to 25,000, the rate was somewhat higher, namely 39.8 per 1,000 live births. The highest rate, 43.4, was recorded in places of 2,500 to 10,000 population. On the other hand, the recorded rate in rural areas was only 39.1. Some of the differences may have arisen from variations in the completeness of registration of births and infant deaths. It was suspected that the registration of infant deaths might not be as complete as that of births in rural areas; such a situation would lead to an understatement of the actual infant mortality in those places.

Provisional United States data for the leading causes of death in infancy during 1946 showed a setback from 1945 for only one cause, premature birth. Thus, for pneumonia and influenza, the rate in 1946 was 3.9 per 1,000 live births as compared with 5.3 in 1945. For diarrhoea and enteritis, the corresponding rates in the two years were 1.8 and 3.0 respectively. Congenital malformations showed a decrease from 5.0 in 1945 to 4.4 in 1946, while the rate for injury at birth was the same—3.6—in the two years. But infant mortality from premature birth rose from 11.6 per 1,000 live births in 1945 to an estimated rate of 12.5 in 1946.

Several factors contributed to the continued reduction in U.S. infant mortality. First, there had been a rise in the standards of obstetrical practice. Then, the proportion of births occurring in hospitals had risen rapidly, from 37% in 1935 to 79% in 1945. In addition, hospitals had improved and expanded their obstetrical services and in many instances had segregated maternity cases. The growth of hospital insurance plans providing maternity benefits brought the advantages of hospital confinement to many mothers who could not afford such services otherwise. Other factors favouring a reduction in infant mortality were the premarital and prenatal examinations for syphilis required by many state laws and the modern methods of treating this disease.

Contrary to the experience in the United States, provisional data for England and Wales pointed to a small increase in infant mortality from 1946 to 1947; there was a rise of almost 4% in the infant mortality rate in London and the other large cities when the first ten months of the two years were compared. For the whole of 1946, there were 33,413 deaths under one year of age in all of England and Wales, the infant mortality rate being 40.8 per 1,000 live births. For Canada, where the latest available data were for 1946, the number of deaths under one year of age was 15,281—a rate of 46.9. Of the other English-speaking countries, Australia in 1946 had the low rate of 29 infant deaths per 1,000 live births, and the population of European origin in New Zealand had a rate of only 26 per 1,000. For the white population of South Africa the rate in 1946 was 36 per 1,000, while Scotland experienced the relatively high rate of 54 per 1,000.

Of the countries with infant mortality rates available for 1946, the record was particularly poor in Chile, with 160 per 1,000 live births, in Bulgaria (124) and Portugal (110). (*See* also DEATH STATISTICS.)

## Information and Educational Exchange, Office of.

The Office of Information and Educational Exchange (OIE) in the department of state undertook at the outset of 1947 to enlarge the scope of its operations, which are designed to present a full and fair picture of the United States to the other countries of the world. The operations of OIE during the first part of 1947 were proceeding on the basis of an annual budget of approximately $20,000,000 and were grouped generally as follows:

**Radio.**—With the addition of the daily broadcast in the Russian language beamed to Russia in Feb. 1947 and the Greek language program beamed to Greece in May 1947, the "Voice of America" radio, employing 36 short-wave transmitters, was broadcasting 59 hours of programs daily in 26 languages to foreign countries. These daily programs included news bulletins and commentaries from editorials published in papers throughout the U.S. as well as a wide variety of feature material revealing the cultural life of the people of the country. These programs during the year drew more than 150,000 letters from listeners in more than 60 countries and in 40 languages.

**Motion Pictures.**—Documentary and informational motion pictures were made available to foreign audiences estimated to reach approximately 10,000,000 persons a month. These motion pictures were made in 24 languages.

**Press.**—A daily news bulletin sent by wireless to U.S. missions abroad gave in excess of 7,000 words a day news developments, texts of official documents and speeches relating to foreign affairs. These bulletins were translated by OIE officers abroad and distributed to the editors, civic and government leaders and others in foreign countries who requested them.

This division of the OIE was also responsible for the publication of the Russian language illustrated magazine *Amerika.* This magazine was circulated at the rate of 50,000 copies per issue in the U.S.S.R. under an agreement with the soviet government. Its retail sale at the price of 10 rubles or approximately 83 cents a copy in Russia paid most of the cost of its publication.

**Exchange of Persons.**—The exchange of persons program during the year was divided into two separate operations. In the first, the state department acted chiefly as a catalytic agent, stimulating and assisting private agencies in renewing their own international interchanges.

The second of these enterprises was inaugurated during 1947, when the department undertook the administration of the new Fulbright act providing for the use of foreign currencies received by the United States in payment for overseas war surpluses for the enrolment of U.S. students, professors and specialists in the schools of those countries. In July of 1947 President Harry S. Truman appointed a board of foreign scholarships, provided in the Fulbright act, to supervise the program.

**Libraries and Institutes.**—United States libraries in tion during the first part of 1947 totalled 67 in 41 cou In addition, 27 cultural centres with 45 branches were in tion in the 20 other American republics. Cultural centres from libraries in that they have, in addition to books, c in English and a wide variety of group activities.

**Legislation.**—All of the activities of the OIE were carried on under congressional appropriation but withou basic congressional authority required for regular gover operations. At the time congress began consideration o OIE budget for 1947–48, a measure was before congress this basic congressional authorization but had not been en into law. Because of the lack of this basic authority the appropriation was stricken from the appropriation bill i house. A limited amount, however, to carry on a min operation pending congressional action on the basic aut measure was provided by the senate when the bill came b that body for consideration and was later agreed to b house.

This total appropriation for the OIE operations was $12 000 for 1947–48, as compared with the $20,000,000 whic been available for the program in the previous fiscal year. more than $1,000,000 was required for liquidation in red the program, the OIE's actual operating budget for 19 was thus reduced to $10,901,233.

Drastic reductions thus were made in the program i latter half of 1947 to bring the expenditures to the approp sum.

William Benton, who had been the assistant secreta state for public affairs during the organization of these c tions in the state department, resigned his post in Sept. and was succeeded (1948) by George V. Allen, U.S. ambas to Iran. In prospect of the early passage of the basic aut ing legislation, the lack of which brought about the sharp tailment of the budget of 1947–48, the state department pared for congress a new budget of $38,000,000 for 19 operations and a request for $6,000,000 additional appro tion to complete the operations for the 1947–48 fiscal (*See* also RADIO.)

## Institutum Divi Thomae.

The Institutum Divi Th is the graduate school o ence of the Athenaeum of Ohio, Cincinnati. In its prog major emphasis is placed upon the training as research wo of a limited number of graduate students who follow a scribed course of study and conduct investigations in affiliation with staff members.

During 1947 further positive results were obtained in treatment of certain types of human skin cancer by the i tion of deproteinized tissue extracts. Laboratory studies undertaken with a view to learning the nature of the active stance or substances in the extracts and clarifying their of action as manifested by metabolic and cytologic effects ability to induce resistance to or cause regression of tumou animals. Clinical facilities were being expanded to provid a broader evaluation of the possibilities of this mode of the

Progress was made in concentrating materials present in mal tissues which convert *Staphylococcus aureus,* inclu penicillin-resistant strains, to avirulent forms, both *in vitro* in animal infections. Existing evidence suggested that the terials inhibit toxin formation by the organisms. It was orted that certain of the extracts, previously found to be bactericidal against strains of *Mycobacterium tuberculosis in vitro,* lso exhibit activity in animals infected with tuberculosis.

Other investigations conducted during the year in the laboratories of the Institutum and its affiliated units include studies f antibiotics present in extracts of bacteria and moulds, the cceleration of enzymatic activity, the action of mercurial ermicides in terms of enzyme phenomena, additional studies in cancer, particularly from the enzymatic viewpoint, tissue culture studies, certain physical and biological effects of slow electron bombardment, spectroscopy and investigations in the nutrition of poultry and cattle.

The Donner foundation increased the Institutum's facilities for marine biological research and teaching in Palm Beach, Fla., by the donation of Donner hall adjacent to the present building, Bradley hall. Donner hall would be devoted to laboratories while Bradley hall would provide library, living quarters, and dining hall. (E. S. C.)

**Insulin:** *see* DIABETES.

## Insurance.

**Life.**—Legal reserve insurance companies of the United States and Canada were believed to have passed the $200,000,000,000 mark for life insurance in force (excluding reinsurance) at the end of 1947. This was an increase of about 9% over 1946. New insurance issued during 1947 totalled about $25,000,000,000, equal to the 1946 all-time record; group life exceeded the 1946 record by more than 15%, and industrial by about 3%. New ordinary life insurance fell short by about 3%. Assets at the end of 1947 were approximately $55,000,000,000, after the companies had paid or credited to policyholders and beneficiaries slightly more than $3,000,000,000 during the year.

Mortality among policyholders in 1947 was probably the lowest in history. New low death rates were established for such important causes of death as influenza, pneumonia, tuberculosis, syphilis, appendicitis, and puerperal diseases. Death rates for diseases of middle and later life continued upward, however, with the cardiovascular-renal diseases, cancer, and diabetes all showing increases in rate. The motor vehicle fatality rate declined slightly from 1946, but that for all other accidents dropped much more.

The flow of U.S. life companies' funds into the business economy of both the U.S. and Canada was greatly accelerated during 1947. Demand for new capital was exceptionally heavy in both the bond and the mortgage markets. Life companies were able to acquire approximately $4,200,000,000 net in utility bonds and notes, industrials, and city mortgages, about evenly divided among these three categories. No appreciable change took place in the portfolios of farm mortgages, municipal bonds, or rails. In addition to $15,000,000,000 in corporate bonds and notes, the companies now held $1,500,000,000 of stocks—mainly preferred. City mortgages aggregated $7,700,000,000, of which about 10% was partially guaranteed or insured by the government.

Direct investments by life companies in housing, although hampered by high building costs, rose to roughly $200,000,000—nearly half again as much as at the beginning of the year. Other income-producing real estate investments—primarily commercial and industrial—grew rapidly from about $70,000,000 to $175,000,000 during the year.

Investments in U.S. government and Canadian dominion securities declined by about $1,400,000,000 in 1947—the first drop since the early 1930s. Nevertheless, these securities still amounted to approximately $21,000,000,000, or two-fifths of total assets.

Because of a sharp upswing in market interest rates during the closing months of 1947, the life companies were able to invest new money on much improved terms. This rate (after deducting investment expenses, but before allowing for asset gains or losses) had declined to a new all-time low of 2.9% in 1946, compared with a high of more than 5% in the mid-1920s.

By the end of 1947, U.S. companies had made or announced changes necessary to bring their policy provisions into conformity with the new standard valuation and nonforfeiture laws. In most jurisdictions, these laws (the so-called Guertin laws) were applicable to policies issued after Jan. 1, 1948, or earlier if a company desired. Coincident with the changes in policy provisions, most companies took occasion to raise the level of premium rates of new policies to reflect the low interest rates which had prevailed for some time. This was not required by the Guertin laws. The interest rates adopted for new premium rates ranged from 2% to 3%, the majority of the companies choosing 2½%. (L. A. L.)

**Automobile.**—During 1947 all U.S. automobile rates were increased substantially. Many companies believed that the fire, theft and collision rates were now adequate. The figures for the first six months of 1947 indicated that while the liability rates were also probably adequate, there was still a deficiency in property damage rates. All automobile insurance business was difficult to place during the year. (F. M. R.)

In Great Britain, the abolition of wartime discount, new rates of commission to agents and a full-scale premium revision, followed by the government's decree withdrawing basic gasoline, combined to focus interest on motor insurance. Premium income remained at a high level. The over-all underwriting result was again adversely affected by the high cost of claims. (P. Ss.)

**Hospital, Medical and Surgical.**—Blue Cross nonprofit hospital service plans continued the rapid membership growth which started in 1943, adding 3,600,000 new members during the year to reach an estimated total of 29,600,000 in the U.S. and Canada on Dec. 31. New plans covering the states of Mississippi, South Carolina and Wyoming began operations, leaving only Arkansas without a plan approved by the American Hospital association. In Canada, Alberta and Saskatchewan remained unserved. A total of 91 plans were in operation.

Blue Shield medical-surgical care plans experienced their largest enrolment, reaching a total of 7,250,000 by the end of the year in 49 plans. Associated Medical Care plans, co-ordinating body formed in 1946, reported that growth equalled or exceeded Blue Cross growth at a comparable period of development.

Commercial insurance companies became increasingly active during 1947 in this field, devoting particular attention to large employed groups. Best available estimates indicated that a total of 11,000,000 persons carried hospital expense indemnity policies, 7,000,000 carried surgical indemnity policies and 600,000 carried medical indemnity policies. In addition, about 1,250,000 persons were covered in industrially operated hospital-medical programs, but this type of coverage was declining. About 700,000 persons held membership in co-op or group clinic plans including hospital care.

Fifty bills calling for compulsory sickness insurance were introduced in 16 state legislatures; all were defeated. Twenty bills of this type were introduced in the U.S. congress, but, of these, the Taft-Smith-Ball-Donnell bill providing grants-in-aid to states establishing state-sponsored hospital-medical programs received most attention. The Wagner-Murray-Dingell bill providing for a nationalized system of compulsory prepaid care was again introduced. None of these bills were reported out of committee.

Chief interest in foreign programs centred on the National Health Service act passed by parliament in Great Britain late in 1946 and scheduled to come into full operation July 5, 1948, nationalizing hospital and medical care. Preparations for inaugurating this compulsory program went forward during the year. In New Zealand, the compulsory insurance program underwent criticism as costs increased steadily. (A. G. S.)

**Accident and Health.**—Premium income set a new record of $775,000,000, a 15% increase over 1946. Loss ratios on individual policies rose slightly while experience on group insurance improved. Although frequency of hospital confinement increased, average duration was less so that net claim payments under hospitalization policies were about the same.

A survey by the Health and Accident Underwriters conference showed that nearly all companies had liberalized their hospitalization policies, modifying waiting periods and pre-existing condition clauses.

Medical care insurance was being offered individuals with specific amounts for doctors' calls, usually with the elimination of three or five calls, or on a blanket basis, providing $150 to $500 medical and surgical with $25 or more deductible. The cost of medical care under group insurance made it prohibitive unless the employee paid at least 50% of the cost. (C. D. Sp.)

**Fire.**—The U.S. government extended the period for fire insurance companies to align themselves with the Atlanta decision of 1943, which reversed a supreme court decision rendered more than 75 years before to the effect that insurance was subject to the states and not to the U.S. government. The deadline was set for July 1, 1948.

Losses paid by U.S. fire insurance companies during 1947 were estimated roughly at $400,000,000. (*See* also FIRES AND FIRE LOSSES.) (E. R. H.)

**War Damage, British.**—Value payments released by the War Damage commission on Nov. 10 affected nearly 210,000 properties, and, together with cost of works payments, required £270,000,000 in the financial year. This brought the total paid for repair of damage to land and buildings to approximately £679,300,000. Contributions under this section of the War Damage act were estimated to yield £200,000,000.

On July 14 the board of trade made payments totalling £55,000,000 under the private chattels scheme. More than 250,000 claimants received the balance of outstanding agreed claims, together with interest and any supplementary payment due. Payments were mainly under the free cover provided to about 20,000,000 persons. Receipts were under £16,000,000 and the deficit approached £104,000,000. No date was announced for payment of outstanding claims under the business scheme. (P. Ss.)

**Marine and War Risk.**—The premium income from marine insurance rose materially in 1947 because of the vast increase in overseas shipping. In addition to the large capital sums insured, the rate structure remained high by reason of the continuation of surcharges which came into effect during World War II. Were this not so, it is likely that the entire marine insurance industry of all countries would have shown a severe loss in 1947.

Theft and pilferage were rampant, and in some parts of the orient and western Europe the ports were in a state of almost complete anarchy. In the western hemisphere, while conditions were not quite as bad, thefts were extremely serious despite considerable efforts to combat them. At the annual conference of the International Union of Marine Insurance at Cannes, France, in Sept. 1947, representatives of all nations put the question of theft and pilferage near the top of the agenda.

The volume of premiums on hull insurance remained much higher than before World War II. The underwriting experience, however, was not favourable and probably resulte net loss for the year. (*See* also SOCIAL SECURITY; VET ADMINISTRATION.) (H. C. T

# Inter-American Affairs, The Institute of.

The Institute of Inter-American Affairs, a nonprofit gover corporation which operates under the U.S. department of was reincorporated for a period of three years by an act o gress which was approved by President Truman on Aug. 5, The former Inter-American Educational Foundation, Inc merged with the institute by this act, and became a di within the institute.

The purposes of the institute, as prescribed by congress act of reincorporation, are "to further the general welfa and to strengthen friendship and understanding among, th ples of the American republics through collaboration with governments and governmental agencies of the American r lics in planning, initiating, assisting, financing, administ and executing technical programs and projects, especially i field of public health, sanitation, agriculture, and educatio

The programs of the institute are carried on in each American country under authority of a co-operative agree signed by representatives of the U.S. and of the host go ment. During 1947, field technicians of the Food Supply di were at work in Haiti, Costa Rica, Peru and Paraguay agreements were signed extending the programs there until 30, 1948. While choice of exact projects depends on local and circumstances, in general all food supply projects inv (1) demonstrating approved methods of irrigation, dra erosion control, cultivation; (2) assisting local producers i taining seed, fertilizer, insecticides, etc.; (3) initiati strengthening agricultural education and extension prog (4) assisting in construction of food storage facilities an provement of distribution and marketing systems; (5) de strating improved methods of livestock and pasture ma ment; (6) training of nationals to carry on future activiti

By the end of 1947, approximately 1,500 activities had undertaken by the institute's Health and Sanitation div with more than 1,000 of them completed in 18 countries. ing the year there were about 3,000 doctors, engineers, n and other professional or technical persons employed on health and sanitation projects; 130 were U.S. citizens.

Also during 1947, program extensions were negotiated Venezuela, El Salvador, Honduras, Ecuador, Peru, Uru Haiti and Bolivia. Agreements were terminated in Nicar Costa Rica and the Dominican Republic, in each of countries the projects, which had been initiated throug operative health services made possible by the institute, transferred to national health authorities for operation. H and sanitation programs also had been conducted in B Chile, Colombia, Guatemala, Mexico, Panamá and Paragu

The institute's health and sanitation program stresses raising of health standards in Latin American countries. ultimate objective is greater productivity, higher levels of ing and an expanding economy in all the Americas. Activiti the Inter-American co-operative health services include h education, training of professional and technical personnel tension of sanitation and malaria control, and provisio health centres, hospitals, and other health facilities and ices. With fellowships for training in public health, san engineering, nursing and related subjects, 474 Latin Ameri had studied in the United States.

The U.S. and the host government each contribute a share of e money, materials and trained men and women needed for e projects. Activities are under the direction of the U.S. repesentative. Expenditures of the pooled funds are decided jointly y the chief of party of the institute and an appointee of the co-perating national government. Agreements, originally signed or one- and two-year periods, were renewed in most countries. lso, the program extensions were notable for increased proortions of financial contributions by the countries where the ork was done. In the beginning, the United States usually put at least half of the money and sometimes more. Later, all ational contributions exceeded U.S. funds—in one instance by 1 to 1.

The Education division during 1947 had co-operative prorams with immediate and long-range objectives in 12 Latin merican countries. Altogether, it had sent about 60 educational pecialists from the U.S. to work with the ministers of educaon in the other republics on programs of vocational, health and ural education, and teacher training and secondary education. uring its entire operations, nearly 600,000 books, pamphlets, aps, charts and other teaching materials were made available field parties in the other American republics. Also, 168 disnguished educators from those countries were sent to the U.S. or lectures, study and other educational activities.

Each country has its own peculiar education problems, and onsequently the type of program developed by the division aries from country to country, in accordance with those probems. All however, provide for: (1) the sending of a small roup of U.S. educational specialists to work with the minister f education and his staff; (2) the development of teaching aterials; (3) the bringing of distinguished educators, superisors and teachers to the U.S. to lecture, study and to particiate in national, state and local educational programs.

(A. R. Hs.)

**nter-American Defense Board.** The board is an autonomous internaional organization created in March 1942 in accordance with esolution XXXIX of the third meeting of the ministers of oreign affairs at Petrópolis, Brazil. Membership includes miliary, naval and air delegates from each of the American repubics. Its mission is to study and recommend measures necessary or the defense of the hemisphere.

During 1947 the board held 18 plenary sessions, at which the rincipal items under discussion were the organization and unctions of the permanent military agency which was to relace the existing board in the inter-American system. The proosed name was the Inter-American Military Defense council. n the basis of extensive study the board forwarded to the Pan merican Union and to the governments of the 21 American epublics its recommendations for the structural features of the ermanent agency. The proposed mission and functions of the ouncil were carefully defined, taking into account the proviions of the hemisphere defense treaty concluded at Rio de aneiro in Sept. 1947.

Committees of the board also studied various other subjects ertaining to the defense of the hemisphere, preparatory to subitting their recommendations to the governments. These comittees included the air survey committee, the committee on fficer training, the committee on language barriers and the comittee on industrial mobilization.

The board's secretariat is located at 1735 New York avenue, N.W., Washington 25, D.C. Lieut. Gen. M. B. Ridgway, U.S.A., was chairman in 1947.

(*See* also Inter-American Defense Conference.)

(F. A. I.)

**Inter-American Defense Conference.** The Inter-American Conference for the Maintenance of Continental Peace and Security met at Petrópolis, near Rio de Janeiro, Brazil, from Aug. 15 to Sept. 2, 1947, under the presidency of Foreign Minister Raul Fernandes of Brazil. Countries represented were Argentina, Bolivia, Brazil, Chile, Colombia, Costa Rica, Cuba, Dominican Republic, Ecuador, El Salvador, Guatemala, Haiti, Honduras, Mexico, Paraguay, Peru, the United States, Uruguay and Venezuela, all members of the Pan American Union (*q.v.*). Nicaragua, also a member of the union, was not represented, lacking a government recognized by the other countries. The closing session of the conference was addressed by President Harry S. Truman of the United States, who also gave a reception to the delegates on board the U.S.S. "Missouri," anchored in the harbour of Rio de Janeiro.

The main task of the conference was to conclude the inter-American treaty of reciprocal assistance which was signed in Rio de Janeiro on Sept. 2 by delegates from all countries attending the conference except Ecuador, whose government had been overthrown by revolution during the course of the conference. Sixteen of the countries were represented by their foreign ministers, the delegation of the United States being headed by Secretary of State George C. Marshall. The director general of the Pan American Union and the secretary general of the United Nations attended by official invitation. Plenary sessions and committee meetings of the conference were open to the press.

**Background.**—The conference, and the treaty which it produced, derived from two earlier international meetings. The Act of Chapultepec, a declaration of the Inter-American Conference on Problems of War and Peace, Mexico City, 1945, stated that any attack by a state against an American state would be considered an act of aggression against all signatories and that in the event such an attack occurred or was threatened the signatories would consult in order to agree upon the measures it might be advisable to take. This declaration also called for the conclusion of an inter-American treaty embodying such provisions in the form of permanent international obligations which would be consistent with the then projected charter of the United Nations. Later in 1945, the charter of the United Nations, drafted at San Francisco, gave recognition to regional arrangements for the maintenance of international peace and security, setting forth certain provisions concerning such arrangements in chapter VIII. Article 51 of the charter, moreover, recognized the right of individual and collective self-defense in case of armed attack.

Following acceptance of these provisions of the U.N. charter, the United States announced its intention of meeting with its Latin American neighbours to conclude the treaty called for in the Act of Chapultepec. The conference was, however, postponed largely because of strained relations between Argentina and the United States. On July 2, 1947, the Brazilian government announced that the conference, for which it had been designated the host, would be convoked on Aug. 15. The governing board of the Pan American Union had earlier decided that the agenda of the conference would consist only of the conclusion of the projected treaty.

**Treaty of Reciprocal Assistance.**—Aside from the preamble citing antecedents of the treaty and certain traditional inter-American policies, the treaty may be summarized as follows:

The parties reaffirmed their previous pledges to settle their disputes by peaceful means (articles 1, 2). They agreed that an armed attack against an American state should be considered an attack against all of them (article 3) and undertook to assist in meeting the attack. The parties would consult in the event of such an attack to agree upon collective measures. If the armed attack should take place within the territory of an American state or anywhere within a region defined in article 4 of the treaty (the American continents, Greenland, adjacent waters and islands and the polar regions to the north and south of the American continents), the parties would undertake to give such immediate individual assistance to the attacked state as they considered necessary pending consultation. In case of any act of aggression, other than an armed attack, against an American state, or in the event of any other fact or situation that might endanger the peace of the Americas, the parties would consult on measures to assist the victim of aggression or to maintain continental peace and security (article 6). Such consultations would normally take the form of a meeting of foreign ministers, but the governing board of the Pan American Union might act provisionally as an organ of consultation (articles 11, 12).

In the consultative meetings, decisions to take measures under the treaty would be by a two-thirds majority (article 17). When such measures comprised any of the following (article 8), the decision to take them would be binding upon all parties (article 20), except that no state would be required to use armed force without its consent: "recall of chiefs of diplomatic mission; breaking of diplomatic relations; breaking of consular relations; partial or complete interruption of economic relations or of rail, sea, air, postal, telegraphic, telephonic, and radio telephonic or radiotelegraphic communications; and use of armed force." When a conflict between two American states was under consideration, parties to the conflict would not be allowed to vote (article 18), and the first action of the consultative body would be to call upon the parties to cease hostilities and restore the *status quo ante bellum* (article 7).

Frequent references to the charter of the United Nations provided proper concordance of the treaty with the San Francisco document. In case of armed attack, parties might (as permitted by article 51 of the charter), exercise their right of individual or collective self-defense until the Security council of
the United Nations had taken the measures necessary t
tain international peace and security (article 3). (
situation other than an armed attack, prior approval
Security council was required, according to the charter
enforcement action could be taken under the treaty.)
ten of the treaty specified that nothing in the treaty "
construed as impairing the rights and obligations of t
Contracting Parties under the Charter of the United N

The treaty, open for signature by all American states

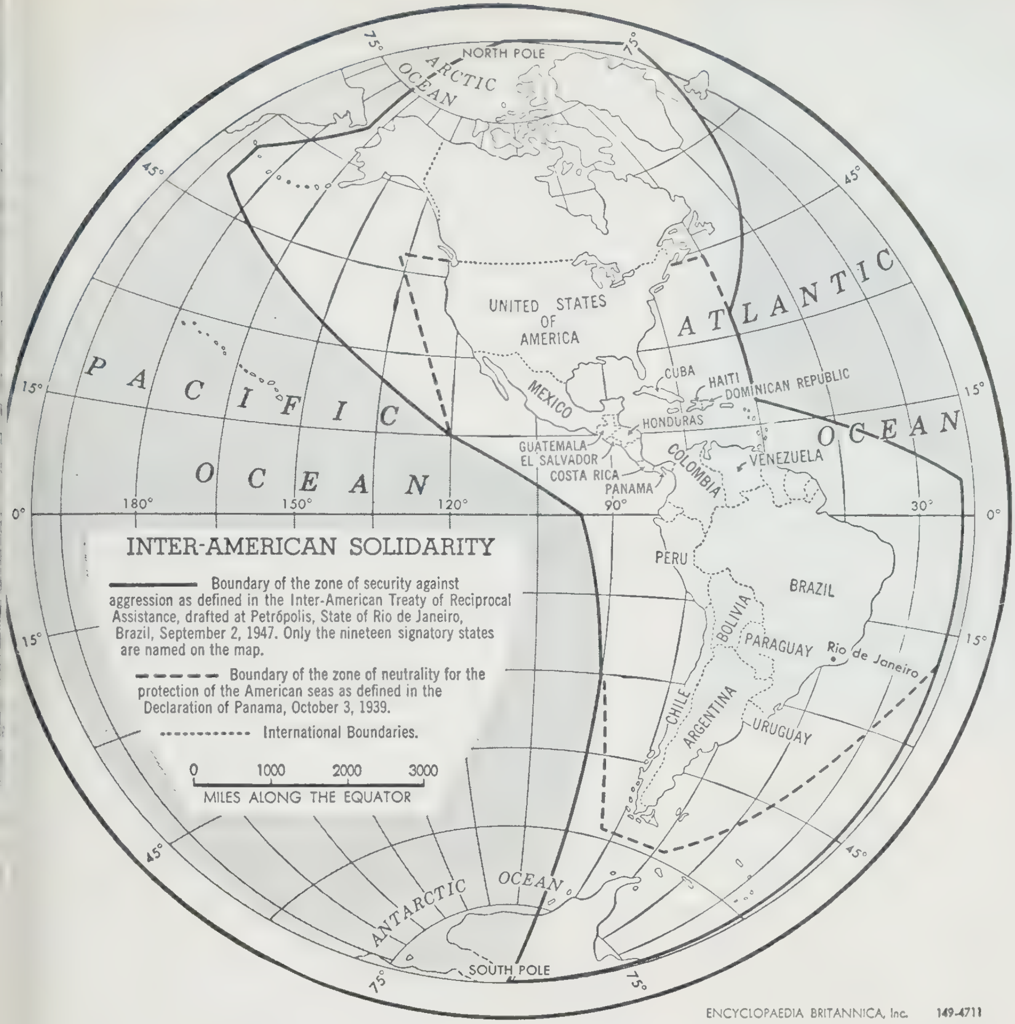
PLENARY SESSION of the Inter-American conference of foreign ministers which convened at Petrópolis, near Rio de Janeiro, Brazil, on Aug. 15, 1947



INTER-AMERICAN SOLIDARITY
Boundary of the zone of security against aggression as defined in the Inter-American Treaty of Reciprocal Assistance, drafted at Petrópolis, State of Rio de Janeiro, Brazil, September 2, 1947. Only the nineteen signatory states are named on the map.
Boundary of the zone of neutrality for the protection of the American seas as defined in the Declaration of Panama, October 3, 1939.

ment took place over whether different procedures should be stipulated regarding acts of aggression originating within and without the continent. This question was decided largely in the negative; acts of aggression would invoke the same obligations of assistance regardless of their origin. Debate over the voting procedure under the treaty was also important, some delegates arguing for a requirement of unanimity, others for a simple majority. The two-thirds rule for voting under the treaty was adopted overwhelmingly as the best compromise between the two more extreme positions.

Bibliography.—The texts appeared in the U.S. department of state bulletin for Sept. 21, 1947. *See* also the report of the director general of the Pan American Union on the conference and the report of the foreign relations committee, U.S. senate, of Dec. 5, 1947 (U.S. senate, 80th congress, executive report No. 11, "Inter-American Treaty of Reciprocal Assistance"). ## Interior Decoration.

The year 1947 in the United States saw the token postwar developments of 1946 carried forward with a vigour which, because of complex inflationary trends, still was unable fully to meet mass-demand or to keep products within expected price ranges. A more normal and healthy buyer's attitude was in evidence, with deliberate selectivity and attention to quality—a desire to get value received. No radically new designs or materials were shown; rather the pent-up developments of the war and reconversion years were finally bearing fruit.

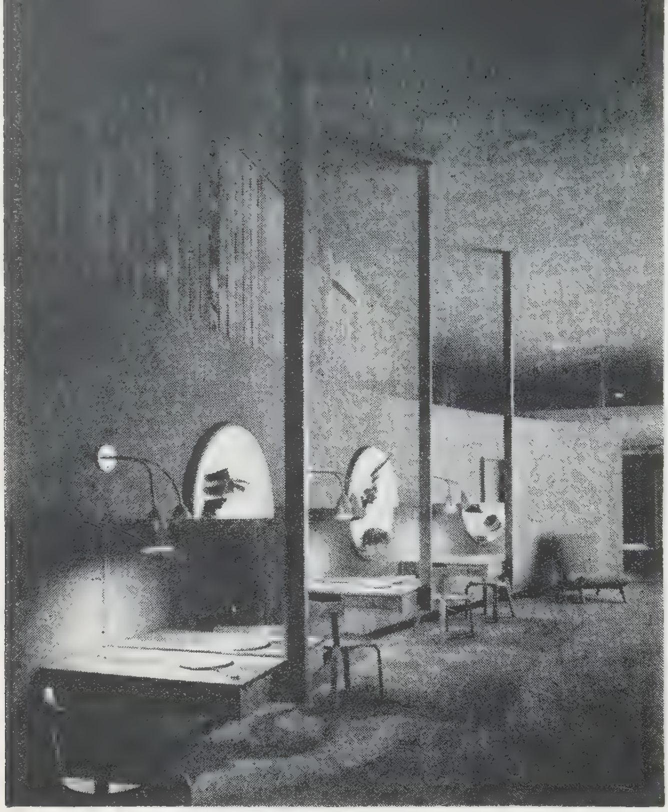
It was important to note the increasing influence of the designer in all phases of interior decoration—an influence going beyond surface form and colour to interpret and correlate the various functions of contemporary life. The gradual and belated emergence of the designer in this role could be noted as a most important incipient trend for 1948. Multipurpose furniture, compact built-in equipment and intelligent storage all pointed toward real utilization of space and simplification of form.

**Interior Surfaces.**—A variety of materials, many new, were available for interior surfaces. Products were offered which in one coat would cover concrete, brick, masonry or wallpaper, filling uneven surfaces in a single operation; plastic tile was available for bathrooms, kitchens, etc., in sizes up to 4 ft. by 8 ft., reducing installation costs; veneers and plywoods were in good supply and so were war-developed adhesives with which to apply them; improved paints were also in supply, as were wallpapers in which a trend toward good design was evident. In addition, a whole group of wall coverings—coated fabrics; materials on paper backing in marble, leather or wood effects; decorative substances such as bits of glass, mirror or wood on fabric back; solid plastics; cork tile; three-dimensional papier-mâché; and simple insulating materials—gave a wide and very interesting range for wall treatments.

Floor surfaces were once again a matter of choice. Rubber tile, cork, asphaltic composition tile, terrazzo, Koroseal and improved linoleum were available in a good range of patterns and colours. Woven coverings in wool, cotton or linen, in interesting textures and colours, were available in the new 158-in. width. Many manufacturers used a plastic to hold yarn backing. Although carpets were in somewhat short supply, luxurious custom-made items in deep pile or carved rugs could be delivered on time.

**Window Treatment, Textiles.**—Windows were generally treated simply by decorative curtains hanging straight to the floor. Frequently, to avoid a broken-pattern wall, the curtains were extended to cover wall as well as window, giving the overall space of a room the simplicity of a backdrop. The public acceptance of designers like Dorothy Liebes pointed taste toward interesting handcraft weaves employing many novel materials. Bold abstract prints, painted textiles and rich floral patterns were also in demand. In the inexpensive bracket, durable paper curtains appeared—in only two patterns, however. A beginning was made toward using silk derived from kelp. This material, heavy with metals and suitable for drapery or upholstery, was proved to be absolutely fireproof, but in 1947 its source was limited to the kelp beds off southern California.

**Furniture.**—There was a marked trend toward contemporary design, which accounted for more than 40% of goods shown,



MILLINERY DEPARTMENT designed by Albert Henry Hill for a store in Fresno, Calif., and completed in 1947

according to a survey. The idea of multipurpose furniture and sectional furniture such as Module became firmly established. The Charles Eames moulded plywood furniture reached the market but could not meet the brisk demand. The new Saarinen-Swanson designed birch furniture, using upholstery fabrics designed by Marianne Strengell, aroused a great deal of interest, particularly since it was scaled for moderate-sized rooms. Metal, glass, rope and bent forms were all used with more or less effect. Perhaps the outstanding characteristics of the new lines were their plastic quality, as in tables adjustable vertically; well-engineered sectional lines susceptible to many variations, chairs like the Barwa designed for scientific relaxation in more than one position; and the full utilization of space for storage, not only in free-standing pieces but also in prefabricated cabinets and closets of all types, and including compact continuous built-in furniture particularly for bedrooms and for radio-phonograph and record units. Even the bathroom was provided with a tub, lavatory and toilet in one continuous form with the lavatory moveable above the other units.

While there was a marked tendency to make use of unused space by continuous storage and shelving, there was an equally marked tendency in the more advanced lines of furniture toward lightness of weight, without sacrifice of strength, and toward airiness and lift of line. Good traditional furniture continued to hold its own but there was somewhat less, rather than more, of it. Upholstered furniture, improved smartly-styled sofa-beds and occasional pieces were all in supply.

**Lighting.**—A number of lamp manufacturers who had heretofore concentrated on reproductions or adaptations of traditional forms for the first time introduced contemporary lines. Flexible metal lamps, both desk and floor types, with exceptionally clean outlines, sometimes as sensitive in appearance as a line-drawing, were on the market. Indirect lighting, using fluorescent tubes, was appropriate for many interiors and was particularly easy to install in conjunction with some of the new wall-covering panels. The dressy elegant occasional lamp with elaborate shade was also in some demand.

**Decorative Accents.**—Some very high quality glass and crystal were developed in the United States and were us decorative accents of lasting elegance. Ceramics contin flourish because of their appropriateness to informal c porary living. There were sufficient regional craftsmen w in this field to produce a variety of individual expre There was also an interest in metalwork, including ename

**Plants.**—The appeal of the "indoor-outdoor" room, w merging of green growing plants and everyday indoor made this feature popular with new home builders. Larg orative plants were likewise used when possible in city int and they provided living accents for almost any room in a Small sunken indoor gardens—more properly pits for plants—coffee tables with a box section for plants, or, usually, large leaf plants in free-standing decorative pots, all employed. (G. M.

## International Bank for Reconstruction and Development.

During 1947 the International Bank f construction and Development, whic cially began operations on June 25, 1946, strengthened i ganizational structure, developed and clarified its basic p and embarked upon its first borrowing and lending activiti

Five additional nations joined the 40 which were memb the end of 1946, and admission of a sixth was authorized new members' subscriptions to the bank's capital, plus app increases in those of some other countries, raised auth capital subscriptions by present members of the bank $7,790,500,000 to $8,248,000,000. Twenty per cent of scribed capital is required to be paid in and is availab loans provided consent is given by the member whose cu is involved; the other 80% is subject to call only if nec to meet the bank's obligations. Paid-in capital at the e 1947 aggregated $1,599,985,000, not including authorized ments, of which only $726,075,000 was in gold or United dollars, the currency mainly in demand.

On July 15, 1947, the International bank made the first offering of its bonds, after laws or administrative rulin many states had been modified to permit banks and insu companies to invest in the bank's securities. The bank o $100,000,000 ten-year 2¼% bonds due July 15, 1957, and $ 000,000 twenty-five-year 3% bonds due July 15, 1972. offering was made through more than 1,700 securities de more than twice the largest number ever to participate in a single security distribution, and it was substantially subscribed.

During 1947 the bank made four loans to finance the chase of industrial and transportation equipment, fuels an materials, fertilizers and other products needed for urgen construction in Europe: to France, on May 9, $250,000 to the Netherlands, on Aug. 7, $195,000,000; to Denmar Aug. 22, $40,000,000 and to Luxembourg, on Aug. 28, $12, 000. In the last instance, for the first time, a loan was partly in a currency other than dollars, Belgium having sented to the use of francs equivalent to $2,000,000 fro capital subscription. All these loans were for a 25-yr. with interest at 3¼%, plus a 1% commission to build up a cial reserve against defaults. The loan agreements pro for control by the bank over use of loan proceeds and for lar consultation and submission of information by the borr on significant economic and financial developments. At the of 1947, five other formal applications for credits were u consideration, and informal discussions preliminary to the mission of specific loan requests were in progress with se additional members.

The four loans to European countries received priority ause of the urgency of their need, the advanced status of their econstruction plans and the early contribution they could make o expanding world production. During 1947, however, the bank ave increasing consideration to programs for developing less dvanced regions. The general principle was adopted that the ank's funds, limited as they are in relation to total needs for apital, should be used at strategic points to bring about maximum increases in productivity in the shortest possible time, and o stimulate investment from other sources. The bank also indicated in its second annual report, issued Sept. 11, that it ntended to play an active role in promoting sound financial programs, encouraging the removal of unnecessary trade barriers nd the regional integration of production programs, where ppropriate, and otherwise seeking to assure economic conditions which would maximize the benefits resulting from its loans. t also expressed willingness to assist in working out international financial settlements and in selecting and recruiting experts to provide technical assistance where necessary.

The bank recognized that developments in connection with he European Recovery program (*q.v.*) would undoubtedly ffect its role in the work of European reconstruction. The report of the Committee of European Economic Co-operation proposed that the bank finance a major part of the projected capital equipment imports, but the amount proposed was larger han the bank expected to have available in view of its limited unds and the financial needs of other regions. Nevertheless, it eemed clear at the end of 1947 that substantial further credits rom the International bank to certain of the participating ountries could be anticipated to cover part of the European Recovery program requirements; and that other bank credits, by developing markets and sources of supply outside western Europe, would make an important contribution to the program's uccess.

On Feb. 23 John J. McCloy was elected to succeed Eugene Meyer, first president of the International bank, who had resigned the previous December; and Robert L. Garner succeeded Harold D. Smith, who died in office, as vice-president. During the year the bank's staff was substantially increased; on Nov. 30 it numbered 380 persons of 23 nationalities.

The bank's board of governors, at its second annual meeting in September, approved the appointment of an advisory council composed of the following: Sir Arthur Salter, chairman, Pedro Beltran, Edward E. Brown, R. Dickson Harkness, Herbert Hoover, Leon Jouhaux, Sir C. V. Raman, Lionel Robbins and S. K. Alfred Sze.

An agreement was concluded between the bank and the United Nations which confirmed the bank's administrative and financial autonomy, but provided for consultation and exchange of information on matters of mutual interest. (*See* also BANKING.) (J. J. McC.)

**International College of Surgeons:** *see* SOCIETIES AND ASSOCIATIONS.

**International Court of Justice.** The International Court of Justice held its second session at The Hague, the Netherlands, Feb. 10–March 14, 1947. It dealt primarily with administrative matters, no case having been submitted for adjudication. Nevertheless, the second year of the court was marked by events pointing the way to greater utilization of the judicial process in the settlement of international controversies.

On Oct. 15, 1946, the Security council adopted a resolution providing that the court might be open to a state not party to the statute, upon its filing with the registrar of the court a declaration, particular or general, accepting its jurisdiction "in accordance with the Charter of the United Nations and with the terms and subject to the conditions of the Statute and Rules of the Court," and undertaking to comply "in good faith with the decision or decisions of the Court" and accepting "all the obligations of a Member of the United Nations under Article 94 of the Charter." A particular declaration is one accepting jurisdiction with respect to a particular dispute or disputes which have already arisen, while a general declaration is one accepting jurisdiction generally in respect of all disputes or of a particular class or classes of disputes which have already arisen or which may arise in the future.

Under article 93 of the charter of the United Nations a state not a member of the United Nations may become a party to the statute of the court on conditions to be determined by the general assembly upon recommendation of the Security council. The council, Nov. 15, 1946, adopted a resolution recommending the conditions on which Switzerland, which had inquired, might become a party to the statute. The assembly, by resolution of Dec. 11, adopted the council's recommendation. The resolution was communicated to the Swiss government, Dec. 31, 1946, but toward the end of Dec. 1947 that government had not yet adhered. The resolution provided for the deposit by Switzerland with the secretary general of the United Nations of an instrument containing:

> "(a) Acceptance of the provisions of the Statute of the International Court of Justice;
>
> "(b) Acceptance of all the obligations of a Member of the United Nations under Article 94 of the Charter;
>
> "(c) An undertaking to contribute to the expenses of the Court such equitable amount as the General Assembly shall assess from time to time after consultation with the Swiss Government."

In addition to the 17 states subject to compulsory jurisdiction under article 36(5) of the statute, by virtue of unexpired acceptances of such jurisdiction under the statute of the predecessor court, nine states had accepted compulsory jurisdiction under article 36(2) of the statute.

On April 9, 1947, the Security council adopted a resolution recommending that the United Kingdom and Albania refer to the court a dispute between them, arising out of an incident on Oct. 22, 1946, in the Straits of Corfu, in which two British ships were damaged by mines with resulting loss of life and injury to their crews.

On May 22, 1947, the British ambassador at The Hague transmitted to the court an application, dated May 13, 1947, instituting proceedings against Albania in respect of the incident, claiming that Albania was internationally responsible.

In a note filed with the registrar, July 23, 1947, Albania stated that, while it would have been within its rights in holding that the United Kingdom was not entitled to bring the case before the court without first concluding a special agreement with Albania, it was prepared—though reserving its rights respecting the manner in which the case was brought—to appear before the court.

On July 31, 1947, the president of the court issued an order fixing as time limits for the presentation of the memorial of the United Kingdom, and the countermemorial of Albania, Oct. 1 and Dec. 10, 1947, respectively.

The memorial of the United Kingdom was filed on scheduled time. On Dec. 9 Albania filed a preliminary objection to the application of the United Kingdom government of May 13, 1947, and on Dec. 10 the president of the court issued an order giving the United Kingdom until Jan. 20, 1948, for filing its observations.

The general assembly, on Nov. 14, 1947, approved three resolutions prepared by its sixth (legal) committee recommending that organs of the United Nations and specialized agencies should refer points of law to the court for advisory opinions; authorizing the Trusteeship council to request advisory opinions; urging acceptance of the compulsory jurisdiction of the court, insertion in treaties of clauses providing for the submission of disputes to the court and recommending that as a general rule states should submit their legal disputes to the court.

On Nov. 17, 1947, the general assembly passed a resolution asking the court for an advisory opinion regarding the admission of states to the United Nations under article 4 of the charter. (*See* also INTERNATIONAL LAW; UNITED NATIONS.)

**International Labour Conference:** *see* INTERNATIONAL LABOUR ORGANIZATION.

## International Labour Organization.

The constitution and procedures of the I.L.O. were retooled and geared into the machinery of the United Nations. The I.L.O. took its place as an independent, specialized agency of the U.N. with adequate provision for co-ordination and co-operation in its larger tasks. The cost was great in terms of increased budget and personnel for highly technical services, and representation in almost continuous, sometimes overlapping, meetings in all parts of the world. In the months of Jan.–July 1947 such meetings were scheduled. In July the 30th session of the conference voted a budget for 1948 of $4,449,295, an increase of 15.13% over 1947.

The largest conference in number of delegates (173) and advisers (309) in its history met in Geneva, Switz., June 19–July 11. There were represented 48 states members (including Austria readmitted at this session), 40 of them with complete delegations. Representatives of the U.N., the U.N. Educational, Scientific and Cultural organization, the International Monetary fund and the World Health organization also participated. The total I.L.O. membership (July 15) was 53 with two states, El Salvador and the Republic of the Philippines, having declared their intention of accepting membership when necessary constitutional formalities were completed. Yugoslavia gave notice of withdrawal effective June 16, 1949, but was expected to reconsider before withdrawal became effective. Five conventions, applicable to nonmetropolitan territories, were adopted: (1) social policy, by vote 103–1, with 25 abstentions; (2) right of association and settlement of labour disputes, by vote 121–0, with 3 abstentions; (3) labour inspectorates, 120–0, with 3 abstentions; (4) application of international standards, 95–20, with 12 abstentions; (5) maximum length of contracts of employment of indigenous workers, 99–0, with 24 abstentions. Thus was brought to a close the prolonged debate in a tripartite discussion of many delicate questions in colonial areas at four successive sessions of the conference (1944–47). One more convention was adopted concerning labour inspection in industry and commerce, 134–0, with no abstentions. To this were added two recommendations: (1) on labour inspection in general, and (2) on labour inspection in mining and transport, both adopted by vote 135–0, with no abstentions. The conference adopted four resolutions: concerning freedom of association and protection of the right to organize and to bargain collectively; international machinery for safeguarding freedom of association; points to serve as a basis for adoption of conventions on this subject at the 1948 session of the conference; and, finally, placing the question on the agenda for a first discussion at the 1948 session. This action was in response
reference by the U.N. Economic and Social council of th
tion of "guarantees for the exercise and development o
union rights" to the I.L.O. for study and report. The
general assembly on Nov. 17 by vote of 46–6 approved th
ciples of trade union rights laid down by I.L.O. and d
that it and not the World Federation of Trade Unions w
proper authority to deal with freedom of association a
dustrial relations as the U.N. specialized agency on labour
Ratifications of conventions reported to the conference J
numbered 944, and later July reports made the total 9
increase of 25 within a year. The report of the commit
experts on the application of conventions (Conf. Docs
VI App.) and of the conference committee on the appli
of conventions (Prov. Rec. No. 26) showed satisfactory
ress and a determination to make full use of new constitu
requirements, such as reports on conventions not ratifie
action taken under recommendations to increase the effe
ness of both.

There were three director general reports. (1) The 30t
sion report (Conf. Doc. Rep. I) presented the usual eco
and social background on a world scale of the topics
confronted the conference. Its discussion was more ext
than usual. No other event of the year in internationa
presented a better documented analysis of world econom
trends, a tripartite debate on fundamentals and a guide to
for I.L.O., U.N. and other international agencies. (2) Fi
port of the I.L.O. to the United Nations[1] was prepared
article V, 2, a, of the agreement between the U.N. an
I.L.O. (May 30, 1946) which provided for regular repo
the activities of the organization. The period covered ext
from the establishment of the U.N. to July 15, 1947. (3
third director general report was prepared for the Prepa
Asiatic Regional conference in New Delhi, India, Oct. 27–N

Industrial committees for six important international i
tries held meetings, some their second session, in 194
proved more effective than anticipated as a new triparti
proach to solutions of international industrial and labour
lems. The governing body considered the advisability o
ferring the conclusions in many cases to the general confe
as a first discussion of matters to be dealt with in conve
and recommendations. (*See* also CHILD WELFARE.)

(S. McC.

## International Law.

The value of activity relating
ternational law in 1947 was
tioned by some jurists who believed this body of law shou
kept within the narrow field which it occupied during the
century. The numerous national and international agencie
gaged in the development of international law, on the
hand, pursued their work with vigour and confidence that
would help adapt it to the conditions of a shrinking and
dependent world whose governments were equipped with
ons which would make another war intolerably destructive.
work was, for the most part, based upon the assumption
the principles of justice which the law ought to maintain
those set forth in the preamble of the United Nations cha
"to save succeeding generations from the scourge of war .
reaffirm faith in fundamental human rights . . . to establish
ditions under which justice and respect for obligations ar
from treaties and other sources of international law ca
maintained, and to promote social progress and better stan
of living and larger freedom." These principles diverged w
from those derived from the prevailing 19th century conce

---

[1] Vol. I *Report;* Vol. II *Appendices* included I.L.O. constitution, as amended and i
in 1947, agreement (U.N. and I.L.O.), membership July 15, governing body, conv
and recommendations, 1919–47, etc. (Geneva).

hat sovereign states are the only subjects of international law, re bound only by rules to which they have consented, and are resumed to retain freedom to refuse to submit to any superior uthority and to advance their policies even by war. It was ot surprising that the transition to the new conceptions involved difficulties and proved alarming to some international awyers.

The new principles, it was true, did not originate in the U.N. harter. They were inherent in concepts of natural law with which modern international law originated in the 16th century, nd in the efforts to give practical effect to human aspirations or peace and justice at the Hague conferences of 1899 and 907 and in the League of Nations. But as the world had hrunk, the need for a more effective law preventing war and protecting human rights had become obvious to an increasingly arge proportion of the world's population.

Strangely, the Soviet Union, which in its domestic policy had been most radical, had become most conservative in regard to nternational law, and remained the most devoted champion of unlimited national sovereignty. The United States, on the other hand, which had been notable for its aloofness from international organization and its insistence on national sovereignty, had officially sponsored projects such as those for the control of atomic energy and for modifying the veto vote in the Security council which would greatly augment the effectiveness of international authority and reduce that of sovereign states. Certain elements of U.S. opinion moved even further, and organizations favouring world government or world federation had attracted a considerable following.

Responsible agencies concerned with the development of international law avoided either extreme. They declined to be dogmatic about the sovereignty of either the nations or the world, but sought to develop international law as the changing conditions of the world community and the merits of each particular problem suggested.

**Interpretation of the U.N. Charter.**—One issue concerned the utilization of political as opposed to juridical procedures in interpreting international law. The issue arose during 1947 in several discussions concerning interpretation of the charter of the U.N. For example, when India complained that Indian nationals in South Africa were denied the human rights assured them by the charter, South Africa contended that the matter was essentially within its domestic jurisdiction, and consequently U.N. organs could not consider the matter. Certain states wished to obtain the advisory opinion of the International Court of Justice on this contention, but the general assembly passed a resolution on the merits of the question, urging a settlement in accord with the provisions of the charter, thus by implication deciding that the matter was not within the domestic jurisdiction of South Africa.

Again, when the question arose concerning the conformity of the U.S. proposal for an interim committee of the general assembly to deal with political problems which the Security council failed to settle, the soviet government claimed that the primary responsibility of the Security council to maintain international peace and security would be encroached upon. The British suggested reference to the court, but this was not done, and the general assembly, by approving the U.S. proposal, decided by implication that it was not contrary to the charter.

In both of these cases the majority of the members preferred to interpret the charter by the political action of the general assembly, rather than by juridical advice of the court. The Soviet Union, however, took a third position in the latter case, holding that each member was ultimately justified in interpreting the charter itself, and since it regarded the interim committee of the general assembly as contrary to the charter, announced that it would not participate in the meetings of that body. The soviet delegation took a similar position when the general assembly confirmed the trusteeship agreements without determining who were the "states directly concerned," which under the charter should draw up these agreements. Consequently it refused to participate in the Trusteeship council, which it considered to have been set up in violation of the charter.

UNITED NATIONS committee on international law whose activities, in 1947, were devoted to the study of how international law might eventually be codified

Whether South Africa was obliged under the charter to place the mandated territory of South-West Africa under trusteeship and the extent to which the general assembly could make recommendations concerning non-self-governing territories, were issues involving charter interpretation which had not been decided at the end of 1947.

Charter interpretation was also involved in discussions regarding use of the veto by the great powers. It was suggested that the declaration made by these powers at San Francisco agreeing to use the veto with moderation should be regarded as an authoritative interpretation of the charter, and it was also contended that the Soviet Union had failed to manifest this moderation. When the Soviet Union vetoed the admission of several new members, acknowledging that its objective was political, in order to induce other states to vote for certain of its candidates, the general assembly asked the International Court of Justice to give an advisory opinion on the right of a state to base its vote upon applicants for membership on grounds other than those stated in the charter. This was the only case in which an issue of charter interpretation was referred to the court, but the second general assembly in Oct. 1947 passed a resolution introduced by Australia urging greater use of the court for this purpose.

In practice the members preferred political procedures for this purpose, perhaps from a fear that judicial interpretation might impair the opportunity of the U.N. to develop in accord with experience and changing conditions. This attitude, however, was balanced by a growing opinion favourable to judicial interpretation by countries outside the soviet bloc. The latter tended to support the right of nullification by individual members.

**Status of States.**—Formerly, sovereign states had been regarded as the proper subjects of international law, although nonsovereign states, international organizations and individuals had been accorded a limited status. Actions of the U.N. developed this tendency. The Ukraine and Byelorussia, although they could not be regarded as sovereign states, were admitted as original members of the U.N. The same was true of India, which subsequently, however, became a sovereign state. The first assembly admitted Afghanistan, Iceland, Sweden and Siam, and the second assembly admitted Yemen and Pakistan, the latter resulting from the division of India. Eleven other states had applied for admission by the end of 1947. Albania, Bulgaria, Hungary, Mongolia and Rumania were supported by the Soviet Union, but failed to obtain the necessary majority in either the Security council or the general assembly, concurrence of which was necessary for admission. On the other hand, Austria, Finland, Eire, Italy, Portugal and Trans-Jordan, supported by the western powers, failed of admission only because of the soviet veto in the Security council. Unsuccessful efforts were made in the second general assembly to bring pressure to eliminate this veto, including the reference to the International Court of Justice already referred to.

The exclusion of Franco Spain from relations with members of the U.N. or from participation in U.N. agencies was continued, but resolutions of the second general assembly were less drastic than those of the first assembly.

The conclusion during 1947 of peace treaties with Germany's five European satellites made these countries eligible for admission to the U.N., although, as noted, they were not actually admitted. A remarkable feature of these treaties was the provision that they should come into force when ratified by the Soviet Union, the United States, the United Kingdom and France. Although the former enemy states were invited to ratify, their ratification was not necessary for the validity of the treaties. Thus the instruments, although they acquired a treaty status among the great powers, could hardly be regarded as peace treaties in the usual sense, but as joint declarations by these powers, assuming legislative authority with reference to the former enemy states.

Negotiations on the German peace at Moscow in the spring and at London in the fall of 1947 reached a deadlock. There seemed little hope of agreement between the western powers and the Soviet Union. In view of the exercise of Germany's sovereignty by the four powers, a peace by declaration of these powers, rather than by treaty with a nonexistent German government, would seem appropriate; but apparently different declarations would apply in the western and eastern zones.

Peace negotiations with Japan were not begun, but in view of the continuance of government under the emperor, that country, differing from Germany, had some status under international law.

This was not true of Korea, which was still divided into two zones, occupied respectively by U.S. and soviet forces. Efforts to break the deadlock failed, and the U.N. general assembly sent a commission to investigate the problem. (*See* also Peace Treaties.)

The special meeting of the assembly called for May 1947 to consider the Palestine problem appointed a commission which proposed to the second general assembly that the country be partitioned. This proposal was accepted, and a committee to supervise the transition from British mandatory control was appointed. No provision, however, was made for forces to implement the decision, and hostilities broke out between Jews and Arabs. The partition proposal involved a Jewish state of three separated fragments, an Arab state, also of three fragments, and an international state of the Jerusalem area. The Trusteeship council of the U.N. was authorized to draft a statute for the latter area. Jerusalem was to be the second international city created since World War II, the first being Trieste, which was internationalized under the Italian peace treaty. (*See* al estine; Trieste, The Free Territory of.)

Problems of status concerning a number of colonia arose during 1947. Thus the former Italian colonies in although renounced by Italy, remained under British n occupation. The Italian treaty, however, provided that principal powers failed to agree on their status within from the coming into force of the Italian treaty, the should be turned over to the general assembly of the U number of proposals for trusteeship of the colonies we sidered by the principal powers.

During the year the Pacific island of Nauru was placed trusteeship of Great Britain, Australia and New Zealan the North Pacific islands, formerly under Japanese ma were placed under strategic trusteeship of the United Thus all of the former mandated territories had been under trusteeship except Palestine and South-West Afric though South Africa had so far resisted the pressure U.N. to place its mandated territory under trusteeship, it to report on this area to the Trusteeship council. The body not only considered this report, which it thought quate, but also examined reports from the administrat trusteeship territories, and considered petitions from t moans and the Ewe people of Togoland for more self-g ment. (*See* also Trustee Territories.)

The status of the Indonesian republic was involved i troversy before the Security council between the Nethe and that country. A commission sent to the spot arran the autumn for the cessation of hostilities.

Under the influence of the U.N., persistent tendency oped toward the breakup of empires and the developm self-government of colonial peoples, with the result that t tinction between sovereign and nonsovereign states had b somewhat blurred.

**Status of International Organizations.**—The status 12 recognized and prospective specialized organizations the U.N. was determined by agreements completed by 9 of with the U.N. Three organizations—the International organization, the International Refugee organization an International Maritime Consultative organization—had n completed or received sufficient ratifications of their co tions. Under these agreements, the specialized organizatio tained their autonomy, and gained the right to send delega appropriate meetings of the U.N. organs. There were als visions for mutual exchange of documents and for consul on personnel and budgetary problems with the U.N.

**Status of Individuals.**—One of the most important de ments of international law following World War II wa recognition that individuals have a direct relationship t world community. Formerly international law had consi that the rights of the individual flowed solely from his rel ship to the state of his residence or of his nationality. U.N. charter, however, called for respect for human right Geneva in the fall of 1947 the Human Rights commission, the chairmanship of Mrs. Franklin D. Roosevelt, produ draft declaration of human rights to be placed before the general assembly, and a draft covenant of human rights open for ratification by states. There was discussion i commission of the procedures for implementing these righ petition of individuals, by discussion in the commission, o sibly by invocation of the jurisdiction of a court of h rights. No conclusions on this matter were reached, how The importance of the question was indicated by an argu made in the supreme court of the United States that the h rights provisions of the charter had become binding law i United States, and that a pledge to assure observance of h ghts and fundamental freedoms without distinction as to race, ex, language, or religion, forbade U.S. courts to assist in the nforcement of restrictive covenants discriminating among races r religions.

The liabilities of individuals under international law were also eveloped by the numerous war crimes trials, both in Europe nd the far east, developing the principles set forth in the Nuernerg charter and enforced by the International Military triunal at Nuernberg. The Committee on Progressive Development of International Law and Its Codification, set up by the rst general assembly of the U.N., recommended the drafting f a code of international criminal law, including the Nuernerg principles, and this was approved by the assembly. It also iscussed the possibility of an international criminal court, but o action was taken. The assembly instructed the Economic nd Social council to prepare a draft convention on the international crime of genocide. (*See* also WAR CRIMES.)

The status of members of the U.N. secretariat and of delerates to the U.N. was defined in the Headquarters agreement etween the U.N. and the United States and approved by the econd general assembly. This agreement supplemented the act f congress providing immunities for international organizations nd their personnel in the United States.

**Prevention of War.**—The international law concerned with revention of war developed in 1947 through efforts to improve he procedure of the U.N. so that it could act against aggressors without the inhibiting influence of the veto. The general assembly, in which there was no veto, provided for an interim committee to study disputes which the Security council failed to deal with, and established a precedent by dealing itself with mportant problems threatening the peace, such as Palestine, Korea and the Balkans. The general assembly also passed resolutions condemning all forms of propaganda likely to provoke hreats to peace, and urging members to disseminate information expressing the undoubted desire of all peoples for peace.

There was much private discussion during 1947 of the possibility of developing a supplementary convention, by which members of the U.N. might agree to contribute forces to deal with a state declared to be an aggressor by the general assembly. Such a convention might implement the right of individual and collective self-defense recognized in the charter, and would be similar to the convention of Rio de Janeiro agreed to by the American republics. This provided for collective defense of the Americas through a procedure involving the votes of two-thirds of those states. The law concerning the prevention of war developed not only through this treaty, but by the judgments in several war crimes trials during the year dealing with the offense of aggressive war. The Binion case in the United States also contributed to the subject by holding that war began with the attack at Pearl Harbor and not with the congressional declaration of war against Japan the following day and against Germany and Italy four days after the assault.

Little progress was made during 1947 on the important problems of atomic energy control, disarmament and organization of U.N. forces. The Atomic Energy committee continued its work, and the majority reiterated in the second report submitted to the general assembly its endorsement of the main elements of the Baruch proposal, but the Soviet Union remained opposed to the concept of international ownership of dangerous fissionable materials, and clung to the veto on sanctions. (*See* ATOMIC ENERGY.)

**Economic and Social Matters.**—The International Civil Aeronautics organization helped develop international law of the air, and the Geneva conference in the autumn contributed toward the reduction of commercial barriers by a convention which considerably lowered tariffs, and by a draft convention for establishment of an International Trade organization to maintain principles of freer and less discriminatory trade. The latter convention was to be acted upon by the Havana conference in 1948.

The policy of the United States of giving aid to Greece and western European countries under the Truman doctrine and the Marshall plan was attacked by the Soviet Union as violating the sovereignty of those states. It was not opposed by any organ of the U.N., however. (*See* EUROPEAN RECOVERY PROGRAM.)

The United Nations Educational, Scientific, and Cultural organization continued its activities to promote freer international communication of culture and information, and considered a treaty on this subject. The Economic and Social council of the U.N. arranged for a conference on freedom of information in the spring of 1948. The International Labour organization cooperated with the Human Rights commission, and initiated several conventions on labour rights, especially on the right of association. The second general assembly passed a resolution on the latter subject.

**Institutions for the Development of International Law.**—The most important agencies directly concerned with international law in 1947 were the International Court of Justice (*q.v.*) and the International Law commission. The court perfected its rules, and the Security council gave it jurisdiction of the Corfu channel case between Great Britain and Albania. Great Britain agreed to place the dispute concerning British Honduras before the court, but Guatemala did not consent. The general assembly asked for an advisory opinion on the question of the grounds upon which members of the U.N. might refuse to vote for applicants to membership. The record for two years of the court's existence could be compared with that of the first two years of the Permanent Court of International Justice under the League of Nations, during which time eight requests for advisory opinions were considered.

During 1946 and 1947, China, Denmark, France, Guatemala, the Netherlands, Norway, Sweden, the United Kingdom and the United States accepted the compulsory jurisdiction of the court, in some cases with reservations. Added to the states still bound by the optional clause of the statute of the Permanent Court of International Justice, transferred to the new court, 27 states were now obliged to submit to the court's jurisdiction. Further accession to the optional clause was urged in a resolution of the second general assembly.

The general assembly, the Security council, the Economic and Social council and nine specialized agencies which had completed agreements with the U.N. were now entitled to ask the court for advisory opinions.

The second general assembly passed a resolution urging greater use of the court, especially in interpreting the charter and the constitutions of the specialized agencies. At Switzerland's request the assembly also defined the conditions under which a nonmember of the U.N. could become a party to the court statute and the conditions under which nonparties to the statute could have access to the court.

Establishment of the International Law commission was authorized by the second general assembly, on recommendation of the Committee on the Progressive Development of International Law and Its Codification. The commission was to be appointed by the third general assembly from recognized international lawyers, to prepare proposals for the codification of international law, the rights of states, and offenses against the peace and security of mankind, including the crimes defined by the Nuernberg tribunal. A convention on the crime of genocide and a convention on human rights were under consideration by the Economic and Social council, but these matters might also eventually be considered by the International Law commission. The commission also was to consider the means of making the sources of customary international law more available, and consult with private organizations in the field.

During 1947 the work of the U.N. and other official bodies in the field of international law was exploratory, and few final conclusions were reached. The powers still manifested a preference for political over juridical methods, but provisions were made for greater use of legal institutions to develop and apply international law in the spirit of the purposes and principles of the charter. (*See* also UNITED NATIONS.) (Q. W.)

**International Monetary Fund.** During 1947 the International Monetary fund began actual operations and engaged in a considerable volume of exchange transactions. The fund's first exchange transaction occurred on May 8, 1947, when France purchased $25,000,000 (U.S.) from the fund in exchange for francs. Total sales of foreign exchange by the fund to member countries against their own currencies to Dec. 31, 1947, are summarized in the following table:

| Country | Sales of U.S. Dollars | Sales of Pounds Sterling |
|---|---|---|
| | (In millions) | |
| United Kingdom | 240.0 | |
| France | 125.0 | |
| Netherlands | 46.0 | 1.5 |
| Mexico | 22.5 | |
| Belgium | 11.0 | |
| Chile | 8.8 | |
| Turkey | 5.0 | |
| Denmark | 3.4 | |
| | 461.7 | 1.5 |

Among the other matters which the fund dealt with during the year were the admission of new members, the establishment of par values for certain countries, revisions of the quotas of certain members, external gold transactions at premium prices, gold production subsidies, exchange restrictions and multiple currency practices.

During 1947 five additional countries (namely, Italy, Turkey, Syria, Lebanon and Australia) were admitted to membership, while the application of Finland for membership was approved by the board of governors meeting in London in Sept. 1947. The addition of these 5 raised the total number of member countries to 45. As of Dec. 31, 1947, the aggregate quotas of members of the fund amounted to $7,921,500,000, as compared with $7,412,500,000 at the end of 1946.

The fund established par values for four of the newly accepted members; namely, Turkey, Syria, Lebanon and Australia. During 1947 a par value for Venezuela, which accepted membership on Sept. 30, 1946, was also set. The par values established were those proposed by the respective countries and were based on existing rates for the U.S. dollar for these nations. The par values of these currencies are:

| Country | Currency | Date Established | U.S. Cents per Currency Unit |
|---|---|---|---|
| Venezuela | Bolivar | April 18, 1947 | 29.8507 |
| Turkey | Lira | June 19, 1947 | 35.7143 |
| Lebanon | Pound | July 29, 1947 | 45.6313 |
| Syria | Pound | July 29, 1947 | 45.6313 |
| Australia | Pound | Nov. 17, 1947 | 322.4000 |

Certain member countries still did not have par values established for them and therefore were not able to use the resources of the fund unless special terms or conditions were arrived at with the fund. These member countries were Brazil, China, the Dominican Republic, Greece, Poland, Uruguay, Yugoslavia and Italy. In addition, par values for the Netherlands Indies and for French Indo-China had not been established. In many cases, the principal reason for not establishing par values was the existence of disturbed monetary conditions, but in others
lative requirements caused the postponement.

The quotas established for Italy, Syria, Lebanon and T
were $180,000,000, $6,500,000, $4,500,000 and $43,000,00
spectively. Australia's quota was set at $200,000,000, the
figure which had been originally agreed to at Bretton W
N.H. In addition, authorization was given by the board of
ernors to revise the quotas of certain member countries if
applied for proportionate changes in their subscriptions i
International Bank for Reconstruction and Development (
Thus, the quota of Iran might be raised from $25,000,0
$35,000,000 and Egypt's from $45,000,000 to $60,000,000

In June 1947 the fund requested all of its members t
operate in the elimination of external gold transactions at
mium prices. Such transactions generally involve a loss of
from monetary reserves and might contribute to the u
mining of exchange stability. Previously, in accordance wit
fund agreement, the fund had prescribed a margin for sales
purchases of gold by members, thereby tending to stabiliz
price of monetary gold for all members and preventing
significant divergencies from par of the external value of r
ber currencies through transactions in gold.

In Dec. 1947 the fund gave consideration to the questic
gold production subsidies in connection with a proposed
production subsidy by the Canadian government. The fun
nounced that all member countries which proposed to intro
new measures to subsidize the production of gold were u
obligation to consult with the fund on the specific measur
be introduced. A subsidy in the form of a uniform pay
per ounce for all or part of the gold produced would const
an increase in price which would not be permissible if the
price paid by the member for gold were to become in exce
parity plus the prescribed margin, as set forth in the articl
agreement. Subsidies involving payment in another form m
also, depending upon their nature, constitute an increas
price. Subsidies on gold production, regardless of their f
were inconsistent with the fund agreement if they underm
or threatened to undermine, exchange stability. Furthermo
subsidies contributed directly or indirectly to monetary i
bility in other countries, they were of concern to the fund.
fund declared its intention to continue to study and to re
with its members their gold policies and any proposed cha
to determine if they were consonant with the provisions of
fund agreement and conducive to a sound international p
regarding gold. In the present circumstances the prop
Canadian action was determined by the fund not to be in
sistent with the policy of the fund.

During 1947 the fund also paid considerable attention to
problems of exchange restrictions and multiple currencies.
fund agreement provides that during the transitional pe
member countries may, subject to certain safeguards, main
and adapt to changing circumstances exchange restrictions
payments and transfers for current international transacti
Most member countries availed themselves of these transiti
arrangements. Only five countries (namely, El Salvador, Gu
mala, Mexico, Panamá and the United States) assumed
obligation to permit freely payments and transfers for cur
transactions. With regard to multiple currency practices,
fund took a practical attitude, keeping in mind the spe
problems of the member countries concerned.

The second annual meeting of the board of governors
convened in London Sept. 11, 1947, and adjourned Sept.
until Sept. 1948, when the third meeting was to be convene
Washington, D.C. Among the matters on which the boar
governors took action at the London meeting were the a
cation of Finland for membership and the requests of Iran

gypt for quota increases. (*See* also BANKING; EXCHANGE CONTROL AND EXCHANGE RATES.) (A. N. O.)

**nternational Refugee Organization:** *see* REFUGEES.

**nternational Trade.** World trade during the first half of 1947 showed substantial gains over he previous year, and prewar levels generally were exceeded. n analysis of the trade of 42 countries which accounted for hree-fourths of world trade in 1938 indicated that actual volume of trade was 10%–20% above the 1946 level and slightly bove the 1938 level.

The striking increase in foreign trade of the countries of the estern hemisphere, more than double prewar volume, was lmost entirely responsible for these gains. Dominant in the rade picture of the hemisphere was the fivefold increase of .S. exports by value (250% by volume) since 1938.

Trade of the eastern hemisphere during the first six months f 1947 gained significantly over the previous year, but volume emained around 35% below the prewar level. A significant art of this decline was caused by the virtual disappearance of erman and Japanese trade.

Although a large proportion of U.S. exports was financed hrough government loans and grants, the nations of the world iquidated approximately $4,500,000,000 of their gold and dollar ssets to pay for U.S. goods and services. Resulting dollar hortages led to tighter import controls during the year by many nations which sought to limit U.S. purchases to the most ssential commodities.

Other forces, however, operated to promote the eventual reer flow of world trade. On Oct. 30, 1947, representatives of he U.S. and 22 other nations meeting in Geneva as the Preparatory Commission of the United Nations Conference on Trade and Employment drafted the charter for the International Trade organization and concluded a series of multilateral rade agreements aimed at a reduction of trade barriers. These greements, which affected the trade of nations doing about hree-fourths of the world's commerce, marked the first successul multilateral effort to reduce tariffs. (*See* TARIFFS.)

**United States Trade.**—The dollar value of U.S. exports eached an all-time peak of approximately $14,500,000,000 in 1947—nearly $5,000,000,000 more than in 1946 and $11,500,000,000 above the 1936–38 average. Rises in prices, however, accounted for nearly half the increase over the previous year. In volume, 1947 exports were 250% larger than in the prewar period.[1]

Imports during 1947 were valued at approximately $5,500,000,000, nearly $750,000,000 higher than in 1946. In terms of volume, however, imports were actually a little lower than in the previous year; the price factor accounted for more than the entire gain in dollar value. Imports in 1947 by value were twice the 1936–38 average, but were only 9% above prewar volume.

Forty-three per cent of United States exports went to western hemisphere destinations in 1947 compared with 34% in prewar years. The proportion of total shipments to Europe declined during the same period to 36%, from 43% prior to World War II.

The change in the import pattern was more striking. Almost 60% of 1947 imports derived from western hemisphere countries compared with 37% in the prewar period, while Europe contributed only 14% in 1947 in contrast with 29% in 1936–38. The proportionate share contributed by Asia was also down sharply to 18% in 1947 as against 30% in the prewar years.

Prior to the multilateral trade agreements concluded at Geneva on Oct. 30, the United States had signed reciprocal trade agreements with 29 nations.

**Canada.**—The focus of development in Canada's foreign trade shifted during 1946 and 1947 from exports, where it had been concentrated during the war years, to imports. During 1947 imports reacted strongly to the easing supply situation, rising to a new record of $2,500,000,000. Exports, meanwhile, had declined from $3,200,000,000 in 1945 to $2,300,000,000 in 1946 but recovered to $2,800,000,000 in 1947.

*Estimated from 11 months' figures.
†Preliminary.

---

[1] Approximately 25% of U.S. exports were still subject to control in 1947.

Because the accelerating import was, in the main, a dollar import, and the dominion's export customers in the sterling area and Europe were unable to pay in dollars for a considerable portion of the food and other goods they were taking from Canada, a critical drain of exchange reserves arose and imports were again placed under restriction. These restrictions were aimed chiefly at the reduction of U.S. trade and were accompanied by a project to ration capital goods import to increase production for export to the U.S.

**Latin America.**—Most of the countries of Latin America reached a difficult stage in the transition to postwar trading patterns. Following a period of exceptionally heavy foreign buying supported by accumulations of war-earned dollar exchange, a growing inflation led to speculative and nonessential purchasing which placed a strain on dollar balances and focused attention early in 1947 on the need for regulatory measures. Import and exchange control restrictions were adopted which tended during the latter part of the year to arrest the upward trend of imports. Argentina, Brazil, Mexico, Colombia and Peru became particularly concerned over the need to conserve their dollar resources.

Table IV.—*Trade of Specified Latin American Republics for 1938, January-August 1946 and January-August 1947*

*Data for January through April only.

Argentina's exports were still predominantly to the United Kingdom, but it had been able through agreement with that country to exchange sterling for dollars, and was purchasing heavily in the U.S. market until Aug. 20, when the convertibility privilege was withdrawn as a result of the stringent dollar position of the United Kingdom. Purchases from the U.S. were thereupon shut off completely for a period, but were later resumed on a selective basis.

Brazil's two-way trade had traditionally lain heavily with the U.S. After the war, Europe's needs caused a revival of trading with that area, however, and in consequence Brazil piled up a sizable export balance with countries other than the U.S. Dollar balances, on the other hand, declined as Brazil began to purchase U.S. products in quantity, and the government felt impelled in June 1947 to impose exchange restrictions granting priority to payments for imports considered essential.

Deferred wartime demand and the persistence of inflation in Mexico boosted the import balance in that country after 1944 to a point where the government found it necessary in July 1947 temporarily to prohibit the importation of certain nonessential goods constituting 15% to 20% of the value imports.

**"TRYING TO MAKE BOTH ENDS MEET,"** a reference to Great Britai ficulties in balancing its foreign trade in 1947, by Vicky of the *Chronicle* (London)

Both Colombia and Peru also increased their restrictic the sale of foreign exchange during the year. On the other Cuba and Venezuela and a few of the smaller Central Am and Caribbean republics were exceptions to the difficult exchange situation. Because of the nature of their expo resources, demand for their products in the U.S. continu a sufficiently high level to balance their imports.

Since these measures to restrict imports were not accom by measures to reduce the volume, or even to curb the expa of the internal means of payment, the pressure for impo mained strong in Latin America.

**United Kingdom.**—The United Kingdom's foreign tra 1947 was marked by continuation of an adverse balan trade and application of measures to alleviate this situ The government continued selling external capital assets tailing imports and expanding exports, and drawing frequ on foreign loans. The suspension of sterling convertibilit announced in Aug. 1947, and one month later the gover introduced its new import-export program designed to n the gap in its balance of payments.

*Excludes U.N.R.R.A. shipments.
†Prewar data for Austria are for 1937.
‡Data for 1938, prewar Germany; data for 1946 and Jan.-June 1947 include partial data from soviet zone.
§Excludes surplus property and gift packages.
Note: Owing to the multiplicity of exchange rates, data are tentative for 1946 and first six months 1947; western Europe excludes Spain.

The volume of goods imported into the United Kingdom in 946 was about 66% of the prewar volume, and by the third uarter of 1947 had increased to 89%.

Purchases during 1947 were restricted not only by world hortages of foodstuffs and raw materials but also by the deision of the British government to import only essential comnodities.

Europe, which provided about 33% of the United Kingdom's mports in 1938, supplied only about 22% during the first nine nonths of 1947. British Commonwealth countries continued to upply approximately 40% of total imports, while those from he western hemisphere increased from 33% to 47% during this eriod.

Imports from nonsterling countries accounted for 70% of the otal during the first nine months of 1947.

At the beginning of 1947 the government introduced a plan lesigned to increase the volume of exports to 140% of the 1938 evel. This goal was to be achieved by December, but in view f severe shortages in coal and other raw materials during the vinter months the program was unattainable. A revised export rogram was announced in September based on an expansion of xports to 164% of 1938 by the close of 1948.

During the third quarter of 1947 the volume index of exports vas 114%.

Of the United Kingdom's ten leading exports before World War II, only five—machinery, vehicles, iron and steel, chemicals and electrical goods—were exported in amounts equal to or exceeding prewar volume.

During the first nine months of 1947 manufactured goods comprised 88% of total exports.

Table VIII.—*Principal Purchasers of United Kingdom Exports, 1938, 1946, and January-September 1947*

(In pounds sterling)

| Country | 1938 | 1946 | Jan.-Sept. 1947 |
|---|---|---|---|
| British India | £33,764,754 | £79,750,047 | £68,123,454 |
| Union of South Africa | 39,493,503 | 75,359,969 | 67,989,207 |
| Australia | 38,164,905 | 55,181,503 | 49,450,775 |
| Eire | 20,281,525 | 39,522,872 | 37,728,820 |

| Canada | 22,529,765 | 32,603,137 | 30,166,429 |

**Continental Europe.**—By the end of 1947, production in half of the countries of Europe had already exceeded prewar levels. In the first six months of the year the imports of the 16 countries participating in the European Recovery program reached a total of $10,000,000,000, 29% of which were from the U.S. and 33% intra-European. Of the $6,000,000,000 in exports during the first half of the year, approximately 52% went to European destinations and only approximately 5% to the U.S.

Unusually large imports into Europe would be needed for some years, first to compensate for the sharp but temporary reduction in the normal indigenous production of coal, food and fertilizer and, secondly, for the replacement and repair of plant

and equipment. These needs are superimposed on normal European requirements of raw materials. It was expected that the current large gap between imports and exports would diminish rapidly as expected increases in production led to expanding exports.

Tables IX and X are based on very preliminary reports of trade. As will be noted, figures are not available for all areas.

**Far East.**—The foreign trade of Japan, the most important trading nation of the far east prior to World War II, was beginning to return to peacetime channels in 1947. Imports were sufficient to meet urgent needs of the economy and to prevent disease and unrest. The small volume of exports consisted chiefly of raw silk and certain other items handled through the U.S. Commercial company and of shipments to such nearby areas as China and Korea. In the first half of 1947 a U.S. trade mission conferred with the supreme commander for the allied powers in Tokyo, and arrangements were made for the partial resumption of private trade with Japan.

China's foreign trade during the same period was increasingly affected by economic, political and military difficulties. From July 1946 to Sept. 1947, inclusive, net legal imports into China (excluding U.N.R.R.A. shipments) were valued at approximately U.S. $775,000,000, or almost three times net exports of about U.S. $285,000,000. While the value of exports was greater than in many similar prewar periods, the value of imports represented a still larger increase. The excess of imports had been the major cause of the continuous deficit in China's balance of payments and the serious drain on its foreign exchange resources. The Chinese government restricted nonessential imports and conserved foreign exchange by a system of quotas, import prohibitions, and exchange controls in an effort to reduce the excess of imports and obtain vitally needed commodities.

Copra, the production of which exceeded all records in 1947, remained the mainstay of Philippine exports, and, in fact, of the Philippine economy. Late in 1947 sugar became available for export for the first time since 1941. Heavy dollar receipts from U.S. expenditures in the Philippines and the great demand for goods for consumer needs and construction resulted in imports about three times prewar levels. Supplies of consumer goods and production for export increased, and inflationary trends abated.

Siam's trade, conducted through private channels, also progressed toward a normal peacetime status. Restrictions were still in effect, however, with respect to the four most important export commodities.

Although rubber production and export led to some revival of Malaya's trade, imports were still restricted generally to rehabilitation and essential goods. Trading conditions in other areas of southeast Asia were still far from normal. Difficulties were especially acute in Indo-China and in the Netherlands Indies because of disturbed political conditions. ## Interstate Commerce Commission.

The duties and powers of the Interstate Commerce commission are set forth in the Interstate Commerce act, originally passed in 1887 and later amended in many important particulars. The act is divided into four parts, and deals with the regulation of rail, motor and water carriers and freight forwarders. The regulatory powers of the commission extend, among other things, to the charges made by carriers for transportation services; to questions involvi valuation and financial reorganization of railroads; to the ance of securities; to the acquisition or control of these v carriers by other carriers or persons; to their accounting tices and the abandonment of lines of railway; and to m involving the determination of whether public convenienc necessity require the institution of new services by moto water carriers or by freight forwarders, or for the constr and operation of lines of railway.

There was no substantial change in the statutory author the commission during 1947. The full membership of 1 attained by the appointment of Richard F. Mitchell to fi vacancy caused by the death in 1946 of Commissioner Clau Porter. Commissioner J. Monroe Johnson continued to se director of the Office of Defense Transportation. Commis Clyde B. Aitchison served as chairman during the year and Commissioner William E. Lee was selected as chairma the year 1948.

The carriers subject to the jurisdiction of the comm were confronted with numerous and difficult problems c the year, including the rising costs of labour and materials, war shifts in the movement of commodities because of cha the location of plants and substitution of commodities changes in competitive advantages brought about by diffe in technological improvements between the different agenc transport. Private transportation had increased and was pa larly felt in the passenger field.

Numerous urgent appeals for increased revenues to me increased costs of transportation resulted in authorizati the commission of increased freight rates and charges, e and forwarder rates, passenger fares and Pullman charge interim increase of 10% in rail freight rates and charge permitted in October to be added to the increase effective J 1947, pending the investigation of the proposal for more stantial increases.

On May 12, 1947, the supreme court of the United upheld the findings and order of the commission requi substantial revision of class rates east of the Rocky mour Subsequently, the commission modified its order in the rate case, so as to permit a uniform increase of 22.5% i rates there prescribed. As so increased, the new class rat came effective Aug. 22, 1947, and were increased another under the interim order of Oct. 6, 1947. The rail carriers u took to formulate a nation-wide uniform classification requisite in the class-rate case. (C. B.

**Intestinal Disorders:** *see* ALIMENTARY SYSTEM, DISO OF.

## Intoxication, Alcoholic.

The trend toward differ ting more clearly betwee coholism" and "the use of alcohol" continued to devel 1947. The former includes those who become the victims c pernicious effects associated with its excessive use. In th jority of those who use alcoholic beverages, they neither as the source, nor do they cause physical and mental illn social ostracism.

Studies in the United States indicated that approxin 65% of the population over 21 years of age drink alc beverages (75% male, 56% female). Among the popu over 21 years of age, 27% of males and 8% of females habitually or regularly. Thus there is isolated, among thos drink, a fairly large group of people out of which emerg potential alcoholics.

The rates of chronic alcoholism were not greatly influ the many and diverse liquor control systems inaugurated ter repeal of prohibition in the United States. Between 1945 ıd 1947 the rate was reported to have increased in urban eas and decreased in rural communities. There was no ap- rent basis for believing that female inebriety was increasing ster than male inebriety. The narrowing gap between the sexes respect to drinking alcoholic beverages, however, appeared be in accord with the general world trend of society toward ss and less differentiation in the social behaviour of men and omen.

In France the year witnessed a movement in favour of alco- ol and a legislative proposal to abrogate the laws of 1940 and 41 restricting its uses. Those supporting such legislation con- nded that the laws aggravated the situation, that they pro- oted bootlegging and other antisocial trends and that such gimentation was contrary to French ideals. Those opposing lieved that the laws had improved public health.

The long-range approach to the solution of the problem of ronic alcoholism, more or less crystallized in the literature of 947, embraces education, research and treatment. The latter cludes community and hospital services and facilities for erapy, the training of personnel to undertake the duties in- olved, measures for social readjustment and prevention and ommitment centres for the intractable alcoholic. The majority pinion regarded these as a public function and that the send- g of drunks to jail "to teach them a lesson" is a primitive nd a useless gesture. Controversies still obtained on whether ere is a common denominator in all cases of alcoholism and hether specific physical and psychological dispositions account r the development of alcoholism rather than other symptoms f maladjustment.

One physical hypothesis was proposed to explain the nature nd causes of alcoholism. Its approach involved the interplay f hereditary and environmental factors. According to this ypothesis, some individuals inherit a constitutional metabolic attern which makes possible a readily developed intense appe- ite for alcohol. No standard body of observations, however, onfirmed this biochemical genetic hypothesis respecting alco- olism.

There was support for the opinion that habitual drunkards re at no time able to repress the true characteristics of their ersonality in conventional patterns and that they express their rue personality characteristics by having resort to alcoholic in- oxication. Among these are the cyclothymic, schizophrenic, sychoneurotic and psychopathic personalities and other situa- ional types of reaction among those whose standards of con- entional integration of the personality is individually too high or them.

The use of insulin combined with dextrose and vitamin B or the treatment of acute intoxication continued to receive ndorsement. Insulin alone, ranging from small to subshock loses, was also advocated, with rapid results reported in the obering process.

Favourable responses were reported from the application of ntensive combined therapy in cirrhosis of the liver, both with nd without fluid in the abdomen. The treatment consists of a naximum protein—high carbohydrate—high vitamin—low fat liet, plus liver extract and vitamins, and including methionine, asein, and choline and cystine. **Inverchapel, Archibald John Kerr Clark Kerr,** 1st Baron, of Loch Eck (1882– ), British diplomat, was born on March 17, 1882, and was privately educated. He entered the British foreign service in 1906, and after service in World War I returned, and in 1919–22 was acting agent in Tangier; 1922–25, first secretary at Cairo; 1925–28 minister to Central American republics, and 1928–30 minister to Chile. In April 1931 he was transferred to Stockholm, in 1935 appointed ambassador to Iraq, in 1937 to China and in 1942 to the U.S.S.R., where he succeeded Sir Stafford Cripps. He was appointed ambassador to the United States on Jan. 25, 1946, but before taking up his duties he was engaged on a special mission to Java, to attempt mediation in the Dutch-Indonesian conflict. On Jan. 21, 1946, he was raised to the peerage, and took the title of Baron Inverchapel of Loch Eck. In Washington, on March 20, 1947, he presented to General of the Army Dwight Eisenhower the sword of honour given the latter by the city of London.

**Investments, Foreign, in the U.S.:** *see* Foreign Investments in the United States.

**Iodine.** The iodine production of the United States is not reported. Imports increased from 220,526 lb. in 1945 to 886,578 lb. in 1946 but these figures do not have great significance, since imports are brought in only as they are needed to replenish a rather large stock that is maintained in the country. Over a 15-yr. period, imports had averaged about 1,000,000 lb. a year. (G. A. Ro.)

**Iowa.** A north central state of the United States, popularly known as the "Hawkeye state." Area, 56,280 sq.mi., of which 294 sq.mi. are water. The population in 1940 was 2,538,268, with 1,084,231 listed as urban and 1,454,037 as rural. Only 16,694 were Negroes, and 883 others were nonwhite, about half of whom were Indians. Of the white population 117,245 were foreign-born. In 1947 the population, exclusive of persons overseas in the armed services, was estimated to be 2,606,000. The principal cities are: Des Moines, the capital (159,819); Sioux City (82,364); Davenport (66,039); Cedar Rapids (62,120); Waterloo (51,743); Dubuque (43,892) and Council Bluffs (41,439).

**History.**—The principal state officers elected in Nov. 1946, who took office in Jan. 1947, were: governor, Robert D. Blue; lieutenant governor, Kenneth A. Evans; secretary of state, Rollo H. Bergeson; auditor, Chet B. Akers; treasurer, J. M. Grimes; secretary of agriculture, Harry D. Linn; attorney general, Robert L. Larson (to fill a vacancy) and superintendent of public instruction, Jessie M. Parker. The general assembly met in regular session from Jan. 13 to April 25, 1947. A special session, which convened Dec. 16–19, 1947, to consider income tax reduction, provided for an increase in exemptions of 50% and a deduction of 25% from the computed tax.

**Education.**—During the school year 1945–46, out of the school population (ages 5–21) of 627,456, 346,508 pupils were enrolled in the 8,149 public elementary schools; 113,986 in the 890 public high schools and 923 in the 21 junior colleges. Teachers in the public schools numbered 22,964. The general assembly in 1947 appropriated $2,000,000 annually for transportation of pupils to public schools and $1,000,000 annually to aid districts where a maximum levy on property fails to produce a minimum income per child.

There are three state-supported institutions of higher education—the State University of Iowa (1847) at Iowa City, the State College of Agriculture and Mechanic Arts (1858) at Ames and the State Teachers college (1876) at Cedar Falls. In Oct. 1947, these 3 institutions had a total enrolment of 22,670, of which 12,215 were veterans attending under the G.I. Bill of Rights. There are 23 other colleges sponsored by churches and private agencies. The total enrolment in these colleges in Oct. 1947 was 18,211, including 8,467 veterans. The number of veterans in college in Iowa dropped from about 25,000 in 1946 to 20,682 in 1947.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—During the fiscal year ending June 30, 1947, Iowa paid out $21,083,963 for old-age assistance, of which $11,082,252 came from the federal government. The state appropriations for 1947–48 included $12,000,000 for old-age assistance, $300,000 for aid to the blind, $375,000 for aid to dependent children and $120,000 for child welfare. The general assembly of 1947 also appropriated $500,000 for the construction at Iowa City of a hospital-school for handicapped children. During 1946–47 a total of $9,689,645 ($1,299,954 of which was interest from the federal government) was collected for unemployment insurance and $2,878,067 was expended, leaving a balance on July 1, 1947, of $71,525,673. Approximately 400,000 persons were covered by this insurance.

On Dec. 1, 1947, there were 13,021 inmates in the state's charitable and correctional institutions—6,364 in the four hospitals for the insane; 1,677 in the hospital for epileptics and school for feebleminded at Woodward; 1,853 in the state school (for feebleminded) at Glenwood; 1,750 in the state prisons for men at Fort Madison and Anamosa; 72 in the reformatory for women at Rockwell City; 217 in the training school for boys at Eldora; 100 in the training school for girls at Mitchellville and 193 in the state juvenile home at Toledo.

**Transportation and Communications.**—There were in 1947 approximately 100,000 mi. of public highways in Iowa, of which more than 9,600 mi. were primary roads managed by the state and about 13,750 mi. were county trunk highways. By Jan. 1, 1947, Iowa had 5,557.6 mi. of paving, and 51,918.2 mi. of gravelled roads. During 1946–47 the state spent $7,920,467 on constructing primary roads and $5,009,859 for road maintenance.

At the close of 1946 the track mileage of steam railroads in Iowa was 9,214.86 mi. During 1946 these roads carried 9,539,970 passengers and 97,922,366 tons of freight. There were at the same time 397.20 mi. of electric interurban track on which 943,721 passengers and 3,658,890 tons of freight were transported. Motor buses carried 21,669,303 passengers in 1945. The number of motor vehicles registered in Iowa in 1946 was 862,812 of which 624,674 were passenger cars. There were 1,245 mi. of pipe lines for crude oil and gasoline and 2,690 mi. for natural gas. Telephones in Iowa in 1947 numbered 724,220, 292,200 of which were in local independent companies. In 1945, 70% of farms and 94% of urban dwellings had telephones.

**Banking and Finance.**—On June 30, 1947, there were 96 national banks in Iowa with deposits of $772,443,000 and resources of $813,086,000. The 557 state banks had deposits of $1,512,304,013, an increase of $146,508,872 over 1946, and assets of $1,596,633,023, an increase of $151,338,976.

In 1946–47 the state income from taxes totalled $107,667,298. The principal sources of revenue were the retail sales tax $36,772,165; gasoline tax $29,815,400 (compared with $19,622,625 in 1945); motor vehicle tax (for 1946) $12,865,066; personal income tax (one-half the levy only) $10,268,046; cigarette tax $3,586,442; inheritance tax $2,248,959; insurance tax $2,265,144 and profits from the state liquor stores $3,500,000. Expenditures for the biennium 1945–47 totalled $113,184,216. The appropriations for the year 1947–48 included approximately $20,000,000 for schools, $10,000,000 for hospitals and penal and correctional institutions and $12,000,000 for old-age assistance. By constitutional amendment all funds received from the gasoline tax and the motor vehicle registration fees is to be spent on the highways. In 1946–47 this amounted to more than $42,000,000. On Sept. 30, 1947, the state treasury reported a net expendable balance of $40,711,671.

**Agriculture.**—There were 206,155 farms in Iowa in 1947 (213,318 in 1940) with 34,703,088 ac., averaging 168.3 ac. per farm. The assessed valuation of farm land and buildings in 1946 was $1,680,898,530, estimated to be about 60% of actual value. For the first nine months of 1947 Iowa farmers received a cash income of $1,696,963,000. The total cash income for 1946 included $1,493,966,000 for livestock, $299,781,000 from crop sales and $46,539,000 from government payments. On Jan. 1, 1947, there were 10,689,000 hogs on Iowa farms, 5,189,000 cattle, 1,519,000 sheep, 412,000 horses and 15,000 mules. On Jan. 1, 1946, there were 22,748 auto trucks on Iowa farms, 177,431 tractors and 46,546 mechanical cornpickers.

Table I.—*Leading Agricultural Products of Iowa, 1947 and 1946*

| Crop | 1947 (est.) | 1946 |
|---|---|---|
| Corn, bu | 331,360,000 | 634,638,000 |
| Oats, bu. | 180,609,000 | 211,575,000 |
| Soybeans (grain), bu. | 26,310,000 | 35,604,000 |
| Wheat, bu. | 3,252,000 | 4,335,000 |
| Rye, bu. | 255,000 | 170,000 |
| Barley, bu. | 799,000 | 410,000 |
| Potatoes, bu. | 975,000 | 2,880,000 |
| Popcorn, lb. | 18,000,000 | 74,620,000 |
| Clover seed, bu. | 111,000 | 220,000 |

In 1946 Iowa farmers marketed 14,439,000 hogs for $684,938,000, 2,603,000 cattle and calves for $370,862,000, 3,037,000 turkeys for $20,788,000, 41,820,000 chickens for $56,206,000 and 328,330,000 dozen eggs for $108,678,000.

**Manufacturing.**—Iowa is not primarily a manufacturing state although the products of industrial establishments about equal the value of the agricultural products. In 1947 there were 3,835 manufacturing plants in Iowa employing about 148,000 workers. Payrolls aggregated $369,462,656, with an average annual wage of $2,491 ($1,262 in 1939). These plants turned out goods valued at $1,515,000,000. The number of retail stores in Iowa making sales tax returns for the first quarter of 1947 was 67,820.

Table II.—*Principal Mineral Products of Iowa, 1945 and 194*

| Mineral | 1945<br>Production | 1945<br>Value | 1944<br>Production | |
|---|---|---|---|---|
| Bituminous coal | 2,010,000 tons | $6,995,000 | 2,690,000 tons | $9 |
| Cement | 3,527,838 bbl. | 6,220,991 | 3,408,616 bbl. | 5 |
| Stone | 4,026,460 tons | 5,306,299 | 3,563,020 tons | 4 |
| Sand and gravel | 6,030,531 tons | 2,091,391 | 5,271,031 tons | 2 |
| Gypsum | 430,843 tons | 569,964 | 398,143 tons | |

**Mineral Production.**—Iowa ranked 29th among the states in t
value of minerals produced in the U.S. from 1911 to 1945.
(R. A.

**Iowa, State University of.** Located in Iowa Cit
this institution of
education in 1947 observed the centennial of its establis
It was created Feb. 25, 1847, and was the first state uni
to admit women on equal standing with men. Enrolment
fall of 1947 was more than 10,000 students, a record f
semester. Approximately 6,000 of the students were w
erans. Heavy enrolment before the first steps of the $10,
building program could be taken necessitated erection
merous barrack-type temporary buildings for classrooms,
tories, and offices. (For statistics of endowment, enr
faculty, library volumes, etc., *see* also UNIVERSITIES AN

Turkey and Iraq and on the south by the Persian gu
Arabian sea. Area: 634,413 sq.mi.; pop. (1946 est.): *c.* 1
000. Chief towns (pop. 1940 census): Tehran (cap. 540
Tabriz (213,542); Isfahan (204,598); Meshed (176
Shiraz (129,000). Language: mainly Persian, but some
and Armenian in the north, Kurd in the west, Arabic
south and Pashtu in the east. Religion: mainly Moham
(*Ithnā-ʻasharīya*), but *c.* 10% of the Mohammedans bel
the Sunni sect; there are also *c.* 50,000 Gregorian Arm
and a few thousand Catholic Armenians, 30,000 Nestoria
50,000 Jews. Ruler: Shah Mohammed Riza Pahlavi; prim
isters: Ahmad Ghavam-es-Saltaneh until Dec. 10, Ib
Hakimi (from Dec. 23).

**History.**—The year opened propitiously for Iran. The
ian army had entered the province of Azerbaijan, and the
government had made no moves, political or military, t
barrass the central government in Tehran or the army a
ties in Azerbaijan. Thus for the first time after Aug. 26,

hen British and soviet troops entered Iran, its full sovereignty d been re-established, and the whole country had once again me under the direct control of the central government.

Polling for the 15th session of the Majlis, which had been stponed several times, began on Jan. 11, 1947. Elections were ld in an orderly fashion, and out of 136 seats in the Majlis, e newly-founded "Democratic party of Iran," sponsored by hmad Ghavam-es-Saltaneh, and its adherents gained altogether seats, thus giving Ghavam a clear majority.

Because of general criticism, Ghavam reformed his cabinet June 22. The ministers of war, health, communications and ance retained their posts. A new ministry of national econ-ny was formed. When the new session of the Majlis con-ned, the government had to tender its resignation, and in the st week of Aug. 1947 Ghavam resigned the premiership; he as renominated by 78 votes out of 116. On Sept. 11 he formed s new cabinet, with himself as minister of interior, and on ct. 5 Ghavam submitted his cabinet to the Majlis and received vote of confidence of 93 votes for him and 12 against.

During September the soviet ambassador in Tehran delivered vo notes to the Iranian prime minister accusing the Iranian overnment of violating the agreement of April 4, 1946, and de-anding swift action in connection with the ratification of the l agreement. On Oct. 22, Ghavam submitted a lengthy report the Majlis giving the background of his negotiations with the viet government on the oil question. He emphasized that the 946 agreement was signed under heavy soviet pressure. A bill eclaring the oil agreement void was then submitted. It was ut to vote, and by 102 votes to 2 the Majlis resolved that (1) havam's oil negotiations and oil agreement with the soviet overnment should be null and void; (2) the government should ke measures to establish within five years the location and uantity of all oil resources, that negotiations might be started or its eventual sale to Russia; (3) it should be forbidden to rant any concessions for the extraction or refining of oil to oreigners or to create any oil company with the participation f foreigners; (4) in cases where the rights of the Iranian na-ion regarding the natural resources of the country were threat-ned, particularly in the case of the Anglo-Iranian Oil com-any, the government should take necessary measures and in-orm the Majlis.

Early in November, Ghavam officially informed I. V. Sadchi-ov, the soviet ambassador to Iran, of this decision. On Nov. 20 adchikov addressed to Ghavam a strongly worded note ac-using the Iranian government of having "treacherously violated ts undertakings" and charging it with responsibility for all the onsequences. The note created serious uneasiness in Tehran, ut one of its results was the weakening of Ghavam's personal osition. His own Democratic party, already not satisfied with is lip service to necessary social reforms, decided that also rom the point of view of foreign policy a change was necessary. n Dec. 10 Ghavam received a vote of nonconfidence in the ajlis and resigned. On Dec. 23 Ibrahim Hakimi, former prime inister, formed a new government.

At the end of May 1947 the shah for the first time in his eign toured Azerbaijan. His visit to the northwest province as the signal for celebrations, and was a symbol of the newly estored national unity.

**Education.**—(1938) 8,381 schools; 457,236 pupils; 13,078 teachers; ne university at Tehran.

**Banking and Finance.**—Revenue (ordinary est. 1944–45) 10,325,000,000 als; expenditure (ordinary est. 1944–45) 10,324,000,000; foreign loan nil); public debt (1944) 2,461,600,000 rials; notes in circulation April 1947) 6,640,000,000 rials; gold reserve (June 1946) 4,015,000,000 ials; commercial bank deposits (1947) 9,008,000,000 rials. Exchange ate (1946): 1 rial = 3.077 U.S. cents.

**Trade and Communication.**—Foreign trade (merchandise, 1946): im-orts 433,000,000 rials; exports 861,000,000 rials. Communication: oads fit for wheeled traffic (1938): *c.* 8,770 mi.; railways open to traffic (1945) *c.* 1,270 mi.

**Agriculture and Minerals.**—Production (in short tons): petroleum, crude (1946) 21,450,000; wheat (1941) 1,870,000; barley, 210,000; rice (est. 1937–38) 420,300; cotton (1943) 22,000; wool (1943) 13,200; beet sugar (1941–42) 26,400; tobacco (1940–41) 13,070.

**Iraq.** An Arab state of the middle east, between Iran, Syria and Saudi Arabia; an independent kingdom after 1932, when the British mandate was terminated. Area: 116,600 sq.mi.; pop. (est. Dec. 1946): 4,803,430. Chief towns (pop. est. 1946): Baghdad (cap., 832,927), Mosul (279,361), Basra (181,814). Language: Arabic; religion: mainly Moslem, but also Christian, Jewish and other communities. Ruler: King Feisal II; regent: Crown Prince Abdul-Ilah; premier: Seyyid Saleh Jabur (March 30, 1947).

**History.**—Elections were held in February, and Seyyid Saleh Jabur became Iraq's first Shia prime minister. His program announced that he would seek to amend the Anglo-Iraqi treaty of 1930. A ten-year treaty of friendship and alliance with Trans-Jordan, providing for joint military training, for measures of common defense and for economic co-operation, was ratified by the Iraqi parliament on May 4.

Iraq played a prominent part in the Palestine discussions of the United Nations during the autumn. On Sept. 22 the prime minister warned the British and U.S. embassies that, if the U.N. general assembly recommended the partition of Palestine, Iraq and the other Arab nations would give all assistance to the Palestine Arabs. After the U.N. decision on partition, the government, on Nov. 30, expressed great displeasure, called on its people to maintain order and assured them that it would carry out its responsibilities with regard to Palestine.

The withdrawal of all British land forces was completed on Oct. 26, leaving only a military mission and two R.A.F. air bases.

Progress was made with the Habbaniya flood-prevention scheme on the Euphrates. The Kirkuk-Mediterranean pipe lines were being doubled. (F. St.)

**Education.**—Nursery schools (1944–45) 56, scholars 7,891; elementary schools (1945–46) 944, scholars 97,453; intermediate schools (1945–46) 54, scholars 9,480; secondary schools (1945–46) 24, scholars 3,131; adult elementary schools (1944–45) 99, scholars 3,788; teachers' training colleges (1945–46) elementary (male) 4, students 969; (female) 2, students 269; higher (mixed) 1, students 347. Other colleges (1945–46) 14, students 2,750.

**Finance.**—Revenue, ordinary (1945–46) 19,675,699 Iraq dinars; expenditure, ordinary (1945–46) 23,608,552 dinars; gold reserve (Dec. 1946) 44,700,000; exchange rate (1947) 1 dinar=£1 sterling=402.7 U.S. cents.

**Trade and Communication.**—Foreign trade, 1945 (merchandise): imports (excluding British army stores) 18,465,768 dinars; exports (excluding crude petroleum) 9,817,868 dinars. Exports (1945) in short tons: grain, pulses and flour 281,420; dates 169,038; wool (raw) 3,026; hides and skins 6,041, intestines (casings) 1,659,295; live stock (number) 119,369; earth, stones and cement 41,974; ceramic products 71,041. Communications: roads (1940) *c.* 4,000 mi.; railways (1945) route open to traffic 965 mi.; passengers carried (1944–45) 4,869,523; goods carried (1944–45) 2,910,736 short tons. Vehicles registered (1945) cars 3,771; motorcycles 127; lorries 2,017; river craft (1945) steam and motor 168, net tonnage 10,872; shipping (1944–45) entered 1,341, net tonnage 5,719,040.

**Agriculture and Minerals.**—Production in short tons: crude petroleum (1946) 4,925,800; rice (1945) 279,900; tobacco (1944–45) leaf 7,322, crushed 4,409; wheat (1938–39) 860,000; barley (1938–39) 1,251,400; wool (1938) 9,100; cotton (1940–41) 3,960; cotton seed (1940–41) 9,350.

**Ireland:** *see* EIRE.

**Ireland, Northern.** Northern Ireland comprises the six counties of Antrim, Armagh, Down, Fermanagh, Londonderry and Tyrone; it forms part of the United Kingdom of Great Britain and Northern Ireland, but (from 1920) has its own parliament and executive (with limited powers for local purposes) although it is represented in the imperial parliament by 13 members. Area: 5,238 sq.mi.; pop. (March 1947) 1,335,000. Chief cities (pop. est. 1947): Belfast (cap. 448,600), Londonderry (49,000). Language: English;

religion: Roman Catholic 33.75%, Presbyterian 31.4%, Episcopalian 27% (approx.). Governor in 1947: the Earl Granville; prime minister: Sir Basil Brooke.

**History.**—The main items of the parliamentary session which opened on April 29 provided for a comprehensive health service, the establishment of a Tourist board and the consolidation of the law relating to the census of production. The Health Services bill received general approval, the cost of the new services being estimated at more than £5,500,000 annually. The Tourist Traffic bill was noncontentious but there was some objection to the Statistics of Trade bill, which the government regarded as essential to the maintenance of a high level of employment.

Throughout the year there was full employment in the shipyards: the tonnage launched in 1946 was 155,000, the largest after 1914. Launching ceremonies of historic interest were those of H.M.S. "Centaur," named by the Duchess of Kent; the Union Castle liner "Pretoria Castle," named by Mrs. Jan C. Smuts who spoke from her home in South Africa; and the Union Castle liner "Edinburgh Castle," named by Princess Margaret.

(D. J. O.)

**Education.**—(1946): Public elementary schools 1,649, scholars 186,664; secondary schools 76, scholars 21,021; technical schools 129, scholars 4,339; universities (1946–47) 1, students 2,400.

**Finance.**—(Estimate 1947–48) revenue £53,073,000; expenditure £32,838,000; public debt (March 1946) £2,995,300. Exchange rate (1947): £1 = 402.7 U.S. cents.

**Trade and Communications.**—External trade (1946): imports £125,000,000; exports £128,000,000. Value of linen and rayon exports (1946) £22,000,000. The United Kingdom exports of linen goods, linen threads and yarns in 1946 (included in the figure of £22,000,000) was £14,600,000; practically the whole of this came from Northern Ireland. Motor traffic roads 13,192 mi. Railways, broad gauge 619 mi., narrow gauge 52 mi. Canals and inland waterways, approximately 150 mi.

**Agriculture.**—Total area under crops and grass (June 1, 1947): 2,282,485 ac., including 842,000 ac. permanent grass, 344,000 ac. rotation grass, 381,000 ac. oats, 182,000 ac. potatoes and 17,500 ac. flax. Cattle 931,175; sheep 531,700; pigs 333,410; poultry 20,975,000. Agricultural shipments to Great Britain during 1946: fat cattle and sheep to the value of £5,357,034; poultry £1,701,852; eggs £4,718,844; seed potatoes £1,150,000 (141,000 short tons); ware potatoes £1,650,000 (246,000 short tons); fruit £1,326,000 (38,000 short tons); rye grass seed £1,028,000; milk 3,000,000 gal.

**Irish Free State:** *see* EIRE.

## Iron and Steel.

For convenience in coverage this subject is subdivided and handled under the three major headings—iron ore, pig iron and steel. Production data were available in 1947 from most of the important producing countries, but a few gaps will still be found in the tables, and some countries that should be included have been omitted for lack of data extending over several years.

**Iron Ore.**—Table I presents the available data on the output of iron ore in countries producing more than 1,000,000 short tons a year. The chief omissions from the table are Germany, the U.S.S.R. and Manchuria, while those of lesser importance include China and the Philippines, and one or two prewa ducers whose output declined to a low level during the war

*Consumption for pig iron only.

There was a decline in iron ore production in the U States each year after 1942, the 1946 output being 20% than that of 1945, and 35% less than 1942. The larger dr 1946 was the result of the steel and coal strikes durin year. The short supply of domestic ore and the restorati activity in other countries led to greater imports, mostly Chile, Canada and Sweden.

Production improved in 1947, the total for the first 10 m of the year being 94,890,601 short tons, while shipment vanced to 96,000,381 tons.

Imports were stepped up even more than output, rea 4,007,797 tons through September.

*Canada.*—Production was expanding in 1947, but the bu the output is exported to the United States, which in turn plies most of the ore used in Canadian furnaces.

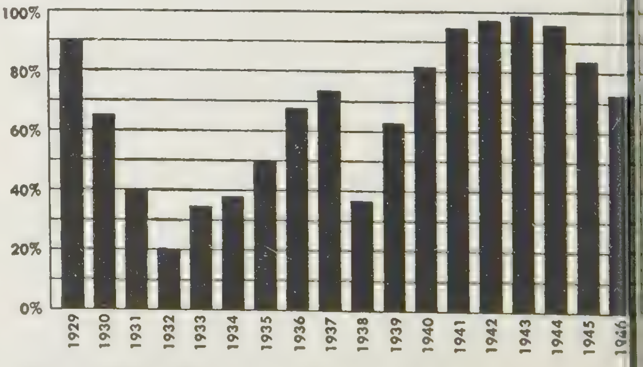
*Great Britain.*—Production during the first three-quarte 1947 was reported to be 9,040,000 short tons, a decline the 1946 rate.

**Pig Iron.**—The production of pig iron and ferroallo countries having an output in excess of 1,000,000 short t year is shown in Table III, along with the estimated world t

Before World War II the United States produced a littl than one-third of the total and Europe nearly 60%; afte war these proportions were about reversed, with half or in the United States and little more than a third in Europe

*United States.*—The salient data on pig iron and ferro in the United States are presented in Table IV.

In spite of the fact that the 1946 output was 16% less that of 1945 and 27% less than the 1944 peak, it was almost a third more than that of 1939, and would have appreciably more except for strikes. With no labour troub interfere, pig iron production picked up in 1947, with a through October of 48,471,731 short tons, foreshadowi



STEEL PRODUCTION in the United States, 1929-47; monthly averac centage of capacity (figures compiled by American Iron and Steel inst

ANT BLAST FURNACE, with a rated annual capacity of 500,000 tons of
n, shown nearing completion in April 1947 at the South Chicago works of
Carnegie-Illinois Steel corporation

ar's total not much short of the war peak of 61,000,000 tons 1944.

Canada.—Blast furnace production in Canada dropped from 964,936 short tons in 1945 to 1,520,753 tons in 1946, includ g 116,995 tons of ferroalloys and 1,403,758 tons of pig iron. 1947 the 1945 level of operations was restored with an out it of 1,630,149 tons of pig iron and 127,393 tons of ferro loys, a total of 1,757,542 tons in the first ten months of the ear.

*Great Britain.*—British production rose from 7,960,000 short ns in 1945 to 8,692,000 tons in 1946 and 6,976,000 tons in the st ten months of 1947—about even with the prewar level.

*Belgium.*—Blast furnace production rose from 803,000 short ns in 1945 to 2,393,000 tons in 1946, and 2,220,000 tons in e first 10 months of 1947, indicating a year's total approach g the prewar level of operations.

*Czechoslovakia.*—Output was expanding and the 1,059,000 ort tons produced in 1946 were approximately equal to the ewar rate, while 1,327,000 tons were produced in the first ten onths of 1947.

*Luxembourg.*—After an almost complete collapse in 1945, production was stepped up to 1,504,000 short tons in 1946 and 1,651,000 tons in the first ten months of 1947. The Oct. 1947 output was at a rate in excess of 2,400,000 tons annually, or about one-third more than the prewar rate.

**Steel.**—Table V presents the steel output of countries having a production in excess of 1,000,000 tons a year.

In general, the postwar recovery among the European steel producers was somewhat behind that of pig iron. In Great Britain and some of the smaller countries the prewar level was approached or even exceeded, but the larger continental producers were still lagging.

*United States.*—The salient statistics of the steel industry in the United States are shown in Table VI.

The 1946 output was seriously curtailed by the steel and coal strikes. Although output in 1946 was considerably above the prewar output, it was still far short of current needs. The average rate of operations during the year was 72.5% and the highest month was 88.7% of capacity, while full capacity would still have failed to meet the demand.

The production rate was stepped up appreciably in 1947, with a total of 84,783,981 tons.

*Canada.*—The Canadian steel output declined from 2,881,323 short tons in 1945 to 2,334,631 tons in 1946, and was 2,945,166 tons in 1947.

a year's total of 4,855,000 short tons, with continued improvement to 5,418,000 tons in the first ten months of 1947.

*Great Britain.*—British steel output rose from 13,241,000 short tons in 1945 to 14,207,000 tons in 1946, but dropped slightly to 11,357,000 tons in the first ten months of 1947.

*Germany.*—Steel production in Germany was still badly disorganized but was improving slowly. The 1946 output was 3,300,000 short tons, an amount that was almost equalled in the first three quarters of 1947.

*Luxembourg.*—With the monthly production rate almost doubling during 1946 the year's total was 1,429,000 short tons. In spite of a recession during the first quarter of 1947, production recovered to give a total of 1,531,000 short tons through October.

*Poland.*—The 1946 production of 1,349,000 short tons increased slightly to 1,263,000 tons in the first nine months of 1947.

*Sweden.*—Production dropped from 1,336,000 short tons in 1946 to 958,000 in the first nine months of 1947. (*See* also BUSINESS REVIEW; METALLURGY.) (G. A. Ro.)

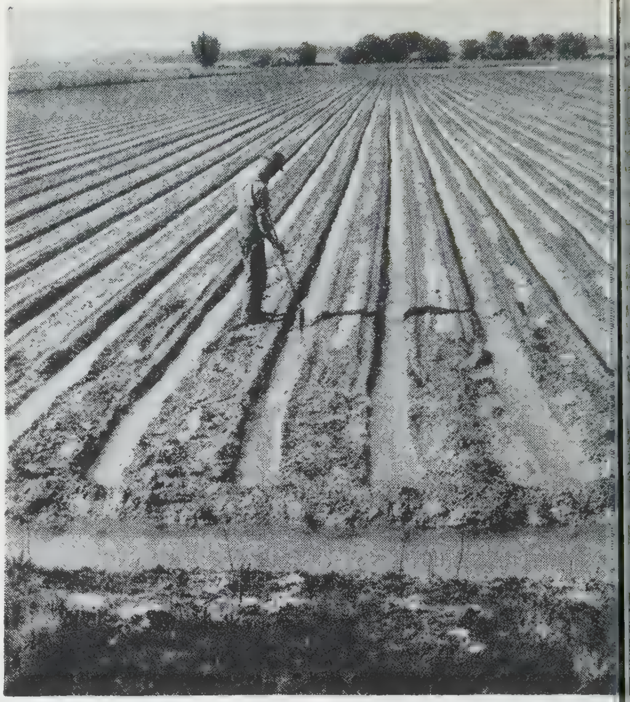
## Irrigation.

At the conclusion of the 1946–47 periodic U.S. snow surveys throughout the 17 western states, forecasts were made of a short snow crop throughout the high mountain areas of Arizona, California, Nevada and New Mexico. Severe irrigation water shortages thus appeared in prospect for hundreds of thousands of acres of irrigated lands in these states.

Generally ample water supplies for irrigation were forecast for the northern tier of western states; these forecasts were later verified by stream flow records. Stream flow for the 1947 irrigation season was considerably more than normal through Montana, Washington, western Canada, Wyoming and northern Idaho. Water supplies were about average in Colorado and northern Utah, but were less than normal in most of Oregon, southern Idaho and parts of Utah. Severe and damaging shortages developed in New Mexico, Arizona and parts of Nevada and California; but water stored in reservoirs was sufficient to offset the deficiency of natural stream flow.

At the end of 1947, snow fall covering the important watersheds of the west was greater than usual through Montana, Washington, western Canada and most of Idaho, Wyoming and Colorado. Mountain snow supplies were more than average in Utah and southern Colorado but less than average in Oregon and southern Idaho.

Plans and specifications were completed by the state of Montana for the Hysham pumping project to cost $220,000 and irrigate about 7,500 ac. of agricultural lands. A $330,000 project to irrigate 15,000 ac. was also contemplated for construction during 1948.



RECLAIMED FARMLAND on the Boise project near Nampa, Ida. A fa
shown irrigating a second crop of lettuce in Aug. 1947

The United States bureau of reclamation resumed a schedule of construction of its many irrigation projects during 1947. In the Missouri basin, Enders dam, third unit of an elaborate irrigation program, was placed under construction about 50 mi. northwest of McCook, Neb., on Frenchman creek, a tributary of the Republican river. It was to be an earth-fill structure 100 ft. high, creating a multipurpose reservoir for flood c
and irrigation with a total capacity of 83,000 ac.ft.—3
ac.ft. for flood control and 34,000 ac.ft. for irrigation; 1
ac.ft. was reserved for dead storage to provide for silt rete
The project was designed to supply irrigation water for 3
ac. already irrigated and supplemental water for an addi
17,000 ac.

Construction was also begun on the Tracy pumping pla
Alameda county, Calif., one of the major units of the C
Valley project and second largest pumping plant in the v
The contract cost of construction was estimated at $5,88
for this plant, which was designed to take surplus water
the Sacramento river and pump it into the 120-mi.-long I
Mendota canal. Completion of this feature of the Central
ley project would carry out one of the essentials of the pr
by supplying additional water to the water-deficient are
northern San Joaquin valley's west side farms to compe
for the San Joaquin river water stored in Friant reservoi
delivery to lands in Madera, Fresno, Tulare and Kern cou
on the east side of the valley. The pumping plant, design
lift 4,600 cu.ft. of water per second to a height of 200 ft.
exceeded only by the pumping plant of the Grand Coulee
project.

**India.**—India continued to lead the world in the extent
irrigated area, exceeding 70,000,000 ac. (reported to be
than the combined total of the next ten most irrigated cou
of the world). The total capacity of India's irrigation can
1947 was more than 4,000,000 cu.ft. per second or in exce
8,000,000 ac.ft. per day. Nevertheless, it was estimated in
that India was utilizing only 6% of the subcontinent's ava
water wealth.

The Thal project in the Punjab was formally opened in
1947. With a barrage consisting of 56 bays, each of 60 ft.
the spillway was designed to pass a maximum flood of 95
cu.ft. per second. Extra freeboard was provided to p
passage of a super flood of 1,000,000 cu.ft. per second. V
completed, the project would serve an area of 1,836,000 a

The proposed Bhakra dam (Punjab), a multipurpose pr
for irrigation and hydroelectric power development, was pla

be 480 ft. high and impound 3,500,000 ac.ft. of water, suffi- nt to provide a mean discharge of 6,600 cu.ft. per second for period of 270 days, approximately the extent of the dry ason. The project was estimated to serve an irrigated area of out 4,500,000 ac. Release of the water at the dam would nerate 160,000 kw.

Hajipur and Gudo barrages (Sind) were proposed for con- ruction across the Indus river. Canals from Hajipur barrage ere to be constructed for a capacity of 30,000 cu.ft. per sec- d, to irrigate 2,600,000 ac. The second barrage would pro- de water for the irrigation of 2,300,000 ac.

In the United Provinces it was proposed to impound 9,000,000 .ft. of water by the construction of the Rihand dam across e Rihand river near Pipri village. The dam would be 250 ft. gh and would release a perennial flow of 6,000 cu.ft. per sec- d to be utilized for irrigation in Bihar. Release of the water ould generate 150,000 kw. at the dam.

The Kosi dam project (Bihar), designed to provide for flood ntrol, irrigation and power, was to comprise mainly the fol- wing component units and connected features: (1) a dam pos- bly 750 ft. high, across the Chhatra gorge above the temple of hara Kashetra; (2) a power plant at the dam site capable of nerating 1,800,000 kw. of cheap power; (3) a barrage in epal across the Kosi with one canal taking off from either bank r irrigating about 1,000,000 ac. in Nepal territory; (4) a sec- d barrage near the Nepal-Bihar border with two canals on the ft bank and one on the right, for irrigating more than 2,000,- 0 ac.

**Iran.**—The government of Iran had under consideration a neral engineering and economic investigation, including irri- tion. The supreme planning board and the independent Irri- tion corporation of Iran listed about 30 priority projects, attered from Maghan steppe in the northwest to Iranian aluchistan in the southeast and from the Meshed area in the rtheast to Abadan Island in the Persian gulf in the southwest. leven separate projects were recommended for construction in e immediate future. Sufficient information had been collected four projects to warrant recommendations for immediate al decision and construction at an estimated total cost of 5,000,000. These four projects would furnish supplemental d new water supplies for about 500,000 ac. of excellent agri- ltural lands.

**Korea.**—The national government and the Korean Water tilization Association union had under construction and rang- g from 10% to 90% complete, a total of 26 national irriga- on projects, 9 tidal land projects and about 200 smaller provincial and community irrigation and tidal land projects.

The irrigation construction consisted of various dams, reservoirs, canals, diversion works, pumping plants, gates, dikes and levees.

All projects were in the area under U.S. administration.

## Islam.

The creation of the state of Pakistan (*q.v.*) was the greatest event for Islam not only of the year 1947, but since the abolition of the caliphate by Ataturk in 1922. The human, natural and economic resources of the new state caused it to rank as one of the most important and influential Moslem powers.

The decision of the United Nations general assembly at the end of November to partition Palestine (*q.v.*) was followed by a call for the declaration of holy war by el-Azhar university in Cairo.

An interesting development in the long struggle between Sunni and Shia was the appointment in Iraq of the first Shia prime minister ever to hold office there. Seyyid Idris Al-Senussi, the most important Islamic figure in North Africa, remained in Cairo throughout the year, as delay in settling the future of the former Italian colonies prevented his return to Cyrenaica.

International co-operation in Islamic studies, interrupted by war, was re-established; Professor Leo Mayer, of the Hebrew university, Jerusalem, lectured in London, Oxford and Copenhagen, and Fr. Gonzague Ryckmans, of Louvain, and Harry St. John Philby, British explorer in Arabia, both published constructive contributions to the history of Islamic origins. (F. ST.)

## Italian Colonial Empire.

The ratification of the Italian peace treaty on Sept. 15, 1947, was something of a landmark for the former Italian colonies over which Italy on that day formally renounced its sovereignty. For a year from then they were to remain under British military administration, but if by Sept. 15, 1948, the United States, Great Britain, the U.S.S.R. and France should have failed to agree as to their future, the question would be brought up before the general assembly of the United Nations.

*The political units listed here were, in 1947, under British trusteeship pending ultimate decision by the United Nations assembly concerning disposal of the prewar Italian Colonial pire.

†Under British military administration Libya was divided in two provinces: Tripolitania (pop. 803,915) and Cyrenaica (pop. 294,871). There were 40,536 Italians in the former, but ly 77 in the latter.

‡The areas given here existed during the time of occupation of Ethiopia by Italy in which parts of Ethiopia were assigned to Eritrea and Italian Somaliland. *De facto* and 1938 areas : Eritrea, c. 46,000 sq.mi. and Italian Somaliland, c. 195,800 sq.mi.

This question of the Italian colonies seems, however, to have been the one problem about which the Four Powers found it—at least in the initial stages—relatively easy to agree, and during the year the prospect of Italy itself receiving the trusteeship over a portion of its prefascist empire increased very appreciably. While the Arab league would have liked to see Egyptian authority expand over Libya, and while Ethiopia was eager to acquire former Italian Somaliland and still more Eritrea, the French supported Italian trusteeship in Tripolitania in order to avoid any extension of Moslem influence along the frontiers of Tunisia. The Russians, who had originally made claims for themselves in Tripolitania, came around to the United States view, which also favoured Italian trusteeship there, and British objections melted away provided the British pledge to the Senussi with regard to no return of Italian authority in Cyrenaica was observed. This was the upshot of the Four Power conference on the former Italian colonies which opened in London on Oct. 3, 1947. The conference, further, appointed a commission of investigation (representing the Four Powers only) which left in November for a tour of Eritrea, Somaliland and Libya; after a preliminary dispute it was agreed to visit Libya last in order to have the latest information on the most complicated political situation. The commission was charged to collect all the necessary data, and in particular to ascertain the views of the local populations. It was to complete its reports not less than six and not more than seven months from the date of its departure from London; the other 19 signatories of the Italian peace treaty were to receive copies of the commission's reports. (*See* also PEACE TREATIES.) (E. WI.)

**Italian Literature.** Vigorous development characterized Italian literature in 1947 despite the disappearance of several independent politico-literary magazines (*Mercurio, Aretusa, Acropoli, Nuova Europa, Realtà Politica, Commento,* etc.), which were obliged to suspend publication because of lack of funds and mass following. Fiction, historiography, literary criticism and research all gave proof of astonishing vitality.

Italian novelists, particularly the young ones, had definitely turned their backs on surrealism and were beating along the path of realism. Some claimed to be writing proletarian novels, but they were in reality merely doing what their elders refused or felt little inclined to do—to live, observe and portray life in a world they knew. In this respect they took their cue from the renascent Italian motion pictures.

Among the writers harvesting rewarding fruits in this field were Vasco Pratolini, whose *Cronache di poveri amanti,* a stirring novel about Florence and its inhabitants in 1926, was animated by a profound tragic sense of life; Giuseppe Berto, whose first novel *Il cielo è rosso,* was a macabre yet poignant story of four homeless adolescents living in the ruins of a bomb-devastated city; and Carlo Coccioli who in *La difficile speranza,* told the story of a partisan, a family and a society yearning for a higher morality but crushed under the impact of historical events.

Other novelists, while drawing from reality, nevertheless either transferred that reality to a surrealistic plane or used it as a basis for psychological studies. Typical of the first group were *Il Sempione strizza l'occhio al Frejus,* Elio Vittorini's haunting story of unemployment, hunger and poverty in a family of workers; *Racconto d'autumno,* a contrast between old age and youth, with grotesque characters groping in a world of fable and reality; and Silvio Micheli's *Un figlio ella disse,* a swiftly-paced, cruel and nightmarish novel, not lacking in lyrical qualities. Among the writers of the second group were Natalia Guinzburg, who reflected the mistrust and suspicion pervading
the times in her portrait of a wife (*E' stato così*); and Al
Moravia, who turned out a distinguished fifth novel, *La ror*
about a Roman demimondaine.

Most of the well-known writers of established reput
published new works which added little to their stature.

The flow of literature on fascism and World War II
tinued unabated. An important work in this field was An
Gramsci's *Lettere dal carcere,* written by the intellectual l
of the Communist party to his family during the nine yea
his imprisonment which ended in his death in 1937.

The Italian campaign was described in *La guerra non*
*voluta io* by a U.S. judge, Michael A. Musmano, who
part in it.

Leo Valiani of the Action party, in *Tutte le strade condu*
*a Roma* and Luigi Longo, a Communist leader, in *Un p*
*alla macchia* gave eye-witness reports of partisan wa
while Gen. G. Messe in *La guerra al fronte russo* gave
first account of the fate of the Italian troops fighting ag
the Russians.

The few outstanding poetical works published during
included Salvatore Quasimodo's *Giorno per giorno,* Ra
Carrieri's *Lamento del gabelliere,* Franco Forlini's *Foglio d*
Giuseppe Ungaretti's *Il dolore,* Mario Luzi's *Quaderno g*
and Umberto Saba's *Mediterranee.* While these poets san
different keys of nostalgia, anguish and despair, Leonardo S
galli in *I nuovi campi elisei* celebrated in stern form the h
and marvels of his youth.

Among the most notable works in literary criticism were
two histories of Italian literature by E. Gennarini and b
Sapegno; Walter Binni's studies on Ariosto and Leopardi,
vanni Getto's on Dante, Giuseppe De Robertis' essays on
pardi and Luigi Russo's on *I promessi sposi.* (M. F. C

ister: Alcide de Gasperi.

**History.**—The history of Italy during the year 1947 was d
inated by three themes: (1) intensifying economic difficu
helping to harden (2) the political deadlock between left
right; (3) the Italian peace treaty and the internationa
habilitation of Italy.

The end of the United Nations Relief and Rehabilitation
ministration hit Italy with particular severity. Among c
things U.N.R.R.A. imports had done much to check infla
but with their end not only was there less to eat and less to
upon in the factories, but also the alarming rise in prices
accentuated and, with this, the constant increase of mone
circulation. In March the enormous budgetary deficit coul
longer be ignored; in April, therefore, the government acc
to the demands from the right to halve the bread subsid
two-edged measure which increased the cost of living furt
while leftist demands for a better rationing system and th
striction of the luxurious living of the rich remained unsatis
There was a revival of confidence after the reconstruction o

vernment in May when, as minister of the budget, the disguished economist, Prof. Luigi Einaudi, inaugurated a deflanary policy with restrictions of credit. It was hoped that the nited States would share this feeling and provide dollar loans. did, in fact, reduce or convert a number of Italy's obligations onnected with the peace treaty and the Allied occupation) d offer financial help to certain major Italian industries, and ring the early summer industrial production rose to more an 70% of prewar figures. Meanwhile prices rose more and ore steeply. In March the cost of living was 42½ times that of 38, in September 65 times as great; a succession of strikes to sh up wages as well was inevitable. Even at the moment of eatest industrial production a formidable mass of unemployed d remained and this increased in the autumn. Thus, however flationary the government had hoped its policy would be—d in April and October it made efforts to force prices down—expenditure on public works was heavy and increasingly so. e bad harvest caused by drought and the freezing of a balance about £10,000,000 in Great Britain made matters worse. In ldition to the unemployed, the unskilled workers and profesonal classes were reduced to penury and ready to swell the nks of the political extremists.

As in the rest of Europe the cleavage between right and left ecame more marked during the year in Italy. In spite of an expected success on April 20 in the elections to the new tonomous diet of Sicily, the left lost ground, and the right, hich had recaptured control of the more influential newspapers, as able to expel the left from the government after the cabinet isis in May. The first stage in this process was in Jan. 1947, hen a group headed by Giuseppe Saragat seceded from the ocialist party in protest against its collaboration with the Comunists. This led to the resignation of the Socialist foreign inister Pietro Nenni and a cabinet breakdown in February. rom then until May an uneasy coalition—dominated by the hristian-Democrat party on the one hand and the Communists n the other, with Count Carlo Sforza at the foreign office and a w Socialist ministers in the background—struggled on, but once was realized that the budgetary deficit had exceeded L.600,00,000,000, the days of this cabinet were numbered. In May lcide de Gasperi, himself head of each successive government fter Nov. 1945, formed a cabinet composed almost entirely of is own Christian-Democrat party, the largest single group in e assembly. In the municipal elections in Rome on Oct. 12 e Christian-Democrats scored a striking success mainly at the xpense of the right-wing *Qualunquisti;* but although the Comunist-Socialist bloc suffered slight losses it was still stronger y one councillor than the Christian-Democrat, and the coninued existence of two evenly balanced groups on the city ouncil of Rome reproduced the seemingly inevitable deadlock f Italian political life. In the middle of November this deadock was disturbed by outbreaks of violence all over the counry; these usually took the form of Communist attacks upon the ffices of the right-wing political groups, especially those of the ost obviously fascist one among them which called itself the talian Social movement. On Dec. 14 De Gasperi formed a ew—his fifth—cabinet by including Republican and right-wing ocialist parties in the government's coalition. Randolfo Paciardi and Giuseppe Saragat, respective leaders of the two arties, became deputy prime ministers. The strengthening of e government found expression on Dec. 19 when the constitunt assembly passed a vote of confidence by 303 votes to 118, ith 14 abstentions.

Alongside economic cares and political complications Italy as kept very busy making itself a constitution. The constituon had been drafted during the last months of 1946 by a comission of 75 members of the constituent assembly. The draft (or *Progetto di Costituzione*) proposed to guarantee all the personal liberties rather vaguely "within the framework of the law." To satisfy leftists it declared in favour of the right to work, the right to strike and the right to "participate" in the management of factories; in May 1947 "participate" was altered to "collaborate," and there was a certain amount of controversy in the assembly at about that time over the definition of Italy as a "workers' republic."

But the attitude which the draft most evidently expressed was that of the Catholic Church, and this awoke the sleeping dog of Italian anticlericalism. It was an article announcing the incorporation in the new republican constitution of the Lateran pact made by Mussolini with the Vatican in 1929 that created the most critical issue of the year. This meant the imposition upon the community as a whole of the views of the church with regard to such basic matters as marriage and education, regardless of all the guarantees of individual liberty to disagree with these views. Most of the intellectual leaders of the country, including Benedetto Croce, considered this proposal as the surrender of their 19th century heritage, but on March 26 the assembly accepted the article by 350 to 149 votes; to everyone's amazement the Communists had voted in its favour in the interest, as they claimed, of the religious peace which the *Osservatore Romano* had declared to be at stake. A month later, however, the indissolubility of marriage was rejected although the Lateran pacts vetoed divorce. In addition to the compulsory religious instruction in all schools which the church required, the Christian-Democrats also pressed for state aid without state inspection for private, which nearly always meant Catholic, schools; they obtained only freedom from state control (April 29). At the same time the most revolutionary article perhaps of the whole draft was agreed upon, by which eight years' free, compulsory education was promised to every child; in the past the theoretical minimum had been six years which, however, rarely materialized.

The other major controversy in the constitutional debates raged round the subject of regional autonomy. Here again the Christian-Democrats were attacked on all sides with regard to the decentralizing articles of which they were the keenest supporters; the subject was debated most of June and July and the upshot was that the Christian-Democrats had their way. It was planned to introduce a new authority with legislative powers between the state on the one hand and the provinces and communes on the other, and the constitution, as amended, even

GRIEF-STRICKEN Italian women mourning their relatives at a mass funeral for ten persons killed in the 1947 May day massacre of agricultural workers and peasants near Palermo, Sicily

SUBWAY scheduled to pass beneath the ancient Colosseum in Rome, Italy, is shown under construction in 1947. Running underground as far as St. Paul's gate, the line was to connect Rome with existing lines to Ostia

slightly increased the powers of this new authority of the *regione*. In answer to the criticism that nothing but confusion would result from the possibility of legislation at three levels, it was voted that a commissioner should be sent to the capital town of each region to co-ordinate the activities of state and region. Of the 22 regions, Sicily, Sardinia, the Valle d'Aosta and the Alto Adige received even greater autonomy than the other 18. During the autumn the machinery for the election of both parliamentary chambers was set up. The most interesting innovation was the introduction of the use of the referendum to put an end to the deadlock which might be created if the two houses disagreed. The new constitution was finally approved on Dec. 22 by 453 votes to 62, with no abstentions. The constitution was promulgated by President De Nicola on Christmas eve.

The last week in July was devoted by the constituent assembly to the question of the ratification of the Italian peace treaty. Its terms were known during 1946 but the resentment they aroused in Italy was increased in the opening months of 1947 by the arrival of thousands of refugees from the territory to be ceded to Yugoslavia. In view of Italy's contribution to the Allied war effort after 1943 there was general bitterness over the reparations to be paid, as also over the loss of Trieste, a bitterness which was enhanced by the sensation of being a pawn in the game between east and west: on the right there was also great indignation over the loss of the fleet and the former Italian "empire," while on the left it was felt that it would have been more consistent with Allied principles if the treaty had been less arbitrarily imposed upon Italy. On July 31, after opposition from both the right and the left, the government carried the ratification of the treaty through the assembly by 262 votes to 68; the hostile voters were members of the parties on the right, while Communists and Socialists abstained. One of the arguments advanced against ratification was the equivocal attitude of the U.S.S.R., which, however, at last agreed to ratify the treaty on Aug. 29; it came into force on Sept. 15.

Contemporaneously the year was characterized by the scaling down of the Italian peace treaty by the western powers; the United States and Great Britain waived their right to confiscate the property of Italy's nationals; the United States and Great Britain waived most of their rights with regard to the Italian navy. Italy was invited along with the other powers to help pare Europe's response to the Marshall offer, and French Italian representatives worked together on a customs union ect. In fact by the end of the year the only serious obstac Italy's international rehabilitation was the soviet veto Italy's entry into the United Nations. (E. W

**Trade and Communication.**—Foreign trade (1946): imports L.84 000,000; (industrial raw materials L.40,710,000,000; food and L.27,290,000,000; semifinished products L.8,610,000,000; finished ucts L.7,600,000,000); exports L.54,530,000,000 (finished pro L.23,280,000,000; semifinished products L.15,020,000,000; indu raw materials L.4,300,000,000; food and cattle L.11,930,000,000) ports (Jan.–June 1947) L.82,364,376,000; exports (Jan.–June L.42,112,706,000. Railways open to traffic (March 1947): steam mi., electric 2,846 mi.; locomotives in service (1947): steam 4,065, tric 1,443; rail motor cars 907; coaches 5,182; luggage and mail 3,105; freight cars 116,212. Roads (1939) 110,712 mi.; load car road vehicles (1947): gasoline trucks 91,256; diesel trucks 27 methane, producer gas and other trucks 6,292. Radio receiving sets 31, 1945) 1,596,431; telephones 835,700.

**Agriculture.**—(1946–47, in short tons) wheat 6,749,750; rye 116 barley 254,500; corn 2,099,300; rice 523,400; potatoes 2,580,800; 498,100; tomatoes 928,900; fresh vegetables 3,879,000; sugar 275 cheese 186,200; butter 29,750; olive oil and seed oil 224,800. Exp produce (1946): fresh vegetables 30,660; citrus fruit 68,135; fresh 112,159; wine, etc., 14,837,280 U.S. gal. Livestock pop. (1946): 6,900,000; pigs 3,200,000; sheep and goats 8,692,000; horses 600 mules 210,000; asses 540,000; poultry 63,000,000; rabbits 40,000

**Industrial Products.**—In short tons: Sardinian coal (June 1946 1947) 866,467; other products (1946): steel 1,270,900; pig iron 716; wool 12,360; cotton goods 132,000; rayon 32,233; staple 14.740; waste 3,490; nylon 55. Exported products (10 months of in short tons): marble and alabaster 61,934; sulphur 11,583; esse oils and essences 78,388; paper 4,100; reeled silk 1,888; hats and (numbers) 4,020,334. Vehicles produced (1946) trucks 16,837; pass cars 11,038; buses 1,428; trailers 7,445. Total unemployed (April 1 2,169,400. (*See* also FASCISM; FOREIGN MINISTERS' CONFERENCES; IAN COLONIAL EMPIRE.)

**Ivory Coast:** *see* FRENCH OVERSEAS TERRITORIES.

**Jamaica.** The largest of the British West Indian Isla lying to the southward of the eastern extre of Cuba. The colony has two dependencies known, respecti as the Cayman Islands and the Turks and Caicos Islands. A Jamaica: 4,765 sq.mi.; Cayman Islands: 93 sq.mi.; Turks Caicos Islands: 202 sq.mi. Pop.: Jamaica (1946 census): 1,2 072, predominantly Negroes (77%) and mulattoes (18%), including about 13,500 Europeans, *c.* 42,000 East Indians *c.* 6,900 Chinese; Cayman Islands (1943 est.): 6,670; T and Caicos Islands (1943 est.): 6,138. Chief towns: King (cap. 201,911); Spanish Town (12,007); Montego Bay ( 500); May Pen (6,038); Port Antonio (5,482). The new stitution brought into effect in Nov. 1944 provided for a ernor (appointed by the British crown); a privy cou (charged with the general function of advising the governo all matters relating to the royal prerogative); an execu council, constituting the "principal instrument of policy in colony" and consisting of 10 members, of whom 2 are norm members of the legislative council and 5 are elected by house of representatives; a legislative council of 15, of wh 10 are nominated unofficials; and a house of representative 32 members elected on the basis of universal adult suffrage the 32 constituencies into which the colony is divided. Go nor: Sir John Huggins (appointed 1943).

**History.**—The outstanding event of the year 1947 occur

September when a conference met at Montego Bay to conler the question of closer association between the British West dian colonies. It was attended by representatives of the varis territories concerned. Arthur Creech Jones, the British cretary of state for the colonies, presided. It was agreed to commend to the legislatures of the participating colonies that intercolonial committee should be formed to work out a plan federation and that this committee should be invited to conude its deliberations by June 1949. Formal resolutions were ssed: (1) accepting the principle of federation; (2) advocating increased measure of responsible government in certain terriries; and (3) recommending, as an interim measure pending deration, the establishment of a British Caribbean Shipping mmittee on lines proposed in the report of a fact-finding eeting on shipping held in Barbados in July 1947. A group of nancial experts was appointed to consider and report upon the nancial implications of federation.

**Finance and Trade.**—The monetary unit in Jamaica is the pound sterling, ked with the pound in the United Kingdom. Revenue (1946) £7,951,-0; expenditure £7,781,000. Imports (1946) £12,523,000; exports ,328,000. The leading products of the colony are bananas and sugar. nanas constitute the largest single item of export. Other exported arties include sugar, rum, spices, coffee, timber and logwood extract.

(J. E. Sh.)

**apan.** An island nation in the western Pacific, under Allied military occupation following its defeat and surrener in 1945. In accordance with the terms of the Cairo and otsdam declarations of 1943 and 1945, Japan was stripped of s former overseas possessions and reduced to the four main lands of Honshu, Kyushu, Shikoku and Hokkaido (total area 46,690 sq.mi.), and minor adjacent islands. The population as officially estimated at 78,220,840 in July 1947, an increase approximately 5,800,000 over Nov. 1945. Net repatriation Japan contributed 4,451,000 of the increase, and natural owth the remainder. About 761,000 Japanese were reported ill held in soviet-controlled areas in October, but were being ipped home at the rate of 50,000 per month.

The chief cities of Japan, with populations according to the 40 census, are as follows: Tokyo (capital) (6,778,804); Osaka 3,252,340); Nagoya (1,328,084); Kyoto (1,089,726); Yokoama (968,091); Kobe (967,234). In 1945 there were 17,613,00 adherents of Shinto sects in Japan and in excess of 40,000,00 Buddhists. The Japanese sovereign is Hirohito. Prime inister (after May 25, 1947): Katayama Tetsu.

**Inter-Allied Policies.**—The basic objectives and control mainery of the Allied occupation of Japan remained unchanged 1947. Policy continued to be determined by the 11-power ar Eastern commission, sitting in Washington, D.C., and cared out by the supreme commander for the Allied Powers in okyo, Gen. Douglas MacArthur. The United States, as before, etained a preponderant control over occupation affairs and adanced most of the costs of occupation.

On June 19 the Far Eastern commission unanimously aproved a basic postsurrender policy for Japan, to remain effecve until a peace treaty should come in force. Designed to enure that Japan would not again menace the peace and security f the Pacific and to encourage a democratic and peaceful regime Japan, this statement of principles reaffirmed in its essentials e earlier U.S. declaration of Aug. 29, 1945. In 1947 the .E.C. also prescribed certain revisions in the Japanese educaonal system (March 27); forbade any Japanese activity in e field of atomic energy "for the time being" (Jan. 30); aproved principles to govern the rehabilitation of Japan's foreign ade (May 8); laid down standards for the reduction of apan's capacity in war industries which is in excess of "the eaceful needs of the Japanese people" (Aug. 14); and defined ose needs as being "substantially the standard of living preailing in Japan during the period 1930–1934" (Jan. 23).

Other F.E.C. decisions dealt with reparations, restitution and subsidiary issues. The commission followed its 1946 program of interim reparations removal of industrial equipment with further decisions establishing criteria for plant selection (May 22), and for the allocation of reparations shares (May 8) and removal costs (Feb. 13). No Allied agreement was reached on the total reparations bill, or on its percentage distribution among claimant countries. In April, however, the U.S. on its own responsibility directed Gen. MacArthur to proceed with an advanced allocation of 30% of the initially available equipment in the following proportions: China 15%; Philippines 5%; the United Kingdom (for Malaya and Burma) 5%; and the Netherlands (for the Indies) 5%. (*See* also Reparations.)

On July 11 the U.S. proposed a conference of the 11 powers represented on the Far Eastern commission to draft a peace treaty for Japan. It proposed further that voting should be by a two-thirds majority, and that when drafted the treaty be submitted to a general conference of all states at war with Japan. Nine countries agreed with the conference proposal and eight with the suggested voting procedure. The Soviet Union maintained, however, that the whole question should first be examined by the Big Four—China, the United Kingdom, the United States and Russia. China put forward a compromise suggestion for an 11-power meeting in which decisions would be by majority vote but would require the concurrence of each of the Big Four. No resolution of the impasse over voting procedure had been achieved by the end of the year.

The trial of Japan's war leaders on the charge of war crimes continued through 1947 in Tokyo. On Sept. 10 the International Military tribunal concluded the general defense phase of the proceedings and began individual defense cases. (*See* also War Crimes.)

**Political Trends in Japan.**—The year in Japan was marked by further implementation of political reforms under the new constitution. In April, elections were held for the diet, for 46 prefectural governors, 209 city mayors, more than 10,000 town chiefs and village headmen and numerous local and prefectural assemblies. The Social Democratic party emerged the victor by a slim margin in the diet, with 143 out of 466 seats in the house of representatives, and 46 out of 250 seats in the new, upper house of councillors. Close on its heels were the 2 conservative parties, the Liberals taking 131 seats and the Democrats 124 in the lower house. Other seats were distributed among minor par-

THE OTSUKA FAMILY, first Japanese tenant farmers to purchase the land they tilled, under the Allied council's land reform program. Ending an era of agrarian feudalism, the sale took place in July 1947 in the village of Seya

ties and independents, including four Communists. At the prefectural and local level the Social Democrats were much weaker. Here the preponderant group elected to office were independents, most of them supported by the Liberal and Democratic parties.

Following the elections, on May 25, the prime ministership passed from Shigeru Yoshida, president of the Liberal party, to Katayama Tetsu, veteran Christian Socialist. Since his party enjoyed only a weak plurality in the diet, Katayama was compelled to form a coalition cabinet with the other major parties. Through the year conservative influences represented in the Democrats and Liberals remained dominant in Japanese politics. By August the Liberals had passed into open opposition, and on occasion joined with the Communists in denouncing the government. Their overtures for a single majority conservative party to rule Japan and negotiate the peace settlement were rejected, however, by the Democratic party. The latter continued along with the Social Democratic and Peoples' Co-operative parties to support the Katayama government against both radical and reactionary opposition.

With only a summer recess, the 93rd diet continued in session from May 20 until near the end of the year. In addition to the acute economic problems facing the country, it was occupied with a mass of legislation revising the political and economic structure of Japan in conformity with Allied directives and the new constitution. Among basic laws drafted for enactment were measures dealing with the reform of the civil service, a new criminal code, improved labour standards, the reorganization of the judiciary, local government and taxation, political parties, education and the decentralization of private control over finance and industry. The augmented powers of the national legislature and of local governments under the new constitution began to be evident in 1947. Initiative tended to remain with the bureaucracy, however, where traditionally it had been lodged. No strong political leadership emerged in the diet to weld contending factions into a dominant political force. A coalition of divergent interests, the Katayama cabinet had only limited freedom of action and lacked the power to deal decisively with the overriding issues of economic stabilization. A year ended it was under increasing pressure from both and left.

**Economic Reform and Recovery.**—Slow progress achieved in carrying out economic reforms initiated under A direction during the previous year. In March and July the ernment purchased 850,000 ac. of land at fixed prices from lords as a first step in the program to acquire 5,000,000 a 80% of all tenanted farm land, for resale to tenants. It commenced the resale of about 40,000,000,000 yen (book v of corporate securities which had been surrendered in pay of the anti-inflation capital levy or taken over under the gram for breaking up Japan's giant combines and liquid 157 other wartime institutions. The reorganization of Japa banking and industry to clear away the wreckage of war decentralize controls over economic life was still in its i phases. Meanwhile, in the field of labour, rapid strides made in raising legislative and administrative standards series of measures culminating in the organization of the ministry of labour on Sept. 1. Trade unions, now fully legal had a membership of 5,724,851 on July 31, and for the time were a potent force in Japanese politics.

As for economic recovery, two bright spots appeared i otherwise gloomy picture. Crops were good; and the year nessed progress toward the reactivation of foreign trade peacetime basis. Economic life continued to be demoral however, by shortages of food, fuel and raw materials, infl of the currency, ineffectual price control and rationing mea and uncertainties over reparations. Industrial productio April was only 30% of the 1935–37 level. Labour product was correspondingly low. The government opposed determ demands from workers for higher wages, meanwhile attem none too successfully to arrest the inflation and black-ma profiteering which gave rise to popular discontent.

Under these conditions, living standards continued far b the prewar level, especially in the cities. By June the u cost of living had soared to 60–70 times the 1937 index, factory wages were only 23 times the 1937 daily average. sumer goods shortages were universal; for example, the clo supply was scarcely 1 lb. per capita during 1947, as pared with 10 lb. in 1937. In housing the war left an accu lated deficit of 4,500,000 dwellings, and by July 1947, about 10% of the gap had been filled. Most serious was food shortage. Compared with 1941 food consumption mated at 2,105 cal. and 64.7 g. of protein daily per capita, sumption by urban workers in 1946 was 1,600 cal. and 60 protein. In the late spring of 1947 the actual ration in th large cities was only 1,100 cal. and 30 g. The average T family secured 20%–40% of its food from the black ma where prices were ten times the official price for staple it Farm families fared better; indeed, Japan's food problem sisted in good part in the difficulty of collecting and delive food to the cities. To remedy the 1947 deficiency, about 1, 000 tons of imported food had been released for distributio October.

The cumulative effects of wartime and postwar hards were recorded in the physical development of primary sc children, which in 1946 lagged one full year behind the standard of weight and height. Public health records, on other hand, were good in most respects. As a result of ener immunization campaigns conducted by Allied headquar communicable diseases were reduced to the lowest level in J nese history.

**Finance.**—Government finance continued through 1947 to reflect economic paralysis and financial disorganization left in the wake o war. At the root of inflation lay the national budgetary deficit, v again necessitated huge borrowings to meet expenditures. Expendi talled 192,200,000,000 yen in the fiscal year ending April 1947. Gen- al revenue came to only 115,600,000,000 yen, leaving 76,600,000,000 n, or 40%, to be financed by loans. Collections from the capital levy x reached 16,650,000,000 yen on April 30, 1947, and were expected total 40,000,000,000 yen by the end of the year. On Aug. 31 the na- onal debt had climbed to 304,630,000,000 yen, as compared with 220,- 00,000,000 yen a year previously. Outstanding domestic bonds amounted 200,715,000,000 yen, external loans 881,000,000 yen (at 1923 gold rity), and bank loans 93,304,000,000 yen. The general account budget r 1947–48 was set at 114,500,000,000 yen, with occupation costs fig- ed at 27,000,000,000 yen. Progress was expected in closing the infla- onary gap, but additional supplementary appropriations were anticipated large sums. The Bank of Japan's note issue continued to increase at the te of more than 200,000,000 yen per day in the first half of 1947, and Aug. 31 totalled 150,684,000,000 yen. Exchange rate, 1947: 50 yen $1 U.S.

**Trade and Communications.**—Imports into Japan were valued at $305,- 00,000 in 1946 and exports at $72,000,000. According to press reports, 947 imports were $420,000,000 to $440,000,000 and exports $425,- 00,000. Food accounted for $229,000,000 of imports, and textile fibres 91,000,000, both mainly from the U.S. Raw silk and cotton goods were he chief export items. The largest single transaction was the import of 05,353 bales of U.S. cotton from June 1946, through Sept. 1947, under n arrangement providing for the re-export of 60% of the fibre as manu- ctured exports. Cotton also began to arrive from India in Oct. 1947, n a contract calling for 170,000 bales.

In August important steps were taken toward the normalization of ade on a more diversified and expanded basis. Authorized foreign trad- s were allowed to re-enter Japan to re-establish private trade; foreign anks were permitted to resume normal trade services; and tele-communi- ations and mails were opened again to transactional messages. To assist financing trade, Allied headquarters also created an Export-Import evolving fund, utilizing as a credit base $137,000,000 of Japanese- wned gold and silver.

Government railways (length 32,000 km.) carried about 100,000,000 etric tons of freight and 3,000,000,000 passengers in 1946. Correspond- ng figures for Aug. 1947 were 9,272,000 tons and 304,552,341 passen- ers. At midyear the merchant marine comprised 763 vessels of more han 100 gross tons, totalling 1,330,000 tons and capable of transporting 00,000 tons monthly. Production and operation of aircraft by Japanese ationals was forbidden under the occupation. On Aug. 31 there were ,072,772 telephones in service, 657 land radio stations, 6,000,000 licensed adio receivers and 750,000 unlicensed sets.

**Agriculture.**—The 1946–47 harvest was as follows in metric tons: rice, ,977,000; wheat, 1,617,000; sweet potatoes, 5,512,000; silk cocoons spring, 1947), 26,500. Collections of summer crops in 1947, as of Oct. 0, were as follows in metric tons: rice and substitutes, 439,000 (brown ice equivalent); wheat and barleys, 799,000 (brown rice equivalent); weet potatoes, 188,000; white potatoes, 527,000. The food crisis in the ities, described above, was partly attributable to the decline of acreage nd yields. Tilled acres per farm family also dropped from 2.45 ac. in rewar years to 2.08 ac. as a result of demobilization, repatriation and ndustrial depression. About 640,000 ac. had been reclaimed for cultiva- ion from the end of the war to Aug. 1947, in a program to add 25% o the nation's cultivated area. Crop yields still suffered, however, from educed supplies of commercial fertilizer. These totalled only 1,434,851 ons in the year ending June 30, as against a 1936–40 average of 4,191,- 00 tons. Wartime and postwar shortages of feed had also reduced live- tock to the following figures: draft oxen and cows 1,830,000; milch cows 60,000; horses 1,070,000; pigs 90,000; poultry 20,400,000.

**Manufacturing and Mining.**—Japanese industries generally operated at a ow level in 1947, as already noted. One major handicap was inadequate oal production, which came to only 28,000,000 tons in 1947 as com- ared with an estimated minimum requirement of 36,000,000 tons. Crude il output was about 17,000 kilolitres monthly in the half year ending September. August output in other heavy industries was as follows in metric tons: pig iron, 33,467; steel ingot, 87,476; refined copper, 2,732; cement, 120,509; and caustic soda, 4,744. The textile industries were likewise handicapped by shortages of fuel and raw materials. Raw silk production in August was 8,725 bales; rayon, 1,684 tons; cotton yarn, 8,283 tons; and cotton cloth 56,257,000 sq.yd.—all far below prewar output. With the gradual revival of foreign trade, greater progress in industrial recovery was expected in 1948.

## Jet Propulsion.

The greatest gains in the new type reaction power plants were registered in the turbojet engine category during 1947. A wide variety of new fighters, multijet bombers and modified "mixed power" converted bombers were test-flown, powered by turbojets and in a few cases by turbopropjets, or propeller turbines. Several new companies in the U.S.A., Great Britain and other countries gained their initial experience with jet propulsion in the flight testing of their prototype aircraft. Behind the veil of military security, considerable progress could also be recorded in the nonturbine or duct-type reaction power plant—the ramjet, pulsejet and rocket. Successful experimental work for thrust augmentation by means of water/methanol injection, air bleed-off and afterburning technique was carried out. Component testing in several company laboratories, and research in jet fuels, high-temperature alloys and ceramics opened the way toward the solution of several problems.

**Turbojets.**—The most widely used U.S. turbojet engine in 1947 was the torpedo-shaped General Electric TG-180 (air force designation, J-35), with axial-flow compressor, delivering 4,000 lb. static thrust. During 1947 full responsibility for production and development passed to Allison division, General Motors, where more than 1,200 units were on order. The J-35 was the power plant of the North American XB-45 high-speed medium-range bomber (four units in twin nacelles) and the similar type Consolidated Vultee XB-46. The J-35 also powered the six-jet Martin XB-48, the eight-jet Northrop YB-49 Flying Wing and the six-jet, sweptback Boeing XB-47 Stratojet. The J-35 in August carried Marine Maj. Marion F. Carl to a world's high-speed record of 650.6 m.p.h. at Muroc lake in navy's Doug-

**EXHAUST END OF A RAMJET** issuing flame during a night test in 1947. Experimental work on the ramjet was being conducted at the laboratories of the Standard Oil Development Co. at Linden, N.J.

las 558 Skystreak trans-sonic-speed research aircraft. It also powered the North American FJ-1 carrier-based jet fighter, scheduled to go into production early in 1948.

Allison's redesigned version of the GE I-40 turbojet with centrifugal compressor (4,000 lb. thrust) was announced as its model 400 (air force J33-23), with 4,600 lb. static thrust, 20% more for take-off with water injection. This engine carried Lockheed's P-80R to an international speed record of 623 m.p.h. which held good for about two months. It was the power plant of the improved P-80B and was to be used in about half of the production Grumman F9F Panther carrier fighters.

The Westinghouse 19XB-2B version of the Yankee, with 1,600 lb. thrust, went into full production at Westinghouse and Pratt and Whitney for the McDonnell FD-1 Phantom twin-jet carrier fighter. The more powerful 24C (navy-U.S.A.F. designation, J-34) unit of 3,000 lb. thrust was test-flown in the faster McDonnell XF2H Banshee in May, and announced as the power plant of the Douglas 558-2 Skyrocket, along with Reaction Motors 6000C4 rocket engine. Four J-34's were announced as power plant of the Curtiss XP-87 "all-weather" long-range fighter. It was also reported as powering the McDonnell XP-85 and XP-88, Lockheed XP-90, Douglas XF3D-1 and McDonnell XF3H-1. An improved version of the TG-180 (J-35), designated TG-190, was bench-tested in 1947 by General Electric.

In Great Britain the Rolls-Royce Nene (5,000 lb. static thrust, 5,750 lb. with water injection) flew in a modified version of the D.H. Vampire, was publicly demonstrated at the Radlett air show in the Vickers Supermarine E. 10/44 Attacker, operated from a carrier deck in a British fleet air arm version of the 10/44, and was test-flown in the new Hawker N. 7/46 (Sea Fang) for the navy. An imported engine flew as power plant of the first prototype of the U.S. navy's Grumman F9F-2 Panther, and arrangements were being made at Pratt and Whitney to produce a U.S. version of the Nene during 1948 to power about 50% of the production Panthers. In Dec. 1947 the Armstrong-Whitworth AW 52 experimental tailless aircraft took to the air, powered by two Nene turbojets; the third model of the D.H. 108 tailless aircraft, with one Goblin III, also flew during the year. These were both forerunners of advanced high-speed, high-altitude commercial air liners. The power plant for one of these (D.H. 106) was the De Havilland Ghost (rating 5,000 lb. thrust, expected to develop more than 6,000 lb.) which was flight-tested as two of the power plants in the modified Ghost-Lancastrian. These were all radial-flow jet engines.

The only British axial-flow turbojet unit flight-tested up to the end of 1947 was the 3,500-lb. thrust Metropolitan-Vickers F 2/4 Beryl, two of which powered the Saunders-Roe SR/A1, the world's first jet-powered flying-boat fighter. A later version of the Beryl was rated at 3,750 lb. thrust. A much more powerful unit, the Rolls-Royce AJ-65 Avon, was first bench-tested in the spring of 1947 as that company's first axial-flow turbojet engine.

The Nene was going into production in France (by Hispano-Suiza) and in Australia for R.A.A.F. Nene-Vampires; the D.H. Goblin was being built in Sweden and Switzerland. Argentina imported some Derwent V's for a new jet fighter, and Canada some Goblins for R.C.A.F. Vampires. Sweden and Canada announced original turbojet engine developments, Canada's including the axial-flow Avro Chinook. The U.S.S.R. was reported to have made good headway with improvement of several German operational and development projects by Jumo, BMW and Heinkel, besides having imported some Rolls-Royce Derwents and Nenes.

**Turboprops.**—U.S. developments in the propeller-turbine field were mostly in the large high-powered units. These included the Flader XT-33, Wright XT-35, Northrop XT-37 Turbodyne and a big Allison unit—all in the 5,000–1 equivalent shaft horsepower class. The Wright XT-35 test-flown as the fifth power plant (in the nose) of a mod B-17, but no details were announced. The big unit had an put of about 5,000 h.p. but was capable of much higher dev ment; it was the world's most powerful propeller turbine to flown up to the end of 1947. The fourth model of the Nort XT-37 Turbodyne was reported to have a rating of 10,000 on bench tests. The Lockheed-Menasco L-4000 (XJ-37 5,000-lb. thrust unit, could be used as either a turboje turboprop. The Flader unit was dropped late in the year.

Flight testing of new airscrew/turbine units (turbopr made considerable headway in England during 1947. Thes cluded the Theseus-Lincoln (2 Bristol Theseus 2,400-h.p. u 2 Merlins). A second Avro Lincoln with four Theseus units scheduled for flight tests early in 1948. In October the Mar Lancaster (Armstrong-Siddeley 1,400-h.p. Mamba as 5th p plant, in nose) and Dart-Lancaster (Rolls-Royce 1,300-h.p. in nose, 4 Merlins) took to the air. The larger Armstrong-Si ley Python (4,500 h.p.) was also scheduled for flight test 1948, in a modified Lancaster bomber. The promising Na Naiad (1,590 h.p.) and Rolls-Royce Clyde (3,600 h.p.) were tensively bench-tested in 1947. Other British turboprops u development included the Power Jets 250 h.p. unit, De Havil H-3 and Bristol Janus (500 h.p.) and the big Bristol Pro (3,500 h.p.) for eventual use on the Brabazon I and Saund Roe SR/45 flying boat.

**Ramjets, Pulsejets and Rocket Engines.**—In tests off Virginia capes, speeds up to 1,500 m.p.h. were attained by 1 model ramjets. Five different designs were under test, u 20-in. diameter. Some were flight-tested in P-51 fighters ( tips) and underslung from P-61 Black Widows and B-29 he bombers. The main problems included flame blowout at su sonic speeds and a more efficient method of bringing an airc or missile up to the 400 m.p.h. required for initial compres in ramjets. The U.S. navy was especially active in pres fundamental research in the pulsejet engine, otherwise refe to as an intermittent ramjet or resonant (reso) jet. The effec valve life on current experimental pulsejet units was increa from the 45 min. on the V-1 buzz-bomb unit to about 7 Specific fuel consumption decreased from 4 lb. per hour pound of thrust to about 2.6 lb.

During 1947 several interesting developments took plac the rocket engine field (*see* also MUNITIONS OF WAR). J units were used commercially for assisted take-off of hea loaded cargo planes, and a set of them was built into the force's advanced six-jet bomber, the Boeing XB-47 Strato The Bell XS-1 with a Reaction Motors 6000C4 rocket eng flew at better than Mach 1.00 (speed of sound) at more t 35,000 ft. The Douglas 558-2 with J-34 turbojet and 600 rocket was unveiled and scheduled to be test-flown early in 1 Several advanced air force turbojet-cum-rocket fighters w reported as under development. Britain's Vickers-Armstro pilotless trans-sonic research aircraft was test-flown by be dropped from a Mosquito bomber. Big research rockets Boeing, Martin and North American aircraft were announc (*See* also AVIATION, MILITARY.) (N. F. S.

## Jewish Religious Life.

Outstanding in the story Judaism in the year 1947 v its continued struggle to re-establish itself in Europe after shattering blows of the preceding decade. The great centres Jewish life numerically and spiritually had shifted to the Uni States and Palestine, and the only marked movement of placed persons and other Jewish survivors of the Europe holocaust had been to the United States and to the internm amps of Cyprus en route to Palestine. Thus, during the year hundreds of rabbis and students sailed from Shanghai, where many had found refuge from eastern Europe, and other points to the U.S.

In the other direction, U.S. organizations such as the Joint Distribution committee helped make possible the observances of Jewish religious life in the D.P. camps of Europe. Books, religious supplies and millions of pounds of kosher meat and Passover supplies were shipped to the suffering Jewish remnants in Europe from Canada and the United States, and U.S. aid was given with outstanding generosity for rebuilding ruined synagogues and reopening religious schools in the old world. Talmudic academies (yeshiboth) were re-established, and the rabbinical colleges in such centres as Paris, Rome and Budapest reopened. Prayerbooks, copies of the Talmud and other Jewish books were increasingly made available for furthering Jewish cultural life in the war-devastated countries of continental Europe.

All this work was done against consummate difficulties. The surviving Jews in the communities of a country like Germany were in large measure elderly people, the children having been the first to be massacred. The adults who survived were often those who had been on the extreme borderline of Jewish life and who had escaped annihilation only because of marriage to a non-Jewish partner, or because their children had been brought up in the church. Moreover, everywhere there was a lack of rabbis. Thus, of the 46 rabbis deported by the Germans from France, not one survived to return.

The shortage of religious teachers was equally catastrophic. In Basle, Switzerland, new courses were established for training Jewish religious teachers for German-speaking lands, and in the United States steps were taken to make Jewish religious teaching as attractive as that of other academic professions. An important world conference on the basic problems of Jewish education was held in Palestine.

In general, in a country like Belgium or the United States there continued the marked tendency toward more intensive methods of Jewish education. The movement was away from the superficial Sunday school to the weekday school, and all-day Jewish schools sprang up in larger metropolitan centres.

From many parts of the world synagogues reported increased membership, expansion of their facilities for more cultural and social activities and increased interest in such matters as synagogue music. The reform synagogues in the United States organized a preaching mission which they called the American Jewish Cavalcade. On the other hand, synagogues everywhere were struggling with the basic problems of maintaining traditional Jewish religious observances and intensifying Jewish religious education.

The action of the United Nations in declaring for the establishment of a Jewish state in Palestine was welcomed by synagogues everywhere with enthusiasm tempered by a belief that the exclusion of Jerusalem from the Jewish state made this action spiritually incomplete and unsatisfying to Jewish religious tradition. (*See* also ANTI-SEMITISM.)

BIBLIOGRAPHY.—*American Jewish Yearbook*, pp. 1–540 (1947–48).

GEN. LUCIUS D. CLAY, U.S. military governor in Germany, addressing members of the Jewish community in Munich on May 20, 1947, as he rededicated the synagogue destroyed by nazi storm troopers a decade earlier

**Jewish Welfare Board, National.** The National Jewish Welfare Board (J.W.B.), organized in 1917, is the national association of Jewish community centres and Young Men's Hebrew associations and Young Women's Hebrew associations in the U.S. and Canada. It is also the officially recognized agency for serving the religious, welfare and morale needs of Jewish men and women in the armed forces and in veterans' hospitals. During 1947, a survey of J.W.B.'s programs, functions and operations, which was begun early in 1946 by Dr. Oscar I. Janowsky, professor of history of the College of the City of New York, was completed. It was carried out under the direction of a survey commission composed of 35 Jewish educators and communal leaders headed by Dr. Salo Baron of Columbia university. The commission submitted 21 recommendations to J.W.B., 20 of which were adopted at the 1947 annual meeting of J.W.B. in Pittsburgh.

The major recommendation called for the formulation of a statement of principles defining the unequivocal Jewish purpose of the Jewish centres. These principles, later adopted by J.W.B.'s Jewish Center Division committee, become a condition for continued complete affiliation of existing Jewish centres (within three years) and for new ones (at admission).

In 1947, the J.W.B. served its 309 affiliates (with 500,000 members) with programs for youth, adult Jewish education, centre fund-raising, surveys of community cultural resources, religious holiday program aids and similar services. The Jewish Music council and Jewish Book council, both sponsored by J.W.B., conducted nation-wide celebrations furthering interest in Jewish literature and music.

Program needs of the centre in Jewish culture were met, in part, by J.W.B.'s Lecture bureau which booked 1,045 programs during the year, the majority dealing with Jewish themes. Activation of the World Federation of Y.M.H.A.'s and Jewish centres (formed 1946) of which J.W.B. is a constituent, was begun through dispatch of a representative to South America to aid the centre program there. Sponsorship of a campaign for a Jerusalem Y.M.H.A.—a World Federation project—was accepted in principle by J.W.B.

Culminating five years of fact-finding concerning participation of Jews in World War II, J.W.B. completed and published a two-volume record *American Jews in World War II*.

Officers in 1947: Frank L. Weil was elected J.W.B. president for his 8th term; Mrs. Felix M. Warburg was honorary vice-president; Mrs. Alfred R. Bachrach, Lloyd W. Dinkelspiel, Irving Edison, Mrs. Samuel R. Glogower, Mrs. Walter E. Heller, Carl M. Loeb, Jr., Donald Oberdorfer, Dr. David de Sola Pool, vice-presidents; Joseph H. Cohen, treasurer; Robert K. Raisler, assistant-treasurer; Joseph Rosenzweig, secretary; Ralph K. Guinzburg, assistant-secretary. On October 1, Samuel

D. Gershovitz became executive director succeeding Louis Kraft, who became general secretary of the National council.

(F. L. W.)

## Jinnah, Mohammed Ali

(1876– ), Indian statesman and politician was born on Dec. 25 in Karachi. He studied law in England, and in 1906 he became an advocate of the Bombay high court. In 1910 Bombay Moslems elected him to the imperial legislative council. He joined the Moslem league in 1913 and was instrumental in getting Hindus and Moslems to hold joint sessions at the Lucknow conference in 1916.

LEADERS OF INDIA at Karachi, on Aug. 15, 1947, during the ceremonies ending British rule. Left to right: Fatima Jinnah, sister of the Moslem leader; Mohammed Ali Jinnah, governor general of the Dominion of Pakistan; Lord Mountbatten, governor general of the Dominion of India; and Lady Mountbatten

Jinnah's zealous advocacy of an independent India cooled considerably in the aftermath of World War I. His disagreement with Mohandas Gandhi over methods of obtaining the desired independence grew sharper, and he no longer was the leading Moslem proponent of concord with the Hindus. At the London round table parleys (1930–31), Jinnah, although not a delegate, demanded separate electorates for Hindu and Moslem communities as well as equality for Moslems in the sharing of offices in the central and provisional governments. In the succeeding years, Jinnah, who had become head of the Moslem league, unswervingly pursued a single goal: establishment of a wholly independent Moslem state; his efforts were crowned with success on Aug. 15, 1947, when he was made governor-general of the Moslem state of Pakistan. Later Jinnah lent his voice to those protesting the bloodshed caused by the outbreak of Hindu-Moslem warring after India achieved its independence, but to little avail, at least in 1947.

## Johns Hopkins University.

Johns Hopkins university is a privately endowed institution of higher learning located in Baltimore, Md. It sists of: three undergraduate schools (1) arts and scie (2) engineering (mechanical, civil, electrical, aeronautical, tary, industrial) and (3) business; McCoy college; the fa of philosophy (graduate); the school of medicine; the sc of hygiene and public health; and the Hopkins applied ph laboratory. For the year 1947–48, 2 new buildings, 27 faculty members and a new department of industrial engir ing were added. Of undergraduate students 61% were vete Undergraduates study under a group plan, while graduate dents study under the jurisdiction of department heads. T is no separate faculty for the graduate school, all faculty m bers teaching both graduate and undergraduate students. following degrees are offered: A.B., M.A., B.S., doctorate philosophy, hygiene, public health, engineering, history of m cine and education. President, Isaiah Bowman. (For statis of endowment, enrolment, faculty, library volumes, etc., UNIVERSITIES AND COLLEGES.)

## Johnson, Herschel V.

(1894– ), U.S. governm official and diplomatist, was b May 3 in Atlanta, Ga. He was graduated from the Universit North Carolina in 1916, and served overseas with the A.I during World War I. After the war he studied at Harvard school and entered the U.S. foreign service. In 1941 John was named ambassador to Sweden by Pres. Franklin Roosevelt.

Recalled from Stockholm in 1946 to become deputy to ward R. Stettinius, Jr., then chief U.S. delegate on the U Security council, Johnson was appointed a regular delegate the U.N. general assembly in July 1947.

Johnson carried the burden of presenting U.S. policy bef the general assembly throughout 1947. During an acidulous bate with Andrei Gromyko on July 23, he admitted that held no brief for Greece, but said the latter at least was menace to world peace as were, he contended, Albania, Bulg and Yugoslavia.

Annoyed by the soviet use of the veto, Johnson presa formation of the "little assembly" plan on July 29, when he dicated to the general assembly that the U.S. would try to some way of defying Russia on the veto.

## Jute.

The U.S. supply of jute, all imported, declined in year ending July 1, 1947, to a total of 35,000 to compared with 78,000 tons in the previous year, and an aver of about 80,000 tons during 1934–38. The cotton crop forme required about 70,000 tons of jute bagging but the sma crops of 1946 and 1947 reduced this need to about 40,000 to

## Juvenile Delinquency.

In 1947 approximately 92. children's cases were handled 220 courts in 17 states co-operating with the federal childre bureau. This juvenile court statistical reporting plan, in ope tion since 1927, remained the only reliable index of trends delinquency. In 1947 the total number of delinquency ca decreased 15%. Boys' cases still represented more than fo fifths.

Of all cases disposed of in these reporting juvenile courts 1,851) 73% were delinquency cases and 27% were depend-cy, neglect and other cases. On Jan. 1, 1946, the children's reau revived its plan of statistical reporting to include analysis all children's cases, in the belief that persons planning and lministering programs of service to children would find these ta valuable.

Numerous conferences on prevention and control of juvenile linquency were held in 1947. Philadelphia developed the Com-unity Neighborhood plan to elicit citizen participation in evention. The National Conference on Prevention and Con-ol of Juvenile Delinquency (Miss Eunice M. Kennedy, execu-ve secretary, Washington, D.C.) conducted meetings in New rsey, in Washington, D.C., and in Kansas City, Mo. The con-rence assembled literature and information for state-wide at-cks upon the problem.

Columbia university donated a research fund to the first *ear Book on Prevention of Delinquency,* scheduled for publi-tion in 1948.

The year 1947 showed the most constructive gains both in eatment and prevention of delinquency throughout the U.S. nce 1940.

## ansas.

Located in the geographical centre of continental United States, Kansas was admitted to the union the 34th state on Jan. 29, 1861, and is referred to in popular sage as the "Sunflower state." Total area 82,276 sq.mi. of hich 82,113 sq.mi. are land; the population in 1947 was re-orted as 1,835,011, an increase of 50,558 or 2.8% from 1946 1940 census 1,801,028); 96.3% were white; 3.6% were Negro, e rest being all other races. Only 3% of the people were reign born; the population was about equally divided between rban and rural. Capital, Topeka, pop. 85,117, a gain over 946 of 5,963 (1940, 67,833). The two larger cities in 1947 ere Wichita, 160,370 (1940, 114,966), and Kansas City, 140,-50 (1940, 121,458).

**History.**—The principal state officials in 1947, elected in 1946 r two-year terms, were: Frank Carlson, governor; F. L. Haga-an, lieutenant governor; Frank J. Ryan, secretary of state; eorge Robb, auditor; R. T. Fadely, treasurer; E. F. Arn, at-orney general; L. W. Brooks, superintendent of public instruc-on. Since 1880 Kansas has been a "dry" state, but in the lection of 1948 the matter of repeal was to be submitted to vote of the people, with indications of a hard fight. Kansas w defines intoxicating liquor as containing more than 3.2% lcohol.

**Education.**—There were 3,166 one-teacher schools in the state during 947 with an enrolment of 35,387; a reduction by 4,230 schools in num-er of one-teacher schools during a 7-year period had been caused by onsolidations. The enrolment (1946) in elementary and secondary chools was 323,457, of which 88,824 were in high schools and 234,633 ere in elementary and secondary schools. A law requiring consolidation f school districts was declared unconstitutional by the state supreme ourt.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—he populations of the various state institutions in 1947 were as follows: dustrial school for boys 119; industrial school for girls 79; hospitals r the insane 5,609; state hospital for epileptics 707; state hospital r tuberculars 419; state school for the blind 69; state school for the eaf 233; state orphans home 125; state school for imbeciles 1,317; ate penitentiary 1,003; state industrial farm for women 42; state in-ustrial reformatory 288.

**Communications.**—In 1944 the state had 9,373 mi. of rural highways nder state control; the steam railroad mileage was 8,448; the number f airports was 127, 38 of which were commercial and 45 municipal.

**Banking and Finance.**—The budget for the biennium 1947–49 totalled 37,213,993, representing an increase of $11,157,063 over the previous udget. Charitable institutions were to receive $8,134,965, compared ith $7,171,196; penal institutions $2,652,018 compared with $2,169,876; educational institutions $17,459,314 compared with $9,858,043. Approximately $28,808,022 was collected from sales tax (2%) in 1947, the highest of record and $6,861,170 more than during the previous year. The bonded indebtedness of the state as of Dec. 31, 1947, was $7,250,000. In 1947 the state collected in excess of $9,000,000 in income tax, the largest in history. As of Oct. 1, 1947, there were 174 national and 439 state banks, with deposits of $1,500,000,000.

**Agriculture.**—Receipts from marketings the first nine months of 1947 indicated a total cash farm income for the year of about $1,367,000,000 or about 50% larger than the previous year and the highest on record.

*Leading Agricultural Products of Kansas, 1947 and 1946*

| Crop | 1947 | 1946 |
|---|---|---|
| Wheat, bu. | 294,360,000 | 216,768,000 |
| Corn, bu. | 42,158,000 | 63,231,000 |
| Sorghum (grain), bu. | 10,860,000 | 11,448,000 |
| Oats, bu. | 40,860,000 | 40,556,000 |
| Soybeans, bu. | 1,760,000 | 2,178,000 |
| Hay, tons | 2,830,000 | 2,328,000 |
| Barley, bu. | 6,332,000 | 5,022,000 |

The year 1947 was the seventh consecutive year of favourable production in the southwest U.S. wheat belt, the Kansas crop comprising 27% of the total U.S. winter wheat production. Hay production exceeded the 10-yr. average and the oats crop was excellent, but the corn, sorghum and soybean yields were below average because of deficient moisture. The spring movement of cattle was about 8% smaller than in 1946—329,000 cattle and calves—but about 30% above 10-yr. average.

**Manufactures and Mineral Production.**—The mineral production of Kansas was valued at $210,187,000 in 1945, compared with $217,876,000 in 1944 and $220,413,000 in 1943. The state ranked ninth as a mineral-producing state. Its principal mineral products were petroleum, natural gas, zinc and coal. (F. CN.)

## Kentucky.

An east south central state of the United States, admitted to the union June 1, 1792, popularly known as the "Blue Grass state." Area, 40,395 sq.mi., of which 286 sq.mi. are water (chiefly the Ohio river). Population in 1940 was 2,845,627, of which 2,443,252 were white. Negroes constituted 209,721 or 7.5%, and 15,631 were foreign-born. The estimated population July 1, 1947, was 2,745,590. Capital, Frankfort (11,492); largest city, Louisville (319,077). Other cities: Covington (62,018); Lexington (49,304); Paducah (33,765); Owensboro (30,245); Ashland (29,537).

**History.**—In the quadrennial election Nov. 4, 1947, Earle C. Clements (Dem.) defeated Eldon S. Dummit (Rep.) for the governorship by 387,795 votes to 287,756. Other Democratic officers of the state were Lawrence W. Weatherby, lieutenant governor; George G. Hatcher, secretary of state; A. E. Funk, attorney general; Harry N. Jones, auditor; Edward F. Seiller, treasurer; Harry F. Walters, agriculture; Boswell B. Hodgkin, superintendent of education; Charles K. O'Connell, clerk of court of appeals.

EARLE C. CLEMENTS, elected governor of Kentucky, Nov. 4, 1947, on the Democratic ticket

**Education.**—Elementary schools in 1947 numbered 5,116, with 12,696 teachers and 415,296 pupils. In 576 public high schools there were 5,186 teachers and 116,500 pupils. The distribution of funds was $25.66 per capita.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—The unemployment commission paid $400,000 monthly to about 40,000 civilians during 1947 and administered payments to 26,540 veterans in twice that sum. Old-age assistance was given to 47,285; aid to dependent children, to 9,150; and aid to needy blind, to 1,705. The population of the various correctional institutions was reported as follows: reformatory, 1,574; penitentiary, 835; women's prison, 52; house of reform for boys, 263; for girls, 53. At the close of 1947, 93 counties had voted dry.

**Communications.**—The highway department reported 10,252 mi. of highways under state control. Total receipts were $31,994,400, while expenditures were $26,613,600. The Milton-Madison bridge was freed of tolls Nov. 1.

**Banking and Finance.**—On June 30, 1947, there were 93 national banks with resources of $621,946,000; 295 state banks and trust companies with resources of $898,858,000. From its general fund Kentucky drew $24,948,813 for education; $10,823,307 for welfare work; $7,714,985 for expenses of government. Receipts in the same period came from these sources: $8,917,902 from property and inheritances; $19,087,493 from corporations and incomes; $12,678,022 from alcohol taxes and licences; $1,893,141 from other licences. The surplus of $25,000,000 on June 30, 1947, was reduced from a higher figure by the "escalator" clauses of the budget law. No state debt exists.

**Agriculture.**—The leading crops of 1947 appear as reported in the table.

*Leading Agricultural Products of Kentucky, 1947 and 1946*

| Crop | 1947 | 1946 |
|---|---|---|
| Wheat, bu. | 5,184,000 | 4,976,000 |
| Corn, bu. | 76,265,000 | 77,824,000 |
| Oats, bu. | 2,415,000 | 2,200,000 |
| Hay, all types, tons | 2,678,000 | 2,583,000 |
| Tobacco, all types, lb. | 416,167,000 | 505,885,000 |
| Potatoes, Irish, bu. | 3,366,000 | 3,996,000 |
| Soybeans, bu. | 1,908,000 | 1,566,000 |

**Mineral Products.**—During 1946 coal mines yielded 69,271,470 tons, and employed 57,576 miners with a loss of 113 lives. The output of petroleum was 10,924,283 bbl. Natural gas was estimated at 80,000,000,000 cu.ft. (E. T.)

**Kenya:** *see* British East Africa.

## Kidnapping.

Kidnappings in 1947 were featured chiefly by political motives, with alleged communist influences involved in several of the highly publicized cases. Notable in this category were numerous kidnappings in Austria. For example, several students were reported as kidnapped in Vienna in June by three men wearing U.S.S.R. military uniforms. In the following month Austrian Minister Oskar Helmer claimed that there had been 11 political kidnappings by Russian troops during the immediately preceding weeks and that the soviet occupation forces were prohibiting Austrian police from reporting such occurrences.

Palestine recorded an important case late in January when H. A. I. Collins, former British army major, was abducted by an armed group.

China also held its place as a centre for such crimes when the Rev. J. L. Devine, a former U.S. army chaplain was reported killed by Chinese Communists operating as a guerrilla force, following his kidnapping in September and an unsuccessful attempt to collect ransom.

In Buitenzorg, Java, Gov. R. Hardjadiparta was reported kidnapped during the coup d'état of May 23.

Kidnappings in the United States during 1947 showed no marked evidence of racketeering influences, even though Illinois, as a former centre of business kidnapping rings, was again prominent in the dispatches. The year had scarcely opened when the kidnapping of a woman in Dixon, Ill., was followed by the conviction and sentencing of Frank Sickles on charges of kidnapping her and several others. Two months later, an inmate of the Illinois Training School for Girls at Geneva killed a nurse employed at the school, and kidnapped the baby of another inmate. In May, William G. Fuller was sentenced for the 1945 abduction of three-year-old Mary Ann Kubon from a Chicago nursery school.

The populous states of New York and Pennsylvania also appeared in the kidnapping news, although some of the cases were of doubtful authenticity. In Lodi, Calif., Alice Dean Devine reported she escaped from kidnappers who allegedly demanded $10,000 ransom. From Hollywood came a report in October that Earl Carroll, night club owner and once widely known as a producer of musical comedies, had been held up on entering his Beverly Hills home at dawn and robbed of $400. The gunman then forced Carroll and his chauffeur into the producer's car, and after driving with them toward Hollywood ejected them from the car. Several hours after the crime was reported, police in distant San Bernardino arrested a suspect, aged in the Carroll car.

Perhaps the most shocking case of the year originate Kearney, N.J., where 11-year-old John Preston, Jr., was ported missing from his home on Sept. 14. Although a ran demand was made upon the boy's parents, and police br cast an eight-state teletype alarm, no police results were cured for several days. Then the father of 14-year-old Walter Smigelski presented his son before special agents of FBI, where admission of kidnapping and murder was fr made. The motive, said the boy, was to "prove he was a m and not a "sissy." Defense counsel sought to have young Sm ski tried before a court for juveniles, but he was held for ac of the grand jury, on Sept. 19, and indicted for murder Oct. 14. (Br. S

## King, William Lyon Mackenzie

(1874– ), C dian politician, born at Berlin (now Kitchener), Ont., Dec. 17. For a biograph account, see *Encyclopædia Britannica.*

King co-operated with the United States in measures for c mon defense of the two countries, and he participated in sev Churchill-Roosevelt conferences. In the general elections June 11, 1945, King's liberal party emerged victorious altho it failed by a slim margin to obtain a clear majority. King h self was defeated in his constituency in Prince Albert, Sa but was re-elected in a parliamentary by-election in Onta Aug. 6.

Several months after participating with Harry S. Truman Clement R. Attlee in the Washington, D.C., Atomic Energy ference in Nov. 1945, Mackenzie King asserted (Feb. 15, 19 that his government had unveiled a widespread espionage engineered by Russian agents, presumably seeking secret ato information.

In the early spring of 1947, the prime minister visited Pr dent Truman during the course of a vacation spent in the Un States; in June the president paid a return visit to Canada.

While touring western Europe in the fall, King stopped of London where he was received by King George VI and gi the Order of Merit (Nov. 17).

## Kleffens, Eelco Nicolaas Van

(1894– ), Neth lands statesman, was b Nov. 17 in Heerenveen, the Netherlands. He was gradua with an LL.D. degree from Leyden university in 1918 and a member of the League of Nations secretariat, 1919–21. was appointed minister to Switzerland, and Netherlands rep sentative to the League of Nations (1939). Van Kleffens to England after the German invasion in May 1940, becom foreign minister for the Netherlands government-in-exile.

He attended the United Nations conference in San Franci in 1945, the U.N. sessions in London in early 1946 and following sessions in New York.

During the London meetings of the U.N. Security coun Van Kleffens and Andrei Vishinsky clashed over the latter's mand (Feb. 10, 1946) for an investigation of the Indonesian c pute. Van Kleffens replied that he would agree to an investi tion provided it were limited to the original charge of whetl or not Britain was threatening world security.

In 1946 Van Kleffens also represented the Netherlands on U.N.'s Atomic Energy commission and in 1947 he was nam (May 28) ambassador to the U.S. He asserted before Security council (July 31) that the Dutch attack on Indone was a "police action" and therefore beyond U.N. jurisdicti owever, the council rejected this contention as well as his later fforts to prevent the Indonesian delegation from getting a hearng on the ground that Indonesia was not a "sovereign state."

**nights of Columbus:** *see* SOCIETIES AND ASSOCIATIONS.

**orea.** A peninsula on the mainland of Asia directly west of Japan. On the north it is bounded by Manchuria, n the west by the Yellow sea, and on the east by the Sea f Japan. Area: 85,225 sq.mi., including 3,479 islands. Pop. Oct. 1, 1940) 24,326,327. As a result of the Potsdam agreeent of 1945, Korea is divided at the 38th parallel into U.S. nd soviet zones of occupation. Leading cities in U.S. zone ith estimated populations: Kyongsong (Seoul) 935,464; usan (Fusan) 249,734; Inch'on (Jinsen) 1,000,000. Leading ty in soviet zone: P'yongyang (Pyengyang or Heijo) 285,965. eligion: Buddhism, Confucianism and Taoism. In 1938 there ere 494,500 Korean Christians.

**History.**—A Peoples' Republic established on Sept. 6, 1945, y the Socialist and Communist parties was reorganized by he Russians into the Korean Peoples' Interim committee. ieut. General John R. Hodge, commander of the U.S. occupaon forces, denied recognition to the Peoples' Republic and ornized the Korean Advisory council consisting of 11 members, l of them from the Korean Democratic party led by Kim Koo nd Dr. Syngman Rhee. In Oct. 1946 Major General Archer . Lerch, U.S. military governor, established an interim legislave assembly consisting of 45 members elected by the people nd 45 appointed by the commanding general.

In 1946 and 1947 the joint commission established by the oscow conference failed to agree on which Korean parties nd social organizations should be consulted in the setting p of a government. The U.S.S.R. refused to consult with pares opposing the establishment of a trusteeship for Korea as rovided in the Moscow agreement. This difference appeared to ave been settled in May 1947 when Soviet Foreign Minister yacheslav Molotov agreed not to bar parties which had oposed the Moscow decision providing they now supported it. hen the joint commission resumed negotiations on May 20, 947, soviet representatives objected to parties which were embers of a "Committee Against Trusteeship" and to some ocial groups which they considered unrepresentative. The nited States representatives held that the soviet aimed to stablish a government controlled by a Communist minority. n Aug. 28 the U.S. proposed to the U.S.S.R. that the four owers adhering to the Moscow decision meet at Washington o consider the Korean question. When the U.S.S.R. rejected is proposal, the U.S. referred the question to the United Naons general assembly. On Sept. 27 the U.S.S.R. proposed the vacuation of soviet and U.S. occupation forces by Jan. 1948. he United States maintained that evacuation should follow the stablishment of a national government. In November the nited Nations assembly created a commission to hold Korean lections by the end of March 1948 and to aid in the establishent of a government.

**Education.**—Attendance in primary schools in May 1947 was 2,177,980 udents, in middle schools 158,325, and in universities and colleges 13,17. There were 3,208 primary schools and 384 middle schools in the .S. zone. Less than half of almost 5,000,000 children of ages 6 to 12 ere in school.

**Finance.**—Early in 1947 average family expenditures in Kyongsong were eported to have increased by 14,190% over 1937. Controls over sales of ommodities and a program of grain collection were instituted to prevent oarding and speculation. The official fixed rate of exchange was 15 yen r one U.S. dollar. In July the acting military governor approved a alanced budget not to exceed Y17,500,000,000.

**Trade and Communications.**—Foreign trade was largely on a governent-to-government basis. Japan was the chief source of parts and mahinery for industrial rehabilitation. The U.S. government gave Korea 91,000,000 under the civilian supply program. Included in the fooduffs sent to Korea were more than 395,836 metric tons of wheat, barley, flour and rice; 173,354,038 litres of petroleum products, and 106,423 metric tons of fertilizers. In June 1947 there were 617 locomotives of which 271 were operable, and 8,647 freight cars. Roughly the same amount was thought to be in the soviet zone.

KOREANS giving the communist salute as they greeted U.S. delegates of the joint U.S.-soviet commission arriving in the Russian occupation zone for a tour of inspection in July 1947

**Agriculture, Manufacturing, Mineral Production.**—Agriculture is the chief industry in Korea. The 1946 rice crop in South Korea was 1,849,535 metric tons, 18% below wartime production. Irrigation projects under construction were expected to add 101,320 ac. and an estimated 3,580,500 bu. of rice by 1948. The major spinning and weaving plants produced 8,740,400 lb. of cotton yarn and 21,700,040 yd. of cloth in 1946. Coal production totalled 208,476 tons in 1946. Korea has to import all bituminous coal. Shortage of coal was a major factor in delaying industrial recovery. In 1947 the military government in the U.S. zone was still engaged in the sale of former Japanese-owned property. Money proceeds were held by the national property custodian for delivery to the future government of Korea. (*See* also OCCUPIED AREAS, ADMINISTRATION OF.)

Washburn, "Russia Looks at Northern Korea," *Pacific Affairs* (June 1947).

(P. A. V.)

**Krug, Julius Albert** (1907–    ), U.S. engineer and government official, was born on Nov. 23 in Madison, Wis. He received an M.A. degree from the University of Wisconsin in 1930. Associated with several federal agencies as power engineer and consultant in the years between 1936 and 1941, Krug held an executive post with the War Production board in 1943. The following year, he joined the navy as lieutenant commander, but was back again with WPB as chairman in the fall of 1944. Krug resigned in Oct. 1945. He later returned to government employ at Pres. Harry S. Truman's behest (Feb. 26, 1946) to succeed Harold Ickes as secretary of the interior. In this post, he played an important role in the government's attempts to mediate the strikes of the coal miners in 1946.

The Centralia (Ill.) mine disaster (March 1947) in which 111 persons lost their lives led to sharp exchanges between Krug and John L. Lewis, with the latter attacking the secretary of the interior for alleged failure to enforce mine safety conditions; Lewis also requested that all but two mines be closed because of perilous working conditions. Krug rejected Lewis' demands, hinting (April 10) that the United Mine Workers chief was prompted by "motives other than a concern for safety."

Great significance was attached by administration supporters to a report made (Oct. 18) by a committee of specialists headed by Krug to the effect that "a considerable program of foreign aid" could be undertaken by the government without putting any undue strain on the country's natural resources.

**Kuwait:** *see* Arabia.

## Kyanite Minerals.

This group includes the closely associated minerals kyanite, andalusite, dumortierite and sillimanite.

**Kyanite.**—Production in the United States was 9,561 short tons in 1943, after which it increased, but was no longer reported. Imports dropped from 14,544 tons in 1945 to 10,782 tons in 1946, mostly from India. Consumption was estimated at 11,500 tons in 1946, down from 15,000 tons in 1945.

**Andalusite and Dumortierite.**—There was no U.S. production in 1946, as there were stocks to cover current demand.

**Sillimanite.**—The supply in 1946 was limited to 592 short tons imported from Australia, as there was no U.S. production. (G. A. Ro.)

## Labour Unions.

**United States.**—Developments in organized labour during 1947 were dominated in the United States by new federal legislation and by the continuing postwar boom in business. At its first session the new Republican congress devoted itself to overhauling the nation's labour policy and labour law. On June 23, the senate passed the Taft-Hartley act over the president's veto.

Adoption of this statute marked the first major revision in New Deal labour policies of the 1930s and in the Norris-LaGuardia and Wagner acts. The authors of the new policy had in mind a variety of purposes, but taken together they amounted to curbing the power of organized labour. The act consequently was an "omnibus" measure, containing not only revisions of existing statutes but also many novel features.

Revision of the Wagner act was made in two directions. One set of provisions had as their purpose limiting the authority of the law's administrative agency, the National Labor Relations board. Accordingly, the judicial and prosecuting functions were assigned to separate and independent agencies—the board, with its membership increased from 3 to 5, retaining its judicial functions and a new officer, the general counsel appointed by the president, charged with the duties of prosecution. To limit the authority of these administrative agents further, their findings were made subject to broader review by the federal courts, and the standards of evidence on which they were permitted to act were raised.

The Wagner act was further amended and enlarged in order to impose on unions standards of conduct similar to those required in the original law of employers. Hence the Taft-Hartley act enumerated unfair labour practices of unions, outlawed the closed shop, strengthened the employer's right of free speech, redefined the authority of unions over their members, removed foremen's unions from protection of the law and required all unions to file with the department of labour their constitutions and financial and membership statements.

MOCK STALIN FIGURE, impersonated by a member of the United Auto ers union employed at the Ford Motor Co. in Dearborn, Mich. Campai prior to the election of officers in March 1947, he charged communist c of leadership within his local

In addition to these features, the law removed the con tion service from the department of labour and set up an pendent agency to perform the same functions. There also elaborate regulations of the calling and waging of strike

By the end of 1947, there had been little experience wit operations of the Taft-Hartley act and there had yet bee court decisions interpreting the meaning of the law and powers of the administrators.

The business boom of 1947, on the other hand, added t strength of organized labour. Full employment and rising p and profits fortified the bargaining position of unions. They cessfully negotiated a second round of postwar wage incre amounting to roughly 15 cents an hour, and won many valu concessions in working conditions. By the end of the year had regained their early postwar losses in membership probably added some 500,000 new members. All these adva were made under much more peaceful conditions than had vailed in 1946. Time lost through strikes declined from 000,000 to 35,000,000 man-days. Both employers and u were unwilling to repeat in 1947 the losses they had suffere 1946. The unions, also, were apprehensive that a repetitio the labour troubles of 1946 would expose them to still drastic regulation by congress.

The passage of the Taft-Hartley act and the changes in tional labour policies implicit in this statute aroused all un to renewed political activity. Even the independent rail unions, though they were not subject to the act but conti to operate under the terms of the Railway Labor act, joined A.F. of L. and the C.I.O. in uncompromising opposition to new law. All branches of the labour movement were busy ganizing new political agencies or reviving old ones to us the national elections of 1948. Organized labour was unanin in its intention to defeat the congressional supporters of Taft-Hartley act and to erase that law from the statute bo

Political unity was not translated into union unity, howe The C.I.O. proposed that the A.F. of L. join with them in bilizing the political strength of organized labour, but the of L. opposed any joint action short of a complete merge the two organizations. This solution of the problem of disu the C.I.O. refused to accept. Forces of dissension within our movement thrived in 1947 as in previous years. John L. wis took the United Mine Workers out of the A.F. of L., with hich they had become only recently reaffiliated, because he s unwilling to sign the anticommunist affidavit required by e Taft-Hartley act. In the C.I.O., the fight against communist ctions broke out, notably in the large unions of automobile, ectrical and radio, and mine, mill and smelter workers. There s some shifting of affiliations, the most important of which s the shift of several locals from the independent telephone orkers to the C.I.O.

The struggle against the communist influence in unions in ternational labour organizations had swift repercussions in the ited States. The new international labour policy of the S.S.R., by which unions became instruments of Russian forgn policy, caused a cleavage in the World Federation of Trade nions. Since the C.I.O. was one of the founders of the W.F.T.U., is development proved highly embarrassing and it sent an issary to Paris to present to the W.F.T.U. the case for the arshall plan. The A.F. of L. was strengthened by these events nce it had been, from the beginning, an implacable foe of the .F.T.U. and had consistently opposed any traffic with comunist unions. (*See* also AMERICAN FEDERATION OF LABOR; USINESS REVIEW; CONGRESS OF INDUSTRIAL ORGANIZATIONS; AW; NATIONAL LABOR RELATIONS BOARD; STRIKES AND LOCKUTS.) (L. Wo.)

**Great Britain.**—The Trades Union congress held at Southort in Sept. 1947 represented 7,540,000 workers, as compared ith 6,671,000 in 1946, whereas the number of unions repreented fell as a result of amalgamations from 192 to 187. The ost important merger was that of the National Union of Disibutive and Allied Workers (275,000) with the Shop Assistnts' Union (101,000) to form the National Union of Shop, istributive and Allied Workers. This fusion brought together to one body the well-organized co-operative employees and e much less well-organized workers in private shops and wareouses.

Considerable progress was made in collective bargaining in he distributive trades, in which there had been also an extenion of statutory minimum wage regulation under the Wages ouncils act. The increase of trade union membership was well pread over the majority of industries, the largest increases beng in transport, building, and the engineering trades. The rise n total membership was, of course, largely the result of deobilization from the armed forces, which had increased the umber of male workers in industry, whereas the number of omen workers had fallen with the return of many married omen to family life.

There were no startling developments in trade union policy uring 1947. The most important development was a renewal f the pressure for the maintenance of joint production comittees, which in many cases had been allowed to lapse after Vorld War II, but were being reinstated in order to help in the roduction drive for higher exports. The government urged the evelopment of joint production committees, but refused to pply compulsion, on the ground that the matter could be better ettled by joint agreements in particular industries.

In face of the balance of payments crisis, the trade unions greed to a limited measure of direction of labour, designed to ecure a better distribution of manpower. Such direction was pplied only in exceptional cases, where a worker was unemloyed or desired a change of job; but it was recognized that ore drastic measures might be needed if the action taken to queeze out redundant workers by rationing raw materials and uel to the less essential industries failed to achieve the required ffect. The trade unions watched the situation with some anxity, as they knew that "direction" would be very unpopular and wished to confine it within the narrowest limits that were found to be compatible with the national necessities.

Throughout the crisis, arising first in connection with the bad weather and fuel shortage difficulties in the early months of 1947 and later in connection with the exhaustion of the U.S. loan, there was close consultation between the Trades Union congress and the government. In the matter of wages the unions did their best to avoid exerting any pressure likely to have an inflationary effect, and wage-advances were kept within narrow limits (*see* WAGES AND HOURS) in order to avoid embarrassing the government.

The Trades Union congress of Sept. 1947 passed a resolution urging the need for an over-all production plan setting definite targets for the various industries; and the government responded with the Cripps plan of Sept. 1947. The congress also urged more effective control over prices and measures for the public investigation of costs and profits, including the costs of distribution. Proposals were also put forward for amending the Factories act in order to bring it into line with postwar developments in factory methods and organization. Florence Hancock, of the Transport and General Workers' union, was elected president for 1947–48.

The trade unions continued to collaborate with many government committees, including the working parties which made recommendations for the reorganization of a number of manufacturing industries. There were a number of changes in trade union leadership and in the composition of the Trades Union congress general council, because of the appointment of several trade union leaders to serve as members of the boards of newly socialized industries (mines, transport, electricity) or in other government posts. The civil service unions fully resumed their position in the Trades Union congress, which they were able to rejoin after repeal, in 1947, of the Trade Unions act of 1927.

The number of unofficial strikes was smaller than in 1946, and the agitation against the closed shop died down as it became apparent that the trade unions had no intention of pressing for it in any large number of instances. Total trade disputes were at much the same level as in 1946, involving up to August a loss of 1,610,000 working days, as against 1,498,000 in the corresponding period of the previous year. Coal mining accounted for 428,000 of these lost days, as against 326,000 in 1946. Disputes were most extensive among transport workers, who lost 558,000 days in Jan.–Aug. 1947, as against 67,000 in the first 8 months of 1946. All these totals, however, were very low. In general, disputes were small and of short duration.

The British Trades Union congress maintained its connection with the World Federation of Trade Unions (*q.v.*). Certain demarcation questions arose in connection with the organization of workers in the newly nationalized services, especially in respect to clerical and administrative staffs; but these seemed to be well on the way to amicable settlement. The Trades Union congress further expanded its educational work, especially in the training of trade union officials and the provision of short courses and summer schools for trade unionists. It maintained its representation on the National Council of Labour (with the Labour party and the Co-operative union), and sent a number of missions to help with trade union organization in colonial and other areas. (G. D. H. C.)

**Labrador:** *see* NEWFOUNDLAND AND LABRADOR.
**Labuan:** *see* NORTH BORNEO.

**Lacrosse.** This game, conceived by the American Indian, was expected to take on world importance as a major sport in 1948. It was expected that the sport would be included on the world Olympic program in London in the summer.

The lacrosse season in the U.S. in 1947 prospered as never before with 32 institutions participating, a record number. In both the 1928 and 1932 Olympic games, lacrosse was demonstrated but not a part of the schedule.

National U.S. champions were Mt. Washington club of Baltimore, Md., in the Open; Johns Hopkins, of Md., in the intercollegiate. The women's national tournament was won by the No. 1 Westchester, N.Y., team which defeated the Philadelphia, Pa., first team. The Philadelphians were defending. The North team defeated the South, 15 to 3. (T. J. D.)

**Lamb:** *see* MEAT.
**Laos:** *see* FRENCH OVERSEAS TERRITORIES.

**Lard.** Production of lard in the United States rose in 1947 as the number of hogs slaughtered increased. Total output of lard was estimated at about 2,300,000,000 lb., compared with 2,114,000,000 lb. in 1946 and a somewhat higher average of about 2,398,000,000 lb. in the previous five years, 1941–45. Stocks were larger at the beginning of 1947—110,000,000 lb. compared with 69,000,000 lb. a year earlier. The civilian supply was estimated at more than 12 lb. per capita, compared with 11.8 lb. in 1946. Exports declined below the 1946 level of 469,000,000 lb. The price of lard reached a peak in March 1947 and then declined almost one-fourth.

World production followed the trend in hog production which declined slightly in 1947. In June, July and August the United States Department of Agriculture purchased about 85,000,000 lb. of lard for Austria, and the United States and British zones of Germany. The United Nations Relief and Rehabilitation administration made considerable purchases in the early part of 1947 to complete its obligations of foreign aid. Very small amounts were otherwise exported. (*See* also HOGS; MEAT; VEGETABLE OILS AND ANIMAL FATS.) (J. C. Ms.)

**Latvia.** One of the Baltic states of northeastern Europe, north of Lithuania, south of Estonia; an independent republic 1920-40, a republic of the U.S.S.R. 1940-41, part of the German "Ostland" 1941-44, reintegrated into the U.S.S.R. after the reconquest of 1944-45. Area 25,395 sq.mi.; population (census 1935) 1,950,502, (est. 1940) 1,994,506. Capital, Riga (393,211 in 1939); the other principal city is Liepaja (57,098 in 1935). Language, Latvian. Religion, Christian (Protestant 56%; Roman Catholic 24.5%; Greek Catholic 9%; Greek Orthodox 5.5%). Chairman of the Council of Ministers: Vilis Lacis.

**History.**—Latvia suffered severely during World War II from both Russian and German armies which swept through the country. The old part of Riga was hardest hit by Russian bombers during the German occupancy. More terrifying to the people were the mass deportations carried through by both great power conquerors. Thousands were taken to Germany as forced labourers and many of them were still in Germany in 1947, either unable or unwilling to return to soviet-controlled Latvia. Thousands more, particularly farmers and intelligentsia, were deported by communist authorities to the interior of the U.S.S.R., these to become labourers or settlers. Russians were then sent in to Latvia to take over the jobs or the farms of the deportees. Often, it was reported, these newcomers even take the names of the dispossessed, and the Russian ical leaders in charge of the country also assumed La names. Still a third class of exiles attempted escape acro Baltic to Sweden.

According to a report to the London *Economist,* Latvi becoming rapidly Russified, and the Russian language ha come official. To a large extent, small peasant propriet characterized the landholding system, continuing the policy of the agrarian reforms of the 1920s. Skilled ar continued to operate independently and private business th During 1947, however, Latvia probably experienced some collectivization just as did Estonia to the north. Evidentl process would be slow.

Latvia continued a very peculiar twilight existence int tionally. Neither the U.S. nor Great Britain recognized establishment of the Communist republic in 1944; Latvian lomats continued to enjoy the hospitality of London and W ington. In May 1947 the British undersecretary C. P. Ma stated that Britain recognized *de facto* the regimes create the U.S.S.R. in the three Baltic states, and he refused to gu tee that *de jure* recognition would not follow.

That all was not well in Latvia was clear from Ru sources where it was admitted by the Russian finance mi A. Zverev that the soviet state was having difficulties colle taxes in the country.

Industrial reconstruction and expansion was proceeding. L served as the main port because of the destruction of Riga carried on an active trade. Meanwhile, Riga's port faci were being rebuilt, and the city was booming. The railwa Moscow was being double-tracked all the way, with occas stretches of three and four track line. (F. D. S

**Law.** Congress freed business from most of the remai entanglements of emergency and war laws during but threw a net of controls about labour unions and their cials through the passage of the Taft-Hartley act. The Decontrol act of 1947 revoked the president's broad emerg and war powers under the Second War Powers act except specified purposes; and on July 25 congress wiped out the of control laws still on the books. Slight concessions to proponents of control were made in three enactments: The ond Decontrol act, extending the president's power over cer materials in critically short supply; the Housing and Rent extending rent control in a relaxed form to Feb. 29, 1948; the Anti-Inflation bill which congress tossed into the preside lap in December at the end of its special session as its ans to his demand for a ten-point inflation control program. bill tendered the president authority to limit the use of g for distilled liquors for five-week periods and extended ex controls and the power to allocate transportation facilities equipment, but beyond that provided no economic controls.

Shying away from drastic measures in any field except lab management relations, congress gave its attention mostly patching up existing statutes and to housekeeping problems. a sequel to the Reorganization act of 1946, designed to stre line congress, an act was passed establishing a Commission Organization of the executive branch of the government to st and report on means for improving the economy and efficie of service in departments, agencies and bureaus. Congress attempted to forestall the difficulties which might follow death, resignation, removal from office or disability of both president and vice-president by enacting the Presidential S cession act which provided that in such a contingency the p ers and duties of chief executive should devolve in turn u the speaker of the house of representatives, the president

© 1946, Chicago Times, Inc.

STRIP MINING," Burck's conception, in the *Chicago Times*, of John L. wis' legal setbacks after the coal strike of late 1946. In March 1947, the S. supreme court upheld the contempt charges made against Lewis by a S. district court

mpore of the senate and thereafter upon the cabinet officers the order of their traditional rank.

On March 24 by joint resolution congress proposed an amendent to the constitution providing that no person shall be ected to the office of president more than twice and that no erson who has held office of president for more than two years f a term to which some other person was elected shall be ected more than once. To become operative the amendment ust be ratified by the legislatures of three-fourths of the ates within seven years.

No distinct trends were discernible in the development of rivate law, although a spate of litigation, often novel in the sues presented, arose out of the pressure of inflation and housg and production shortages. Trial and appellate courts were alled upon to adjust bitter battles between landlords and tennts and to determine disputes growing out of the frustration f persons desiring automobiles. Not only were many actions till coming to trial for the enforcement of penalties for black arket deals prior to the expiration of price control, but suits ere also brought, seldom successfully, to obtain cars by writs f replevin and specific performance of sales contracts.

Only the more important legal developments of general interst are reported in this article.

**Administrative Law.**—The supreme court applied the subtantial evidence rule to sustain three rulings (later nullified by e Taft-Hartley act) of the National Labor Relations board pholding the right of foremen and plant guards to representaon through their own unions. In another case, which had been ent back to the labour board to enable an employer to present vidence previously rejected, the supreme court said that the oard did not have to hold a trial *de novo* and listen to a reearsal of evidence already recorded in some 13 volumes of ,000 typewritten pages (*NLRB* v. *Donnelly Garment Co.*, 67 . Ct. 756).

Some interesting aspects of judicial review were expounded by the supreme court in *SEC* v. *Chenery Corp.*, 67 S. Ct. 1575. The court supported the authority of the Securities and Exchange commission to evolve rules on a case-to-case basis for meeting and solving new administrative problems. The court also pointed out, in affirming an SEC order, which it had previously reversed, that the commission had originally grounded its rulings on a wrong view of the law. The court had been powerless, it said, to affirm the results, even though correct, by substituting a sound basis for that advanced by the agency. The case had therefore been remanded to the commission which "had re-examined the problem, recast its rationale and reached the same results." Thus properly supported, the ruling was affirmed.

The actions of other agencies were upheld by the supreme court in decisions which approved: the removal by the board of directors of the federal reserve system of the director of a member bank on the ground that he violated the statutory prohibition against employees engaging in the underwriting business; the appointment by the Federal Home Loan Bank board of a conservator for a savings and loan association without notice; the authority of the price administrator to delegate to regional and district directors the function of signing and issuing subpoenas, which was implicit in the broad rule-making powers granted by the Price Control act; and the jurisdiction of the Federal Power commission to regulate sales of natural gas conveyed by pipeline across state boundaries.

The high court, however, declared that the Interstate Commerce commission exceeded its statutory powers when it attempted to modify a certificate of convenience granted to a water carrier and also when it approved freight rates that destroyed the advantages of low cost barge shipment of grain. Similarly the treasury department was ruled out of bounds in two cases for its classification of employees under the Social Security act.

The attempt of a litigant to by-pass agency procedure by obtaining a declaratory judgment in court when a statute expressly provides for a preliminary administrative decision was rebuffed by the supreme court. It dismissed a suit brought by a government subcontractor to have the Renegotiation act declared unconstitutional on the grounds that he should have taken the matter to the tax court which was given authority by congress to make the initial decision in such a case (*A & D Equipment Corp.* v. *Hirsch*, 67 S. Ct. 1493).

**Agriculture.**—Two Idaho farmers paid dearly for their failure to read the regulations of the Federal Crop Insurance corporation published in the *Federal Register*. In a 5 to 4 decision the supreme court denied them compensation for the loss of 400 ac. of spring wheat reseeded on winter acreage. The regulations, which precluded such coverage, were binding on all who sought crop insurance, the court said, even though they may have been misled by a government agent into thinking they were protected. The government's liability in this respect is not the same as that of a private insurance company (*Federal Crop Ins. Corp.* v. *Merrill*, 68 S. Ct. 1).

The protection of the Crop Insurance act was further narrowed by congress through amendments which restricted crop insurance to counties where (1) income from insured crops is of primary importance, (2) the failure of such crops would bring disaster and (3) a sound program can be successfully provided.

Among other enactments affecting agriculture was the Sugar act of 1948 (adopted in 1947) designed to stabilize sugar producing, refining and importing industries through the use of quotas allocated to certain areas.

The Kansas supreme court strengthened the position of farmers' co-operatives by a decision which approved the far-flung activities of one of the nation's largest co-operative enterprises. The organization's charter permitted it to engage in any activity connected with manufacturing, selling or supplying its members with machinery, equipment or supplies. This by implication included the authority to own and operate oil refineries, canning plants and lumber mills, to engage in international trade and to sell its products to nonmembers as an incident to its other activities (*Kansas* v. *Consumer's Co-op. Assn.*, 183 P. 2d 423).

**Aliens and Citizenship.**—The attempt of a labour contractor to evade the provisions of the Immigration act under cover of the wartime Farm Labor Supply act was blocked by the supreme court. The latter law did not authorize a would-be employer to circumvent the established immigration process. The contractor was rightly prosecuted for writing to persons in Mexico offering to smuggle them into the United States for the price of $25 each (*U.S.* v. *Lem Hoy*, 67 S. Ct. 1004).

In two decisions the supreme court passed upon the application of provisions of the First War Powers act of 1941, amending the Trading with the Enemy act of 1917. In the first case the court ruled that a Swiss national had a right to the return of property seized by the alien property custodian even though these statutes authorized the seizure of property of any foreign nationals whether or not they are enemies or allies of enemies. Congress intended to reach enemy interests masquerading under innocent fronts but not to appropriate assets belonging to friendly or neutral nations where there was no possible enemy taint (*Clark* v. *Uebersee*, 68 S. Ct. 174). In the second case the court supported the authority of the custodian to vest in himself shares of stock of a U.S. corporation held by a Swiss corporation as pledgee for the benefit of a German corporation in spite of a provision of the original Trading with the Enemy act that a pledgee who is not an enemy or an ally of an enemy may continue to hold property under the terms of the pledging agreement (*Silesian Corp.* v. *Clark*, 68 S. Ct. 179).

The claims of four German heirs to land in California devised to them by a relative residing in that state were upheld by the U.S. supreme court against the contention of American heirs that a California statute barred German nationals from sharing in the estate. The court ruled that a 1923 treaty between the U.S. and Germany, guaranteeing reciprocal rights of inheritance to the citizens of the two signatory nations, was paramount to state law. Neither the subsequent war nor U.S. war statutes abrogated the treaty rights (*Clark* v. *Allen*, 67 S. Ct. 1431).

The immigration laws were amended for the benefit of U.S. servicemen who had married or pledged themselves to marry aliens while overseas. The so-called Brides act of 1945 was revised to permit racially inadmissible spouses of U.S. citizen members of the armed forces to enter the U.S., if otherwise admissible. This was intended to enable soldiers of Korean and Japanese descent, who had married girls of the same racial origin, to bring their wives into the country. The time limitations of the Fiancee act of 1946, which permitted aliens betrothed to members of the armed forces to enter the U.S. on visitor's visas, were extended.

**Business Regulation.**—Southern and western states won the first round in their long fight to wipe out sectional discrimination in railroad freight rates. The supreme court sustained an order of the Interstate Commerce commission increasing "class rates" in eastern territory and decreasing them in the south and west. The court found legislative authority for the order in the 1940 amendment to the Interstate Commerce act which enlarged the commission's power to prevent discrimination (*N.Y.* v. *U.S.*, 67 S. Ct. 1207).

The supreme court gave some comfort to the proponents of vigorous antitrust law enforcement by approving a complaint charging Chicago taxicab interests with restraints of trac violation of sections 1 and 2 of the Sherman act. In sen the case back to the district court for trial, the supreme c threw out the defendant's arguments that its interstate ac ties affected national commerce only slightly and constit only a small part of its entire business. Neither the relatic the defendant's interstate trade to interstate business gene nor to the defendant's entire business was material. "I enough if some appreciable part of interstate commerce is subject of monopoly" (*U.S.* v. *Yellow Cab Co.*, 67 S. Ct. 15

How valuable this ruling might become remained to be s The difficulties of making the antitrust laws effective were i trated by the government's unsuccessful attempt to set a the sale by the Pullman company of its car servicing and ope ing business to a group of railroads which handle 95% of passenger traffic in the U.S. The sale, which followed a c order for divestiture, was attacked by the attorney genera the ground that it substituted a more powerful monopoly the one dissolved. But the supreme court, dividing 4 to 4, the sale undisturbed.

The problem of enforcing the antitrust laws became e more difficult when the government's antitrust division tac business combinations which were buttressed by legalized nopolies granted under the patent laws. The government's against the titanium trust was only partially successful. Thro control of more than 300 patents the two defendant corp tions dominated 90% of U.S. trade in titanium, which had come the chief base for making paint. The defendants practically divided the world market between them. Nevert less the district court merely directed the defendants to is patent licences to applicants on a reasonable basis, overru the attorney general's plea for royalty-free licensing and t each defendant be required to divest itself of one of its p cipal plants. In affirming this decree, the supreme court refu to send the case back to the district court with directions make the relief more effective. The decree should not be bro ened, the court said, because it represented an exercise of so judicial discretion. Actually the trial judge had limited the lief because he thought he had no discretion under the h court's prior rulings (*U.S.* v. *National Lead Co. and du P* *Co.*, 67 S. Ct. 1634).

The supreme court found no difficulty in banning a simp type of restraint on trade exercised in connection with pat rights. Leases of patented salt dispensing machines which quired the lessees to use only salt produced by the lessor v lated the Sherman act, the court ruled. Such tie-in agreeme were a misuse of the patent monopoly to restrict competit in an unpatented product (*International Salt Co.* v. *U.S.*, 68 Ct. 12). In several other cases private litigants pleaded t violations of the antitrust laws had invalidated patent licens agreements. Patent owners, who sought to recover royalt under agreements fixing the resale prices for the patented a cles, were told by the supreme court that such agreements v lated the antitrust laws. The licensees could therefore prope contest the validity of the patents, even though they h specifically waived such right in the licensing agreement. T way should be kept open, the court said, for interested perso to challenge patent monopolies. In a third case the purchas of a business had also acquired the exclusive licence to ma and sell certain machines under the vendor's patents, but t agreement required the purchaser to assign to the seller a improvements patents which might be acquired during t period of the agreement. By a 5 to 4 decision the supreme cou held that such an agreement was not in itself illegal. The u of one legalized monopoly to acquire another is not a violati of the antitrust laws, the court said.

A limit was set by the supreme court, however, on the extenon of another form of legalized monopoly. A producer of arkplugs had obtained a lower court order prohibiting the sale reconditioned secondhand sparkplugs bearing its trademark, ut the high court held this went too far. The sale of such renditioned articles is lawful provided that the words "used" or epaired" are stamped on them. The removal of all labels on condhand articles offered for resale is not necessary to preent deception (*Champion Sparkplug Co.* v. *Sanders,* 67 S. Ct. 136).

The 1945 Insurance Moratorium act, exempting insurance usiness from federal regulation, was extended to June 30, 1948.

**Civil Rights.**—The year was not notable for any far-reaching ecisions on civil rights by the supreme court of the United tates. Most significant were its pronouncements in reviewing e proceedings of state courts in criminal cases. The court insted that due process requires that a defendant be fully advised f his rights, especially his right to counsel. The court also led that the guarantee of equal protection of the laws was iolated by the systematic exclusion of Negroes from grand and etit juries in Mississippi for 30 years. The equal protection ause also brought relief against discrimination to a racial inority in California when a federal circuit court forbade chool officials in that state to segregate children of Mexican escent by sending them to separate schools.

A majority of the supreme court justices eloquently defended reedom of the press in *Craig* v. *Harney,* 67 S. Ct. 1249, holdng that the contempt power of the courts must not be used nreasonably to infringe this right. Applying the familiar "clear nd present danger" test, the court reversed jail sentences gainst the publisher, editor and a reporter of a Texas newsaper for characterizing the conduct of a local judge in a pendng eviction trial as high-handed and outrageous. "The veheence of the language used is not alone the measure of the ower to punish for contempt," said Justice Douglas. "The res that it kindles must constitute an imminent, not merely a kely, threat to the administration of justice."

In two cases, which might have considerable impact on the perations of political machines, the supreme court upheld proisions of the Hatch act as valid limitations on freedom of peech. The court affirmed the discharge of a worker in the ederal mint for violating the Hatch act by taking active part at he polls during an election. If strictly applied, this decision vould bar some 3,000,000 U.S. employees from political activity n federal elections (*United Public Workers* v. *Mitchell,* 67 S. Ct. 556). The application of the Hatch act was further exended to nearly 1,000,000 state employees by another decision hat its restrictions also apply to all who work in departments eceiving federal aid (*Okla.* v. *U.S.,* 67 S. Ct. 544).

A Massachusetts trial judge pronounced the novel *Forever mber* not guilty of obscenity in proceedings under an amendent to the state law permitting suit to be brought to ban an ndecent book without requiring inflicting a penalty upon the eller. The judge adopted the view of defense witnesses that the tory was more conducive to sleep than to immorality.

Perhaps more important than court decisions was the report ntitled *To Secure These Rights,* released by President Harry S. ruman's commission on civil rights, headed by Charles E. Vilson, president of the General Electric company. The comission recommended a carefully worked out program to trengthen the machinery for the protection of civil rights hrough legislative, administrative and judicial processes. (*See* lso the article Civil Liberties.)

Decisions on other aspects of civil rights are reported in this rticle under *Constitutional Law* and *Criminal Law.*

**Constitutional Law.**—A fierce controversy over the ownership of oil lands under water off the California shore was adjudicated but not ended by a supreme court decision holding in favour of federal ownership. The U.S. has paramount rights in all land underlying the Pacific ocean within three miles of the low tide mark on the California coast except for bays, harbours and other inland waters, the court ruled. The contention of California that the original states owned the land under navigable tide waters in trust for their states was rejected. The court, however, said that congress has power to dispose of property belonging to the U.S. This pronouncement stimulated the campaign for legislation transferring tidelands from national to state ownership, but congress took no action (*U.S.* v. *California,* 67 S. Ct. 1658).

Another *cause célèbre* revived the age-old controversy over separation of church and state. By a 5 to 4 decision the supreme court approved a New Jersey law under which the parents of children attending parochial schools may be reimbursed for bus fares. While ruling that the first amendment, which prohibits any law respecting an establishment of religion, applies to the states as well as the federal government, the court found that the New Jersey statute made no provision for state support of religious schools. It merely provided a general program to help parents send their children to school safely without regard to religion (*Everson* v. *Board of Education,* 67 S. Ct. 504). For similar reasons the California supreme court upheld a "released time" plan by which the state provides transportation for pupils whose parents wish them to be released from school for religious instruction outside of school. The supreme court of Iowa, however, approached this highly controversial subject quite differently in ruling that school districts had no right to furnish transportation to students attending parochial schools even though their parents were ready to pay their share of the cost. There was serious danger, the court said, that private schools might thereby come under the control of the state. In Illinois the atheist mother of a public school child lost her fight against a program of sectarian religious instruction to voluntary segregated groups of children in a public school. This arrangement did not interfere with the religious freedom of the individual pupil nor constitute state aid to religious institutions and therefore did not violate either state or federal constitutional guaranties, according to the Illinois supreme court.

The commerce clause was applied by the supreme court to support the regulation by the Federal Power commission of rates charged by a natural gas company which mingled its gas with that of other producers before selling it to pipeline companies which then pumped it across state lines (*Interstate Natural Gas Co.* v. *FPC,* 67 S. Ct. 1482). But in another case the court held that the power of the national government in this respect is supplementary to that of the states and does not preclude the state of Indiana from regulating rates on sales of gas delivered directly to industrial consumers even though brought in from other states (*Panhandle etc. Co.* v. *Pub. S. Comm.,* 68 S. Ct. 190).

Following the trend of the past few years the supreme court held that persons engaging to any degree in interstate business subject themselves to federal regulatory laws. A defendant, so engaged, was held liable to prosecution for making a false guarantee that his products were not adulterated or misbranded in violation of the federal Food, Drug and Cosmetics act, even though there was no proof that the articles so guaranteed had actually entered interstate commerce (*U.S.* v. *Walsh,* 67 S. Ct. 1283).

The rapidly developing doctrine of *forum non conveniens* was used to qualify the constitutional right of litigants to resort to the federal courts in diversity of citizenship cases. Corporation defendants were successful in obtaining the dismissal of actions brought against them in districts where it was inconvenient for them to defend. In approving these dismissals the supreme court indicated that district courts should have considerable discretion in weighing the inconvenience to the defendant against the convenience to the plaintiff. The court's own convenience might also be considered.

The voters of New Jersey approved the state's new constitution to go into effect on Jan. 1, 1948, except for the judicial article which would become effective Sept. 15, 1948. The new basic law revamps the judicial system by changes which include the replacement of the 16-member court of errors and appeals with a new supreme court of 7 justices. New rights and privileges are added to those formerly guaranteed. No person may be limited in his privileges because of race, colour, sex, religion or national origin. New Jersey thus became the first state to give equal constitutional rights to women. Labour is guaranteed the right to organize and bargain collectively in private employment and to organize and present grievances through representatives of its own choosing in public employment. The right of trial by jury is modified to permit verdicts by a majority of five-sixths of the jurors. The governor's term was increased from three to four years with elections in odd numbered years to avoid confusion with national elections. Twenty executive departments would replace the 80 former departments, agencies and commissions. The legislature is authorized to assist slum clearance projects through grants of tax exemptions to private enterprises for a limited period.

**Criminal Law.**—The United States supreme court exercised its right to review the proceedings of state courts in criminal trials in a series of cases involving the right to counsel, the constitutional prohibition against cruel and unusual punishments, the privilege against self-incrimination and the manner of selecting jurors. The court took the view that justice should be sure but not too swift. It set aside the conviction in Michigan of a 17-year-old boy for murder, because he had been "hurried through unfamiliar legal proceedings without a word being said in his defense" and without representation by counsel or advice concerning his rights (*DeMeerleer* v. *Michigan,* 67 S. Ct. 596). The court found an even more flagrant deprivation of due process in Illinois where an 18-year-old defendant, unable to speak English, had been sentenced to life imprisonment for murder, without representation by counsel, within one week after his indictment. The record did not show that the defendant had been advised of his right to counsel. Repeated attempts to obtain a review of his case had been blocked by procedural technicalities. In remanding the cause, after the defendant had served 22 years in prison, the supreme court excoriated the state of Illinois for the "procedural morass" of its laws relating to criminal appeals. Convicted defendants who seek relief from the violation of their constitutional rights "are required to ride the Illinois merry-go-round of *habeas corpus, coram nobis* and writ of error before getting a hearing in a federal court." (*Marino* v. *Ragen,* 68 S. Ct. 241.)

In two other Illinois cases, however, the supreme court by votes of 5 to 4 rejected claims that the defendants had been unjustly denied counsel since the docket entries showed that they had been fully informed of their rights (*Carter* v. *Illinois,* 67 S. Ct. 216; *Foster* v. *Illinois,* 67 S. Ct. 1716). Similarly the high court refused to disturb the conviction by a New York court of a defendant who had declined the services of a lawyer when asked by the court if he wanted one (*Gayes* v. *New York,* 67 S. Ct. 1711).

Another aspect of due process came before the supreme court on the appeal of a defendant convicted of murder who had declined to testify in his own behalf for fear that he would thereby have to admit a former conviction. The defendant complained that the provision of the California constit which permitted the judge and prosecutor to comment o failure to take the stand had deprived him of a privileg immunity and denied him due process as guaranteed by the amendment. But the court ruled 5 to 4 that there had bee deprivation of due process. Nor did the protection of the amendment against incriminating one's self become availab a "privilege" of national citizenship guaranteed by the amendment (*Adamson* v. *California,* 67 S. Ct. 1672).

In two cases the high court passed upon the practice of picking juries in criminal cases. A new trial was ordered f Mississippi Negro, condemned to the electric chair for mur ing a white man, on the grounds that there was a strong sho of "purposeful racial discrimination" through the system exclusion of Negroes from the state grand and petit juries more than 30 years (*Patton* v. *Mississippi,* 68 S. Ct. 184). the other hand the practice of selecting a "blue ribbon ju sanctioned by New York statute, was approved by the cour a 5 to 4 decision rejecting the defendant's contention that had been discriminated against by the exclusion of labour foremen, service employees and women from the jury pa The majority of the court found that there was no showing the specially selected jurors were more likely to convict t ordinary jurors (*Fay* v. *N.Y.,* 67 S. Ct. 1613).

The supreme court dealt with a unique problem in conside the appeal of Willie Francis, a 17-year-old Louisiana Negro, freedom on the ground that he should not be executed for m der because the state had failed in its first attempt to elec cute him. He lost his fight for life but won a place in legal tory when the supreme court by a 5 to 4 vote held that exe tion of the sentence was not a cruel and unusual punishmen violation of constitutional rights. Two other points raised his behalf, namely, that he was being deprived of equal pro tion of law and was placed in double jeopardy, were brus aside by the court (*Louisiana* v. *Resweber,* 67 S. Ct. 374).

Another 5 to 4 decision of the supreme court evoked a st of criticism. The court upheld the search of a citizen's h and the seizure of his papers without a search warrant as an cident to his arrest. Officers, who had gone to arrest the fendant on a charge of passing forged checks, could find no s checks but did discover an envelope marked "personal pape Upon opening this they found draft registration cards unla fully held. The defendant was prosecuted for possessing su cards. The court's ruling rested on the ground that the fendant was committing the crime of unlawfully possess draft cards in the very presence of the arresting officers, but effect it gave authority to officers who are making a lawful arr to search both the person arrested and his home (*Harris* *U.S.,* 67 S. Ct. 1098).

The law of treason was somewhat elaborated by the supre court in sustaining the conviction of Hans Max Haupt at his s ond trial for sheltering and aiding his son, Herbert Hau executed nazi saboteur. The constitutional requirement th treason must be proved by the testimony of two witnesses the same overt act had been fulfilled even though the treaso able character of the act was not proved by the same two w nesses (*Haupt* v. *U.S.,* 67 S. Ct. 874).

**Family Relations.**—In its only decision of the year affecti family relations, the supreme court ruled that a New Yo court had the power to modify a Florida decree granting mother custody of her child. While suit was pending the fath had managed to take the child from the mother in Florida New York. The next day the Florida court granted her a divor and custody of her son. She then brought habeas corpus pr ceedings in New York and was awarded the child subject to t father's right of visitation, a proviso which she contested. Th preme court said, however, that an out-of-state court, in doing hat the Florida court might have done, did not violate the full ith and credit clause of the federal constitution (*N.Y. ex rel.* *alvey* v. *Halvey*, 67 S. Ct. 903).

The perennial conflict over proposals to tighten or to relax vorce laws was waged in many state legislatures with a slight end toward liberalization. Most startling was the adoption by e South Carolina assembly of a resolution providing for a ref- endum at the next general election in 1948 on the proposal to peal the state's constitutional prohibition against divorce and permit divorce for adultery, physical cruelty, desertion or bitual drunkenness.

Arkansas joined the small group of states permitting absolute vorce from an insane spouse where the mental illness has con- nued for three years.

Efforts to slow down the operation of Chicago divorce mills rough special legislation which by its terms could only apply Cook county were checked by the Illinois supreme court. he new law, which provided for the appointment of four spe- al masters in chancery to hold preliminary hearings in family lation cases, was designed to reduce the number of split fami- es and insecure children through reconciliation procedures and ereby to decrease juvenile delinquency. This objective was mmendable, the court said, but the statute was invalid because could apply only to one county (*Hunt* v. *County of Cook*, N.E. 2d 48).

**Housing and Rent.**—The Housing and Rent act of 1947 re- oved government controls over all construction except certain musement and recreational facilities and amended the National ousing act by giving the administrator power to insure loans r the mass production of housing for World War II veterans. s a further stimulus to building, congress by various enact- ents increased the amount of mortgage insurance available for onstruction loans on private homes; made $750,000,000 of ortgage insurance available to veterans for the purchase of ermanent housing including war housing built by the govern- ent; authorized federal home loan banks to accept mortgages ith a 25-year maturity as collateral instead of restricting them 20-year maturity paper; and released local housing authori- es from building cost limitations on low-cost-housing and slum- learance projects. These federal efforts to relieve the housing hortage were supplemented in many states by the appropria- ion of funds to provide new dwellings of various types with pecial emphasis on the needs of veterans.

Proponents of urban redevelopment programs were encour- ged by a decision of the Pennsylvania supreme court which pheld the constitutionality of a state law empowering cities to ondemn blighted areas for redevelopment by private builders.

Rent controls in a greatly modified form were extended to eb. 29, 1948, under Title II of the Housing and Rent act, to e administered by the housing expediter. Certain types of ac- ommodations, including hotels, motor courts and tourist homes erving transient guests, newly built, newly rented and con- erted units and luxury priced quarters were exempted from urther control. But the rents of other housing units in defense- ental areas were frozen at the level of June 30, 1947, except 1) that a landlord and tenant might before Dec. 31, 1947, nter into a lease at a rental 15% above the maximum, running o the end of 1948, (2) that the expediter was authorized to ake such rent adjustments as might be necessary to correct nequities, and (3) that he might remove all rent ceilings in any efense-rental area if in his judgment the need for control had eased. The OPA rent regulations and controls over evictions ere terminated, and the emergency court of appeals was abol- shed. The expediter was also directed to create local advisory oards in each area with five or more members to be appointed by him on recommendations made by the state governor. Such boards were authorized to make recommendations for decontrol of an area, the adequacy of rent levels and the operation of the local office, but the weight to be given such recommendations was not indicated.

Many states and municipalities adopted rent control laws to go into effect if and when federal rent controls should expire.

**Labour.**—The strong legal position acquired by unions under the Wagner, Norris-LaGuardia and Wage-Hour acts was shaken by a series of events commencing with the struggle between John L. Lewis and the U.S. government. A succession of strikes in key industries had culminated late in 1946 with the walk-out of soft coal miners in disregard of a district court injunction. The consequent entry of an order finding the United Mine Workers union and its president in contempt of court was affirmed by the U.S. supreme court in March 1947. The assessment of $3,500,000 against the union was cut, however, to $700,000 contingent upon compliance with the court's order, but the fine of $10,000 against Lewis was not disturbed. This case provoked an extraordinary divergence of views among the justices who aligned themselves in five groups supporting five different opinions on different aspects of the controversy. In substance the court held that the miners were government employees under the government's seizure of the mines, that the government was not subject to the provisions of the Norris-LaGuardia act outlawing injunctions by federal courts in labour disputes, and that the trial court had power to issue a restraining order to preserve existing conditions pending a decision upon its own jurisdiction. Arguments by union counsel that civil and criminal contempt proceedings could not be merged were swept aside on the ground that no substantial prejudice had been shown.

Following upon this decision congress enacted the Labor-Management Relations act of 1947 (Taft-Hartley act) as an amendment to the National Labor Relations or Wagner act, thus inaugurating a new era in labour law. Through a series of interlocking provisions the new statute imposes a complex of duties, restrictions and liabilities upon unions and their officials and expands the rights and powers of management and government. It prescribes standards of conduct for organized labour, declaring it an unfair practice for unions to do any of the following: to coerce either employers or employees, to force discrimination under union-shop contracts, to refuse to bargain, to engage in certain types of strikes or secondary boycotts, to engage in "featherbedding," or to extort excessive dues or fees. The check-off is permitted only in case the employee has given his employer a written assignment authorizing the deduction of union dues from his pay check. The new act sanctions union-shop contracts but forbids closed-shop agreements which require the hiring of union members or that hiring be done through unions. Strikes are barred during a 60-day cooling-off period; and injunctions are authorized (free from the prohibitions of the Norris-LaGuardia act) to stay strikes of industry-wide character for a period of 80 days. Unions are also made liable as entities to court proceedings and judgments. A new Federal Mediation and Conciliation service is created to help settle disputes threatening tie-ups in interstate commerce. Unions are required to file with the secretary of labour financial reports, copies of union rules and regulations, and the affidavits of their officers denying communist affiliation. Unions as well as corporations are forbidden to make campaign contributions in federal elections. Strikes by government employees are outlawed. Certain provisions of the Wagner act defining unfair practices by employers are continued but their liabilities as to the expression of opinion and the discharge of employees are narrowed. Employers are also given the right to file charges of unfair practices against unions.

The passage of the Taft-Hartley act set off a chain reaction in state legislatures. Union control laws, variously aimed at curbing jurisdictional strikes, secondary boycotts, sympathy walkouts, work slowdowns, mass picketing and closed-shop contracts, were enacted in a dozen or more states. At least 11 states adopted laws designed to prevent strikes in transportation and public utility industries by imposing penalties or providing by state seizure and operation to assure the continuation of essential services.

North Carolina's new anti-closed-shop law was held constitutional by the state supreme court, but no controversies under similar state statutes or the Taft-Hartley act were determined by the U.S. supreme court during the year. Several decisions of the federal high court were nullified, however, by provisions of the Taft-Hartley law which relieved employers from recognizing unions of supervisory personnel and isolated organizations of plant guards from rank-and-file unions. The supreme court had recognized the rights of both types of employees to the benefits of the Labor Relations act.

On the very day (June 23) when congress passed the Taft-Hartley act over the president's veto, the supreme court dealt union leaders another blow in a decision overruling the contention of James C. Petrillo, head of the musicians' union, that the Lea act is unconstitutional. Petrillo had been charged with using coercion to compel radio stations to employ more persons than needed to perform actual services. The court held that the statute did not violate the due process clause, nor was it too vague or uncertain as contended by counsel for Petrillo (*U.S.* v. *Petrillo*, 67 S. Ct. 1538).

Concern over the potential liabilities of corporations under the overtime pay decision in the Mount Clemens Pottery company case in 1946 inspired enactment of the Portal-to-Portal act of 1947, which exempts employers from liability under the Fair Labor Standards act and related statutes for failure to pay minimum wages or overtime for activities of employees in travelling to and from the actual place of performance of their principal work unless otherwise covered by contract or consumer practice.

**Social Security.**—The status of employees under the Social Security act was determined by the supreme court in two cases. Workers who unloaded coal under contract with a coal dealer, were held to be employees covered by the act; while drivers, who operated their own trucks under contract with coal dealers and motor carriers, were held not to be employees but independent contractors. There is no absolute test, the court said, but the total situation, including the risk undertaken, the control exercised, opportunity for profit, permanency of the relationship and skill required must be considered in deciding the status of workers. No one element is controlling nor is the list complete. The decision construed two sections of the Social Security act and two sections of the Internal Revenue code (*U.S.* v. *Silk*, 67 S. Ct. 1463).

In the second case the commissioner of internal revenue had ruled that a union contract which designated the owner of a ballroom as the employer of a dance band shifted the social security tax from the leader of the band to the ballroom owner. The supreme court, however, told the commissioner that he should have examined the facts instead of construing a private contract which was beyond his authority. Since the band leader hired and fired the band members, told them what to do and how they should do it, paid their salaries and expenses, took the profit and bore all losses, he was the employer and must pay the social security tax (*Bartels* v. *Birmingham*, 67 S. Ct. 1547).

The 1% social security tax rate on wages was extended by congress through the year 1949 both as to employers and employees with provisions for stepping up the rate to 1½% during 1950 and 1951 and 2% thereafter. Federal grants-in-aid to st for assistance to blind, needy and dependent children w continued.

**Taxation.**—In two decisions of general interest to taxpay the supreme court ruled that all income tax refund claims m be filed within three years from the filing of the income return or within two years from the date of paying the tax. four-year period allowed by the internal revenue code for cla ing refunds on certain other types of levies does not apply income taxes. The fact that refunds are asked for taxes roneously or illegally collected makes no difference. Relief fr any resulting injustices can be provided only by congress (*Jo* v. *Liberty Co.*, 68 S. Ct. 229).

The efforts of taxpayers to reduce income taxes through shift of investments between members of a family were thwart by the supreme court. The sale by one spouse of shares of st and the purchase of an identical number of shares of the sa stock by the other spouse on the same day could not be used create capital losses. Such transactions were in effect sa between members of a family which are expressly disallowed deductions by the internal revenue code (*McWilliams* v. *IR* 67 S. Ct. 1477). The court also ruled that the distribution bonds and new common stock for old common stock in a fa ily corporation was a taxable dividend and not a tax-free organization, since its purpose was merely to convey accum lated earnings to the stockholders (*Bazley* v. *IRC*, 67 S. 1489).

Widespread agitation for the enactment of community pr erty laws resulted in such statutes in Michigan, Nebraska, O gon and Pennsylvania. Various types of provisions made it p sible under these laws for a married couple to operate as financial partnership, dividing their income equally for the pu pose of their income tax returns. The Pennsylvania law w killed, however, by a unanimous opinion of the state supre court because it was so uncertain and contradictory as to unworkable. (*See* also TAXATION; UNITED STATES.) (M. DN.)

**Great Britain, the Commonwealth and Europe.**—In m European countries and in the commonwealth there were thr types of legislation during the year. These dealt with currenc crime and constitutions. The shortage of food, goods and foreig exchange in many countries resulted in nearly all cases in t imposition or extension of currency laws, under which the i port or export of foreign (and, often, domestic) currency w hedged about with restrictions aimed at securing that no su stantial sums should go into, or out of, the country concerned a manner which might prove embarrassing or undesirable to t policy of the local government. Secondly, a wave of crimin law reform swept over most countries with the result that t death penalty was abolished in many, and the question abolition discussed in others without legislative results: th reform affected primarily the eastern European countries. Thir ly, constitutional reforms were carried into effect in many Bri ish commonwealth countries, and minor reforms and abortiv discussions on reforms took place in many others. There we also signs of the beginning of serious efforts to co-ordinate t laws of different countries. This desire appeared to have arise from the frequent meetings of representatives of the many mem bers of the United Nations, and although not yet manifested legislation, it began to be shown in such ways as the lifting restrictions on international travel and visas in Europe (excep in the eastern European group of countries) and in the forma tion of smaller countries into customs unions.

*Great Britain and Northern Ireland.*—In Great Britain number of acts were concerned with nationalization of indus tries; in this respect, an inclination to follow in principle th most war-damaged countries (who had passed extensive na onalization laws in 1945 and 1946) was noticeable, but very ifferent methods of working out nationalization were found: e British laws, although giving wider powers to the executive han usual in time of peace did not go as far in that direction as id the earlier nationalization laws of such countries as Poland d Czechoslovakia. A remarkable and important act concerned ith agriculture, for example, provided for effective but de-entralized government control of that industry, but did not go far as to nationalize the land, its owners and occupiers and s profits.

Foreign currency continued to be strictly controlled, and as e kingdom's foreign exchange position worsened, so regula-ons were tightened. The export of currency even to countries ithin the sterling area, such as South Africa, was not entirely nrestricted by the end of the year. Heavy fines, amounting requently to thousands of pounds, were imposed for breach of ese restrictions.

Acts for the regulation and control of penicillin and atomic nergy were passed. Acts concerned with industrial organization nd trade statistics increased government powers in the in-estigation and direction of most industries. The Trafalgar states, which had previously been inalienably held (together ith an annual pension) by the heir of Admiral Lord Nelson, ere made alienable and the pension discontinued: thus the last f the estates given by the country to national heroes of the ast was put on a level with ordinary private property.

Important bills placed before parliament during the year but ot passed by the end of it included the Criminal Justice mendment bill, which gave an opportunity for proposals to be nade for the abolition of the death penalty (permanently or for trial period) and of corporal punishment, and the Parliament ill, by which the government intended to reduce the power of he house of lords to delay certain types of legislation to one ear, with retrospective effect. Emergency laws due to expire t the end of the year included those relating to the control of urnished houses and of rents.

Interesting decisions of the courts confirmed the validity of ninisters' administrative decisions under town planning and sim-lar acts without any requirement to exercise their powers of letermination in a judicial manner and without being subject o any interference from the courts. There was no diminution n the mass of subordinate legislation by rules, regulations and orders under acts, nor was there any indication of greater care being taken than in previous years to make the interpretation of these orders obvious to the wide and legally untrained classes o whom for the most part they applied.

During the year interest revived in the Canon law of the Church of England, on which a number of books were published.

In Northern Ireland a progressive Births and Deaths Regis-ration act removed a hardship by providing for a new (and al-ernative) form of birth certificate, from which it was impossi-le to tell whether the child was legitimate or otherwise.

*British Commonwealth.*—In Australia the stevedoring indus-ry was regulated by an act. A curious trial occurred in which a nan who had been charged with murder in 1935 and found nfit to plead was tried and convicted 12 years later. In Canada he important Canadian Citizenship act was passed, by which hildren born outside the dominion could become Canadians; t was established that the final court for appeals should be in Canada and not in London. Steps were commenced to establish court of criminal appeal for Basutoland other than the judicial ommittee of the privy council in London. India was given do-minion status as the two dominions of India and Pakistan, and he Ceylon Independence act was passed, granting similar status o Ceylon. Burma became an independent republic and Cyprus vas given constitutional government.

A bill to restrict rights of final appeal to courts within the dominion (as had been done in Canada) was introduced into the parliament of the Union of South Africa, but not passed.

*Europe.*—In Bulgaria, the death penalty was abolished soon after the execution of Nikola Petkov.

The people of Finland appeared not wholly to approve the working of the Special law, under which those responsible for bringing the country into World War II were made liable to a ten-year sentence.

A monarchy law in Spain (*q.v.*) made that country nominally a kingdom again, but without apparent practical result.

The U.S.S.R., followed by a number of other eastern European countries, abolished the death penalty. The wives of some foreign nationals were refused permission to leave the country to rejoin their husbands abroad. | Government . | — | — | 248.4 | 173.9 | 90.5 | 68.7 | 45.5 |

Mine production had by 1946 declined to almost one-third less than the 1942 peak, and to the lowest figure after 1935, and for the first time was surpassed by the secondary recovery. A drop of nearly one-half in imports further accentuated the shortage. Much of the 1946 decline was caused by strikes in the mines and smelters, and in addition the price situation was unfavourable until after the abandonment of price control.

Without the strike handicap in 1947, mine output in the first three quarters of the year rose to 278,070 short tons, primary metal output was still better, with 477,624 tons through October, and secondary recovery doubled the 1946 rate.

**Canada.**—The output of primary lead increased from 173,497 short tons in 1945 to 176,987 tons in 1946, but dropped back again in 1947, to 162,000 tons. Refinery output was 165,744 tons in 1946 and 161,444 tons in 1947, the difference between these and the primary figures being the exports of lead in ore and concentrates.

**Mexico.**—The production rate increased in 1947, to 163,000 short tons in the first three quarters.

**Australia.**—The primary output through Aug. 1947 was 143,957 short tons, nearly one-third better than the 1946 rate. (*See* also MINERAL AND METAL PRODUCTION AND PRICES.)

**League of Women Voters of the United States:** *see* SOCIETIES AND ASSOCIATIONS.

**Leahy, William Daniel** (1875– ), U.S. naval officer, was born at Hampton, Ia., on May 6. He was graduated from the U.S. naval academy, Annapolis, Md., in 1897 and advanced to rank of admiral in 1936. In Nov. 1940, Pres. Franklin D. Roosevelt named him ambassador to the French government at Vichy. In April 1942, Roosevelt summoned Leahy to Washington where, on July 21, he became chief of staff to the commander in chief. In this capacity he accompanied the president to the many wartime Big Three conferences. In Dec. 1944 Admiral Leahy was promoted to the five-star rank of admiral of the fleet.

Leahy was appointed by Pres. Harry S. Truman, March 28, 1946, to a special ten-man national defense board composed of top leaders of the armed services. Although remaining quietly in the background, the admiral was a powerful factor in the shaping of U.S. foreign policy in 1947. One of the chief proponents of an anticommunist global effort, his already considerable influence in the White House grew even stronger after the resignation of Secy. of State James F. Byrnes. It was generally believed that Leahy had a large share in formulating the so-called "Truman doctrine" and that he encouraged the president to push vigorously the anticommunist "containment" policy and the Marshall plan.

**Lease-Lend:** *see* LEND-LEASE.

**Leather.** World conditions in the leather industry became more clearly defined in 1947, and for the first time after the start of World War II, it was possible to obtain accurate information about world raw stock supplies and leather tanning activities, although the information was still incomplete and inconclusive in its relation to future activities.

From all available reports, a gradual restoration of the prewar pattern of the leather industry was taking place. In European countries where tanning activity had been sharply increased to meet national military needs, factory output of leather was reportedly declining to normal levels for home consumption and moderate exports.

Even more important, was the apparent abandonment by South American countries, especially Argentina and Brazil, of a war-inspired program to develop a strongly competitive tanning industry. Those countries were normally important suppliers of hides and skins, and the withholding of supplies from world markets had caused considerable apprehension, especially among U.S. tanners. Although nothing in 1947 indicated that this program had failed completely, there was considerable evidence that it would not reach planned proportions and that more raw stock and less finished goods would be shipped to world markets in the future.

Added to this favourable restoration of world balance in the industry was the reopening of raw material supply sources and practically all supplying areas were making normal shipments by the end of 1947, although much of the stock remained below normal quality standards.

Depletion of herds in the war zones was not as great as been feared, department of agriculture reports in 1947 reve These reports estimated world cattle numbers at the begin of 1947 at about 716,000,000 head, an increase of 3,50 over the preceding year and 6,000,000 above the 193 average.

The quality of raw stock supplies, both imported and mestic, was not pleasing to U.S. tanners and consumers. siderable amounts of inferior raw stocks were tanned into ferior leather, and consistent efforts were made through year to better the situation—which was aggravated still fur by high prices all along the line, allowing no margins for able qualities.

Although the U.S. leather industry was confronted with m problems of raw stock supply, factory productivity, and o postwar factors, production in 1947 continued at a high le The following table shows the average monthly productio the U.S. of the principal types of leather for the years 1943- with the monthly average for the 1931–39 period.

*Average U.S. Monthly Leather Production, 1943-47*

(000's omitted)

| | 1947 | 1946 | 1945 | 1944 | 1943 | 193<br>inc |
|---|---|---|---|---|---|---|
| All cattle hides (including kips for side leather) | 2,373 | 2,253 | 2,297 | 2,179 | 2,138 | 1,6 |
| Calf and whole kip | 1,057 | 907 | 970 | 911 | 926 | 1,0 |
| Goat and kid | 3,039 | 2,011 | 2,002 | 2,888 | 3,113 | 4,0 |
| All sheep and lamb | 2,954 | 3,998 | 4,370 | 4,608 | 4,991 | 2,8 |

1947 figures are based on an average of ten months' production. Compiled from of the Tanners Council of America and the U.S. bureau of the census.

The greatest problems of the U.S. leather industry in 1 revolved around economic factors, directly and indirectly affe ing operations. Summed up briefly these represented high p duction costs, high wage levels, general economic factors t might affect shoe production trends (shoe production accou for more than 90% of all U.S. leather used), unsatisfact quality standards, efforts to raise advertising and merchandis standards within the industry or affecting the industry, and competition of leather substitutes.

On June 1 export restrictions on hides, skins and leather w removed, and the last trace of wartime controls over these co modities was ended. The U.S. was the first major power in world to revert to a prewar free market basis for hides, sk and leather.

Reports of progress in the advancement of leather mak science were significant during the year, and not only reveal a continuance of the scientific interest that had been well und way before World War II, but also disclosed many importa developments that had come about through wartime resear and study.

In February the Tanners Council Research laboratory at t University of Cincinnati offered a fellowship of $1,000 a ye and free tuition in the university to graduate chemists or chem cal engineers, preferably young men who had indicated so interest in tanning and who had sufficient chemical education permit them to do graduate work.

At the beginning of the year, the Leathersellers' Technic college, of Bermondsey, London, reopened after having be closed since 1941.

Among the scientific developments interesting to the leath industry in 1947 was the employment of spectroscopy. One the first applications in leather chemistry was made by Dr. R. Theis, of Lehigh university, Bethlehem, Pa., and his ass ciates. This work had to do with chrome analysis. Anoth application of the spectrophotometer by tanners was in th identification of their leathers. This is done by incorporatin in the leather some inert chemical in small quantities—for i stance it can be put in with tanning or fatliquoring. Then, matter how much use the leather receives, it is possible to lea t a sample, put it in the spectrophotometer and determine e presence of the identifying chemical. In this way, the nner can tell whether it is his leather which fails in shoes, en when labels or marks are removed.

Dr. L. Masner, of the Bat'a corporation, Zlin, Czechoslovakia, ported that European tanners were using quebracho alone to n sole leather, and obtaining good substance leather. The port was of considerable interest to U.S. tanners, as supplies chestnut, a principal sole leather tanning material, were fast vindling in the U.S. because of the nation-wide blight.

The Tanners Council Research laboratory conducted experi- ents in the use of infra-red as a leather drying medium, and ported that at the existing stage of development, and the ice of electricity, the process was too expensive. However, e laboratory stated that when infra-red is used on finishes of ather, the results are beneficial.

There was some interest in the U.S. industry in reported de- ils of hide preservation through a mummifying process, de- loped in Argentina in 1943. In general, the process consists a rapid unhairing (30 min.) by the use of strong sulphide- ne liquors in a drum. The hair is lost as such. The unhaired des are washed in the drum, delimed with buffer salts and te material. The third step consists of treatment of the de- ned hides in a bath of bran, yeast, salt, bisulphite, formalde- de, oil and ammonia. This requires two hours. The hides are en dried and are ready for shipment.

Difficulties in securing a uniform wetting of hides and skins ere overcome in practice by the use of sodium polysulphides a procedure developed and reported by the Tanners Council esearch laboratory. If skins and hides are wet in a dilute solu- on of polysulphides, the dry salted hides become uniformly etted in short order and from then on will process as well as e best green salted hides. Dry hides (flints), instead of re- uiring six to eight days of soaking, can be well wetted in less an half the time.

Important work was also inaugurated by the laboratory in 947 in the adaptation of sulphonyl chlorides, developed in Ger- any during World War II, to U.S. tanning processes. The roject was underwritten by the army quartermaster department.

The U.S. department of agriculture's Eastern Regional Re- earch laboratory staff devised methods of extracting canaigre hich give yields much higher than obtained by current leach- g methods. The laboratory also found several strains of bac- eria which act upon canaigre extract and, by reducing the ugars, improve its purity. Canaigre is an annual crop and ould be harvested annually, thus providing much-needed do- estic vegetable tannins.

The state of California also reported developments in its tudy of potential tanning materials, and tanners showed spe- ial interest in reports of California wattle development. (*See* lso Shoe Industry.) (R. B. B.)

**ebanon:** *see* Syria and Lebanon.

**eeward Islands.** The Leeward Island colony, with a total area of 423 sq.mi., consists of a roup of islands forming the northern part of the Lesser Antilles the Caribbean. Politically it is divided into four presidencies, iz.: Antigua (with Barbuda); St. Christopher (or Kitts) and evis (with Anguilla); Montserrat; and the Virgin Islands. op. (1946 census): Antigua, 41,757; St. Kitts-Nevis, 46,253; ontserrat, 14,322; Virgin Islands, 6,508. The capital of the olony is St. John's (Antigua) with a pop. of 10,962. Basseterre St. Kitts) is the only other large town (pop. 12,201). Execu- ve authority is vested in a governor appointed by the British rown, assisted by an executive council and by a general legislative council consisting of the governor (as president), eight official members, eight elected members (three from Antigua, three from St. Kitts and two from Montserrat) and one unofficial member from the Virgin Islands. Each of the larger islands has an island council to deal with its local affairs. Acting governor in 1947: W. A. MacNie.

**History.**—The Leeward Islands colony was represented at the conference held in Jamaica in Sept. 1947 to consider the general question of West Indian federation. The narrower issue of closer union between the Leeward and Windward Islands also came under discussion during the year. A conference was held in St. Kitts in Jan. 1947, attended by representatives of the legislatures of the two colonies, at which a series of resolutions on matters of constitutional reform was passed, the most important of which was to the effect that all the islands in the Leeward and Windward groups should be combined in one federation under a strong central government. These resolutions were referred in the first instance to the island legislatures; it was expected that the considered recommendations of the governor would be submitted in due course to the secretary of state in London. Grants were approved under the Colonial Development and Welfare act in the course of 1947 for a number of schemes affecting the Leeward Islands. These related to such matters as the training of teachers, the appointments of federal education officer and chief veterinary officer, the development of civil aviation and the water and electricity supply in Antigua.

**Finance and Trade.**—The usual currency in the Leeward Islands is British silver, but United States coins also circulate. Revenue (1946) £800,000; expenditure £839,000. Imports (1946) £1,542,060; exports £1,284,000. The chief products of the group are sugar and cotton. In Montserrat the cultivation of sugar, once the staple industry of the island, had been reduced to small dimensions; and sea-island cotton, tomatoes, onions and limes were the principal products. (J. E. Sh.)

**Lend-Lease.** The Lend-Lease act, "an Act to Promote the Defense of the United States," was enacted by the congress on March 11, 1941, nearly a year before the United States actively entered the war against the axis powers. The act provided a means whereby the countries opposing axis aggression could obtain much needed war supplies in the United States although lacking the necessary dollar resources. It also provided a mechanism for efficient foreign procurement of war materials in the United States. During the period of hostilities most lend-lease aid was rendered under agreements with the recipient countries providing for future determination of the amounts and terms of settlement. Many lend-lease countries supplied as reverse lend-lease essential goods and services needed by the United States.

With the conclusion of hostilities on V-J day, Sept. 2, 1945, lend-lease and reverse lend-lease on a wartime basis were halted except for aid to China, which was continued for clean-up operations against the Japanese, and for certain other minor cases. However, noncombat goods on hand or on order on V-J day, aggregating in value about $1,200,000,000, were in large measure furnished to the countries for which they were originally intended, on a cash payment basis or on credit terms contained in so-called "pipeline" agreements with the recipient countries. These agreements were concluded under the authority of section 3(c) of the Lend-Lease act, as amended, under which the powers necessary to carry out any contract or agreement made prior to July 1, 1946, were continued in effect until July 1, 1949.

By the end of 1946 more than 97% of all "pipeline" goods had been delivered. The Third Deficiency Appropriation act, 1946, approved July 23, 1946, which provided funds for the liquidation of lend-lease activities, contained a proviso that prohibited the use of these funds for any expense incident to the shipment abroad of any commodities after Dec. 31, 1946. Upon receipt of a ruling by the comptroller general that, in view of this act, shipments could not be continued even with funds which had been deposited by the recipient countries for the purpose, all shipments were suspended early in Jan. 1947. Some lend-lease articles, title to which had passed to the soviet government prior to Dec. 31, 1946, under the terms of the soviet "pipeline" agreement of Oct. 15, 1945, were delivered to soviet custody up to the end of March, at which time even these deliveries were suspended pending action by the congress. The Supplemental Appropriation act, 1948, approved July 30, 1947, provided funds and authority for continuation of deliveries to ten of the affected countries, but made no provision for further shipments to the Union of Soviet Socialist Republics. The articles for the Soviet Union still remaining undelivered were authorized for disposal as surplus property. Deliveries of articles for other countries were continued.

During the year 1947 final settlements for lend-lease were concluded with the governments of the Netherlands and the Union of South Africa. In both cases a final disposition of various wartime claims and accounts was effected, and payments were agreed for South Africa in the amount of $100,000,000 in cash and for the Netherlands in the amount of $67,500,000, of which $19,500,000 had been paid and the balance would be due over a period of 30 years from July 1, 1951. Previously, settlement agreements had been concluded with Australia, Belgium, France, India, New Zealand, Turkey and the United Kingdom. At the year's end settlements were in process of negotiation with China, Czechoslovakia, Ethiopia, Greece, Norway, Poland, the Union of Soviet Socialist Republics and Yugoslavia.

Following the principles of the original lend-lease "master agreements," the settlements were such as not to burden commerce between the countries. In general no payments were asked for lend-lease articles destroyed, lost or consumed in the war effort and, in return for payment of current value, full title was given to nonmilitary lend-lease articles remaining at the end of the war. Military supplies were left with the recipient government without payment but subject to recapture by the United States. Naval vessels must be returned to the United States in accordance with law, and in some instances the United States required the return of other articles of use in other government programs.

Lend-lease aid to Canada, Egypt, Iceland, Iran, Iraq and Panamá was on a full cash payment basis. Aid to Liberia consisted of a port construction project with payment to be made from future revenue of the port. The terms of payment for lend-lease assistance to the American republics, other than Canada and Panamá, were specified in the original lend-lease agreements with those countries.

Total lend-lease aid rendered to all countries both during the war and in the post-war period amounted to $50,243,996,000, as reported through June 30, 1947. Of this amount $1,848,761,000 represented losses, expenses, etc., not charged to specific recipient countries. The balance of $48,895,235,000 was distributed among 43 allied nations. The British empire, including Australia, Canada, India, New Zealand, South Africa, the United Kingdom and Colonies, received by far the largest portion, namely $31,384,810,000. The Union of Soviet Socialist Republics was the second largest recipient, receiving $10,982,089,000. Reverse lend-lease received by the United States was reported as $7,819,323,000 through June 30, 1947. Of this amount $6,752,073,000 was received from the British empire. Total cash payments received from foreign governments for various lend-lease settlements and transactions aggregated $1,502,144,000 to J
30, 1947.

After Oct. 20, 1945, the lend-lease liquidation program
administered by the department of state, while fiscal operat
were handled by the treasury department. (*See* also AGRIC
TURE.) (N. T. N.

**Leprosy.** Clinical experimentation in the treatment of lep
during 1947 continued as a by-product of tu
culosis research. Human leprosy had not yet been reprodu
in a lower animal, nor had the *Mycobacterium leprae* been
tured so that the antibacterial effectiveness of new drugs c
be tried in test tubes. The sulfone drugs showing promis
tuberculosis—promin, diasone and promizóle—were used
treating leprosy. Diasone seemed preferred since it can
given by mouth and has low toxicity. In addition to the
viously reported favourable results with use of these drugs
Carville, La., there were reports from the British West Ind
British Guiana and Argentina indicating that many advan
cases of leprosy had shown clinical improvement following
longed therapy, although reversal of bacteriologically positiv
negative cases rarely occurs. From British Guiana came a
liminary report of use in leprosy of another member of
sulfone group—sulfetrone—which had shown promise in tu
culosis. Though the report was based on only six cases f
period of six months, optimism was expressed on account of
low toxicity and apparently beneficial effect. The real value
the sulfone drugs in treating leprosy, however, would not
known for many years because there is probably no other
terial disease in which the evaluation of treatment is so diffic

When streptomycin became available there was some
dence of its usefulness in experimental and human tuberculos
consequently it was necessary to try its effect in leprosy. In
last half of 1946 treatment of 10 patients by this drug was be
at Carville, La. The patients received 2,000,000 units daily
four months and one half that dose for another four mont
All cases selected were of the advanced lepromatous type.
provement was noted in 7 of the 10, but the results appeared
better than those generally obtained with the sulfone drugs.
patient became bacteriologically negative. Serious toxic effe
were noted. One patient became deaf and all had sympto
of vertigo; other undesirable effects were anaemia, loss
weight and nephritis. Eosinophilia occurred in all. The inves
gators concluded that unless streptomycin could be improved
that it would not be toxic, it would not become a useful drug
the treatment of leprosy.

Although leprosy is one of the oldest of diseases, controve
still existed in 1947 concerning its transmission by inoculati
and its incubation. Many human inoculation experiments h
been attempted in Europe and in Hawaii with negative resul
The celebrated case of Keanu, the condemned prisoner in H
waii, who was inoculated and developed leprosy, had not be
accepted as proof because he came from a leprous family. Oth
isolated cases of inoculated leprosy had been accepted skeptica
on account of the endemicity of leprosy in the geographi
areas involved, and the well known fact that in lepers lesio
frequently develop at the site of an injury. From Michig
came a report which furnished strong evidence that human le
rosy could be transmitted by inoculation. Two young me
friends from the same Michigan town, while serving with t
U.S. marines in 1943, were successively tattooed in Melbour
Australia, by the same man. In the tattooed emblem of eac
leprous lesions developed two and one-half years later. T
diagnosis of leprosy seemed well established. At the time of t
tattooing, according to the report, the marines and the tattoo
were inebriated, and several needles were broken. The d

pment of leprosy in two people with this history, plus the : that they lived in a community without other known lepers, bably offered the best published evidence so far that leprosy be transmitted by inoculation. It had to be assumed, of rse, that the needles had been used on a leper or that the ooer was leprous.

Leprosy*, 15:231–235 y–Sept. 1947); José M. M. Fernandez and Eduardo A. Carboni, "The on of Diasone in the Treatment of Leprosy (Preliminary Report)," *rnat. J. Leprosy*, 14:19–29 (Dec. 1946); G. H. Faget and P. T. kson, "Use of Streptomycin in the Treatment of Leprosy: A Prenary Report," *Internat. J. Leprosy*, 15:146–153 (April–June 1947); V. Porrit and R. E. Olsen, "Two Simultaneous Cases of Leprosy Deping in Tattoos," *Am. J. Path.* 23:805–817 (Sept. 1947).

(C. H. BD.)

**ttuce.** Lettuce was one of the few U.S. vegetable crops that exceeded the high record of 1946. Total protion in 1947 was estimated at 34,254,000 crates, compared h 33,801,000 in 1946 and the ten-year (1936–45) average of 575,000. Acreage was smaller than in 1946, but the yield rose 182 crates per acre compared with 164 crates in 1946.

***U.S. Lettuce Production 1947, 1946 and 10-yr. Average 1936-45***

(In thousands of crates)

| rop | 1947 | 1946 | 10-yr. average |
|---|---|---|---|
| ter | 8,710 | 9,387 | 5,710 |
| y spring | 8,960 | 8,391 | 6,598 |
| spring | 1,288 | 1,315 | 926 |
| mer | 7,615 | 7,450 | 5,148 |
|  | 7,681 | 7,258 | 5,194 |

Prices were relatively strong through 1947 in spite of the ge crop. In August producers received $4.25 per crate, comred with $2.30 per crate in 1946. The larger indicated proction of the fall crop depressed prices toward the end of year. (*See* also VEGETABLES.) (J. C. Ms.)

**wis, John Llewellyn** (1880– ), U.S. labour leader, was born Feb. 12 in Lucas,

For his early career, see *Encyclopædia Britannica.*

In 1935 Lewis formed the Committee for Industrial Organiion, later renamed the Congress of Industrial Organizations. refused to heed the American Federation of Labor's order dissolve the committee, and the participating unions in the I.O. were suspended in 1936 and expelled from A.F. of L. mbership in 1937.

Lewis supported Franklin D. Roosevelt in 1936, but in 1940 switched his support to Wendell Willkie and promised to ren as chief of the Congress of Industrial Organizations if illkie lost. He made good his promise but retained the presincy of the United Mine Workers of America. In Oct. 1942, he l the mine workers out of the C.I.O. and after three years of gotiations, his union was finally readmitted to the American ederation of Labor, Jan. 25, 1946.

Lewis called two major strikes in 1946. The first (April 1– ay 29) was terminated upon the signing of a contract, to ntinue during government operation of the country's coal nes, which included a wage increase and other benefits for miners. However, the second strike, called in November ter he unilaterally terminated the contract with the governent on the ground that it had been violated, came to grief. e government, contending Lewis had no authority to abrogate contract, brought him up before a federal district court d on Dec. 3 Lewis and the union were convicted of civil and minal contempt. Lewis was personally fined $10,000 and the M.W. $3,500,000. Upholding the conviction, the U.S. supreme urt on March 6, 1947, sustained the fine against Lewis, but duced the union penalty to $700,000. Although Lewis assailed government's "blackjack" tactics, he yielded to the supreme urt on March 19 and withdrew the contract termination notice that had started the strike.

However, after the Centralia, Ill., mine disaster which occurred later that month, he ordered a "memorial" shutdown of the mines in protest against the accident, explaining that working agreements with the operators permitted observance of such memorials.

In October, Lewis attacked the A.F. of L. for its willingness to comply with the ruling of Robert N. Denham, general counsel of the National Labor Relations board, requiring union officers to sign non-communist affidavits.

The federation's executive council voted, however, to amend the union constitution so that its locals could avail themselves of N.L.R.B.'s facilities. Two months later (Dec. 12), Lewis sent a curt note to Pres. William Green announcing his union's decision to leave the A.F. of L. in the following two words: "We disaffiliate."

**Liberal Party:** *see* POLITICAL PARTIES, BRITISH.

**Liberia.** The Republic of Liberia is situated on the west coast of Africa at the lower curve of the continental bulge; it faces the Atlantic narrows at the point where Africa most nearly approaches South America. It is approximately 43,000 sq.mi. in area. On the northwest, Liberia is bordered by the British colony of Sierra Leone, and on the north and northeast by the French colonies of Guinea and the Ivory Coast. The population was estimated in 1947 to be 2,000,000 (all Negroes) of which approximately 12,000 persons were direct descendants of the original settlers from the United States. The remaining majority was composed of indigenous Africans. Many of these have become detribalized and have adopted the life and customs of the more advanced section of the population, but the larger part still live under tribal conditions. English is the official language; the tribal languages are divided into some 28 dialects which stem from Arabic, Bantu and Nilotic language bases. Monrovia (pop. approx. 10,000) is the capital city.

Liberia has a constitution modelled after that of the United States and its government functions through executive, legislative and judiciary branches. The president is elected for a term of eight years. The Hon. William V. S. Tubman was inaugurated in Jan. 1944. Liberia has granted suffrage to women and given political representation in the house of representatives to the tribal peoples. Liberia grants religious freedom to all denominations. Nearly all of the U.S. church organizations have maintained missions in Liberia for many years.

**History.**—In 1947, a new port at Monrovia, which had been under construction for three years at a cost of approximately $19,000,000, was opened to world commerce. This port accommodates large vessels alongside its 2,000 ft. of wharfage. The depth of water within the harbour permits vessels drawing up to 30 ft. to enter the channel and provides a 32-ft. depth alongside the dock. Two American shipping lines established new services between the U.S. and Liberia during 1947. A preliminary survey was completed for the construction of a railroad through the Western province from the new port to a terminus at Nzerekore in French Guinea. Arrangements were made during 1947 for the operation by U.S. and Liberian interests of Roberts air field near Monrovia, built by the U.S. as a war measure, which would permit maintenance of international commercial air transportation and the operation by a Liberian company of a coastwise air service. Work was continued on the development of the valuable iron ore deposits at Bomi hills; a vehicular road through the Central province to connect the Liberian coast with roads in French Guinea and to open this area to trade was completed. Forestry and agricultural surveys by the U.S. Economic mission, including special work on coffee, palm oil and cacao production, were made during the year. The U.S. Public Health mission also continued its operation and expanded its training program. Plans were prepared and arrangements were being discussed for construction of a public water system and improved electric lighting for the city of Monrovia.

In July 1947, the republic celebrated its 100th anniversary; delegations representing 13 countries were present at the ceremonies. The U.S., France and Great Britain sent both diplomatic and naval missions for the occasion.

In October, the government announced its decision to create an official instrument for over-all development to be known as The Liberia company. The Government and Stettinius Associates Inc., a U.S. company, had agreed jointly to participate in a co-operative effort to bring together the advantages of private resources in capital and specialized knowledge from the United States, and the natural resources of Liberia, with a view to improving the levels of living in Liberia and to expand the people's opportunity for economic and social advancement.

**Education.**—In 1947, institutions included 84 government, 81 mission, a number of schools supported directly by the tribes and 25 private schools. The most important were: Liberia college; College of West Africa; and Booker T. Washington Industrial and Agricultural institute. These schools and colleges receive partial support from the government. The U.S. government makes a yearly grant to the Booker T. Washington institute. Substantial sums for education are expended yearly in Liberia by the Protestant Episcopal Church, American Lutheran Church, American Baptist Church, South, the African Methodist Episcopal Church; the American Zion Churches and Seventh Day Adventists maintain schools as does the Roman Catholic Church. Education for children from 6 to 16 is by law compulsory and free, although the facilities are inadequate and many children are unable for that reason to attend a school. The Liberian government steadily increased its annual appropriations for education during the presidency of William V. S. Tubman. In 1947, 38 Liberian students were in the U.S., principally on government scholarships.

**Finance.**—Revenue receipts for the fiscal year 1947 were the largest in the history of the republic—$3,075,000 as compared with $2,337,000 in 1946 and $1,933,000 in 1945. Liberia's external debt as of Nov. 1947 was $650,000. There was no internal debt. For the 12 months ending Aug. 31, 1947, imports were reported to the value of $8,317,000 and exports for the same period, $13,067,000. The number of vessels calling at Liberian ports during the fiscal year was 201 as compared with 144 in 1946. The fiscal year is Oct. 1 to Sept. 30.

**Trade and Agriculture.**—The largest U.S. institution in Liberia is the Firestone Plantation company, a subsidiary of the Firestone Tire and Rubber company. Liberian rubber exports are estimated to average approximately 20,000 tons of crude rubber annually. The company employs between 22,000 and 30,000 Liberians and has a foreign staff in excess of 100. The second most important export is gold; the average annual export is about 22,000 troy oz. Piassava fibre, palm oil, palm kernels, kola nuts, cacao and coffee also are exported. Liberia regularly imports from the U.S. petroleum products, textiles, hardware, automobiles, machinery, steel and construction material, clothing, shoes and radio equipment. (S. de la R.)

## Libraries.

The 1947 problems, resembling those of 1946, were intensified by rising costs and staff shortages. Carl H. Milam, executive secretary of the American Library association, stated that operational costs had increased 50%, income about 12%. Mary U. Rothrock, outgoing A.L.A. president, estimated a shortage of 4,900 professionals. Yet, it was a constructive year.

American librarians attended the Documentation confe (Bern, Switzerland), the Scandinavian Library congress Norway), the United Nations Educational, Scientific and tural organization (U.N.E.S.C.O.) conference (Mexico Mexico). They visited occupied countries as special consul They aided in U.N.E.S.C.O.'s library activities (1947 bu more than $6,000,000). The Special Libraries association j the International Federation of Library Associations. Th brary of Congress' European mission ended; books, etc., se in occupied countries, were going to U.S. libraries. The Princeton conference on exchanges brought results. Army lations allowed flow of cultural materials to and from the pied countries. Eligibility of librarians under the Fulbrigh (scholarships to countries owing the U.S. for lend-lease) being explored. Dr. P. P. Sevensma, former League of Na librarian, accepted the U.N. librarianship in New York.

U.S. information libraries under the state and war (21 in pied countries) departments continued, the former reduce 67 because of slashed funds. The American Book centre, c Dec. 31, had shipped 1,250,000 volumes, mainly scholarl Allied libraries, fewer to others (the U.S. delegation was u national book exchanges at the Mexico City U.N.E.S.C.O. n ing). At the May–June Assembly of Librarians of the Ar cas, more than 50 representatives from 37 Latin Ame libraries discussed both technical and administrative matte

The A.L.A. Federal Relations office (Paul Howard, direc concentrated on the $25,000,000 Library Demonstration bil fore congress, with fair hope of passage in 1948. The A. national plan (reorganization of about 7,500 public libraries 1,200 regional units) was approved and would be published in 1948. The public library survey by the Social Science search council (Robert D. Leigh, director; staff of econom sociologists, etc.), financed by a $175,000 Carnegie corpora grant, would study 23 projects in 49 libraries to determine eligibility to conduct adult education programs. The sup tendent of documents revised both distribution procedures the monthly catalogue of government publications (Jerom Wilcox, consultant). The Association of Research Libra documents expediter, Washington, supplied 59 subscribing lib ies, including non-letter-press material. A.R.L. approved original "Farmington plan" (at least one copy of every for publication in some American library) and would commenc Jan. 1, 1948, to secure Swedish, French and Swiss publicati

**Growth and Development.**—Libraries had, in general, n income, but rising costs nullified increases. To the 1946 lis 1,000,000-vol. holdings were added New York State library, bany, N.Y., and St. Louis Public library, St. Louis, Mo. troit Public library, Detroit, Mich., planned an industrial search service for subscribing industrial concerns. More regi and county systems were established, the most important b Erie county, N.Y., which includes Buffalo. Librarians at November Conference of Eastern College Librarians called u the president and congress to protect freedom of conscien Paul North Rice, incoming A.L.A. president, had urged libra to abandon "traditional neutrality" in their collections. Massachusetts and California library associations fought c sorship.

**Salaries.**—Authorities agreed that increased federal libr salaries (Library of Congress median about $3,100) had g effect. Yet many increases were mere cost-of-living advan Some public libraries graded positions in making increa among which (tables in the *Library Journal*) were Baltim Md.; Buffalo, N.Y.; East Orange, N.J.; Erie, Pa.; Flint, Mic Gary, Ind.; Grosvenor (Buffalo, N.Y.); Hartford, Conn.; L coln, Neb.; New York, N.Y.; New York State, Albany; N ark, N.J.; St. Paul, Minn.; White Plains, N.Y.; Youngstown versity of California and Yale instituted elaborate library classification and pay plans. The Special Libraries associa- began a salary survey of members.

**ibrary Schools.**—In part, low salaries accounted for an an- l shortage of 3,600 recruits, but overemphasis of library niques in training was also a deterrent. The Association of erican Library Schools was advocating revisions which would gnize subject specialization. School headship changes: is S. Shores, dean, University of Florida, Gainesville, Fla. w); Lewis F. Stieg, director, University of Southern Cali- nia, Los Angeles, Calif. Bernard R. Berelson succeeded rence H. Faust as dean, the University of Chicago.

**tates.**—Library agencies (state libraries, extension agen- ) fared well: Illinois, New Mexico, South Carolina and as received notable budget increases. The Tennessee Valley nority (TVA) commenced a two-year survey (Marion A. czewski, director) of nine states: Alabama, Florida, Georgia, ntucky, Mississippi, North Carolina, South Carolina, Tennes- and Virginia. Maryland completed a survey, New York e's continued, New Jersey contemplated one. Many states sed important legislation, chiefly directed at establishing nty library systems, instituting or continuing state aid (total, , or recognizing librarianship. States would be asked to im- nent the A.L.A. national plan, mentioned above; the pro- ed 1949 A.L.A. regional meetings would strengthen state anizations. Theresa C. Stuart (Maine) and Frank L. Tolman ew York state), both leaders in state development, retired.

**Adult Education.**—The New York State survey, commenced 945, found public libraries wanting as adult education agen- . The public library survey by the Social Science Research ncil (mentioned above) would produce a nonlibrarians' esti- te. Yet, libraries were working effectively. They were help- to honour the Freedom Train visits. They continued to ouse such community programs as health drives, veterans' dance, parent education, etc.; libraries in Akron, Boston and waukee were serving labour groups. In 1947, Baltimore's omic Information institute and Louisville's "neighbourhood lege" (classes in library branches) were high spots. About 28 ding public libraries participated in Great Books discussion ups, many more unofficially.

But libraries no longer confined themselves to having printed terials, alone; phonograph records, 16-mm. films, pictures amed and unframed) were lent freely on borrowers' cards. e 290 libraries having $25,000 or more budgets could serve an imated 50,000,000 with audiovisual materials; R. Russell unn (Akron Public library) estimated that an initial $3,700 s needed for films.

**Children's Work and Schools.**—Scarcest among profession- were children's librarians, because of low salaries and unclear ff status, in many instances. Book awards included: the John wbery medal given to Carolyn S. Bailey's *Miss Hickory* iking); the Caldecott medal awarded for Leonard Weisgard's strations to *The Little Island* (Doubleday). The first Caro- e A. Hewins lecture (F. G. Melcher, sponsor) was delivered fore the New England Library association. Several states ded school library supervisors. Mrs. Mary Peacock Douglas, tionally known, resigned from North Carolina's school library pervisorship.

**Buildings and Equipment.**—Municipal bond issues were ap- oved at Baltimore, Md. ($1,500,000 for branches), Topeka, n. ($650,000 for main building) and Newark, N.J. ($781,000 expansion and renovation). Several private colleges nched drives.

Princeton university, Princeton, N.J., laid the cornerstone of $9,000,000 Firestone library; Washington State college, Pull- n, Wash., broke ground for a $2,500,000 building, as did University of California at Los Angeles for a $790,000 wing. Gustavus Adolphus college, St. Peter, Minn., resumed work on its $420,000 library.

BOOKS being sorted at the University of Vienna library after being returned by soviet authorities from the Russian occupation zone in Austria in 1947. The volumes were removed from Vienna by the nazis during World War II

Colby college, Waterville, Me., secured enough equipment to open part of its $500,000 Miller library; University of Nebraska, Lincoln, Neb., moved into its new Love library, completed in 1943 but occupied since by the services. Bowdoin college, Brunswick, Me., and Oberlin college, Oberlin, O., installed distinctive rare-book rooms. Overpopulation forced Union college, Schenectady, N.Y., University of Kansas, Lawrence, Kan., and St. Michael's college, Winooski, Vt., to convert surplus war buildings into reading rooms.

Public libraries did little or no building. Sacramento, Calif., and San Antonio, Tex., converted former residences into young people's libraries. New Orleans, La., moved and converted a war hut into a branch. Many libraries refurbished their rooms with bright paint and informal furniture. Grand Rapids, Mich. installed a fiction room which was promptly dubbed a "fashion room." Philadelphia, Pa., successfully modernized a branch with "commercial" lighting.

Engineering was improving bookmobiles. The Shaw photocharger for circulation work (Library bureau) got off to a good start. Ceiling projectors for books on film (projected books) were available to civilian hospitals. The Veterans' Administration Library service was experimenting with an Elliott addressing machine to produce 300,000 sets of cards for 5,000 titles to send to its 126 hospitals. A new microcard reader was unveiled but not announced. The Carnegie corporation granted funds to the Massachusetts Institute of Technology, Cambridge, Mass., for exploration of scientific mechanical aids to documentation: printing, photoreproduction, sound recording and visual presentation.

**Publications.**—Notable typographical improvement was made in library publications: the National Publicity council placed the New York Public library's 1946 annual report among the six best reports published during 1947 in the U.S. Among new serials, Harvard library's *Bulletin* was outstanding.

**Gifts and Collections.**—The year's dramatic event was the $1,000,000 surprise gift from John Deferrari, former fruit peddler, to the Boston Public library. The Abraham Lincoln papers at the Library of Congress, opened 21 years after the death of Robert Todd Lincoln, enhanced historical scholarship. The A. S. W. Rosenbach collection of early children's books went to the Free library of Philadelphia. The *Bay Psalm Book,* auctioned for $151,000, went from friends to Yale university. Municipal archives were transferred to New Orleans Public library.

Brigham, *History and Bibliography of American Newspapers, 1690–1820* (1947); B. H. Mahony and others, *Illustrators of Children's Books 1744–1945* (1947); H. R. Galvin, *Films in Public Libraries* (1947). (K. BN.)

**Army Library Service.**—In the year 1947, the Army Library service continued as a recognized activity of the U.S. army with 800 libraries in the U.S. and overseas. The professional character of the service was maintained by the employment of librarians paid from appropriated and nonappropriated funds.

The library branch of office, chief of special services, department of the army, inaugurated a new service in the spring of 1947. This project consisted of the purchase and distribution of a set of 25 books a month for each overseas library. The titles are selected in advance of publication with books distributed overseas simultaneously with publication dates.

(P. E. P.)

**Navy Library Service.**—The scope and basis of the library service program for naval personnel, including the marine corps afloat and ashore both in the United States and overseas, remained unchanged during 1947 with modifications to meet postwar needs. There remained about 1,600 active libraries ranging in size from a few shelves on small naval craft to station libraries containing many thousand volumes. Large shore station and hospital libraries were administered by approximately 50 professionally trained librarians. These civilian librarians also assisted in organizing and administering shipboard libraries and those at small stations. Each library is kept up to date by regular shipment of current books of technical and professional interest, for general information and for recreational reading with issue of replacements or special material on request. Scientific and technical libraries required for naval research and development programs continued to expand to meet the increased demand for highly specialized research materials. (D. F. DR.)

**Great Britain.**—The public libraries of Great Britain and Northern Ireland issued approximately 300,000,000 vols. during 1947, an issue of about seven books per head of the total population of the country. The demand made upon the resources of research libraries appeared to be equally heavy. The increased demand accentuated the difficulties caused by the inadequacy of accommodation in many libraries, and the economic situation dictated the postponement of new building as well as overdue alterations to existing premises. As a temporary measure many library authorities opened branchés in shop premises, pr
cated buildings or schools, while an increasing number of
or travelling libraries were used to serve outlying di
Loan collections of gramophone records were introduced
first time in a number of public libraries.

The removal of the statutory limitation on rates for
library purposes in Northern Ireland was effected by a cla
the Public Health and Local Government (Administrativ
visions) act (Northern Ireland). In Scotland the rate lim
was still in force, although a campaign was afoot to obt
abolition. On the other hand, the Public Libraries acts
adopted for the county of Argyllshire; the acts were t
operation for the whole of Scotland.

In the British museum, London, an important ne
pointment was that of Sir Henry Thomas, previously kee
the department of printed books, to the newly-created p
principal keeper of the department. There was a change

**Europe.**—The first conference of U.N.E.S.C.O., held in
in Nov. 1946, had discussed the program of U.N.E.S.C.C
mulated by its preparatory commission, and the section
cerned with libraries had given priority to the rehabilitat
damaged libraries. Other matters for early attention inc
the wider provision of public or "popular" libraries throu
the world, the removal of barriers to the export and imp
books and periodicals, copyright problems, internationa
change of books and periodicals, and the encouragement
preparation of bibliographies and catalogues as a means of
tating the exchange of bibliographical information. Ten
agreement was reached for the formation of a United N
library. The former Inter-Allied Book centre which was
lished in London for the collection and distribution of
and periodicals for war-devastated libraries was administer
U.N.E.S.C.O. for the greater part of 1947. It was then
the nucleus of a British national book centre, housed i

classics for distribution by U.N.E.S.C.O. and 300 sets of
*clopædia Britannica* were presented by Encyclopædia Brita
Inc.

Further news was received about book losses in Ger
during World War II, and possibly the greatest of thes
curred at the Bavarian state library in Munich, where
than 500,000 volumes were destroyed, including special c
tions of some fame. It was, however, presumed that the fa
collection of incunabula had been evacuated and was ther
saved. An estimate of the total losses of learned librari
Germany is 15,000,000 volumes, while the popular lib
(*Volksbüchereien*) lost something between 5,000,000 and
000,000 books. The *Deutsche Bücherei* at Leipzig had reco
most of its previous holdings and it was estimated that t
brary now consisted of about 2,000,000 vols. The *Oeffen*
*Wissenschafliche Bibliothek* is the title which was given
new public scientific library in Berlin, formed by combinin
*Preussische Staatsbibliothek* and the library of the *Techn*
*Hochschule.* The serious war damage to the Bulgarian nat
library in Sofia, one of the largest in the Balkans, which
nearly completed at the outbreak of the war, was repaired
Greece, steps were being taken towards the organization

blic library service for the whole of the country in the Greek tional library. Professional library training was initiated in eece.

A further sign of the resumption of normal library activity the continent of Europe was given by the meeting of the mmittee of the International Federation of Library Associans in Oslo in May 1947, where 18 countries were represented more than 60 delegates. This was the first meeting of the mmittee since 1939 and was largely concerned with reviewing ports of work carried out under difficult conditions during war years by the *sous-Commissions,* and with planning for future. The conference also served as a valuable opporiity for co-operation between the International Federation d U.N.E.S.C.O. (D. C. H. J.)

**e, Trygve** (1896– ), Norwegian statesman and United Nations official, was born July 16 in Oslo. After aduating from Oslo university law school in 1919, he became cretary general of the Norwegian Labour party. Lie was juse minister in the Nygaardsvold cabinet in 1935 and minister commerce in 1939. After the Germans invaded Norway in 40, he joined the Norwegian government-in-exile in England; was first minister of shipping and supply and later foreign nister. On Feb. 1, 1946, Lie, who was Norway's delegate to e United Nations, was elected secretary-general of the Secur- council of that organization.

In his statements on world affairs in 1947, he pleaded for return to the spirit of Yalta and warned that "chaos and ends suffering" would be the world's lot unless the great Allied wers worked together in the postwar era with the same spirit co-operation that marked their wartime alliance. In his speech sing the second regular general assembly session, Nov. 29, urged greater co-operation among the big powers.

**iechtenstein.** A small principality on the eastern frontier of Switzerland. Area: 61 sq.mi.; pop. (cens 1941): 11,138. Capital: Vaduz (pop. 2,020). Language: German; religion: mainly Roman Catholic. Ruler: Prince Franz sef II.

**Education.**—(1943): schools 62, scholars 1,701.

**Finance.**—Revenue (est. 1946) Fr.2,693,760; expenditure (est. 1946) .2,809,377; public debt (1945) Fr.2,669,615. Currency: Swiss franc. xchange; 1 franc = 23.4 U.S. cents.

**Foreign Trade.**—In customs union with Switzerland. According to the itish board of trade, imports and exports to and from the United Kingm (1947, first eight months) were: from Liechtenstein £156,837; to echtenstein £115.

**ilienthal, David Eli** (1899– ), U.S. government official, was born on July 8 in Morton, l. A graduate of De Pauw university in 1920, he studied law Harvard university. In 1933, President F. D. Roosevelt amed him director of the newly-created Tennessee Valley uthority and in 1941 he became chairman of TVA. He was so a consultant with the atomic project at Oak Ridge, Tenn. 1946, he headed a committee whose report to the state deartment formed the basis for the U.S. proposals for establishent of a United Nations Atomic Energy commission.

Pres. Harry S. Truman's nomination of Lilienthal in October 1946 as chairman of the new U.S. Atomic Energy commisson provoked a hot political fight in the senate that split party lines. Opposition to his appointment was led by Senator R. A. Taft, Republican leader (who felt Lilienthal was "too soft" toward Russia) and Sen. K. D. McKellar, Democrat, of Tennessee (who had long feuded with Lilienthal over the latter's refusal to grant patronage deals in TVA). Sen. A. H. Vandenberg headed the defenders of the former TVA chairman. Following protracted debate, Lilienthal finally was confirmed on April 9, 1947, by a 50–31 vote. After being installed as chairman of the new body, he upheld vigorously the administration policy that the U.S. would continue to develop atomic weapons until a foolproof system of world atomic controls had been established.

**Lime.** The production of lime in the United States increased from 5,920,600 short tons in 1945 to 5,990,700 tons in 1946, including 4,344,300 tons of quicklime and 1,648,400 tons of hydrated lime. Reduced industrial demand made available the needed increase in building lime, without much advance in production. (G. A. Ro.)

**Limes:** *see* Fruit.
**Limestone:** *see* Stone.

**Linen and Flax.** While some recovery was made from the disruption caused by World War II, the flax and linen industry in 1947 was still snarled in the uncertainties of industrial dislocation, new farm interests and difficult labour conditions. The U.S.S.R., principal source of flax prior to World War II, indicated that it might manufacture its own linens and sell the finished product, rather than the flax, thus removing the largest prewar supplier of raw material to the linen-weaving countries. The 1947 acreage of flax in the Soviet Union was estimated at 3,211,000, with a prospective yield of 400,000 tons of flax, compared with a planting of 2,717,000 ac. in 1946 with a yield of 240,000 tons.

In Northern Ireland, traditional home of linen goods, the industry was rapidly disintegrating, although organizations of linen weavers were making valiant efforts to rebuild it. Flax acreage in 1947 was about 18,000, instead of the 70,000 that the industry estimated were needed. Farmers found greater profits in food crops.

Exports of linens from the United Kingdom for the first ten months of 1947 were as follows, in thousands of square yards:

| | |
|---|---|
| United States | 9,077 |
| Australia | 4,396 |
| South Africa | 2,368 |
| Argentina | 1,996 |
| New Zealand | 1,975 |
| All others | 18,191 |
| Total | 38,003 |

The average earning of all workers in the flax-spinning and linen industry was 58*s* 11*d* a week in April 1947—or 97% more than 1938 rates.

In Belgium, the scutching mills in the Lys valley continued to serve as the processing machinery for flax straw grown in France and the Netherlands. Production in 1947 averaged 975 metric tons per month. Weaving mills found it difficult to operate at full capacity, and in November operations were down to 25%. Production of linens was at an average monthly rate of 849 metric tons in 1947, compared with 663 metric tons in 1946 and 753 metric tons in 1938. Lack of skilled workers was still a problem, and few apprentices had been trained during World War II. Labour-saving devices were being employed in an effort to offset the shortage of personnel.

In Eire, the 1947 flax acreage was estimated at from 17,000 to 18,000, continuing the decline from wartime levels. Up to July 31, 1947, 3,792 long tons of flax had been sold, compared with 5,402 in the same period of 1946. The British ministry of supply was the sole customer, and future maintenance of flax acreage was said to depend largely on continuation of price inducements from Britain. Production of linen yarn and woven fabric was negligible.

In Czechoslovakia, the first four months of 1947 saw a substantial revival in the linen industry. The 1947 flax acreage was expected to be 61,780, an increase over that of 1946, despite continued labour shortages.

Egypt's war-born flax industry continued to decline in 1947. The 1945–46 planting was the lowest in several years—3,600 ac. Two new flax-spinning mills which began operation during the latter part of 1946 were working largely on imported short-cut staple fibre. Since Oct. 1946, export of fibre and tow had been under government control.

Polish flax farmers planted 21,000 ac. in 1947, an increase of 33% more than 1946, although exports (120 tons) in the first 3 mo. of the production year (Oct.–Dec. 1946) were only about one-fifth of that for the same period of 1945. Sweden planted about 11,000 ac. in flax for 1947, twice the acreage of 1946, but none of the crop was exported.

A comprehensive survey of the German linen industry was issued in Oct. 1947, by the U.S. department of commerce, in which special emphasis was laid on the possibilities of the material known as "Flockenbast," prepared on cotton-spinning machinery from flax. The finest of its fibres are coarser than Irish dam-retted flax after wet spinning. No statistics of production were given.

In the United States, the department of agriculture offered a federal crop insurance program to 232 counties in the major flax-producing areas, including Minnesota, North Dakota, Kansas, Montana and Iowa. Imperial county in California was listed as a potential producer in 1949.

Only the flax grown in Willamette valley, Oregon, is considered suitable for spinning fibre. Between 8,000 and 10,000 ac. are grown annually, with a yield of about 350 lb. per acre. Thirteen mills were operating in that area by 1947, with a fixed investment in excess of $1,250,000. Weaving of linen in the United States was carried on by eight or ten companies located in New York, Massachusetts, Rhode Island, Pennsylvania, New Jersey, Minnesota and Oregon. Government loans enabled flax growers to continue during the war years, but in 1947 the accumulated loans covered more than 1,000,000 lb. of domestic flax fibre, and the domestic support loan was higher than the open market price on competitive foreign flax fibres.

## Liquors, Alcoholic.

The postwar year of 1946 and the first few months of 1947 saw a shift in emphasis within the beverage distilling industry from all-out war alcohol production to a limited resumption of beverage spirits output. The period thus covered, therefore, was a transitional one for the industry, especially in view of the fact that after only nine months of relatively normal production, another period of restriction was facing distillers of the U.S.

Responding to the urgent need for industrial alcohol, both at home and abroad, the beverage distilling industry began voluntarily to convert its production facilities to war use during the latter part of 1941. In Oct. 1942, the War Production board halted the manufacture of whisky, gin and beverage neutral spirits completely. During this period until the end of the war, the beverage distillers turned out approximately 691,000,000 gal. of war alcohol for use in making munitions, synthetic rubber, hospital supplies and essential civilian and industrial ucts. This represents almost half of the total amount of trial alcohol manufactured by all producing sources.

Another activity of the beverage distilling industry deve during World War II was its contribution to the producti penicillin and other antibiotics. This addition to the r output has since been further developed and enlarged.

In addition, the beverage distilling industry continued t duce high protein animal feed as by-product of distilling ess. During distillation, the nutrient value of the grain creased through the addition of yeast proteins, vitamins fats. According to the department of agriculture, this a feed played an important role in the tremendous increa meat, chicken and egg production during the war over p levels. In the fiscal year ending Oct. 30, 1947, distillers duced a total of 409,600 tons of dried distillers grains, a crease of 20% over the previous year and an increase of a 40% over the 1937–42 average of 224,000 tons per year.

From 1942 until V-J day in Aug. 1945, distillers were mitted to produce potable alcohol during only three one-m periods when supplies on hand were at sufficiently satisfa levels to warrant the release of distilling facilities from work. The revocation of the WPB control order at the er Aug. 1945, did not bring with it a return to normal produc Basing its action on increased demands for grain to mee need for export to grain-deficient countries abroad, the de ment of agriculture issued new restrictions on grain alloca to the industry. The use of wheat was banned, rye use limited, and distillers were permitted the use of corn grades and sample only. Distilleries were allowed to operate for ous restricted periods ranging from three to ten days mon

Production of beverage spirits proceeded under severe ernment restrictions for the better part of 16 months follo the close of the war.

Not until Dec. 1946, did distilled spirits production rea relatively normal level. At that time the department of agr ture, in the face of record crops of corn and other grains, l its restrictions to allow distillers unlimited quantities of corr the manufacture of spirits and modified its restrictions on to allow its use to the extent of 6% of the total quantit grains used in any one plant in a given month.

Whisky production increased in the last month of 1946 the first few months of 1947, reflecting this move. The in try's concentration on war alcohol production and postwa strictions had severely cut into stocks of aged whiskies and seriously disrupted aging schedules.

U.S. whiskies are aged anywhere from two to eight years fore bottling—the average aging period for most whiskie about four years. Flavour, colour and body develop in a chemical process which involves reactions between substa originally contained in the whisky and others extracted from toasted wood of the oak barrel in which they are stored.

Consumers had continued to be supplied with beverage sp during the war years, although the whisky thus used was being replenished by new production, so that in spite of a tively favourable production year in 1946, net whisky in tories as of Dec. 31 of that year were still well below normal war levels: 327,000,000 tax gal. as against 424,000,000 gal Dec. 1941.

The over-all increase in production during the early par 1947 did effect some improvement in the total supply pict At the end of Sept. 1947, net whisky inventories (after estin ing evaporation and leakage losses) totalled 401,400,000 tax —only 12,100,000 gal. below the prewar level of Sept. 31, 1

Age composition of supplies on hand, however, was still s ously out of balance. As of Sept. 30, 1947, less than 20%

t whisky inventories was more than 4 years old; slightly more in 7% was between 2 and 4 years old and the balance—73% was only 2 years old or less. As a consequence, the industry s forced to conserve its stocks of matured spirits carefully. Withdrawals in 1946 and the first nine months of 1947 were intained on the conservative basis of the war years. During fiscal year ended June 30, 1947, withdrawals of whisky alled 58,822,676 tax gal. and of gin 6,764,660 gal. Withawals of grain neutral spirits were maintained at the high el of the previous year, 99,391,442 tax gal. and were used incipally to make the popular whisky spirit blends.

Production of distilled spirits in the fiscal period ended June , 1947, amounted to: whisky, 167,994,805 tax gal.; gin, 7,359,8 tax gal.; rum, 908,083 gal.; brandy, 40,850,527 gal.

On Oct. 5, 1947, at the request of President Truman, the verage distilling industry agreed to halt production of all in distilled spirits for a period of 60 days, in order to aid food conservation program. Following the short period of atively normal production, after three years of almost comte shutdown, and with aged whisky stocks extremely low, the dustry was in 1947 confronted with the problem of adjusting production program to the world food program. In Dec. 47, the president was granted the power to allocate grain for production of beverage distilled spirits on a temporary basis.

Although total imports of distilled spirits during 1947 dened from levels of the previous year, Scotch whisky imports r the first 9 months of the year showed a marked increase er the same period in 1946—4,531,980 tax gal., as against 17,884 tax gal. in 1946. On May 1, 1947, British whisky tillers were ordered by the minister of food to revise their tios of Scotch whisky released for consumption. It is difficult say to what extent the grain situation would affect whisky oduction in Canada and the United Kingdom. In Aug. 1947 e British ministry of food allocated 150,000 tons of barley to otch whisky producers. The Scotch production target for the 47–48 fiscal year was reported at 38,000,000 gal. as against ,500,000 gal. in 1946. Whisky withdrawals for the home mart were reduced from 50% to 25% of total withdrawals, while locations for export to "hard currency" countries were ineased from 50% to 75% of the total.

Table I.—*Revenues from Alcoholic Beverages*

| | Distilled Spirits | Beer | Wine | Grand total |
|---|---|---|---|---|
| 1941 | $ 558,547,795 | $348,876,726 | $20,008,266 | $ 927,432,787 |

| 9 months, 1947 | 1,023,026,518 | 533,937,544 | 30,973,407 | 1,587,937,469 |

Federal tax receipts from alcoholic beverages in 1947 constited a major source of government commodity tax revenue. In e first 9 months of 1947, government collections from alcolic beverages totalled $1,587,937,469. Table I shows internal venue receipts from distilled spirits, wine and beer during ch of previous years, as well as for the first nine months of 46–47.

Table II gives data for production, withdrawals and bottling distilled spirits for the fiscal year ended June 30, 1947.

(A. J. Li.)

SCOTCH WHISKY, the largest shipment to arrive in the U.S. after the start of World War II, is shown being unloaded at a New York dock in May 1947

**Liquor Control.**—The year 1947 saw the return of government controls on the use of grain by distillers and brewers. In October, owing to pressing need for grain abroad, the distillers agreed to a voluntary 60 day holiday, ending on Christmas day. The brewers agreed to a 25% reduction in production during that period. These limitations were in response to a request by the Citizens Food committee appointed by President Truman. After the expiration of the holiday, the president, who in the meantime had been given the necessary powers by congress, limited the amount of grain to be allocated to the distillers in Jan. 1948 to 2,450,000 bu.

No limitation on grain for brewers had been announced at year's end.

The argument still raged during 1947 as to whether limitation should be on a historical basis, the amount produced during the period before World War II or on a capacity basis. Of the five big producers, four, National Distillers, Schenley, Distillers-Seagram and Hiram Walker have been big producers after repeal. The fifth, Publicker, formerly a manufacturer of alcohol only, became a big whisky maker after the end of World War II.

The government action came after the big distillers were unable to agree among themselves upon a voluntary method of restriction.

In legislation, little of importance was passed by the federal congress. A feature of 1947 was the adoption by nine states of a mandatory fair trade contract law. This requires the brand owners to name a minimum price at which items of alcoholic beverage may be sold to the consumer. These floor prices are

Table II.—*Distilled Spirits Statistics, Fiscal Year Ended June 30, 1947*

cludes brandy withdrawn for the fortification of wine.

rce: Prepared by Licensed Beverage Industries, Inc., from data of the alcohol tax unit, bureau of internal revenue, treasury department.

filed with the state authority, and heavy penalties, including suspension and revocation, are imposed upon retailers who make sales below the floor prices. The states which adopted this system were Arizona, California, Georgia, Illinois, Kentucky, New Jersey, New Mexico, New York and Oregon.

Some states also adopted compulsory price posting laws which require suppliers to post their prices to retailers, and forbid any discrimination. The mandatory trade law met with considerable opposition, but seemed to be working well. The principal argument against it was that it deprives the customer of the lowest price which might result from free competition. The proponents argue that it protects the small operator from the competition of the large department store or chain which could use particular items as a loss leader, and that the neighbourhood store price was the true one. The system provides opportunity for amendment of prices by the brand owner, in many cases the changed price going into effect 30 days after filing of the amendment with the control body.

The collection of taxes, federal and state, on alcoholic beverages fell off during 1947, as did the consumption of alcoholic liquor. The high cost of living left little money for liquor in the average family budget. The demand for beer, however, did not fall off and collection from this source remained about the same as in 1946.

In spite of strenuous efforts by industry representatives to secure passage of legislation lowering the tax of nine dollars a proof gallon on distilled spirits, congress took no action. The legislators were apparently unmoved by the argument that the existing tax represented the point of diminishing returns, and that over-all collections were being reduced. None of the states reduced the tax rate and seven of them increased it.

Arkansas raised the tax per gallon from $1.50 to $2.52, Massachusetts from $1.45 to $2.00, Minnesota from $2.00 to $2.50, Nebraska from $0.80 to $1.00, Nevada from $0.60 to $0.80, New Jersey from $1.00 to $1.50 and Tennessee from $1.00 to $2.00. Idaho, Iowa, Kansas, Massachusetts, Nebraska, North Carolina, Pennsylvania, South Carolina, Tennessee, West Virginia, Wisconsin raised the tax rates on beer, which averages about four cents a gallon. Six states raised the tax rates on wine.

Existing federal regulations on labels were found to need considerable revision. In the fall of 1946 open hearings on labels were held in Washington, D.C., before the alcohol tax unit. Decisions were expected in 1947, but did not materialize. These were expected to be made early in 1948. One of the principal matters in dispute was the labelling of liquor made in the U.S., claimed to have the attributes of Scotch. It now must be labelled "Scotch type." Those who claimed it to be the equal of the product made in Scotland wanted the right to label it American Scotch, or a similar name. The Scotch manufacturers and importers wished to forbid the use of the phrase "Scotch type."

Local option elections were held in many states. The national picture was little changed, but in New York, Pennsylvania, Ohio and Illinois, the drys made substantial gains, enlarging the area in which the sale at retail of alcoholic liquors is prohibited. (*See* also Brewing and Beer; Intoxication, Alcoholic; Wines.)

(M. Lb.)

## Literary Prizes.

The literary prizes for the year 1947 were as follows:

Abingdon-Cokesbury Award.—$7,500 each to John Wick Bowman for *The Religion of Maturity* and to Georgia Harkness for *Prayer and the Common Life*, books chosen by the judges as those offering "the greatest good for the Christian faith."

Academy of American Poets.—$5,000 fellowship to Ridgely Torrence.

American Academy and National Institute of Arts and Letters.—$1,000 each, arts and letters grants, were made to 6 writers: Nelson Algren, Eleanor Clark, Lloyd Frankenberg, Robert Lowell, Elizabeth Parsons and James Still.

Anisfield-Wolf Award for the best book in the field of race r $1,000 each to Sholem Asch for *East River* and to Pauline R. K *Latin Americans in Texas.*

Brazilian Literary Prize (Pandia Calogeras Prize).—$1 Samuel Putnam for his translations of Brazilian classics, *Rebellio* *Backlands* and *The Masters and the Slaves.*

John Burroughs Medal for the most outstanding piece of writing to Theodora Cope Stanwell-Fletcher for *Driftwood Valle*

Commonwealth Club of California.—Gold medal for gen erature to Royce Brier for *Western World;* gold medal for sch and research to John A. Crow for *The Epic of Latin America* medals to George Hedley for *Christian Heritage in America,* to M Conrad Buff for *The Big Tree,* to George E. Mowry for *Theodore* *velt and the Progressive Movement,* to E. H. Staffelbach for *T* *Oregon* (juvenile), to Edward Weismiller for *The Faultless Shore* (

John Day Company's Foreign Service Book Contest.—$1 Charles F. Knox, Jr., for his manuscript, *Thirst,* a novel about ra in South America.

## Lithium Minerals.

The production of lithium minerals in the United States increased from 2,446 tons in 1945, containing 274 tons of $LiO_2$, to 3,065 tons in 1946, containing 323 tons of $LiO_2$. The demand for amblygonite, lepidolite and spodumene was declining, as more use was being made of the lithium salts recovered as by-products in potash operations. (G. A. Ro.)

## Lithuania.

A Baltic country of northeastern Europe, north of Poland; in 1941 it became a part of Germany's "Ostland," and in 1944 was reconquered by the Red armies and re-established as a republic of the U.S.S.R. Area, 22,958 sq.mi. (1940); pop. (Jan. 1, 1940) 2,879,070. Chief cities: Vilnius (Vilna, cap. 1942, 182,000); Kaunas (1941 est. 120,000).

**History.**—Lithuania's independence, won after World War I, was short-lived. In 1940 the country was incorporated into the U.S.S.R. as one of the constituent republics. In 1941 it redeclared independence, but the invading Germans allowed the state to function for only seven weeks. In 1944–45 the Russians drove out the Germans and reintegrated Lithuania into the soviet system.

Throughout these kaleidoscopic changes many of the pre-1940 Lithuanian diplomats remained at their posts abroad and preserved the recognition of the western states for the old democratic regime. Up through 1947 the United States had not yet recognized the Russian claims to the Baltic countries. In May, however, the British recognized the *de facto* control established by the U.S.S.R. and this might be a first step to *de jure* recognition. The Lithuanians continued nevertheless to sabotage and oppose the Russians at home and to appeal for help abroad. Large numbers of Lithuanians lived in the United States and supported a vigorous and persistent propaganda campaign.

On one significant matter the Lithuanians, Latvians and Estonians acted together. For the thousands of "displaced" Baltic peoples in Germany a university was set up at Pinneberg, near Hamburg in Germany. This school without money or traditions, established in Jan. 1946, soon had about 200 professors and more than 1,000 students, organized laboratories and a library, and carried on a vigorous educational program under the name of Baltic university. But then it was forced to go under the name of a D.P. university study centre and to prepare students for entrance into German universities. Stung by this turn of events, the faculty appealed to the U.S. to be allowed to relocate across the Atlantic and carry on from there. Quoddy Village at Eastport, Me., was being sought from the War Assets administration.

The Lithuanians in the United States, during 12 months of 1946–47, sent clothing, food and other supplies to their compatriots in western Europe to a total value of $670,000, and planned to double the aid to $1,400,000 for 1948. More than half of this amount was earmarked for resettlement of 15,000 Lithuanian D.P.s.

Appeals were made to Pres. Harry S. Truman and to the United Nations to aid in the re-establishment of an independent Lithuania, urging particularly that steps be taken quickly to halt genocide—the extermination of a whole people. It appeared that thousands of Lithuanians were being moved into the interior of the U.S.S.R. while Russians were then moved into their homes and farms and workshops in Lithuania—all for the purpose of establishing a trustworthy communist-Russian population on the western border of U.S.S.R. (F. D. S.)

**Liver Disorders:** *see* Alimentary System, Disorders of.

**Livestock.** The total number of livestock on United States farms, excluding poultry, continued to decline from the peak of 1944, and on Jan. 1, 1947, was 3.7% below a year earlier and 12% below the record of Jan. 1, 1944. This decline continued through 1947 in the case of sheep and cattle. The causes of the decline, in the face of high prices, were different with each class of livestock. Sheep raisers complained of loss of herders to other employment and the competition with cattle raising for pastures. The number of stock sheep on Jan. 1, 1947, was the smallest since records began in 1867. The eastern states had fewer flocks, and numbers were down in the range states. High prices for lambs and wool failed to check the decline.

*Livestock on U.S. Farms, Jan. 1, 1947, 1946 and 10-Yr. Average, 1936–45*
(In thousands of head)

| | 1947 | 1946 | 10-Yr. Average |
|---|---|---|---|
| Horses | 7,251 | 8,053 | 10,259 |
| Mules | 2,773 | 3,010 | 3,951 |
| Cattle | 81,050 | 82,434 | 73,342 |
| Milk cows | 26,100 | 26,695 | 25,823 |
| Sheep | 38,571 | 42,426 | 51,909 |
| Hogs | 56,901 | 61,301 | 57,367 |
| Chickens | 475,442 | 530,203 | 461,439 |
| Turkeys | 6,632 | 8,493 | 6,915 |

Prices of livestock began to advance in early 1947 reaching a temporary high point in March; they advanced again in August and despite the large slaughter, made new high records in September. Slaughter of cattle and calves was greater than that of 1946, while hog slaughter was about the same and sheep and lambs lower. Vigorous consumer demand for meat kept prices of all classes above those of the previous year and more than twice the average of 1936–45. The 1947 beef output was the greatest on record; total meat production was about the same as in 1946. The number of livestock fed in feed lots was about a third less than a year earlier.

The total estimated value of livestock was 25% larger on Jan. 1, 1947, than a year earlier, or about $12,000,000,000, compared with $6,600,000,000 average for 1936–45.

The world's livestock numbers were estimated to have risen during 1946. Increases in Asia, Europe and South America offset decreases in North America and Australia. Argentina reported little change. Imports of Mexican cattle were barred by
the outbreak of foot-and-mouth disease. Most of these
were feeder cattle amounting to about 400,000 head a

the cabinet did not revise its decision. London County ncil announced an 18-year £187,000,000 plan to build and ip a network of comprehensive schools ranging from nursery ools to high schools, taking from 1,250 to 2,000 pupils each. ernment economy instructions caused a slowing-down of se building in London. By the end of September, London built 17,660 permanent and prefabricated dwellings, includ- rebuilt bomb-destroyed houses after 1945. There were then 79 dwellings in construction.

raffic developments included the extension of tube railways Stratford and Leytonstone in the east in May and to Green- d in the west in August. Extensions to Woodford and New- y Park were scheduled for 1948. Road transport in central as was speeded up by a "no waiting" rule for many main eets, and horse traffic was forbidden during busy hours. To p street queues down, London transport augmented its fleet ouses by 350 hired motor coaches in October. (P. Bn.)

## ndon University.

In spite of shortages of all kinds the number of students continued to rise 1947, reaching totals of 18,354 internal and 23,289 external; in 1946, 90% of the available places were allotted to ex-serv- men. Little progress could be made in the provision of addi- al accommodation, but a start was made on the new build- s for Birkbeck college and the rebuilding of blocks at iversity college and Bedford college. More than 100 profes- ial and readers' appointments were made. The announce- nt by the treasury of the substantial increase both in recur- t and capital grants to the universities in the quinquennium 7–52 was a further incentive to the active planning which nt on throughout the year. A royal charter was granted to British Postgraduate Medical federation which, with the tgraduate Medical school and 11 other specialized institutes, ld co-ordinate and develop postgraduate medical education London; the establishment of an Institute of Advanced Legal dies would, it was hoped, provide a focal point for British al research.

everal distinguished European scholars visited the university give special lectures in various faculties, and a holiday course in English for students from other countries was held for the first time after World War II. The university, at the request of the colonial office, assumed new responsibilities in relation to higher education in the colonies, whereby certain colonial institutions were to enter into close relationship with the university and prepare their students for London "external" degrees, until they should be granted full university status of their own. (K. M. E.)

**Loran Navigation:** *see* Electronics.

## Los Angeles.

Largest U.S. city in area (452.2 sq.mi.), Los Angeles in 1947 ranked as the fourth most populous in the country. Estimates of the County Planning commission placed the city population at 1,921,285 as of Oct. 1, 1947 (1940 census, 1,504,277), and the county at 3,849,390. The metropolitan area was estimated at 3,146,000, making it the third largest in the U.S. Fletcher Bowron was mayor in 1947.

Los Angeles' industrial growth continued during the year. By Nov. 1 industrial development had reached $112,817,500, compared with a 1946 total of $155,838,492. Business activity was high-lighted by establishment in Los Angeles of several large firms' headquarters, expansion of steel plants, addition of new garment factories and a wide variety of general manufacturing. Manufacturing employment was estimated at 237,600 as of Sept. 1, compared with 106,614 (U.S. census) in 1940. That was 46% of the total for all California. Los Angeles continued leadership in aircraft manufacture, with several firms producing not only the most modern commercial planes but also filling regular and experimental orders on military craft challenging supersonic speeds.

Inadequate housing to accommodate the huge population influx remained a serious problem during 1947, although new construction progressed at a fast pace. By Oct. 1947, 17,721 new family units had been started for the year in the city, with a value, when finished, of $113,790,722; by September, 42,060 were started in the entire county, carrying a value of $260,953,403.

In 1946 the value of Los Angeles county agricultural products exceeded $214,800,000, a new record.

The total tax rate for the 1947–48 fiscal year was set at $5.2226 per $100 of assessed valuation, with assessment based on approximately 50% of real estate market value. The $5.2226 figure included $1.4937 for the county, $1.5754 for the city, and other amounts for schools and special districts. Assessed valuations, higher because of greater value of property as well as many improvements, were $2,140,499,412 for the city and $3,938,544,245 for the county. The 1947–48 city budget was $210,486,617, including $74,272,169 general; $10,750,228 for pensions; $7,606,252 for library, parks and recreation; $30,853,294 for the harbour, water and power department and airport. (C. S. B.)

## Louisiana.

One of the west south central states of the United States, admitted to the union in 1812 as the 18th state, Louisiana is popularly known as the "Pelican state," "Creole state" or "Bayou state." Area 48,523 sq.mi., of which 45,177 sq.mi. are land. Pop. (1940) 2,363,880, of which 1,383,441 or 58.5% were rural and 980,439 or 41.5% urban; 64% native whites, 34.3% Negroes and 1.7% foreign-born. On July 1, 1945, the bureau of the census estimated the state's population at 2,456,057. Capital, Baton Rouge (34,719). Other important cities: New Orleans (494,537), Shreveport (98,167), Monroe (28,309), Alexandria (27,066), Lake Charles (21,207), Lafayette (19,210).

**History.**—The legislature did not meet in regular session in 1947, but in March a five-day extra session was convened to appropriate funds from the mounting treasury surplus to meet pressing needs during the remainder of the 1946–48 biennium. Most important of these appropriations were $10,000,000 for teachers' salaries, $6,500,000 for building construction at the state's colleges and universities and $500,000 for the department of welfare.

Aside from the extra legislative session, the chief political activity of the year centred about the gubernatorial campaign to be decided in the state Democratic primary election of Jan. 20, 1948. Gubernatorial candidates were former governors Sam H. Jones and Earl K. Long (brother of the former governor Huey P. Long), congressman James H. Morrison and Judge Robert F. Kennon of the state court of appeals. The campaign was reaching a climax at the close of the year.

Other important events of the year were: continued activity in residential and commercial building construction; enlarged state highway building and maintenance program, which had been retarded during the war years by shortages of labour and materials; a program of expansion and modernization of the state's charitable and correctional institutions; continuation of the controversy between the state and federal governments over the control of coastal waters in which valuable petroleum deposits were located; strikes of Southern Trailways bus drivers and maintenance men and of the dairy farmers producing milk for the New Orleans market; overcrowded conditions in most of the elementary, secondary and higher educational institutions; the tropical hurricane of Sept. 19, which caused damages of millions of dollars to buildings and crops, with wind velocity of 110 mi. per hour at New Orleans and 60 mi. per hour as far inland as the central part of the state; and the mounting state income from taxes of all kinds, which reached a new high because of prosperous conditions in agriculture and industry.

State officers in 1947 were: James Houston Davis, governor; J. Emile Verret, lieutenant governor; Wade O. Martin, Jr., secretary of state; A. P. Tugwell, treasurer; L. B. Baynard, auditor; Fred S. LeBlanc, attorney-general; John E. Coxe, superintendent of education; Lucile May Grace, register of land office; Harry D. Wilson, commissioner of agriculture and immigration.

**Education.**—In 1947 the 820 public schools for whites enrolled 213,003 elementary and 58,542 high school pupils and employed 10,227 teachers; the 1,566 public schools for Negroes enrolled 151,686 elementary and 14,613 high school pupils and employed 4,706 teachers. The 179 private schools for whites enrolled 47,258 elementary and 9,626 high school pupils and employed 1,798 teachers; the 83 private schools for Negroes enrolled 13,051 elementary and 2,738 high school pupils and employed 391 teachers. The state maintained 11 public trade schools, and several private trade schools were operated for the training of veterans of World War II.

State appropriations for the 1947–48 fiscal year were more than $36,000,000 (exclusive of local funds) for public elementary, secondary and trade schools and $12,000,000 for state-supported colleges and universities. All the colleges and universities were crowded to capacity by veterans seeking higher education under the federal assistance program.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—Readjustment allowances paid to Louisiana veterans of World War II dropped from $9,253,762 in 1946 to $4,548,447 in 1947; civilian unemployment compensation dropped from $12,074,734 in 1946 to $6,287,593 in 1947. Total payments made by the Louisiana division of unemployment security, for all purposes, dropped from $46,034,235 in 1946 to $29,576,291 in 1947.

Louisiana expended $25,000,000 on public welfare work in 1947. The monthly average of persons on the welfare rolls was 113,000, including 56,595 aged persons, 43,542 dependent children, 1,929 needy blind, 582 foster children and 9,691 special cases. In spite of labour shortage and high wages in industry and agriculture, state expenditures for public welfare were higher in 1947 than in 1946.

The state maintained the following institutions in 1947: charity hospitals at New Orleans, Shreveport, Lafayette, Monroe, Pineville, Independence and Bogalusa; hospitals for the insane at Jackson and Pineville; tuberculosis sanitariums at Greenwell Springs and Ruston; state schools for blind and deaf at Baton Rouge (for whites) and at Scotlandville (for Negroes); a training school for the feeble-minded at Alexandria. A special training school for spastic children was under construction at Alexandria, and a new hospital for the insane and three additional tuberculosis sanitariums were projected in 1947.

The state maintained 2 prison farms for its 3,300 adult offen separate training institutes for about 350 white juvenile delinqu new training institute for delinquent Negro boys was complet Baton Rouge in 1947.

State appropriations for charitable and correctional institutio $20,000,000 for the 1947–48 fiscal year, about $5,000,000 of wl for expansion and modernization of the existing facilities.

**Communications.**—In 1947 Louisiana had 18,200 mi. of publ ways, 14,800 mi. of which were state-maintained, 10,500 m gravelled and 4,300 mi. paved. State expenditures for highwa tenance and new construction amounted to $25,000,000 in 1947 were 4,400 mi. of railways and 4,800 mi. of navigable waterwa intracoastal waterway which crosses the lower section of the st ried 12,500,000 tons of freight through the three locks connecting the Mississippi river in 1947. New Orleans, Baton Rouge an Charles are ports for ocean-going commerce, with aggregate tonr nearly 45,000,000 in 1946, distributed as follows:

### Table I.—*Commerce of Louisiana Ports in 1946*

| Ports | Foreign | Coastwise and Internal | |
|---|---|---|---|
| New Orleans . . . . . . | 6,572,177 | 20,000,000 (est.) | 26 |
| Baton Rouge . . . . . . | 487,353 | 7,880,612 | 8 |
| Lake Charles . . . . . . | 1,375,208 | 8,676,783 | 10 |
| Totals . . . . . . . . | 8,434,738 | 36,557,395 | 44 |

There were 40 airports for land planes and 11 seaplane ba anchorages in operation in 1947. Nearly 366,000 telephones service at the close of the year.

**Banking and Finance.**—Louisiana had 33 national banks in 194 total deposits of $1,085,000,000 and resources of $1,132,000,0 125 state banks, with total deposits of $440,000,000 and resou $468,000,000. There were 61 savings and loan associations, wi resources of about $125,000,000. State budget for the 1946–4 year: receipts $125,000,000; expenditures $115,000,000. The state debt was about $150,000,000.

**Agriculture.**—A cold, wet spring retarded seeding operations, summer drought and the September hurricane reduced the yield of the principal crops in 1947. However, higher prices for most cr for livestock and poultry and their products boosted the tota cultural income above that for 1946.

Total value of agricultural and truck crops in 1947 was $250,0 compared with $230,000,000 in 1946; total acreage harvested was 000, about the same as in 1946. Total cash income from crops a stock and poultry and their products was nearly $400,000,000 i compared with $350,000,000 in 1946; from government payments 000, compared with $9,500,000 in 1946.

### Table II.—*Leading Agricultural Products of Louisiana, 1947 and 1*

| Crop | 1947 | |
|---|---|---|
| Cotton (bales) . . . . . . . . . . . . . . . . . | 505,000 | |
| Corn (bu.) . . . . . . . . . . . . . . . . . . . | 13,440,000 | 15, |
| Rice (bu.) . . . . . . . . . . . . . . . . . . . | 21,630,000 | 22, |
| Sugar cane (tons) . . . . . . . . . . . . . . . | 4,000,000 | 4, |
| Sweet potatoes (bu.) . . . . . . . . . . . . . . | 7,100,000 | 10, |
| Irish potatoes (bu.) . . . . . . . . . . . . . . | 1,500,000 | 2, |
| Oats (bu.) . . . . . . . . . . . . . . . . . . . | 3,500,000 | 3, |
| Hay (tons). . . . . . . . . . . . . . . . . . . | 400,000 | |
| Pecans (lb) . . . . . . . . . . . . . . . . . . | 4,400,000 | 8, |
| Peanuts (lb.) . . . . . . . . . . . . . . . . . | 1,500,000 | 1, |
| Peaches (bu.) . . . . . . . . . . . . . . . . . | 270,000 | |

| Citrus fruits (boxes) . . . . . . . . . . . . . | 260,000 | |
| Truck crops (value) . . . . . . . . . . . . . . | $20,000,000 | $21, |

**Manufacturing.**—The demand for manufactured products kept Louisiana industries working at wartime level during 1947. Nearly industrial establishments, employing 150,000 workers and paying 000,000 in wages, produced finished products worth $1,100,000, 1947, as compared with about $1,000,000,000 in 1946. Louisiana tries were not seriously affected by strikes and labour difficulties the year. Several new industrial plants were located in Louisian many large expansions were made to existing plants, under the sta exempting capital investments in industry from taxation for a pe ten years.

**Mineral Production.**—Increased demand pushed production of Louisiana minerals beyond previous levels in 1947, although dropped below the 1946 figures.

### Table III.—*Principal Mineral Products of Louisiana, 1947 and 194*

| Mineral | 1947 | 1 |
|---|---|---|
| Petroleum (bbl.) . . . . . . . . . . . . . . . | 155,000,000 | 140, |
| Natural gas (M. cu. ft.) . . . . . . . . . . . | 530,000,000 | 600, |
| Natural gasoline (bbl.) . . . . . . . . . . . . | 3,700,000 | 2,6 |
| Sulphur (tons) . . . . . . . . . . . . . . . . | 770,000 | |
| Salt (tons) . . . . . . . . . . . . . . . . . . | 775,000 | |
| Shell (tons) . . . . . . . . . . . . . . . . . | 2,300,000 | 1,4 |
| Sand (tons) . . . . . . . . . . . . . . . . . . | 1,775,000 | 1,3 |
| Gravel (tons) . . . . . . . . . . . . . . . . . | 3,800,000 | 2, |
| Stone (tons) . . . . . . . . . . . . . . . . . | 632,000 | 7 |

Total value of mineral production in 1947 was estimated at mor $300,000,000, compared with $280,000,000 in 1946. Some new pet and natural gas fields were discovered during the year.

**Forest Products, Furs, Fisheries.**—Louisiana forests produced 1,100,0 bd.ft. of lumber and 700,000 cords of pulpwood in 1947, compare 1,000,000,000 bd.ft. and 675,000 cords in 1946. The 1946–47 tr on in Louisiana yielded 8,475,563 pelts valued at $9,214,783, com- ed with 8,869,609 pelts valued at $15,553,185 for the 1945–46 season. isiana fisheries produced catches valued at $9,603,210 in 1944, $3,- ,022 representing fresh-water and $6,042,188 salt-water varieties. ches of all varieties in succeeding years declined numerically, but the tly increased prices of all fishery products brought the total value in 7 about as high as that for any previous year. (W. Pr.)

**vett, Robert Abercrombie** (1895– ), U.S. government official, banker l lawyer, was born on Sept. 14 in Huntsville, Tex., the son "Judge" Robert Scott Lovett, who ran the Union Pacific road for the Harrimans. He was graduated from Yale uni- sity in 1918 and took postgraduate courses in law and busi- s administration at Harvard university until 1921. During rld War I, he was in the naval air service.

Starting as a bank clerk, he later became a partner in the king firm of Brown Brothers and Harriman. In Dec. 1940, accepted an appointment as special assistant to the secretary war, and in April 1941 was made assistant secretary of war air.

ovett resigned from the war department in Nov. 1945 to urn to his private business, but on May 12, 1947, was ap- nted undersecretary of state. As Secretary of State George C. rshall was frequently out of the country on important diplo- tic assignments, much of the burden of running the state artment fell on Lovett. He took up the administration lgel for prompt relief aid to western Europe. Alarmed by the ssian establishment of the Cominform, successor to the mintern, Lovett contended, on Oct. 8, 1947, that the new nmunist agency was intended to prevent, if possible, the eco- nic recovery of Europe. He insisted, however, that the U.S. uld not be thus "deflected" from its goal to aid stricken ions.

**mber.** During the first six months of 1947, production of lumber in the U.S. was progressively increased bour was more readily available and there was increased ciency in getting out sawlogs for lumber on the 40,000 logging erations throughout the country. The year was also marked much more efficient operation and consequently greater pro- ction at the sawmills. Lumber production in 1947 was about ,500,000,000 bd.ft., which was considerably above the volume oduced during the past few years.

Elements that prevented greater lumber production were ight car shortages, particularly on the west coast, and the lure of the intercoastal water movement of lumber from the st coast to materialize, both to California points of destina- n as well as to the Atlantic seaboard. Prior to World War this movement of lumber reached a yearly volume of 1,000,- 0,000 to 2,000,000,000 bd.ft. The excessive cost of ship eration in 1947 was the principal cause of the relatively low vement of water-borne lumber. Costs of moving lumber from west coast to the east coast of the U.S. were about $22 to 5 per 1,000 bd.ft. in 1947 as contrasted with prewar costs of out $10 to $14 per 1,000 bd.ft. Rail rates were also increased the Interstate Commerce commission.

The principal species produced in 1947 by the lumber in- stry, in order of production, were: southern pine, Douglas ponderosa pine, oak, white pine, hemlock, red gum, yellow plar, maple and white fir. Of the total volume produced, the st three named constituted more than 70%. Other important ecies were redwood, tupelo gum, beech, cypress, sugar pine, tonwood, western larch, hickory, elm and birch. Some species merly neglected or produced in small volume, notably white and western larch, moved into greater production during 47.

The leading lumber-producing states were Oregon, Washington and California on the west coast, followed by North Carolina, Virginia, Arkansas, Alabama, Georgia, Texas, Mississippi, South Carolina and Louisiana. All of the last nine named states produced southern pine and some hardwoods. Maine and New York also continued to be important lumber-producing states, in spite of repeated cutting, fires and other deterring influences.

About 50% of the total lumber production in the U.S. was produced from a relatively few large mills and the balance from a very large number of small mills. There were about 35,000 sawmill units of all sizes in the U.S. during 1947, most of them located in the south.

Prices for lumber fell sharply in the late spring and early summer. For example, No. 2 common southern pine boards used for sheathing, sub-flooring, concrete forms and many other purposes fell from about $90 per 1,000 bd.ft. delivered on a wholesale price basis in New York city to about $50 to $60 per 1,000 bd.ft., depending upon points of origin in the south. By the middle of summer, these prices had returned to around $95 to $100 per 1,000 bd.ft. A strong demand continued for the upper grades, notably for flooring, as well as for B and better grades in the softwoods and firsts and seconds among the hardwoods. Toward the end of the year, prices continued on a confused basis with a decided tendency to strengthen in anticipation of an active spring building program.

Stumpage prices for commercial timber continued to remain at a high level, in some cases even higher than in 1946. Many purchases of southern pine stumpage were sold at $25 per 1,000 bd.ft. Many of the higher valued hardwoods, such as oak, were sold for from $30 to $50 per 1,000 bd.ft., depending upon grade outturn. Northern white pine in New England and the Great Lakes states was sold for from $15 to $30 per 1,000 bd.ft., depending upon quality.

Many lumber companies, including some of the largest and oldest, made progress in putting their forests under a permanent system of sustained yield management. Almost twice as much lumber was cut from national forest timber in 1947 as was cut before the war. Access roads had made much timber in the national forests available for cutting. (N. C. B.)

**Europe.**—Thirty-four countries sent representatives to the International Timber conference, organized by the Food and Agriculture organization at Marianské Lázne, Czech., from April 28 to May 10, when a thorough examination was made of the timber needs of both Europe and the United Kingdom. It was estimated that during 1947 the export supplies of softwoods available for Europe from all sources would be 2,509,000 standards, whereas the normal import requirements from the same area were declared to be 4,044,000 standards. It was therefore recommended that all the constituent nations should take steps either to increase their production by 10% or to reduce their estimated consumption by an equivalent amount. At a meeting of the Emergency Economic Committee for Europe held earlier in the year, the following import quotas had been accepted by the countries concerned as their absolute minimum requirements:

| | Standards |
|---|---|
| Great Britain | 1,122,000 |
| France | 200,000 |
| Netherlands | 210,000 |
| Belgium and Luxembourg | 147,000 |
| Denmark | 103,000 |
| Italy | 117,500 |
| Switzerland | 47,500 |
| Total | 1,947,000 |

**Great Britain and the Commonwealth.**—It was estimated that during the first six months of 1947 the United Kingdom received in softwoods and hardwoods, including both imported goods and home production, 817,000 standards, as compared with 569,000 standards during the same period in 1946; during the same period in both years plywood supplies remained constant at about 175,000 cu.m., including both imported and home production.

It was considered that in 1947 Canada would make a softwood contribution to Europe of about 550,000 standards, of which total about 500,000 standards would be received by the United Kingdom. Production in Canada of both softwoods and plywood was at record figures during the year. In September the Canadian Timber control relinquished its hold over prices, both internal and external. Domestic prices had before been controlled at about two-thirds of the level ruling in the export market. The effect of decontrol was to produce a rise in domestic prices equal to about half of this difference. Well-informed circles, however, were of the opinion that Canadian lumber prices had probably seen their peak.

Generally speaking, global prices paid for both softwoods and hardwoods during 1947 showed some increase over those of 1946. This position, however, was likely to be reversed when bulk contracts should be discussed for 1948 shipment, because of the increase in production and the currency difficulties of international payments, particularly with regard to dollars. The question of means of payment had indeed replaced production as the problem mainly concerning the United Kingdom and the commonwealth.

The fifth British Empire Forestry conference was held in London during June and July, and was attended by representatives of all the dominions and colonies under the chairmanship of Lord Robinson. A resolution was passed in favour of maintaining the principle of sustained yield, with the proviso that during periods of timber scarcity it might be permissible to overcut for a limited period. The closing act of the conference was to pass a resolution recommending that the sixth British Empire Forestry conference should meet in 1952 in either India or Canada. (*See* also FORESTS.) (B. L.)

**Lutherans.** No other Protestant church suffered as much dislocation of its people, destruction and confiscation of its property in World War II as did the Lutheran. In 1947 Lutherans gathered their total strength to bring spiritual and material aid to their church in Europe and to their threatened foreign missions in Asia and Africa.

Focus of this effort was the meeting in Lund, Sweden, June 29 to July 6 of delegates, representing the major divisions of the church in the Americas, Europe and Asia, to form the Lutheran World federation. Confronted by its own martyrs (many of the delegates had been imprisoned and been caused to suffer in other ways because of their heroic services in the resistance movements before and during the war), the assembly was solemnized to face with equal courage the dismaying demands of its world service. Recognizing its responsible place in the whole family of Christian churches, the federation encouraged its constituent bodies to unite with the emergent World Council of Churches. Anders Nygren, world-renowned Swedish theologian, was chosen first president, and Sylvester C. Michelfelder, U.S., first executive secretary. World headquarters were established in Geneva, Switz. Affiliated bodies included more than 60,000,000 Lutherans, speaking more than 100 languages and dialects.

North American Lutherans associated in the National Lutheran council were able to celebrate by year's end their overpaying by $500,000 their $10,000,000 Lutheran World Action goal for 1946–47. This brought to more than $27,000,000 the relief gifts in money and goods gathered by American Lutherans after 1940.

Contributing greatly to this church's new sense of world unity and understanding were the increasingly numerous war visits of its leaders to sister churches in other lands. A these journeys two unique ones were taken in 1947. Th which saw two deaconesses fly from the U.S. to establis Lutheran diaconate in India also saw a modern re-enac of the Mayflower drama when 23 Estonian Lutherans, persecution, disembarked at Savannah, Ga., after a 7 crossing of the Atlantic in a 35-ft. open boat. (*See* also CH MEMBERSHIP.) (F. E.

**Luxembourg.** A grand duchy situated between France many and Belgium. Area, 999 sq.mi.; (est. 1945) 281,572; chief city, Luxembourg (cap. 59, language, Luxembourgian (idiomatic) and (officially) F and German; religion 98% Roman Catholic. Ruler from Grand Duchess Charlotte.

**History.**—The cabinet resigned on Feb. 13 as a result o flict between Socialists and Christian Socialists, and on Ma a new cabinet, containing neither Socialist nor Communist bers, was formed by Pierre Dupong (Christian Socialist March the minister of economic affairs introduced a new lowering policy to maintain equilibrium between prices wages. In October the Commission for the Restitution of etary Gold allocated 1,929 kg. (68,042.77 oz.) of fine go Luxembourg as one of the countries despoiled of gold by many. Ratifications of the customs union between the Ne lands and the Belgo-Luxembourg economic union took pla Oct. 29. (J. R.

**Finance.**—Revenue (est. 1947) Fr.2,054,133,737; expenditure Fr.2 751,000. Consolidated debt (Nov. 1946) Fr.1,392,588,605. The exc rate is 1 Fr.=2.27 U.S. cents (domestic rate, Oct. 1947).

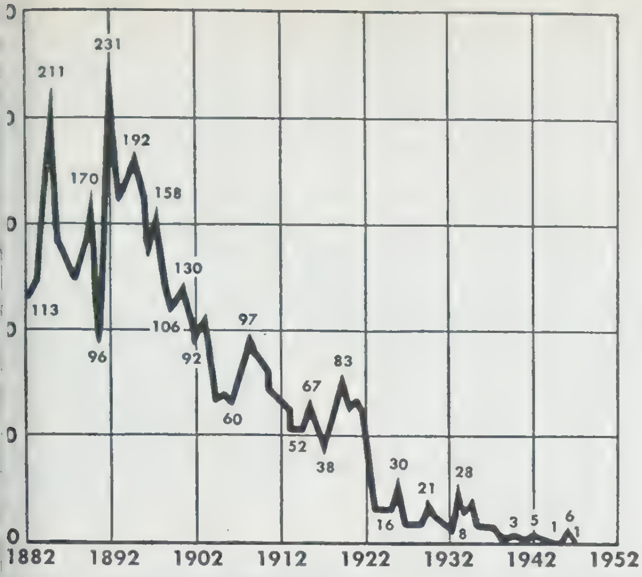
**Industrial Production.**—(July 1946–June 1947 in short tons): pig and ferroalloys 1,740,000; steel ingots and castings 1,636,000.

**Foreign Trade.**—In customs union with Belgium. British board of figures (1947, first eight months): Luxembourg to United Ki £156,837; United Kingdom to Luxembourg £157,671.

**Lynching.** The U.S. lynching record again approache vanishing point in 1947 with only one rep victim. Although in the previous year 3 mobs had take lives of 6 persons, the average for the decade 1938–47 was than 4 victims per year, contrasted with an annual averag 83 for the previous 56-year period during which accurate ords were kept. That the mob spirit was not yet dead, how was evidenced by the fact that 31 lynchings were threaten 1947, and were prevented only by timely action, chiefly on part of police officers.

The one lynching of the year was that of Willie Earle, year-old Negro who was taken from the jail in Pickens, on Feb. 17 and beaten and shot to death on the roadside a miles away. Earle was accused of the robbery and fatal stab 24 hr. earlier of T. W. Brown, 50-year-old taxicab drive near-by Greenville. Gov. J. S. Thurmond immediately issu statement promising that every effort would be made "to prehend the persons responsible for the atrocity." Assiste state and federal agencies, Sheriff R. H. Bearden of Green county, promptly launched an investigation which led to arrest of 27 men within 3 days, and 4 others later. Twe eight of the 31 were taxi drivers, and 26 of these signed sworn confessions of participation in the mob. All were sh indicted by the grand jury on charges of murder and conspi to murder.

When the case came to trial in Greenville, the prosecu evidently did everything possible to secure convictions, bu no avail. Three of the accused were freed by the judge directed verdict and the others were acquitted by the jury. N of the defendants took the witness stand, and defense attor argued that their unsworn confessions had been made u



NCHING in the U.S. from 1882 to 1947, based on figures of the department ecords and research, Tuskegee institute

ress. The verdict elicited many expressions of surprise and ret throughout the south as well as in other sections. "The ole nation must hang its head in shame," said the *Richmond nes Dispatch* (Va.) in comment on the verdict.[1] The *Atlanta urnal* (Ga.) called it "a ghastly farce . . . a verdict for rchy."[2] It was "a scathing reproach to South Carolina jus-e," said the *Roanoke Times* (Va.),[3] and according to the *ntgomery Advertiser* (Ala.) the verdict "brought shame up-South Carolina, the South and the nation."[4]

A parallel case during the year was the failure of North Caro-a courts to convict members of a mob which took from jail dwin Bush, a Negro accused of criminal assault, presump-ely with the purpose of lynching him. Bush was fortunate ough to escape from the mob, however, gave himself again o custody and later was set free for lack of evidence. Mean-e, several alleged members of the mob were arrested, indicted d vigorously prosecuted, but without success.

A notable aspect of both these cases was the fact that nest efforts were made to secure convictions. With more than oo lynchings recorded, comparatively few lynchers had ever en brought into court, and in nearly 50 years only 82 had en convicted. (R. B. E.)

**acao:** *see* Portuguese Colonial Empire.

**acArthur, Douglas** (1880– ), U.S. army officer, was born Jan. 26 in Little Rock bar-cks, Ark. (See *Encyclopædia Britannica.*)

After Pearl Harbor, he led U.S. and Filipino forces in the fense of the Philippines until March 17, 1942, when President D. Roosevelt ordered him to Australia to assume command the United Nations armies in the Southwest Pacific. Starting om New Guinea, MacArthur took the offensive, never relin-ishing it until Japan's surrender. MacArthur, who had been ade a general of the army in 1944, was appointed supreme lied commander for Japan after Hirohito's capitulation broad-st, Aug. 14, 1945, and he headed the Allied delegation that cepted the Japanese surrender in Tokyo bay on Sept. 2 of at year.

MacArthur's early reports on the results of the occupation ere marked with concern over the growth of communism in Japan, although those issued subsequently were more optimistic. By 1947, it was conceded even by critics that his occupation had indeed been impressive. He had given the Japanese, in little more than a year, a bill of rights, a democratic constitution and emancipation from feudal shackles for nearly all classes of Japanese society. Some, however, contended that giving the Japanese democracy on paper was not establishing it in fact, and there were a few complaints that MacArthur was the advance agent of U.S. "imperialism" and that his control of Japan was virtually absolute.

In his statements on the occupation, the general said, March 17, 1947, that he favoured immediate initiation of negotiations for a peace treaty and preparations to evacuate Allied occupation armies. Expanding on this theme, June 27, he said that the occupation task was virtually completed. Later, he praised Japan's progress, asserting that there need be no fears of an economic collapse. MacArthur's name was frequently mentioned among the Republican party's presidential prospects toward the close of 1947. His strength resided largely in midwest "noninterventionist" strongholds.

**McCloy, John Jay** (1895– ), U.S. government official, world bank executive and lawyer, was born on March 31 in Philadelphia, Pa. A student at Harvard law school when the U.S. entered World War I, McCloy served in the army as an artillery officer in France. After the armistice, he returned to Harvard, graduating in 1921, and between 1921 and 1940 practised law with prominent firms on Wall Street. McCloy's handling of the celebrated Black Tom case, in which he won $20,000,000 for the claimants, brought him to the attention of Henry L. Stimson, then secretary of war, who appointed him as expert consultant to the secretary of war in Oct. 1940. The following April, McCloy was made assistant secretary of war.

Two months after the end of World War II, McCloy resigned (Nov. 1945), to return to his law practice. Hardly more than a year later he was asked to take the presidency of the International Bank for Reconstruction and Development. At first McCloy was reluctant to run for the post, but reconsidering, he accepted and was elected Feb. 28, 1947. In the ensuing months, McCloy made several important policy statements. On one occasion, he stated that the bank had to take "calculated risks" if it intended to perform its functions properly. On another, he said (Sept. 10) that Britain was entitled to apply to the bank for a loan to modernize its productive machinery, but that it could not ask the bank for funds for the purchase of food.

**McGill University.** This university at Montreal, Canada, was established in 1821 by royal charter to provide higher education for the English-speaking minority population of the province of Quebec. Of the 7,808 students enrolled in regular university courses for the session beginning in Oct. 1947, 5,187 were from Quebec province and 1,834 from the other Canadian provinces, 285 from other parts of the British empire, 327 from the United States, 72 from Mexico, Central and South America and 103 from other parts of the world, including Iceland, Greenland, Alaska, Europe, Africa, the middle east and Asia. Of these undergraduates, 459 received scholarships and bursaries totalling $93,953. Of 544 students enrolled for postgraduate degrees, 134 received fellowships and scholarships amounting to $125,680.

As an expression of its determination to provide the best possible opportunities for veterans, the university spent $5,624,925 during the year, of which $4,103,252 was for academic facilities and $1,521,673 to provide board and residence for

*Montgomery Advertiser*, Montgomery, Ala., Feb. 1947.

3,215 of the student population. The income was $4,676,139, and the deficit therefore amounted to $948,786, of which only a part was refundable by the government under the Demobilization Orders-in-Council.

Total gifts, grants and bequests during the year were $1,560,140 in money, and additions to the physical fabric included the residence of George Herrick Duggan and the donation of McIntyre park, a large wooded tract of ten acres situated in the heart of the city adjacent to the university grounds, as well as the erection of the Donner Laboratories for Medical Research. (For statistics of endowment, enrolment, faculty, library volumes, etc., *see* also UNIVERSITIES AND COLLEGES.)

(F. C. J.)

**McGrath, James Howard** (1903– ), U.S. senator and lawyer, was born on Nov. 28 in Woonsocket, R.I. He was graduated from Providence college and received his law degree from Boston university in 1929.

Starting his political career as a Democratic precinct doorbell ringer, McGrath worked his way up the ladder, and by 1940 he was the party's candidate for governor of the state. He was elected and twice re-elected, but left the gubernatorial office in 1945 to become U.S. solicitor general. He resigned this post in turn to make his successful campaign in Nov. 1946 for the U.S. senate, one of the few Democratic candidates that survived the Republican tide that swept the country that year.

His appointment as chairman of the Democratic national committee (to succeed Robert E. Hannegan) was disclosed on Sept. 27, 1947; it came as a distinct surprise to many Washington observers since McGrath's voting record and speeches placed him in the camp of the "old-line" party liberals of the pre-Truman era.

In one of his first important actions as party chairman, McGrath, on Oct. 29, 1947, persuaded the Democratic national committee not to deliver a scheduled attack on the record of the G.O.P.-dominated 80th congress on the ground that it would serve neither the president's nonpartisan program nor the national interest.

**Machinery, Farm:** *see* AGRICULTURE.

**Machinery and Machine Tools.** More new types and models of machine tools were developed during 1947 than in any other year of the preceding decade. It was the first year since the end of World War II during which design changes were adopted by the entire machine tool industry; such designs had been frozen at the war's beginning to expedite production.

A principal reason for the industry's exceptional performance was the first Machine Tool show in 12 years, held at the Dodge-Chicago plant in Chicago from Sept. 16 to 26; companies hastened completion of postwar models for display at this show, which was attended by more than 175,000.

The new developments fell into two main classifications: standard, general-purpose machines, which, in many cases, had been redesigned from the base up; and special-purpose machines. The latter group provided the more spectacular examples of new machining processes adaptable to the needs of large-scale, mass-production companies.

Users had shown a predilection for so-called "processing" (sometimes known as "transfer-type") machines—a combination of units tied together by conveyors and operated as an integrated whole. An unmachined part, such as an automobile cylinder block, is carried through a succession of operations from which the block emerges as a completely machined product. Prime example of these "transfer-type" machines w
producing 150 automobile rear-axle housings per hour wit
one operator. These machines obviously could be applie
to high-production operations such as those of the auto
industry. Typical of the trend toward "specials," apart
the so-called "transfer-type" machines, was a ten-spindle
gear shaper—actually a group of ten-gear shapers designe
one compact unit. Each of the ten stations could perf
different operation on a gear, or a combination of st
could do the same operation simultaneously.

All the new general-purpose machine tools showed m
improvements—more power, greater flexibility, less c
over time, higher output, easier operation, more auto
cycling. A substantial amount of the new design resulted
the desire of machine tool builders to keep abreast of de
ments in cemented carbide tooling. Carbide tools had re
tionized machining and had stepped up amazingly the s
and feeds with which machining could be done, thus incre
sharply production per machine-hour. Carbide tools in
necessitated redesign of machines for greater rigidity
greater power.

Standard machine tools had made the task of the ope
simple, with all operations automatic after the initial bu
pressing. In a fraction of a minute, an engine lathe cou
transformed from an automatic, high-speed unit into a
operated unit for a small-lot job. Automatic cycling ha
come commonplace. Automatic feed and rapid-traverse c
with rise-and-fall tables to clear the cutter on return,
provided on milling machines, for example, in almost any
bination of interrupted cuts with uniform or variable sp

Cylindrical grinders were equipped with automatic sizi
one case with electrical gauge heads which measured di
and stopped the grinding cycle within tolerances of a ten
a thousandth of an inch. To speed production grinding,
matic control with rapid approach and withdrawal was
veloped. Automatic loading was used, including hopper
on centreless units.

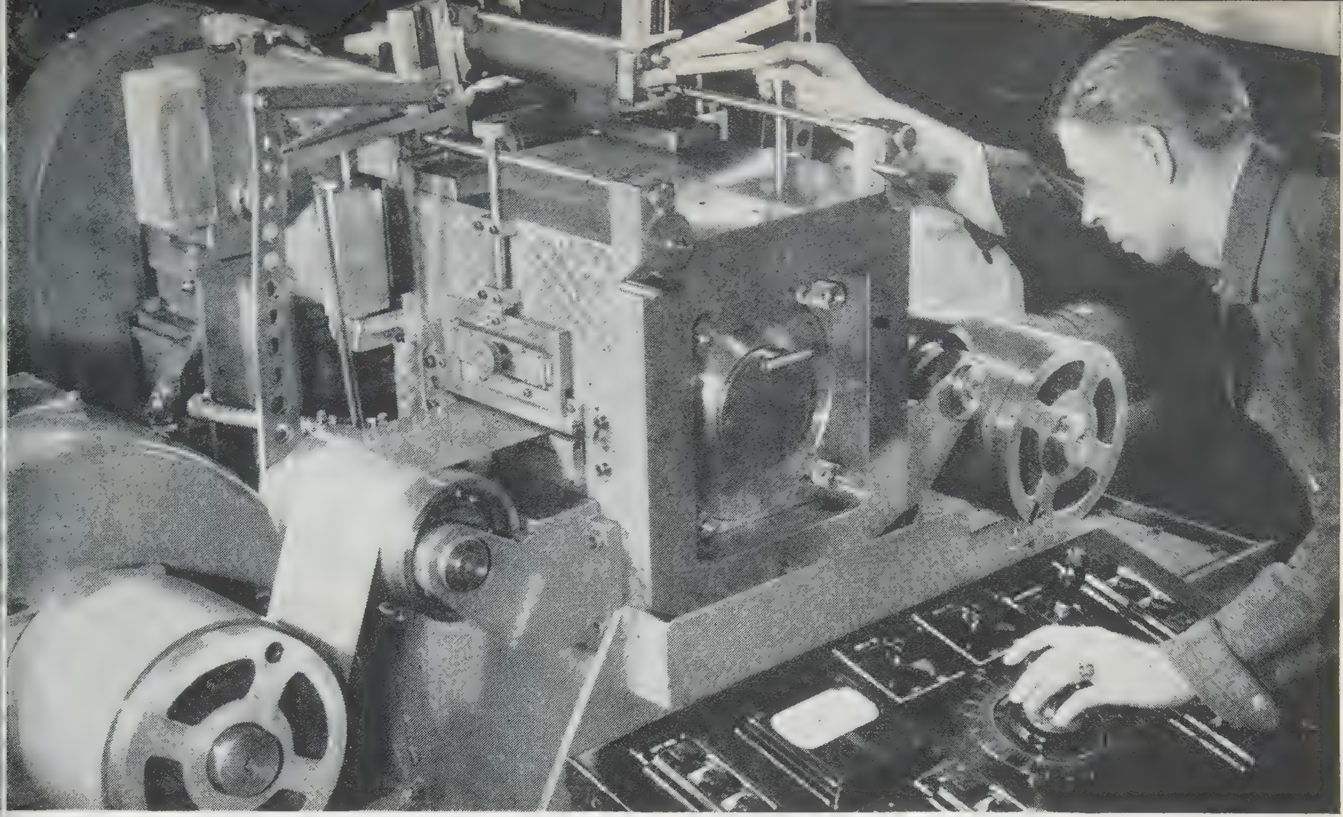
The greater flexibility of new machines was demonst
by a new toolroom lathe with a speed adjuster controlling
than 300 speeds from 6 to 1,500 r.p.m. More than 100 sp
could be obtained in each of three ranges provided by the
bination gear-belt drive headstock without stopping the sp
rotation. Closer tolerances featured many new machine t
improved grinding wheels and careful machine adjustment
instance, made possible surface grinding to limits of 0.
in. and a finish of one or two microinches.

Electronic control had come into considerable favour.
new honing machine had automatic electronic control of op
tions after the bore was honed to size. The cycle included
out, tool collapse and withdrawal. At least one lathe
equipped with electronic-controlled feeds.

Electrification of machine tools progressed notably; s
of the highly complex machines had as many as 17 mo
The control panels alone were often so large as to req
separate housing. It was not unusual for the electrical eq
ment to cost 25% to 30% of the total price of the mac

Postwar-designed machine tools were at least one-third
productive than previous types and models, and the incr
in some cases rose to several times the maximum rate of
replaced model.

Total shipments of the U.S. machine tool indu
amounted to about $300,000,000 in 1947, slightly under
figure for the previous year. After allowance for increa
prices, however, unit production was estimated at only 8
to 85% of that for 1946. Nevertheless, the physical volume
output was comfortably above the best prewar year, 1



NIATURE ROLLING MILL used at the Pittsburgh laboratories of the West- house Electric Co. in 1947, in testing very thin metal alloys for possible in reducing the size and weight of aircraft motors and generators

ien dollar shipments were $185,000,000. Builders ended 1947 th a backlog of more than $100,000,000, and production at out $25,000,000 a month.

Business during the year was not uniformly good among all ilders. Some still suffered from the competition of government-owned, war-surplus machines, although the most critical ase of the surplus problem had passed. A certain shrinkage number of companies was an inevitable consequence of the ır, when the industry grew quickly far beyond normal bounds supply war-production requirements.

Foreign sales always had been a sizeable portion of the achine tool industry's business. Before World War II the erage export volume amounted to 20% of the total. In the mediate postwar period, the proportion was 25% to 30%. ports were to all parts of the world, but particularly to ıropean nations and to Latin America. U.S. builders sup- ied a liberal share of the world market formerly served by e German machine tool industry. (B. Fy.)

**Great Britain.**—Machinery played a big part in the drive to crease British exports during 1947, especially since it was ecided that heavy capital goods were to form one of the most portant items. The success of the drive was shown by the ct that exports of machinery from Great Britain for the third arter of 1947 were 60% higher than for the corresponding eriod of 1938. Total exports of machinery for the first nine onths of 1947 were £129,422,452 as against £75,193,071 for e corresponding period of 1946. New developments in British achine tool manufacturing recognized the need for special- rpose tools as a means of economizing in manpower and in- easing production, and designers were quick to exploit step- ss speed variation by electronic control. Various new types lathes figured prominently, and more importance was at- ched to the appearance of machine tools.

Interest was taken in the question of gas turbines; in view the fuel shortage these had possibilities for the generating industrial power. Examples of this type of engine were the e built and installed at Heaton, Newcastle-upon-Tyne, and experimental generator set weighing only 19 lb. per h.p., developed for industrial use. The railways also considered the possibilities of gas turbine locomotives, the Great Western railway having ordered one capable of 90 m.p.h. from Switzerland and another in England. The Southern railway had four similar locomotives under construction at its Brighton works; these were expected to haul the Atlantic expresses at 100 m.p.h. with 2,000 tons less coal per annum than steam locomotives. Research on marine gas turbines was carried out under the auspices of the Turbine Research association.

Many new ships were fitted with steam reciprocating machinery for propulsion, permitting considerable fuel economy on long voyages. An interesting new example of British mining machinery was a 102 h.p. diesel underground locomotive capable of hauling 375 tons at 4 m.p.h. In the field of motor manufacturing, a new 1,500 ton triple action press could complete a whole side for a car body in one process. (*See* also AUTOMOBILE INDUSTRY.) (J. LN.)

**Mackenzie King, William Lyon:** *see* KING, WILLIAM LYON MACKENZIE.

**McNeil, Hector** (1910– ), British statesman, was born in Scotland on March 10, and was educated at Woodside school, Glasgow, and Glasgow university. He contested Kelvingrove parliamentary division, Glasgow, Nov. 1935, and Ross and Cromarty, Feb. 1936; he was returned unopposed as Labour member for Greenock in July 1941 and again in the 1945 general election. In the Labour government in Aug. 1945, he was appointed parliamentary under secretary of state for foreign affairs, and in Oct. 1946 succeeded Philip Noel-Baker (*q.v.*) as minister of state; at the same time he was sworn a member of the privy council. McNeil represented Great Britain at the United Nations general assemblies in London and New York, 1946 and 1947, where in the absence of Ernest Bevin, he acted as a vice-president of the assembly. He also attended the five sessions of the Economic and Social council, held in 1946 and 1947. In the general debate at the second general assembly of the United Nations, which commenced in Sept. 1947, McNeil spoke of the proceedings of the United Nations being frustrated by "Russia's unwillingness to co-operate" and stated that the United Nations was the main instrument of Britain's foreign policy, and that the British government was prepared to try any method within the scope of the charter to facilitate the working of the United Nations.

⁂

## Magnesium.

The postwar demand that was expected to develop more or less spontaneously for magnesium failed to develop to any great degree, and it was discovered that a metal cannot step into a comfortable spot on the basis of its war record, but must make its place by competition and demonstration of its worth on a practical dollar and cent basis. In spite of the discouraging appearance of the production statistics shown in the table above, the metal was making a good start toward achieving its place in postwar industry.

*Data of Magnesium Industry in the U.S., 1940–46*

(In thousands of short tons)

| | 1940 | 1941 | 1942 | 1943 | 1944 | 1945 | 1946 |
|---|---|---|---|---|---|---|---|
| Primary output . . . . . | 6.3 | 16.3 | 49.0 | 183.6 | 157.1 | 32.8 | 5.3 |
| Secondary recovery . . . | ? | ? | 6.3 | 11.4 | 14.2 | 9.2 | 5.1 |
| Sales, primary . . . . . | 6.4 | 15.5 | 47.4 | 170.3 | 146.6 | 43.5 | 8.9 |
| Exports . . . . . . . . . | 0.8 | 1.5 | 4.0 | 35.6 | 21.0 | 0.5 | 0.2 |
| World output (est.) . . . | 41.6 | 65.9 | 115.8 | 263.0 | 232.7 | 54.5 | 13.2 |

While these figures were low as compared with some of the over-optimistic predictions of a year or two previously, they showed a healthy advance over the prewar years.

(G. A. Ro.)

## Magnesium Compounds.

During World War II there was a radical change in the production pattern for magnesium compounds in the United States. Magnesia may now be produced from any one of half a dozen sources, and not primarily from magnesite.

*Production of Magnesium Compounds in the U.S., 1939–46*

(Short tons)

| | Crude Magnesite | Caustic Calcined | Refractory | Total Magnesia | Other Compounds | Dead-burned Dolomite |
|---|---|---|---|---|---|---|
| 1939. . . . . . . | 198,980 | 10,157 | 86,077 | 96,234 | 85,754 | 671,561 |
| 1940. . . . . . . | 333,166 | 16,261 | 140,668 | 156,929 | 108,266 | 867,909 |
| 1941. . . . . . . | 374,799 | 30,225 | 201,481 | 231,706 | 137,357 | 1,069,887 |
| 1942. . . . . . . | 497,368 | 41,889 | 273,661 | 315,550 | 296,885 | 1,229,357 |
| 1943. . . . . . . | 754,832 | 191,792 | 301,382 | 493,174 | 737,062 | 1,276,725 |
| 1944. . . . . . . | 561,450 | 139,243 | 278,490 | 417,733 | 608,151 | 1,290,790 |
| 1945. . . . . . . | 336,458 | 43,270 | 254,994 | 298,264 | 201,501 | 1,187,334 |
| 1946. . . . . . . | 324,640 | 45,178 | 244,824 | 290,002 | ? | 1,077,983 |

While output during 1947 was well below the war peak, it was more than three times the prewar level, with most of the decline in "other compounds," the heading under which was classified most of the basic raw materials used in developing the war output of magnesium metal. (G. A. Ro.)

## Maine.

The extreme northeastern state of the United admitted as the 23rd state in 1820, and po known as the "Pine Tree state." Land area 31,040 water area 2,175 sq.mi.; pop. (1940) 847,226; rural 5 urban 343,057. Capital, Augusta (19,360); other cities land (73,643); Lewiston (38,598); Bangor (29,822). Th bureau of the census officially estimated the population state as 793,600 on July 1, 1944.

**History.**—Gov. Horace A. Hildreth announced that i 1948 he would be a candidate for the U.S. senate nomi The Republican-controlled Maine legislature met in regu ennial session in Jan. 1947. Proposals for sweeping char the tax structure were defeated, with income tax and g sales tax measures among those rejected. The gasoline ta raised two cents per gallon in 1947, and a new tobacco ucts tax passed, along with an increase in the existing cig tax. The legislature raised minimum pay scales for school teachers from the $1,000 existing rate to a $1,500– range.

Drought conditions in summer and fall months caused lakes and streams to drop to a low ebb, damaging wate plies and bringing about a serious shortage of hydroel power. More disastrous were numerous widely scattered fires, which levelled hundreds of homes and summer co and estates, virtually wiping out several small communitie seriously damaging others, such as Bar Harbor.

**Education.**—The net enrolment in the public schools for 1945–4 154,073 compared with 153,318 for 1945 and 152,788 for 1944. were 5,966 teaching positions for 1945–46 compared with 5,8 5,703 for 1945 and 1944. The state maintained 1,796 urban and schools in 1945–46, of which 815 were 1-room buildings. The fol figures are for the school year 1945–46: total resources availa general support of schools $16,032,280; total expenditures per $109.45. Harland A. Ladd became commissioner of education in 194

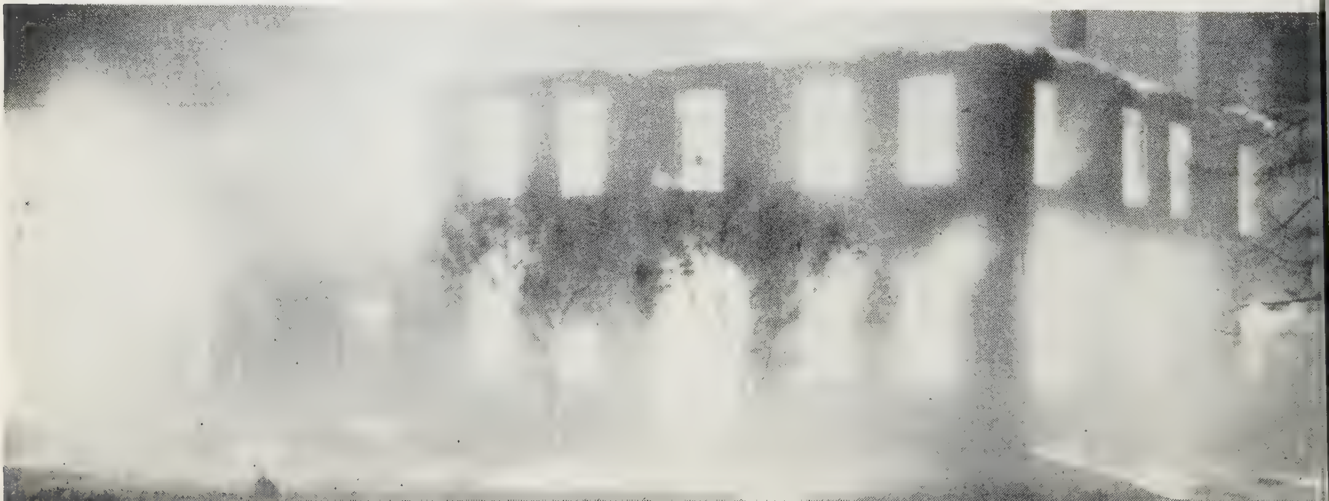
**Social Insurance and Assistance, Public Welfare and Related Progr** As of June 30, 1947, there was a balance in the Maine unemplo compensation fund of $38.872,408, compared with $36,681,291 a earlier. The balance as of Nov. 30, 1947, was $41,127,509. For th 11 months of 1947 the state compensated for 317,830 weeks of ployment, expending in that time $4,200,860.

Public assistance funds expended during the two fiscal years June 30, 1946, were as follows: old-age assistance (1946) $5,43 (1945) $5,134,189; aid to dependent children (1946) $1,210,530, ( $952,799; aid to blind (1946) $299,969, (1945) $293,772. Novemb loads in the above categories were: old-age assistance (Nov. 1946 228, (Nov. 1945) 14,891; aid to dependent children (Nov. 1946) (Nov. 1945) 3,921; aid to blind (Nov. 1946) 772, (Nov. 1945) 80

Thirteen state institutions (correctional, insane hospitals, sana as of Nov. 30, 1946, had a total inmate population of 5,092; the appropriation was $3,107,902.

**Communications.**—Highways of the state as of Dec. 31, 1946, state highways 3,044 mi.; state-aid highways 6,855 mi.; third-class ways 1,279 mi.; town ways 10,646 mi.; miscellaneous 125 mi.; mileage 21,949 mi. In the year ending June 30, 1947, the state exp for highway purposes $14,798,749. Steam railway mileage (1946 2,778 mi. As of Sept. 22, 1947, the Maine aeronautics commission 78 airports and airfields in Maine. The New England Telephone and graph company reported 186,000 telephones in service in Maine Nov. 30, 1947.

BLAZING HOME at Bar Harbor, Me., one of the small towns virtual stroyed in a series of forest fires which swept the state late in Oct. causing damage estimated at $40,000,000



**anking and Finance.**—During 1947 the Maine banking department mer E. Robinson, commissioner) supervised 32 savings banks and rust companies, 31 building and loan associations. Assets of savings ks, as of Oct. 6, 1947, were $260,600,813; of trust companies $263,- ,503; building and loan associations $31,249,960. Total deposits same were: savings banks $231,273,650; trust companies $241,760,955. ets and deposits reached a new high mark in 1947.

tate receipts, expenditures and bonded debt for the fiscal year ending 30, 1947, were, respectively: $45,731,816, $45,413,275 and $13,- ,500. For the year ending June 30, 1946, they were, respectively: ,757,518, $35,700,261 and $16,413,500.

**griculture.**—Production of the leading crops during 1947 and 1946 is n in Table I.

Table I.—*Leading Agricultural Products of Maine, 1947 and 1946*

| Crop | 1947 (est.) | 1946 | Average, 1936–45 |
|---|---|---|---|
| , bu. | 400,000 | 407,000 | 537,000 |
| at, bu. |  | 21,000 | 48,000 |
| , bu. | 2,625,000 | 2,840,000 | 3,576,000 |
| y, bu. | 112,000 | 128,000 | 111,000 |
| wheat, bu. | 136,000 | 120,000 | 117,000 |
| short tons | 950,000 | 844,000 | 840,000 |
| toes, bu. | 62,790,000 | 78,402,000 | 47,572,000 |
| es, bu. | 930,000 | 767,000 | 643,000 |
| is (dry), tons, uncleaned | 3,300 | 2,450 | 4,050 |

**anufacturing.**—The total value of manufactures (1939 census) was 5,368,595. Total employment was 81,995 and wages paid $82,026,503.

**sheries and Forests.**—The commissioner of sea and shore fisheries estied that shellfish to the value of $9,621,357 were taken in 1945, and they weighed 60,815,459 lb., with lobsters accounting for $7,938,542 he value. In 1945 the herring catch weighed 79,140,230 lb., worth 11,694.

laine led the nation in the production of white pine lumber in 1944, nearly one-fourth of the national cut for that year.

**lineral Production.**—The leading mineral products of Maine included e, granite, clay (chiefly for bricks), sand, stone and gravel (the last e chiefly for highway construction), cement, lime, feldspar, mica and t. Maine ranked 43rd among the states in mineral production in 1945. total value of its products dropped from $4,692,448 in 1941 to 483,000 in 1945. (E. F. D.)

Table II.—*Value of Principal Mineral Products of Maine, 1945, 1944*

|  | 1945 | 1944 |
|---|---|---|
| llium ore | $ ... | $ 257 |
| products | 5,756 | ... |

**aize:** *see* CORN.

**akin, Norman John Oswald** (1889– ), Australian statesman and dipnat, was born on March 31 at Petersham, New South Wales. left school at the age of 13 and worked as delivery boy, okseller and patternmaker. He joined the Labour party, was cted to the Australian house of representatives in 1919, eaker of the house 1929 to 1932, and president of the Labour rty in 1936. Makin, who was a member of the advisory war uncil in 1940, was appointed minister of the navy and munins in Oct. 1941. He was given the additional portfolio of airaft production in 1945, and in 1946 was appointed the first stralian ambassador extraordinary and plenipotentiary to the ited States. He led the Australian delegation to the United tions general assembly in London, Jan.–Feb. 1946, when he s the first chairman of the Security council, and was subseently the Australian representative on the Trusteeship coun-. He was an Australian delegate at both sessions of the neral assembly in New York, 1946 and 1947.

**alaya, British:** *see* MALAYAN UNION AND SINGAPORE.

**alayan Union and Singapore.** The political organization of British alaya (including the Straits Settlements and the Federated d Unfederated Malay states) was reconstituted after the liberation of the territory from Japanese occupation at the end of World War II. Two new political divisions were set up, viz: (1) the Malayan union and (2) the colony of Singapore. The former includes all the former Federated and Unfederated Malay states and three of the former Straits Settlements; the latter comprises the city and island of Singapore (as well as the Cocos-Keeling Islands and Christmas Island). A common Malayan citizenship was introduced for the Malayan union. Area, Malayan union and Singapore: 50,962 sq.mi.; pop. (1941 est.): 5,500,000, of which Malays and Chinese in approximately equal numbers together furnish about 82%; there is also a large Indian community. Capital of the Malayan union, Kuala Lumpur (pop. in 1931, 140,000); capital of the colony of Singapore, Singapore (pop. in 1931, 544,000); other chief towns: Ipoh (67,000), Taiping (39,000), Johore Bahru (27,000). Languages: Malay, Chinese, Indian languages and English. Religions: Moslem, Hindu, Buddhist and Christian. Executive authority in each of the two newly constituted units is vested in a governor appointed by the British crown.

There is also a governor-general of Malaya (appointed by the crown) who exercises a co-ordinating authority over both areas as well as over the British territories in North Borneo (*q.v.*).

Governor-general: Malcolm MacDonald; governor of the Malayan union: Sir Edward Gent; governor of Singapore: Sir Franklin Gimson (all appointed in 1946).

**History.**—The new arrangements introduced in 1946 did not escape criticism. In particular the proposal to adopt a common citizenship for the Malayan union met with much opposition. It was urged that the plan was unfair to the Malay community in that it placed Malays and Chinese (the latter of whom were often associated with Malaya only temporarily) on too level a footing. A promise was given that the new citizenship should not actually come into force pending full local discussion of its terms and conditions. Conferences with the Malay rulers and leaders of Malay opinion led to acceptance of the essential elements in the new constitution, subject to certain modifications including the conversion of the union into a form of federation (to be called the Federation of Malaya) under a strong central government. The revised proposals emerging from the discussions with the Malay leaders were conditionally approved by the British government in Dec. 1946, and were referred to the other (non-Malay) elements in the population for their consideration. For this purpose a consultative committee was set up consisting (apart from the chairman) of outstanding nonofficials from all communities other than Malay. The committee, after carefully weighing opinions from every quarter, reported in March 1947. It felt able (while suggesting some modifications) to recommend that the main structure of the revised proposals, as agreed with the Malays, should be preserved intact. Further discussions with the Malays followed during April. The scheme which emerged from all these discussions, and which went some (but not all) of the way to meet the views of the consultative committee, was finally accepted by the British government in July 1947. The general result was, in the secretary of state's words, to achieve the British government's "main policy of establishing in Malaya a strong central government and securing the basis of common citizenship among all the peoples who make Malaya their homeland and the centre of their loyalties." The question whether Singapore (where a legislative council with an unofficial majority, including nine elected members, was to be established early in 1948) should be eventually incorporated in the Federation of Malaya was left over for future discussion.

Schemes approved during the year under the Colonial Development and Welfare act included grants amounting to £19,-

000 for scrub typhus research, and a supplementary grant of £3,740 for general medical research in the Malayan union. Another grant of £4,000 was approved in connection with the appointment of a principal designate to the newly formed Malayan University college.

**Finance and Commerce.**—The standard currency of Malaya is the Straits dollar (value 2*s.* 4*d.*), which is linked to sterling. Revenue (1946) £16,410,000; expenditure £31,198,000. Imports (1941) £96,863,000; exports £131,620,000. Malaya is rich both in mineral and agricultural resources. Its two outstanding products are tin and rubber. In both these commodities there was an immense export trade before World War II, Malaya being, in respect of both of them, the largest producing country in the world. Other exports included copra, pineapples, iron ore and palm oil. There was a large production of rubber after the liberation of Malaya, but the rehabilitation of the tin industry proceeded more slowly.

(J. E. Sh.)

**Malta.** The British colony of Malta covers a group of Mediterranean islands about 58 mi. from the nearest point of Sicily. Only two of these islands, Malta and Gozo, are of importance. The others are small islets. Total area: 122 sq.mi.; pop. (1946 est.): 285,130. Capital and seat of government, Valletta (pop. *c.* 52,000); other towns: Senglea, Cospicua, Vittoriosa and Città Vecchia (Notabile). Religion: almost entirely Roman Catholic. Language: Maltese (believed to be of Semitic origin); English and Italian are also widely spoken. Executive authority in matters concerning defense and external relations is vested in a governor (appointed by the British crown) assisted by a nominated council; in domestic matters it is vested in the governor acting on the advice of an executive council of Maltese ministers. Governor: Sir Francis Douglas (appointed 1946).

**History.**—The constitutional question bulked largely in Malta throughout the year. The terms of a new constitution, as finally approved in 1947, were based on the model of the 1921 constitution and their effect was to confer upon the colony full responsible government in respect of its own internal affairs. The first Malta legislature elected under the new conditions was opened by the duke of Gloucester, on behalf of the British government, on Nov. 10. Apart from the constitutional issue, Malta was still preoccupied throughout the year with measures designed to repair the material and economic damage inflicted by enemy action during the prolonged siege of 1941–42. The Malta (Reconstruction) act, passed by the British parliament in Feb. 1947, not only sanctioned a grant of £20,000,000 from the consolidated fund for making good war damage in Malta but provided that Malta should continue, notwithstanding its acquisition of self-government, to be eligible for benefits under the Colonial Development and Welfare act.

**Finance and Trade.**—Both British currency and local sterling currency are legal tender in Malta. Revenue (1946) £4,306,000; expenditure £4,486,000. Imports (1946) £12,953,000; exports £707,000. The natural resources of Malta are comparatively small in extent. All land suitable for farming is closely cultivated, but the crops produced are designed primarily for local consumption and not for export. Vegetables (mainly potatoes) are the chief exported commodity.

(J. E. Sh.)

**Manchuria.** Manchuria is a large area comprising nine northeastern provinces of China, bounded by soviet Siberia, Outer Mongolia, China and Korea. Area 503,143 sq.mi.; population (1940) 43,233,954, excluding area of 1,338 sq.mi. and population of 1,225,570 in the Kwantung Leased territory, now a part of Manchuria. Population (1939) 39,454,026, including 37,581,000 Manchurians, 1,162,000 Koreans, 642,300 Japanese and 67,700 of other nationalities.

Largest cities (1940) were Shen-yang (Mukden) (1,135,801), Pin-chiang (Harbin) (661,984), Ch'ang-ch'un (554,202), Antung (315,242), and Fu-shun (269,919). The principal religions of Manchuria at the end of 1938, in the order of number of believers, were Buddhism, Taoism, Lamaism, Mohammedanism and Christianity.

**History and Government.**—During 1947, the U.S. tw
quested the Soviet Union to open the port of Ta-lien (D
to international commerce as agreed upon in the Sino
treaty of Aug. 1945. The Soviet Union replied on Aug. 27
that the treaty provided for soviet control of Ta-lien as
a state of war existed with Japan and since there was no
treaty with Japan as yet, the soviet regime would contin
the end of 1947 the southern tip of the Kwantung pe
remained soviet-controlled.

At about the time of the withdrawal of soviet troops
the rest of Manchuria, early in 1946, hostilities began b
Chinese Nationalist and Chinese Communist troops for c
of the area. For many months the Chinese National g
ment controlled the entire southern coast line, except
(Port Arthur) and Ta-lien, and a salient extending inlan
point between Ch'ang-ch'un and Pin-chiang, which in
most of Manchuria's important industrial cities. Chinese
munist forces held most of the rest of Manchuria. A C
Communist offensive in the latter part of 1947 succee
capturing part of the southern coast, reducing the Natio
salient, and cutting railway communications between Natio
strongholds.

**Education.**—In 1939 there were 15,877 primary schools with 1,5
pupils and 37,639 teachers; 238 middle schools with 54,768 studer
2,768 teachers; 40 normal schools with 8,014 students and 520 tea
and 13 institutions of higher education with 3,820 students.

**Finance.**—Monetary inflation continued to be severe in 1947. In
tion to the Manchoukuan yuan (Japanese puppet currency) and
occupation roubles which were still circulating in some parts of
churia, there were also Chinese Communist notes for Manchuria, C
National currency for Manchuria (the so-called Tungpei currency
regular Chinese National notes.

**Trade and Communications.**—Manchuria had virtually no external
in 1947. In 1939 Manchuria had total exports in Manchoukuan y
835,000,000 and imports of 1,800,000,000. (In 1939 the Mancho
yuan equalled 23.65 U.S. cents.) There were about 6,710 mi. of ra
in 1940 and about 30,000 mi. of highways, of which 13,000 mi
suitable for traffic.

**Agriculture.**—Manchuria is a food surplus area in normal times
chief crops are millet, kaoliang, maize and soybeans. Crops in
were above average because of favourable weather conditions, b
creased hostilities between Communists and Nationalists reduced
in 1947. In 1940, the country produced 16,100,000 tons of c
4,200,000 of soybeans, 2,100,000 of potatoes and 75,000 bales o
cotton. There were 1,683,000 cattle, 2,000,000 sheep, 1,250,000
and 2,000,000 horses in 1937.

**Industry.**—Between 1931 and 1945 Manchuria was developed
strong industrial area to supplement Japan's war industry. The
of removal of industrial equipment by soviet forces and of destr
of industrial facilities during the two years of Communist-Natio
fighting, was to reduce the Manchurian economy by the end of
to a state of chaos.

At the end of 1946 U.S. Ambassador Edwin W. Pauley estimated
losses to Manchurian industry because of soviet removals and da
could be valued at $895,000,000. Resulting reduction in Manch
industrial capacity was 71% in the electric power industry, 50
100% in various phases of the iron and steel industry, 80% i
metal-working industry, 75% in nonferrous mining, 65% in liquid
and lubricants, 50% in the cement industry, 50% in the chemica
dustry, 75% in the textile industry, and 30% in the paper and pu
dustry. Even more serious were the losses resulting from the Comm
Nationalist civil war. These were estimated at $1,000,000,00
$1,500,000,000. In 1947 one-half of Manchuria's coal mines were
operated within Nationalist territory and 1947 coal production was
mated at less than 4,000,000 tons. Only 200,000 kw. of electric
capacity remained for the use of industry in Nationalist territory o
a total prewar capacity of more than 2,000,000 kw. Destruction
looting of cotton mills had reduced cotton capacity to about 20
spindles. The civil war also prevented Manchuria's valuable mi
deposits from being mined in anything but a fraction of prewar ou
Minerals and manufactured goods which were produced could not be
tributed even within Manchuria because of damage to the railroads
were already burdened by troop movements.

During the first three quarters of 1947 production was 102,oo short tons, and shipments 107,900 tons. Imports had ropped back from the high level of 1946, with 360,633 tons in he first quarter, 338,415 tons in the second quarter and 331,455 ons in the third quarter, a total of 1,030,503 tons, about the ame rate as in 1945. (G. A. Ro.)

**lanitoba.** Central province of Canada, and geographic centre of North America; established July 15, 870; area, 246,512 sq.mi. (26,789 sq.mi. water); pop. (1946 ensus, rev.), 726,923, of which 389,592 are rural. Capital, Vinnipeg, incorporated in 1873 (229,045). Other cities are: t. Boniface (21,613), western centre of culture for Canadians f French origin; Brandon (17,551), Portage la Prairie (7,620), entres of Manitoba agriculture; and Flin Flon (municipal disrict) (7,595), centre in the north for mining.

**History.**—No change in political leadership took place during he year 1947. R. F. McWilliams continued beyond the term f five years as lieutenant-governor, an office symbolic of the rown; while the coalition government under the premiership f Stewart Sinclair Garson, in office from Jan. 1943, remained nchanged with a cabinet of 11, 10 with portfolios.

The government coalition party comprised representatives of he Liberal-Progressive, Progressive Conservative and Social redit groups.

**Education.**—Enrolment in public schools in 1946 totalled 121,272, of hich number 20,904 were in the secondary grades. Correspondence tudents, unable to attend classes because of distance from schools or hysical disability, numbered 2,486 in the school year. Teachers employed ere 4,475. School districts expended $11,292,756.01 during the period. lans were completed for construction of a technical-vocational high chool for the metropolitan area of Winnipeg with dominion, provincial nd municipal financial support. The experiences of the larger school adinistrative unit of Dauphin, established in 1946, were being studied in ther areas, particularly in Brandon.

**Health and Welfare.**—The progress of the provincial-wide health plan augurated in 1945 was advancing slowly as a result of the general hortages in personnel in both medicine and nursing. Generalized public elfare service was given by local field staffs at Winnipeg, Flin Flon nd Dauphin under the jurisdiction of the department of health and pubc welfare. During the year an epidemic of a comparatively mild form f poliomyelitis visited the region. A family court was established in Winnipeg in 1947 under the direction of Judges E. J. Heaney and M. S. Watson.

**Communications.**—Manitoba is served by main and branch lines of the Canadian National and Canadian Pacific railways. Hudson's Bay railway from The Pas to Churchill provides transportation to Manitoba's ocean port. Stevenson airport is the centre for Trans-Canada Air Lines and aviation centre for the region. A $3,000,000 expansion program was underway in 1947. All-weather provincial highways totalled 8,826 mi. in 1947, with the construction program emphasizing transition from gravel to hard-surface; shortages in material were retarding other programs. The Manitoba government telephone system increased to 111,899 substations with a total wire mileage of 336,368. In 1948 the two government radio stations were to be disposed of with the Canadian broadcasting system establishing a 50,000 watt station. There were four private stations operating—two in Winnipeg, one in St. Boniface (a French-speaking station) and one serving the northern areas from Flin Flon.

**Finance.**—The estimated ordinary revenue for the fiscal year ending April 30, 1947, was $24,040,000, and expenditure was $19,555,000. The provincial government paid over half of its additional revenue from the dominion-provincial agreement to the municipalities, designating $1,900,000 of the $2,750,000 share to be devoted to education. One-half of the relief debt cancelled by the dominion was also credited to local government administrations. A 24-year program for wiping out the dead-weight debt was established in 1947, and a sinking fund was created for providing for future debt retirement.

**Agriculture.**—Wheat production decreased from 63,000,000 bu. in 1946 to 43,000,000 bu. in 1947, and in value from $74,970,000 to $58,480,000. The census of 1946 showed 54,448 farms. The weather was also detrimental for sugar beets with a reduction to 9,000 ac. seeded and 72,000 tons produced in 1947. In general, higher returns equalized lower production, so that the total gross value did not vary greatly.

**Manufacturing, Minerals, Fisheries, Furs.**—In 1947 manufacturing continued at a high level, supporting the 1946 (est.) gross of $320,000,000; mineral production in 1946 totalled $11,403,577 for metallics and $5,272,699 for nonmetallics; fisheries, with 7,293 fishermen, produced 28,696,600 lb. with value to fishermen of $3,303,711 and market value of $4,853,738; furs (1946–47), wild catch from 8,078 trappers was $2,582,006, farms $1,500,000, a total of $4,082,006. Mining areas opened were: a lithium deposit northeast of Lac du Bonnet, Lynn Lake with nickel and Snow Lake with base metals, both north of The Pas. Dr. T. H. Hogg, a royal commissioner, was making a survey of existing and future requirements in water power, and the report "Industrial Survey of the Resources of the Province of Manitoba," by Donald, Ross and Co. of Montreal, was completed in 1947. (J. L. J.)

**Manufacturers, National Association of:** *see* SOCIETIES AND ASSOCIATIONS.

**Maple Products.** The U.S. maple sap season of 1947 was better than in the two preceding years but was retarded by cold weather. Syrup production was 2,039,000 gal. compared with 1,328,000 gal. in 1946 and a 10-year (1936–45) average of 2,381,000 gal. Sugar production was only 305,000 lb. which was less than any other year of record except 1945, when only 237,000 lb. were made. High syrup prices favoured the sale of the syrup as against sugar. The number of trees tapped increased, however, to 8,568,000 compared with 8,000,000 in 1946 and a 10-year average of 9,942,000. Continued shortage of labour held down operations in sugar orchards. Most of the crop of syrup was of good quality, and prices were higher than in 1946. (J. C. Ms.)

**Margarine** (OLEOMARGARINE). The high price of butter stimulated demand for margarine in the United States and resulted in a new production record of 650.000.000

lb. in 1947. A year earlier margarine production had begun to decline from the top wartime output of 500,000,000 lb. in 1943, but the high price of butter caused many consumers to shift to the cheaper product. Average civilian consumption was estimated at 3.7 lb. in 1947 compared with 3.1 lb. in 1946.

The price of margarine followed the price of butter only in general through 1947. In January margarine averaged 39.3 cents per pound while butter averaged 67.1 cents at New York markets. A year earlier when butter averaged 81 cents, margarine stood at 41 cents per pound. By March 1947 margarine reached 42 cents per pound and then levelled off at 36 cents for the rest of the year. Efforts continued to secure the repeal or modification of taxes on coloured margarine and also the reduction of retailers' fees for selling the product, but the dairy interests opposed all such efforts vigorously. (J. C. Ms.)

**Marianas Islands:** *see* TRUSTEE TERRITORIES.

## Marine Biology.

In spite of world-wide political and economic unrest, some productive marine researches were accomplished and some explorations were made during 1947. Probably of greatest interest to scientists and laymen alike were the reports of the actual effects of the Bikini atomic bombs on marine animals and plants. While data gathered was still being examined by the scientists, some authentic accounts appeared which indicated the widespread damage caused by Operation "Crossroads."

**Effects of the Bikini Bombs.**—Of the two bombs released—one above and another beneath the surface of the lagoon—it was the second that demonstrated the widespread dangers of atomic contaminations to marine life. The contaminations were immediately taken up by the marine algae and other plants of the lagoon, and since many marine organisms, especially the bottom-feeding fishes, consumed the plants as food, these soon also became radioactive. Many of the fishes were so affected that they died within three weeks; their decayed bodies then apparently passed the radioactive contaminations back to the plants, and thus was initiated a vicious circle which, it was postulated, might last for many years. Some fishes as well as algae subsequently collected in the lagoon were so radioactive that when placed upon a sensitive photographic film, they took their own pictures. Another result reported was that the fouling organisms of the task-force ships became so radioactive that the action was detected through the steel hulls.

**Expeditions.**—The U.S. navy's expedition into the antarctic, under Rear Adm. Richard E. Byrd, returned with accounts of many new observations on weather and climate as well as some notes on biology. Among new discoveries was the finding of open warm-water lakes scattered here and there among cold and barren wastes. Also returned from Antarctica was the U.S. navy task force coded as Operation "Highjump." As a follow-up, two ice-breakers, the "Burton" and the "Edisto," left for the antarctic late in November to continue scientific surveys of Little America.

The steel ketch "Atlantis" of the Woods Hole Oceanographic institute continued studies over the "mid-Atlantic ridge," a strip of ocean floor presumably extending from Iceland to Antarctica. Mountain peaks and other topographical features of a limited area east of Bermuda were mapped by the use of advanced technical equipment in echo- and sonic-soundings, and mud samples were taken by the "core tube sampling device." In conjunction with the wartime experiments of "Sofar" (code name of U.S. government-sponsored research project on locating survivors at sea), some of the Woods Hole scientists perfected an underwater sound detector so delicate that distress bombs released at a distance of 3,000 mi. were received and their origin "fixed" with accuracy, to within a single square mile of c water.

**New Devices.**—Two undersea cameras of somewhat ne sign were described and their usefulness tested by a Colu university scientist and his assistants. The cameras we two types—one used while "free floating" and the other " pended." The former was used to obtain a series of "shots a maximum depth of 2,700 fathoms (16,200 ft.), but was on the third lowering. It was found that large "photo fl bulbs withstood 60 fathoms' pressure, while small bulbs c be used up to depths of 650 fathoms. For greater depths bulbs were encased in strong optical pyrex bells of specia sign, equipped with 12-volt motor circuit.

A short time later the U.S. navy announced that underw television experiments had been successfully carried out the Bikini bomb tests. By means of a remote-controlled vision camera, fish were observed swimming around a marine 160 ft. below the surface. Such a demonstration op a new field of study in deep-water biology.

The privately endowed Swedish oceanographic floating lab tory, "Albatross," which sailed from Gothenburg in July spent most of the summer of 1947 in the Caribbean sea exp ing the ooze of the sea floor. By means of a revolutionary vice, the perfected "piston core sampler," the bottom m were sampled to a depth of 66 ft. Heretofore, samples of than one-half that thickness were obtained. Bottom muds scientists a clue to the age of the oceans, and with them a tory of adjacent lands. Oceanographers heretofore had g back only to the last glacial period, about 200,000 years The new tube gave promise of extending this research as back as 5,000,000 years or even more. Some other data accu lated by the expedition indicated that the bottom muds f the western North Atlantic floor were comparatively thic over the bed-rock as compared with the Caribbean deposits was determined, by the use of a new sonic device, that mud certain Atlantic areas were as much as 8,000 ft. thick, whil the Caribbean areas they were from 1,000 to 3,000 ft. thick.

**Whaling, Ocean Swell.**—The Low Temperature Resea station, Cambridge, England, and the department of scien and industrial research sponsored jointly an antarctic wha expedition in an effort to determine the potential supply whale meat for human consumption. The factory ship, " taena," equipped with a laboratory for biochemical and phy logical study, left England early in Jan. 1947, to investig factors which influence the quality of whale meat and to de mine what differences techniques of slaughtering, cutting freezing may have on the edibility of the flesh.

A study of ocean swell in relation to storm centres was c tinued by the admiralty research laboratory at Teddingt England. Scientists obtained data along the Cornish coast wh indicated that the longest period exhibited by swell, caused b distant storm, is proportional to the maximum wind velocity that storm. Data on swell were recorded from a tropical sto off the coast of Florida 2,800 mi. from Cornwall, and fr another storm near Cape Horn—almost 8,000 mi. distant.

**Study of Fish Noises.**—In conjunction with the studies natural water noises caused by tides, waves, winds, etc., biolo cal sources of underwater noises were quantitatively analy by the application of perfected technical equipment design and used by the U.S. naval ordnance laboratory at Washingt D.C. Wide fluctuations in noise intensities—seasonal as well diurnal and nocturnal—were recorded on disks. Experiments segregated fishes known to make noises included a prolong series involving the croaker (*Micropogon undulatus*); toadf (*Opsanus tau*); hogfish (*Orthopristis chrysopterus*); spot (*L ostomus xanthurus*); sea robin (*Prionotus carolinus*) and s tfish (*Felichthys felis*).

**Other Studies.**—A comprehensive series of biological studies the Murman coast and Barents sea concerning the herring, d, plaice and haddock was conducted by the Polar Research ard on Sea-fish and Oceanography. An exhaustive report on species of marine algae digesting bacteria was published by e Duke University Marine station; the study included an pendix of all literature related to these organisms and a use- l key.

The sixth report of the Committee on Marine Ecology as lated to palaeontology was released by the Division of Geology d Geography, National Research council (U.S.). One of the st reports from the biological studies at East bay, Antarctica, scribed the preparation of the Weddell's seal (*Leptonychotes ddellii*) for embryological studies, the courtship of the Adelie nguin (*Pygoscelis adeliae*), methods of capturing and feeding tarctic birds and the taking of marine specimens.

Specimens of a common estuarian barnacle (*Eliminus modes- s Darwin*) of Australia were taken from the test panels at ichester harbour, West Sussex, England. Apparently it made e journey on ship hulls and found the north temperate waters itable for growth and development.

A scientist working at the Marine station at Cronulla, New outh Wales, concluded that the age of a fish as well as many atomical and functional characteristics may be analyzed by a udy of the scales.

The history of scientific studies at the Plymouth Marine boratory, England, and its associated station at Lowestoft as recounted by the director of the laboratories. The results tagging salmon in Scottish, Norwegian, Baltic and Canadian aters were released by a scientist at the University of Liver- ol under the Buckland foundation. According to this study, uropean and Canadian salmon have a common feeding ground the North Atlantic, probably near Iceland, and it was recom- ended that a new marking station be established there to cilitate further studies.

It was concluded that "mealiness" of the dory (*Zeus cupen- s*) and the "milky spots" of the stockfish (*Merlucius apensio*) the South Atlantic waters about Capetown are caused by otozoan parasites. Studies using fluorescent techniques gave ick estimates of the distribution of parasitism in infected tis- es, the intensity of infection, and the relative number of fish fected. Among fishes collected in eastern Mediterranean waters by scientists at the Hebrew university, representatives of ten species found east of Suez were found. It was postulated that these had migrated through the canal and had found the Mediterranean waters a suitable habitat.

That the copper content in marine diatoms is of no considerable importance as an antifouling mechanism was concluded by workers at the Millport station. Reasoning that the results of experiments with antifouling cupric oxide containing as much as 105μ copper per gram was of only temporary effectiveness, it was speculated that the antifouling effectiveness of diatom slime which assayed only 164μ copper per gram was of little or no value.

Progress in the cyclic changes in salinities of the North sea was reported upon by the International Council for the Study of the Sea. It was concluded that differentials in the cycles were correlated with changes in the relative direction of the surface currents; the salinities in the northern areas were due to currents from the north, while those in the southern end were associated with the Gulf stream changes. (*See* also OCEANOGRAPHY; ZOOLOGY.)

**Marine Corps.** From Nov. 10, 1775, the marine corps has been an integral part of the navy with a wider field of endeavour than corresponding forces of other navies. In 1947 the National Security act of Aug. 2, while reorganizing the armed forces, confirmed in law the basic missions of the marine corps which had been effectively fulfilled in World War II. These missions were: to provide balanced landing forces of air and ground units for the seizure of advanced bases, or for other land actions incident to a naval campaign, and to develop the tactics, techniques and equipment for the landing force phases of amphibious operations. The law also provided that the marine corps might be assigned special missions by the president and that it would furnish security detachments for naval installations and capital ships of the fleet.

To accomplish these missions the marine corps in 1947 took two major steps. The first was streamlining of tactical units. By November, divisional organizations had been revised with mobile reinforced battalions as basic combatant units. Elimination of infantry regimental headquarters and other administrative troops increased flexibility, providing 10% more forward

.S. MARINES leaving Peiping, China, in 1947, following a U.S. decision cease aid to both factions in the Chinese civil war. "Ding hao!" scrawled ross the train is the Chinese equivalent of "That's great!"

echelon troops without increase in over-all strength and allowing rapid movement of effective, self-contained units.

The second major step in 1947 was building a balanced, well-trained reserve force. Organized ground units were increased from 17 to 60, and organized air units were increased from 25 to 32. A nation-wide enrolment campaign began in November to bring the reserve to its full planned strength of 100,000.

The 1st marine division and the 1st marine air wing had been withdrawn from their emergency task of assisting the attempted mediation of unsettled conditions in China by June 20, and were based on the west coast by Oct. 31.

Emphasis during the year was largely on training and research. Marine training units supervised manoeuvres of army, navy, air force and marine forces. An experimental helicopter squadron was established in December and a marine pilot set a new world's air speed record of 650.6 m.p.h. on Aug. 25. Fleet marine force units on the east and west coasts and on Guam held manoeuvres from September to December and remained ready for action with the fleets.

Gen. A. A. Vandegrift completed his term as commandant and was relieved Dec. 31 by Gen. Clifton B. Cates. The strength of the regular service on that date was approximately 7,000 officers and 77,000 enlisted men. (A. A. V.)

## Marriage and Divorce.

Postwar marriage rates, which in many countries had approached record heights in 1946, began to level off or decline markedly in 1947. While new records had been set the previous year in New Zealand, the Netherlands and the United States, with rates in Australia, Belgium, Canada and France not far behind, the marriages in those countries declined 10%–20% in 1947. Little change was noted in the British Isles and in South America, where a slight drop had occurred in 1946.

The world-wide rise in birth rates continued, reflecting the large number of marriages in 1946. New records were anticipated in the British commonwealth of nations, in most of Europe and in the United States. Although reliable data were not available, it was believed that high birth rates prevailed in Germany, Japan, Russia and those countries under Russian influence. Insignificant declines in the birth rate seemed discernible in Chile, Mexico, Portugal and Sweden. A downward trend in the birth rate was expected to result within three years.

With many of the hasty war marriages already dissolved, there was some evidence to suggest that the unparallelled rates of divorce in 1945 and 1946 might be subsiding.

During the first half of 1947, the number of divorces generally was less than for the corresponding period of 1946.

**United States.**—In the United States about 2,000,000 marriages were recorded, representing a 13% decrease from the 2,300,000 in 1946, the largest number ever recorded (*see* Table). Although nearly 3,500,000 babies were born in 19 all-time record, considerably more than 3,000,000 births forecast for 1947. Because of a drop in the divorce ra the early months of 1947, it was hoped that the record nu of 613,000 divorces in 1946 would show little, if any, inc Little confidence was expressed, however, that any signi reduction was likely in the near future.

*Marriages and Divorces in the United States, 1937–46*

| Calendar year | Number of marriages | Increase (+) or decrease (—) from preceding year per cent | Marriages per 1,000 of population | Number of divorces | Divorces per 100 marriages |
|---|---|---|---|---|---|
| 1937 . . . . . . . . | 1,451,296 | 6.0 | 11.1 | 249,000 | 17.2 |
| 1938 . . . . . . . . | 1,330,780 | — 8.3 | 9.6 | 244,000 | 18.3 |
| 1939 . . . . . . . . | 1,403,633 | 5.5 | 10.9 | 251,000 | 17.9 |
| 1940 . . . . . . . . | 1,595,879 | 13.7 | 12.1 | 264,000 | 16.5 |
| 1941 . . . . . . . . | 1,695,999 | 6.3 | 12.7 | 293,000 | 17.3 |
| 1942 . . . . . . . . | 1,772,132 | 4.5 | 13.2 | 321,000 | 18.1 |
| 1943 . . . . . . . . | 1,577,050 | —11.0 | 11.6 | 359,000 | 22.8 |
| 1944 . . . . . . . . | 1,452,394 | — 7.9 | 10.5 | 400,000 | 27.5 |
| 1945 . . . . . . . . | 1,603,139 | 10.4 | 11.5 | 494,000 | 30.8 |
| 1946 . . . . . . . . | 2,285,539 | 42.6 | 16.2 | 613,000 | 26.8 |

Adapted from *Marriage and Divorce Statistics United States, 1946*, vol. 27, no. 10. Figures for 1946 are provisional; figures for 1945 are revised.

Workshops and institutes on marriage and the family held in many institutions. In 1920 the first college cou preparation for marriage was offered by Teachers colle Columbia university; in 1947 according to the National C (formerly Conference) on Family Relations, about 1,968 t ers were conducting 657 courses in marriage and family li 550 colleges and universities.

Pres. Harry S. Truman authorized a national conferen family life to convene at the White House, May 6–8, 1948. conference was to study the factors that promote stable fa life. Under sponsorship of the Catholic Youth organiza marriage clinics were opened in several cities. In many cities counselling services were set up by different civic or zations.

Research was not lacking. Dr. Lewis M. Terman, in a fu study of his original group of persons gifted in intellig found that the genius is more apt to marry and to have a b chance for happiness in marriage than is the individual of a age intelligence. Dr. Alfred C. Kinsey of Indiana univer Bloomington, released some of his findings in respect to se behaviour of 5,300 white males. Dr. Alan F. Guttmache Johns Hopkins university reported that three-fourths of pl cians received no medical instruction in contraceptive pr dures. Metropolitan Life Insurance company studies sho that chances of marrying at an early age are much greate the United States than in any other country of the wes world, and that the mortality rate for 1947 would probably an all-time low. Dr. Judson T. Landis of Michigan State lege, East Lansing, studied 409 successful marriages of parents of college students. The area requiring the most to achieve satisfactory adjustment was sex relations, follo in order by spending the family income, social activities recreation, in-laws, religious activities and mutual friends. L of adjustment in three or more areas seemed to prevent a h pier than average marriage.

**Other Countries.**—Efforts to stabilize marriage and the f ily were continued. In Australia marriage guidance coun were being established and progress was made toward a fed divorce law to replace the conflicting divorce laws of its se states. A *Conseil Supérieur de la Famille* to exercise all gove mental family functions was proposed in Belgium and the m istry of public health and family initiated plans for a comp hensive program of family life education, counselling cen and family allowances. In Canada while one Gallup poll show that less than one-third of the population was satisfied w modern family life, another poll indicated that a majority the population believed that civil marriage should be prohibit With one divorce for every six marriages in British Colum some agitation to prohibit divorce was evident, especially Quebec. The Canadian Youth commission reported a negat correlation between the divorce rate and occupational stat The International Congress on Family and Population was c vened in Paris, France, June 22–29. Attended by delegates fr many countries, its major topics included housing, wome work, standards of family living, parent-child relationships a functions of family associations. It seemed likely that Franc record birth rate of 1946 would be repeated in 1947.

In England it was reported that the number of marriages d solved rose from 30,000 in 1946 to 50,000 in 1947, but th ost cases arising out of World War II had found their way to e courts by the end of the year. The National Council of omen urged the ministry of education to establish an adeuate educational policy for marriage and family education. arliament received the final report of the Committee on Proedure in Matrimonial Causes which had been appointed in 46 by the lord high chancellor. Among its recommendations, e committee proposed a system of education for marriage, arenthood and family living; specific marriage preparation of ngaged couples; a marriage welfare service, whose function ould be the counselling of couples before or after marriage; e appointment of court welfare officers to give counsel to istressed couples and to endeavour to effect a reconciliation ven after the start of divorce proceedings; the retention of the ecree nisi; and the clarification of the law as to collusion so at lawyers would point out that the law favours reconciliation nd that discussions to that end will not prejudice any divorce roceedings. There was also established a family relations group co-ordinate the interests of organizations concerned with arious phases of marriage and family living. Included in the embership were the British Social Hygiene council, the Cen-al Council for Health Education, the Eugenics society, the amily Planning association, the Family Welfare association, e Marriage Guidance council, the National Council for Ma-ernity and Child Welfare and the Pioneer Health centre. Under e editorship of Dr. David Mace, a monthly bulletin on mar-age and the family was issued by the National Marriage uidance council. The archbishop of York urged that three teps be taken to reduce the divorce rate: raise the dignity and olemnity of the register office marriage; give financial aid to arriage guidance and discourage collusive divorce. The office f the registrar-general reported that nearly 30% of all first abies were conceived before marriage. The British foreign ffice adopted a rule that any diplomat involved in a divorce ction would be liable to expulsion. Bristol university insti-uted a course in marriage for its undergraduates.

Finland set up a system of loans to help young married ouples begin marriage. In Germany marriage, birth and di-orce rates continued to be high. The University of Göttingen stablished an institute for heredity and eugenics. With the re-umption of bimonthly publication of *Marriage Hygiene* in ombay, under the editorship of Dr. A. P. Pillay, it seemed ikely that reliable reports on family life in India would soon e available. In Japan the ministry of welfare established a arriage bureau to help young people find suitable mates, an bjective likewise encouraged by the increase in coeducation. everal birth-control clinics opened and a number of parent-eacher associations were formed. News from Russia was still ifficult to obtain, but meagre reports indicated that marriage t young ages and large families were being encouraged. Addi-ional restrictions on divorce were reported, and the cost of a ivorce was estimated to be 100–700 times the cost of marriage.

Interest in preserving and enhancing family life was renewed n South America. Argentina, Bolivia, Brazil, Chile and Uru-uay took the first steps toward establishing a system of family llowances or family wages. Caracas, Venezuela, was selected s the meeting place for the ninth Pan-American Child congress. n Uruguay, a bill of rights for women was adopted which gave hem legal equality with men, permitted divorce by mutual onsent without any reasons having to be advanced and re-uired both spouses to contribute to the expenses of the home n proportion to their means.

Within three years the National Housing authority of Spain rovided 30,000 low-cost housing units and made plans for an dditional 60,000. Sweden's marriage and birth rates showed ittle change from 1946.

(C. R. A.)

**Marshall, George Catlett** (1880– ), U.S. army officer and statesman, was born at Uniontown, Pa., on Dec. 31. Commissioned second lieutenant in 1901 after completing his studies at the Virginia Military institute, he was graduated from the Army Staff college in 1908 and advanced through the grades to general of the army in 1944. He was made chief of staff on Sept. 1, 1939, the day Adolf Hitler started World War II by invading Poland. An able administrator, Marshall built up the army from its Pearl Harbor strength of 1,500,000 men to 8,300,000 by the close of the war in Europe, May 1945.

He resigned as chief of staff Nov. 20, 1945; a week later, he was sent to China as U.S. ambassador with the task of finding a solution to the civil war there. But his 13 months of negotiations proved fruitless and on his return to Washington he blamed extremists of both sides for balking his peace efforts. On Jan. 7, 1947, President Harry S. Truman announced Marshall's appointment as successor to James Byrnes as secretary of state.

Marshall's first appearance in his new role as a statesman was at the Moscow session of the council of foreign ministers in the early spring of 1947. However, little was accomplished and after the parley's adjournment Marshall was cautiously optimistic on chances of a final settlement, although he did criticize the Russian attitude on Germany.

In a speech at Harvard university on June 5 he proposed that European countries take the initiative in outlining their reconstruction program, promising U.S. aid once this had been done. This proposal was subsequently translated into the Marshall plan, or the European Recovery program. In its first phases the Marshall plan engendered considerable enthusiasm; later it met unequivocal soviet opposition as well as increasing hostility in congress.

In the summer of 1947, Marshall attended the Inter-American defense parley in Rio de Janeiro and came back with a hemispheric defense treaty that won overwhelming congressional endorsement. Then on Sept. 17, he made his celebrated "Little Assembly" speech before the United Nations, proposing establishment of a special permanent committee within the general assembly to circumvent Russian "frustration of the collective will." However, he found more "frustration" in the London meeting of the council of foreign ministers and on Dec. 15, Marshall blamed Russia for collapse of these talks.

**Marshall Islands:** *see* TRUSTEE TERRITORIES.
**Marshall Plan:** *see* EUROPEAN RECOVERY PROGRAM.

**Martin, Joseph William, Jr.** (1884– ), U.S. politician, was born on Nov. 3 in North Attleboro, Mass. After graduating from high school, he worked as a reporter on the *Attleboro Sun,* and when he was 24 he bought *The Evening Chronicle* of North Attleboro.

In 1911, running as a Republican, he was elected to the Massachusetts legislature. He was elected to the federal house of representatives 13 years later (1924) and was re-elected with clockwork regularity even through the lean New Deal days. In 1939, he became minority speaker of the house, a post he held until the opening session of the 80th congress (Jan. 1947), when he became speaker of the house. An astute legislator, Martin was respected for his ability to weld the house Republicans into a solid voting bloc on crucial issues.

On July 10, 1947, Martin virtually became vice-president by house passage of a bill which placed the speaker of the house immediately after the vice-president in the line of presidential succession. In the first session of the 80th congress, he pledged the G.O.P. majority to a program of reductions in taxes and government spending. On foreign policy, in common with most of his Republican colleagues, he denounced the "communist menace," but was only lukewarm in his support of the Marshall plan and similar administration programs.

**Martinique:** *see* French Overseas Territories.

**Maryland.** Long known as the "Old Line state," also as the "Free state" of the U.S.A., Maryland lies on the Atlantic seaboard between Pennsylvania on the north and Virginia on the south. The total area is 10,577 sq.mi., of which 690 are water. Population (1940) 1,821,244; urban, 1,080,351; rural, 740,893; white, 1,518,481 (foreign born, 81,715); nonwhite, 302,763. On July 1, 1947, the bureau of the census estimated the civilian population of the state at 2,215,000. Capital, Annapolis (pop. 1940, 13,069); other cities: Baltimore (859,100), Cumberland (39,483), Hagerstown (32,491), Frederick (15,802) and Salisbury (13,313).

**History.**—William Preston Lane, Jr., Democrat, was elected governor in 1946 for a four-year term, which began on Jan. 8, 1947. The regular session of the general assembly, held in March 1947, enacted a 2% retail sales tax, exempting foods and medicines; authorized an improvement in the school system and an increase in teachers' salaries; approved a program for building arterial highways and bridging the Chesapeake bay; authorized a project for improving the facilities of mental hospitals; made provision for sharing state revenues with Baltimore city and other political subdivisions.

**Education.**—In 1946–47 there were in the state (including Baltimore whose schools are separately administered) 892 public elementary and occupational schools, with a total enrolment of 201,184 and a teaching staff of 5,459. There were 223 secondary and vocational schools, with an enrolment of 99,370 and a teaching staff of 4,115. In the elementary schools about one student in four was a Negro; in the higher schools about one student in six was a Negro. The Catholic school enrolment for the entire state was 48,677 white and 2,268 Negro, with a total of 50,945. The enrolment in non-Catholic private schools was 10,651 white and 134 Negro, with a total of 10,785. The state superintendent of schools in 1947 was Dr. Thomas G. Pullen, Jr.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—During June 1947, old-age assistance was extended to 11,819 persons (cost, fiscal year ended June 30, 1947, $4,290,231); 467 needy blind persons were assisted (cost, $187,464); 4,839 families received assistance for the care of dependent children (cost, $2,418,339). Unemployment compensation benefits paid during the benefit year ended March 31, 1947, were $18,187,041 compared with $17,619,690 in the preceding year.

Correctional institutions and the number of inmates on Oct. 16, 1947, were as follows: Maryland penitentiary, 1,193; Maryland house of correction, 1,398; Maryland reformatory for males, 739; Maryland reformatory for women, 195 (85 white, 110 Negro). Four institutions were maintained for juvenile delinquents, white and Negro; total number of inmates, Sept. 30, 1947, 647.

**Communications.**—During the fiscal year ended June 30, 1947, the state roads commission expended $20,828,377. The total mileage of roads in the state highway system was 4,490.64; in the county systems, 12,826.32; total, 17,316.96. At the close of the year the total mileage of line-haul steam railroads 1,316; of switching and terminal companies, 138; of ele railways (interurban), 65.24. The state aviation commi reported 36 commercial airports licensed on Nov. 30, 194 military airports; 1,886 registered pilots; 877 recorded pers planes. As of Nov. 30, 1947, there were 354,000 telephone scribers, total number of instruments, 516,000.

**Banking and Finance.**—As of June 30, 1947, the state commissioner reported 106 state banks and trust comp with total deposits of $845,674,692 and total resources of $ 050,310 and 9 mutual savings institutions with deposits of $ 873,195 and resources of $436,173,536. On the same date t were 63 national banks in the state with deposits of $668. 000 and resources of $718,929,000. The resources of all and national banks in Maryland on June 30, 1947, tota $2,071,152,846. As of Dec. 31, 1946, the assets of 394 savi building and loan associations in Maryland were compute $255,603,959.

State appropriations for the year ended June 30, 1947, $67,260,816; expenditures, $79,906,483; gross debt, $16, 000; net debt, $14,015,904; general fund surplus, $13,785,17

**Agriculture.**—During the first 8 months of 1947 Mary farmers received $66,350,000 from the principal crops c pared with $51,968,000 in the like period of 1946. Lives and livestock products brought a total of $100,681,000 as c pared with $85,036,000. The aggregate from all such sou was $167,031,000 against $137,004,000 in the 1946 period.

Table I.—*Leading Agricultural Products of Maryland, 1947 and 1946*

| | 1947 | 19 |
|---|---|---|
| Barley, bu. | 2,409,000 | 2,174 |
| Corn, bu. | 16,092,000 | 17,328 |
| Oats, bu. | 1,184,000 | 1,254 |
| Wheat, bu. | 11,955,000 | 7,320 |
| Hay, tons | 620,000 | 63 |
| Tobacco, lb. | 34,560,000 | 40,500 |
| Potatoes, bu. | 2,074,000 | 2,244 |
| Tomatoes, market, bu. | 1,105,000 | 975 |
| Tomatoes, processing, tons | 239,000 | 139 |

**Manufacturing.**—As of June 30, 1947, the Maryland ployment security board estimated the number of manufac ing establishments in the state at 3,086, employing 229,928 sons; the number of nonmanufacturing establishments (cove by unemployment compensation) at 31,918 employing 307, persons; total, 34,004 establishments employing 537,299 sons. The average weekly pay roll, 3 months ended June 1947, was: manufacturing, $155,548,951; nonmanufactur $163,801,624; total $319,350,575. The Maryland commissio of labour and statistics, as of Oct., 1947, estimated the aver weekly wage in manufacturing at $50.60; average hourly wa $1.21; average hours worked per week, 41.

**Mineral Production.**—The latest detailed figures on mine production available from the bureau of mines in 1947 shown in Table II.

Table II.—*Leading Mineral Products of Maryland, 1945*

| | Short tons | Valu |
|---|---|---|
| Coal | 1,765,000 | $6,107, |
| Lime | 66,675 | 502, |
| Sand and gravel | 2,898,808 | 2,694, |
| Stone (other than stone used in cement manufacture and crushed unclassified stone). | 1,242,930 | 1,851, |
| Talc and ground soapstone | 14,707 | 149, |

**Oysters.**—The commercial catch of oysters in Maryland ters during the season 1946–47 totalled 2,157,838 bu., co pared with 2,399,111 bu. during the 1945–46 season. (J. S. A.)

**Masonic Fraternity:** *see* Societies and Associations.

**assachusetts.** A north Atlantic state of the U.S.A., Massachusetts was admitted to the union Feb. 6, 1788. It is popularly known as the "Bay state." ea: 8,257 sq.mi., including 350 sq.mi. of water; population ensus 1940): 4,316,721; (1946 est.) 4,567,621, of which ap-oximately 88% was urban, 12% rural. The capital is Boston op. 770,816). Other cities of 100,000 or more inhabitants e: Worcester (198,741); Springfield (159,896); Fall River 15,062); Cambridge (111,124); New Bedford (110,341); merville (102,177); Lowell (101,229) and Lynn (105,153).

**History.**—Robert F. Bradford (Rep.) was elected governor in 46 for a two-year term. Other constitutional officers serving 1947–48 were: lieutenant governor, Arthur W. Coolidge ep.); secretary of state, Frederick W. Cook (Rep.); attorney neral, Clarence A. Barnes (Rep.); state treasurer, Laurence . Curtis (Rep.); auditor, Thomas J. Buckley (Dem.).

During the legislative session several notable measures were lopted, including the enactment of a law (Slichter act) pro-ding procedures in labour disputes endangering the public alth and safety; a measure to stimulate construction of vet-ans' housing by cities and towns with state guarantees against sses; the establishment of a board of education having super-sion and control over the department of education; the au-orization of a $12,000,000 bond issue for further development the Logan International airport at East Boston; approval of ıblic ownership of the Boston Elevated railway, replacing ivate ownership with the establishment of the Metropolitan ransit authority. The state budget of $198,000,000 for 1947–48 as balanced for the first time after 1851 without assessing a ate tax upon cities and towns—a method formerly employed obtain sufficient funds.

**Education.**—In 1947 there were 1,771 public elementary hools with 364,248 pupils and 13,297 teachers; 177 junior high hools with 80,738 pupils and 3,748 teachers; 276 senior high hools with 145,226 pupils and 6,567 teachers. There were teachers' colleges operated by the state, with a total enrol-ent of 3,175 students and 301 instructors. Total cost of public hool education in Massachusetts was $91,496,496.20 of which e commonwealth contributed approximately 9%.

**Social Insurance and Assistance, Public Welfare and Re-ated Programs.**—For 1947, the estimated total of public wel-are expenditures for cities and towns (with federal and state id) was $69,812,457. Of this amount, $51,817,376 was spent or old-age assistance; contributions to this total were: federal 5.1%, state 38.8%, local 16.1%. There was $10,540,689 spent s aid to dependent children; contributions: federal 27.5%, tate 33.3%, local 39.2%. There was $7,454,392 spent on gen-ral relief; contributions: state 22%, local 78%. The average ionthly case load was: old-age assistance 84,648 persons, aid to ependent children 9,068 families, general relief 15,202 cases.

For the fiscal year 1948 the commonwealth appropriated 4,133,393 to maintain correctional institutions, including the tate prison (611 inmates), prison colony (706), reformatory or men (806), reformatory for women (402), state farm 2,024).

**Banking and Finance.**—Revenue receipts of the common-ealth for the fiscal year ending June 30, 1947, were $285,569,-04.30. Of this figure, $80,000,000 was realized from a bond ssue to meet veterans' bonus requirements. Other bond and ote issues contributed $17,550,000 to the total revenue re-eipts. Governmental costs totalled $275,601,267.22 including 99,054,575 for the veterans' bonus. The direct debt was $122,-82,800, less a sinking fund of $4,138,941.37 for a net of $118,-43,858.63.

Assessed valuations in the state totalled $6,342,903,249 and e average local tax rate on real estate was $39.11 per $1,000.

Table I.—*Financial Report Covering the Year 1947*

| | |
|---|---|
| Savings banks | 190 |
| Trust companies | 60 |
| Co-operative banks | 175 |
| Banking companies | 12 |
| Savings and loan associations (state law) | 4 |
| Credit unions | 459 |
| National banks | 121 |
| Federal savings and loan institutions | 26 |
| Total number of all banks in the state | 1,047 |
| Total assets of all banks in the state | $9,931,743,608.18 |
| Total assets, federal savings and loan institutions | 223,891,453.50 |
| Total number of depositors in all banking institutions in the state | 4,276,521 * |

*Does not include depositors in national banks or shareholders in federal savings and loan associations.

**Agriculture.**—The total value of 1947 crops and livestock products was $176,784,000. The total acreage harvested during 1947 was 457,900 ac.

Table II.—*Principal Agricultural Products of Massachusetts, 1947 and 1946*

| Crops | Production 1947 | 1946 |
|---|---|---|
| Corn, bu. | 1,620,000 | 1,634,000 |
| Cranberries, bbl. | 470,000 | 550,000 |
| Apples, bu. | 2,864,000 | 1,784,000 |
| Hay, tons | 629,000 | 650,000 |
| Potatoes, bu. | 3,458,000 | 3,498,000 |
| Tobacco, lb. | 11,507,000 | 10,789,000 |

| Oats, bu. | 231,000 | 259,000 |
| Asparagus, crates | 132,000 | 136,000 |

**Manufacturing.**—In 1947 there were 1,808 local unions in the commonwealth with a total membership of 522,104 (388,736 males and 133,368 females).

Table III.—*Value of Principal Products Manufactured in Massachusetts in 1947*

| Products | Estimated Value |
|---|---|
| Woollen and worsted goods | $ 590,000,000 |
| Electrical machinery, apparatus and supplies | 499,000,000 |
| Cotton goods | 311,000,000 |
| Boots and shoes, other than rubber | 301,000,000 |
| Clothing, men's and women's, including work clothing | 248,000,000 |
| Foundry and machine-shop products | 217,000,000 |
| Rubber goods, including rubber tires and inner tubes | 202,000,000 |
| Printing and publishing, book and job and newspapers | 177,000,000 |
| Bread and other bakery products | 168,000,000 |
| Leather, tanned, curried and finished | 163,000,000 |
| Paper and wood pulp | 162,000,000 |
| Boot and shoe, cut stock and findings | 111,000,000 |
| All other industries | 2,675,000,000 |
| Total value | $5,824,000,000 |

(R. F. B.)

## Massachusetts Institute of Technology.

The year 1947 marked the peak demand for higher education in the immediate postwar period. The institute's enrolment in Sept. 1947 showed a 10% increase over 1946 and 87% over the normal prewar student body of 3,000. Although the percentage of veterans among the students remained approximately 60% for the institute, the percentage of veterans in the freshman class was only 25%. Of the total student body, 1,500 were graduate students.

The physical plant of the institute increased markedly during the year; four projects being completed and four begun. The construction of the Gas Turbine laboratory was completed; an army-built structure and 46 acres of land in Lexington, Mass., were acquired as a field station for the Laboratory of Nuclear Science and Engineering; two veterans' housing projects were occupied by a total of 270 families; and a new dining room was opened in the graduate house.

In addition, the institute acquired a large surplus navy drill shed which was to be moved to Cambridge and converted into an athletic cage.

Construction was begun on a new 360-man senior house and on a navy-financed, M.I.T.-operated supersonic wind tunnel valued at $2,600,000. Plans were completed for the Charles Hayden Memorial library.

Government and industry continued to sponsor research at M.I.T. on an extensive scale. Of its over-all budget of $17,000,000, the institute's research budget for 1947 was of the order of $10,000,000.

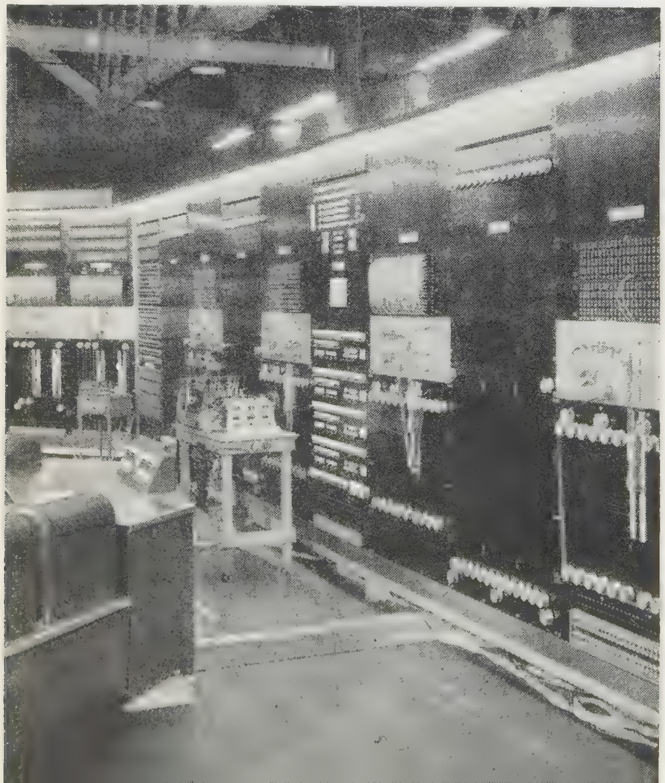
(For statistics of endowment, enrolment, faculty, library volumes, etc., *see* Universities and Colleges.) (K. T. C.)

## Mathematics.

By the end of 1947 most of the mathematical literature for the years of World War II had become generally available, but international communications were still so slow that much of the mathematics which attracted attention in 1947 had been published in 1946 or even earlier. The most striking example was the work of L. Cesari (Italy) on the area of a curved surface, published from 1942 onward but unknown outside Italy until 1947. Not only did Cesari's work overlap much work done in the U.S.A. at about the same time, but it also included the first solution of one of the most significant problems in the field. In Europe, publication was slow, in most countries slow even as compared with the war years. One effect of this delay in publication was that several results of importance were announced with only indications of proofs, so that it was not possible for other mathematicians to verify them. Thus, G. Fano (Italy) announced a proof that the general cubic variety in three-space is irrational, thus settling a long-outstanding problem in classical algebraic geometry. W. Brödel (Germany) claimed to have proved the famous four-colour theorem, which states that any map on a sphere, containing no disconnected countries, can be coloured with four colours so that no two adjacent countries have the same colour. An unexpected result in the theory of the distribution of the values of a meromorphic function was announced by D. Dugué (France).

A particularly significant contribution to algebra was made by R. Brauer (Canada) in proving a conjecture of Emil Artin in group theory, which has important consequences in number theory and the theory of representations of groups. The unitary representations of the Lorentz group were studied by V. Bargmann (U.S.A.) and by I. Gelfand and M. Neumark (U.S.S.R.). The modern "abstract" theory of algebraic geometry received contributions from O. Zariski (U.S.A.), who also delivered the annual colloquium lectures of the American Mathematical society on this subject, and from A. Weil (Brazil), whose b *The Foundations of Algebraic Geometry* was one of the important books of the year.

THE MARK II, largest mathematical calculator in the world at the time of its construction in 1947, was built for use by the U.S. navy in solving problems arising in its ballistics and guided-missiles research program.



Many advances were made in number theory. In the U.S.S U. Linnik and N. Tchudakoff gave new proofs of Vinograd theorem that all large odd numbers can be represented as sum of three prime numbers; in Great Britain several invest tors, notably L. J. Mordell, K. Mahler and H. Davenp studied problems of the geometry of numbers and Diophant approximation; in Norway A. Selberg continued to make pr ress in the problem of the distribution of the zeros of the F mann zeta function; in Hungary P. Turán gave a new and pro ising formulation of the same problem. Much attention attracted by work of L. Schwartz (France) on generalized c cepts of function and derivative, which placed certain ope tional methods on a satisfactory foundation and promised lead to progress in several fields, notably in the study of h monic functions. M. L. Cartwright and J. E. Littlewood (Gr Britain) published striking results in the theory of nonlin differential equations. Advances in the theory of trigonome integrals were made by A. Zygmund (U.S.A.) and F. W (U.S.A.). An unexpected simplification in the theory of Ban spaces was found by W. F. Eberlein (U.S.A.).

Interest in applied mathematics continued high. The bo *Theory and Applications of Mathieu Functions* by N. W. M Lachlan (Great Britain) was the first full-scale treatment of subject. Numerous tables of special functions appeared, testi ing in part to the power of the modern high-speed calculat machines. Several new machines of various types were un construction in the U.S.A., Great Britain and Germany; wh completed, they would be both faster and more versatile th their prototypes.

## Mauritius.

An island in the Indian ocean lying about 5 mi. E. from Madagascar; a British colon Area: 720 sq.mi.; pop. (1946 est.) 428,273, including 144,8 persons of European, African or mixed descent, 271,636 India and 11,836 Chinese. Mauritius and dependencies had an area 807 sq.mi. with a pop. (1944 census) of 432,648. Capital: Po Louis. Governor: Sir Donald Mackenzie-Kennedy.

**History.**—Proposals for the revision of the constituti were promulgated in Oct. 1947. They provided for an extensi of the franchise (including the granting of votes to women and for a revised legislature consisting of the governor (as pre dent), 3 ex officio members, 12 nominated unofficial membe and 19 elected members. The executive council was to inclu 4 members selected by the legislature.

**Finance.**—The monetary unit in the colony is the Indian rupee. Budg (actual 1944–45) revenue Rs. 34,713,517; expenditure Rs. 31,832,7 public debt (June 30, 1945) Rs. 2,563,119 (not including foreign debe ture debt, of the municipal corporation of Port Louis).

**Foreign Trade.**—(1944) exports Rs. 46,292,873; imports Rs. 65,787,7 Chief exportable products are: sugar, rum, aloe fibre and copra.

## Meat.

U.S. production of all meats increased slightly in 19 to an amount not much below the record of 194 largely because of the increased output of beef. The total f 1947 was estimated at 23,200,000,000 lb. compared with 22,96 000,000 lb. in 1946 and a five-year (1937–41) average of 17,67 000,000 lb. Outstanding feature of the year was the large nu ber of cattle and calves sold for slaughter. The total me supply in 1947 amounted to 156 lb. per capita compared wi

*U. S. Meat Production 1947, 1946 and Average 1935-39*

(In millions of pounds, dressed weight)

| | 1947* | 1946 | Average 1935-39 |
|---|---|---|---|
| ef. | 10,500 | 9,378 | 6,936 |
| al. | 1,600 | 1,440 | 1,038 |
| nb and mutton. | 800 | 970 | 871 |
| k. | 10,300 | 11,173 | 7,337 |
| Total. | 23,200 | 22,961 | 16,182 |

*Preliminary estimate.

2.8 lb. in 1946 and the prewar average of 125 lb. during 35–39. The general decline in meat animals was expected to duce this supply sharply in 1948.

The meat supply was made up of a record proportion of ef and veal, less lamb and mutton and somewhat less pork. he increase in beef and veal was caused by the increase in arketing of cattle and calves which reached a record total of out 36,000,000 head—a larger number than the previous rec-d of 1945. In prewar years the number slaughtered ranged om 24,000,000 to 26,000,000 head. The number of all cattle farms Jan. 1, 1947, was less than a year earlier, and the rge marketings in 1947 would result in smaller beef produc-on during 1948. The per capita domestic consumption of beef as estimated at 70 lb.—near the record of 73 lb. consumed in 45.

Pork production in 1947 was about 8% lower than in 1946 d provided an average of 70 lb. per capita compared with 78 . in 1946 and the record of 99 lb. in 1943. The pig crop was naller because of the poor prospects for corn early in the ear. Lamb and mutton production continued to decline, to 00,000,000 lb., the smallest amount since 1929. Per capita onsumption was only 6 lb. compared with the total meat con-umption of 156 lb.

U.S. exports of meat were estimated at 519,000,000 lb. in 946–47, compared with 1,300,000,000 lb. exported in 1946. The d of U.N.R.R.A. operations reduced military needs, and naller commercial shipments accounted for the shrinkage.

Prices of meat animals in 1947 ranged about 50% higher an in the previous year. The rise in livestock prices broke in eptember, then resumed its advance to new records. In Jan. 947, prices for hogs averaged $21.80 per cwt., rose to $24.30 in pril, then after a decline to around $23 for three months, gain advanced to a new high of $27.60 per cwt. in October, ut declined to $24.90 in December. Retail prices of pork prod-cts followed this trend in general. Prices of beef steers started he year at an average of $17.30 per cwt., advanced steadily to 20.20 in September, then declined slightly to the end of the ear. Veal calves held more steady, starting the year at $18 per wt. and fluctuating between this level and $22.30 per cwt. in December. Veal was one of the less expensive meats at retail nd the supply was large, increasing as the year advanced. amb and mutton held the advances made in late 1946 to around 19 per cwt., and rose to $21.60 in September. The slaughter f lambs and sheep was below that of 1946 as well as below the verage for 1936–45. Retail supplies were scarce in many mar-ets and sold at a premium.

World meat supplies were estimated as slightly larger at the eginning of 1947 than a year earlier, the decreases in North merica being offset by increases in South America, Europe and frica. Canada continued to impose its wartime embargo on xports of cattle to the United States, to meet commitments to reat Britain. No stocker and feeder cattle was received from anada.

No imports of cattle or other livestock was allowed from Mexico because of the outbreak of the foot-and-mouth disease. rdinarily the U.S. had received about 400,000 head of stocker attle to be finished on U.S. corn. In Argentina cattle produc-ion continued at about the average of previous years, but consumers were taking most of the higher grades of beef. Exporters found it difficult to fill their orders from Great Britain. Exports of frozen and chilled beef were about double that of a year earlier, about 90% of which went to Great Britain. Hog production was slowly recovering in Europe. (*See* also BACON; CATTLE; HOGS; LIVESTOCK; POULTRY; PRICE ADMINISTRATION, OFFICE OF; SHEEP.) (J. C. Ms.)

## Medical Rehabilitation of Disabled Veterans.

The most important advance of medical rehabilitation in 1947 was its extension into the field of chronic disabilities of long duration. Its greatest application, up to this time, had been in acute illnesses and injuries, largely of the wartime variety. The experience gained in World War II proved most useful in the acute disabilities of peace; and medical rehabilitation continued to play a large role in the treatment of industrial and other accident cases, and in cases of illnesses requiring protracted hospitalization, such as tuberculosis.

In entering the field of the chronic disability, medical rehabilitation continued to encounter new problems. There was the problem of the greater average age of the patient, which has an important bearing upon his physical resiliency, his powers of adaptation, his aptitudes and his motivation. The rehabilitation of the war injury started with the great advantage of the youth of the patient.

Of the disabled in older age groups, the largest was that of the chronic neurological cases. Of these, paralysis resulting from a brain haemorrhage furnished the greatest proportion. Some of these recovered spontaneously to the point of self-care and some degree of ambulation; but few recovered spontaneously to the point of further employability. A surprisingly large proportion were doomed to a life of total, or almost total, helplessness and were dependent upon constant nursing or attendant care.

This placed a burden upon the family which only a small percentage of families were able to shoulder; and this type of case soon found its way into a hospital or a home for incurables. These cases continued to represent a large and increasing proportion of the admissions to veterans' hospitals and domiciliary homes, and little attempt was made to improve their basic condition. The great majority remained in these institutions so long as they lived. The magnitude of this problem had been shown in a survey by the United States public health service, in 1936, which revealed that 11.4 per 1,000 of the people of the United States were chronic invalids, and that, at ages 65 to 74, this proportion had risen to 53.5 per 1,000. With the gradual increase of the older age groups in all populations, the increase in the numbers of chronic invalids would exceed the proportionate increase with age.

Late in 1946, a pilot program of rehabilitation of chronic neurological cases was instituted in the Minneapolis Veterans' Administration hospital under the direction of Doctors A. B. Baker and Joe R. Brown. During the first year of this program, 105 chronic invalids, largely chronic neurological cases, were treated. Most of the patients were above the age of 50 yrs., and about half had been in hospitals for long periods, some bed-ridden for several years.

Of these 105 cases, 49 were discharged from the hospital, capable at least of full self-care. Of those discharged, 23 were considered employable and 11 as partially employable; and 4 others were capable of partial self-care. Of the 52 remaining cases in which rehabilitation was begun, 40 were still under treatment in Oct. 1947, of whom 19 gave promise of early discharge; 2 had died, and only 10 had become discouraged and refused further efforts at rehabilitation.

The experience in this program indicated that the earlier rehabilitative treatment is instituted, the more rapid and the better the results. The importance of starting rehabilitation as soon as the immediate danger of a cerebral accident has passed is apparent in the results obtained. The reasons for this are not only physical, such as the prevention of muscular atrophy, but also psychological, because motivation for recovery generally is lessened as the patient becomes accustomed to inactivity and tends to accept his disability.

The social worker continued to be a most important member of the therapeutic team in the rehabilitation of the chronically disabled. Arrangements had to be made for the reception of the patient into his home and for such employment of which he was capable. One interesting fact uncovered in the social service part of this program was that families usually were happy to have the patient home again if only he were capable of self-care. It was the economic burden imposed by their helplessness that forced most of these cases into institutions.

Since the cost of hospitalizing the chronically disabled was almost as heavy as that of acute cases, the savings to be made by medical rehabilitation were enormous. The United States Veterans' administration estimated conservatively that the average duration of treatment in a hospital of one of these severely disabled chronic neurological cases was five years, and that, at 1947 costs, the annual charge for each case was approximately $4,375. At these figures, the rehabilitation of the 53 cases already discharged from the Minneapolis Veterans' Administration hospital represented a saving of more than $1,000,000.

Manual arts therapy was early made a part of medical rehabilitation in U.S. veterans' hospitals. This program was designed to start the vocational re-education of the patient before his release from hospital. Initially, each such patient was started on a program pointed toward a specific vocation, with the expectation that he would complete his training in a special school after leaving the hospital. The experience of two years, however, cast doubt upon the wisdom of restricting the early retraining of such patients to a single vocation; and it was now planned to direct this phase of retraining toward special broad skills rather than toward specified vocations. Thus, instead of training in watchmaking, or radio repair, the patient would be given basic training in the use of small precision tools, which skill could later be applied to a number of different vocations. This new course was known as Precision Mechanics. The principal reason for the change was that industrial firms much preferred a prospective employee to possess a special broad skill rather than a training completed elsewhere. (P. R. Hy.)

## Medicine.

Many new products of great importance were added to the medical armamentarium during 1947, and new facts were discovered about the sulfonamides, the antibiotics and the radioactive isotopes which were the centre of interest during 1946.

Most conspicuous was the official report on streptomycin in tuberculosis made as a result of an intensive study carried out under the auspices of the Veterans' administration. As the year ended, however, attention was attracted to the development of a new antibiotic called chloromycetin, and to evidence that a combination of a sulfonamide and an antibiotic might be efficient in certain types of infection in which either alone was not curative. This is known scientifically as synergism.

**Antibiotics.**—Streptomycin was apparently the most effi drug yet discovered for the treatment of pulmonary tubercu in its earliest stages. Evidently it can cure miliary tubercul a rapidly spreading form, which was previously invariably f This is the first drug to interfere definitely with the multip tion of tubercle germs in man. It was found, however, that lo doses than those formerly used are efficient; large doses l side effects such as dizziness and, in some instances, severe eruptions and deafness. Excellent results were obtained this antibiotic in tuberculous infections in the throat and bronchial tubes and in tuberculous abscesses. Finally, it is lifesaving in many cases of tuberculous meningitis which merly were almost always fatal.

Among the new drugs introduced during 1947, most inte attached to the new antibiotic called chloromycetin, reporte be effective against such organisms as the *Rickettsia*, which responsible for various forms of typhus. The drug was te also against psittacosis or parrot fever, an infectious dis caused by viruses. Chloromycetin, derived from a mould lated to the species that produces streptomycin, was fo effective also against the tubercle bacillus, the organism causes contagious abortion in cattle or undulant fever in m and against certain infections of the gall bladder, the urin bladder and the intestinal tract. The product is less toxic t streptomycin and can be taken by mouth.

New methods of administering the antibiotics include variety of devices for aerosols or inhalation of penicillin m and new substances which are injectable. The latter inclu penicillin mixed with vasoconstricting drugs like epinephr which permits slower absorption of penicillin. The suggest was also made for the application of cold, utilizing an ice over the area in which the penicillin is injected as a means delaying the absorption. This permitted the maintenance o high level of penicillin in the blood for a longer time.

California physicians reported the treatment of acute in tions of the throat with penicillin ice cream, which provi 25,000 units of penicillin every three hours. This method used in acute tonsillitis, pharyngitis, scarlet fever throats Vincent's infection of the throat, commonly called trench mou

**Synergism.**—Reports were available of the combined use the sulfonamide drugs and streptomycin or penicillin in ca of undulant fever. Attempts were made to use a similar proach to leprosy, using a combination of diasone or pron with streptomycin. Also interesting was a combination of pa amino salicylic acid, known as PAS, with streptomycin. A parently one remedy may damage the germ to such an ext that it becomes more easily susceptible to the bacteriosta effect of the antibiotic.

**New Drugs.**—New drugs were produced for use agai malaria, including chloroquine, pentoquine and a number product, SN13,274, which is also a quinoline. Its technical na is 6-methoxy-9-(4-isopropylamino-1-methylbutylamino)-quin line.

Attention continued to be given to tridione, introduced as remedy in epilepsy, and to several other anticonvulsive dru including hydantoin.

Investigators found a drug called DFP or di-isopropyl-fluor phosphate which affects the sympathetic nervous system. It w found useful in treating glaucoma, which is due to excessi tension within the eye. Reports indicated also that it was us ful in overcoming myasthenia gravis, a condition marked severe continuing weakness of the muscles, and in the trea ment of paralysis of the movements of the intestinal walls. causes excessive motility and makes the tissues more sensiti to the action of two other drugs—neostigmine and pitressin.

Special attention centred on the antihistamine drugs, which w included particularly pyribenzamine, benadryl and antergan. stamine is responsible for dilating the small blood vessels. It related to the attack of migraine headaches, asthma, hay ver, urticaria, food eruptions and similar conditions. The tihistamine drugs are strongly effective in lessening the seri- sness of such symptoms. However, desensitization and elimi- tion of specific allergens (substances that cause allergic at- ks) was still considered a more positive and scientific method treatment.

A drug called tetraethyl ammonium chloride was found to ve the ability to block the sympathetic nervous system. Its e has been in conditions of spasm of the veins or blood vessels ch as in Buerger's disease, intermittent claudication, and teriosclerotic gangrene. The method was used also in Ray- ud's disease in which there is pain and blanching of the fingers d toes.

Urethane or ethyl carbamate was also found effective in re- cing the total number of white blood cells in cases of leu- emia. Studies indicated that action of urethane is the equiva- nt to exposure to X-ray. Ths drug is, however, toxic.

Proteins are the most essential substances in nutrition, since ey are involved in the growth and repair of cells. Patients ere now prepared for operation by injection into the blood of rified amino acids in the form known as protein hydrolosates. ese may also be used in cases of severe starvation or inani- on. The method is also applied in cases of hardening of the ver. Research continued on attempts to secure in pure form e amino acids, of which at least eight had been found to be st as essential to health and growth as the vitamins.

**Antispasmodics.**—A new antispasmodic was discovered called yanesin which may be substituted for curare, the South Amer- an arrow poison. The latter was now available as d-tubo- rarine. All of these preparations were being tested as anti- asmodics in anaesthesia and also for the treatment of spastic ralysis and infantile paralysis and in the treatment of per- ns who have had wounds of the spinal cord.

**Radioactive Isotopes.**—Some tumours take up radioactive osphorus in greater amounts than do the other tissues of the dy. The Geiger counter is used to measure the amount of dioactivity. The method may be used to determine whether not tumours are malignant.

A case was reported in which radioactive iodine taken by outh was effective in causing the disappearance of a second- y growth that developed in the bones and other tissues after rimary cancer in the thyroid. Studies with the X-ray and the eiger counter showed that radioactive isotopes localized in rious parts of the body and that the radioactivity caused a ssening of the size of the tumours.

When people are given radioactive iron by mouth, the red lood cells become radioactive. A specimen of blood can then e taken from the person and injected directly into the blood another person. Later a specimen of blood taken from the cond person can be studied and the percentage of the radio- tive cells to the other cells can be determined. This permits exact estimation of the total amount of blood in the body. indicates also how the radioactive isotopes are used in agnosis.

Radioactive sodium can be injected into a vein and the time its appearance at a remote portion of the body determined use of the Geiger counter. This permits determination of e rate of the circulation and the extent to which inflammation blood vessels may interfere with circulation.

Radioactive phosphorus was found useful in treating exces- ve numbers of white blood cells in the blood, particularly in tients who are intolerant to treatment by X-ray. The method is beneficial in leucaemias and in Hodgkin's disease but not curative.

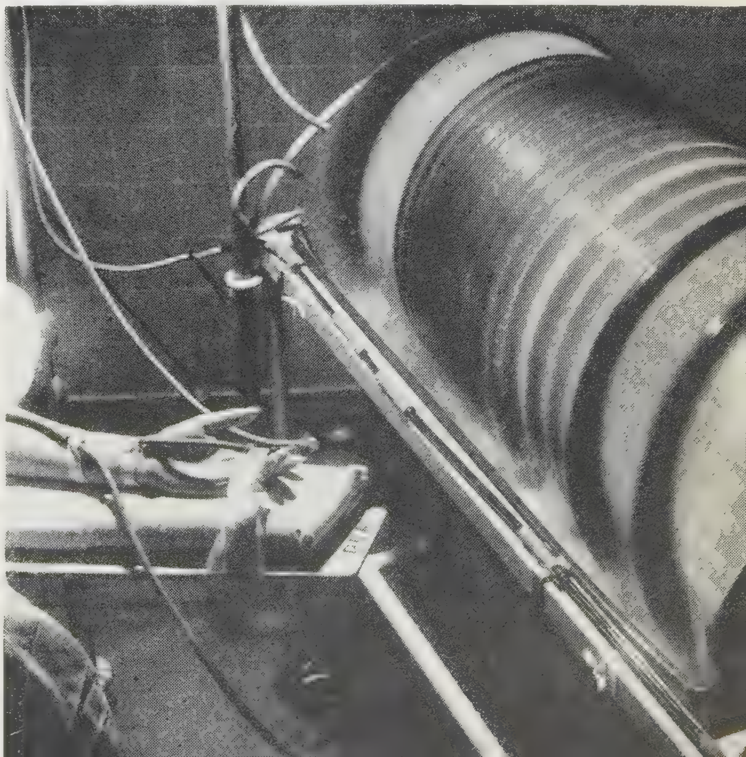
**Cancer.**—The attack on cancer, cause of some 180,000 deaths each year in the United States, was intensified during 1947. Special attention was given to the use of hormones, particularly for cancer of the prostate gland in men (treated with the female sex hormone) and cancer of the breast in women, treated with the male sex hormone. These were the first medical methods proved to be definitely beneficial in the control of certain forms of cancer. Studies were made also of splenic extracts such as were proposed by Alexander A. Bogolomets in his anticytotoxic serum. The results indicated an action which was not yet, however, definitely understood. Other studies related to the use of an extract obtained from an organism known as *trypanosoma Cruzi.* In animals with tumours infected with this trypanosome, a decrease in the size of the tumour was reported. However, research workers in the Institute for Cancer Research in Philadelphia, Pa., were unable to confirm any value for this method of treatment, which was developed by two Russian investigators, Gregory Roskin and Nina Klyueva (Mrs. Gregory Roskin). Studies made on mice with artificial cancer by the Philadelphia investigators were so unsatisfactory that they did not think it desirable to test the method on human beings.

Public interest in cancer was reflected by increased collections made by the American Cancer society to the extent of $12,000,000 annually and governmental appropriation for cancer research amounting to $14,000,000, and the establishment of a new cancer centre at the University of Chicago to include a cyclotron, a special building devoted to radioactive isotopes and a hospital exclusively for cancer patients.

**Narcotics.**—The search continued for a nontoxic narcotic drug. While such preparations had not yet been found, there were new narcotics called metopon, amidone and methadon for which various claims were made both as to their lesser ability to produce addiction and their increased ability in the narcotic effect. Methadon was urged particularly for use in persons dying from cancer for its powerful effects on that condition.

**Alcoholism and Cirrhosis of Liver.**—Physicians were con-

ARTIFICIAL KIDNEY used in critical kidney conditions at Mount Sinai hospital, New York city, during 1947. Patient's blood is shown being removed from the wrist artery, filtered of urea and pumped back into a vein, thus permitting his kidney to rest or recover



DR. HELEN B. TAUSSIG examining "blue children" in Paris in 1947. The U.S. pediatrician went to Paris to select those children suffering from the cardio-vascular disease who might benefit by a method of surgical treatment pioneered by her and Dr. Alfred Blalock

cerned in 1947 with the apparent increase in chronic alcoholism, especially among women. The tendency of women to share public bars with men and to drink in cafes and at cocktail parties was of concern to sociologists. While alcoholism was now believed to be only an incidental factor in cirrhosis of the liver, that condition caused more and more apprehension. Treatment with a high protein, low fat diet plus liver extract and vitamins seemed to be the most efficient form of treatment yet developed.

**Early Ambulation.**—Much research continued concerning the value of getting patients up early after surgical operations and after childbirth. Women were allowed to stand for one minute the first day after the birth, to sit in a chair five minutes the second day, to take abdominal exercises in bed and to sit up for two five-minute periods on the third day, to do the knee-chest exercises and to sit up in a chair for 30 min. on the fourth day and to walk about on the fifth or sixth day, to take a shower on the seventh day and to leave the hospital on the eighth day. The incidence of complications was lessened and a return of the body to normal was apparently hastened by this practice. Similarly, patients who had undergone surgery were now permitted to get up much earlier although by the same gradual process just described. Chemical tests of the blood and of the secretions of the body indicated that these remain more nearly normal under such a procedure.

**BCG Vaccination.**—Extended studies with vaccination against tuberculosis, using BCG (Bacillus-Calmette Guérin), indicated possibilities of its use as a general preventive. A centre for the preparation of BCG vaccine is being established in the new tuberculosis research hospital to be developed at the University of Illinois, Chicago, Ill., and controlled studies were made in large communities to determine the effectiveness of the technique. The evidence available justified trials of BCG among isolated groups like the North American Indians, Eskimos and employees of mental hospitals and some racial and professional groups such as nurses and interns in institutions for the tuberculous, among whom the morbidity and mortality from tuberculosis were known to be high.

**Heart Disease.**—New techniques developed in heart disease included the use of large doses of penicillin in endocarditis by
which at least one half of the patients who formerly would
died now recovered.

The surgical approach to heart disease was broadened so
"blue babies" were operated on by one of two techniques,
apparently successful, involving the taking of an incre
amount of blood into the lung. Reports were also made
technique by which a catheter is inserted into a large vei
the arm and passed directly into the heart. Samples of the b
can be taken from the interior of the heart of the living pa
and studies made with electrical devices which give a b
insight into the mechanism of the heart.

**Vagotomy for Peptic Ulcer.**—Surgical interest cen
around the operation by which the vagus nerves are cu
method useful in the treatment of ulcers of the duodenum
stomach. When the nerves are cut the acid secretions of
stomach are lessened and thus the symptoms controlled. H
ever, much more study was needed to define the exact plac
this unusual technique. Some surgeons were very strongl
favour of this technique, whereas others were just as stro
opposed to it. Most physicians inclined to the view that
patient should be treated by some of the newer medical metl
developed for the treatment of ulcer, including the use of a
acid substances, resins, mucin preparations and similar t
niques, before being submitted to the surgical method.

**Influenza Vaccine.**—During 1946 vaccines had been
veloped against influenza viruses A and B. Hundreds of th
sands of persons were vaccinated. Later studies indicated
the method was not protective since the viruses change t
form and it becomes necessary to develop a variable influe
vaccine which can attack a variety of viruses. The meth
indicate, however, possible controls against such devasta
epidemics of influenza as occurred in 1918. The combinatio
vaccination against influenza virus with sulfonamide and a
biotic drugs to control the germs might be able to arrest s
epidemics.

**Epidemics.**—No serious epidemics disturbed the Un
States during 1947. The total number of infantile paral
cases was under 12,000, or less than half the number that
curred in 1946. A severe outbreak of bulbar poliomyelitis
the vicinity of Minneapolis led to the development of a n
technique of treatment for this special form. It involved ea
opening of the trachea (or windpipe) and direct inhalation
oxygen through this opening. This method was unquestiona
lifesaving in many cases. Serious epidemics of poliomyel
occurred in England and in Germany.

A severe outbreak of cholera affected Egypt and the far ea
England had 15 separate introductions of Asiatic smallp
during 1946, each of which was controlled by widespread vac
nation. In England 33 cases occurred in an outbreak in F
1947.

Special attention was given throughout the United States
outbreaks of infectious hepatitis with jaundice, resulting
some instances from introduction of the virus through blo
transfusion, in other instances simply as an epidemic sustain
from contaminated water or food. New tests were develop
for testing the function of the liver.

**New Devices.**—One of the discoveries of World War II w
a pocket-sized kit by use of which it is possible to tell t
amount of carbon monoxide in the air. Carbon monoxide is t
dangerous exhaust gas from automobiles and the substance
illuminating gas that produces sudden unconsciousness a
death. The detector is a specially prepared mass of yell
silica in jelly form which turns green whenever it is exposed
as little as one part of carbon monoxide in 500,000,000 pa
of air.

Another new device was an electric instrument which can

ached to the ear and which shows exactly how much oxygen
resent in the circulating blood. This is especially important
use on people undergoing anaesthesia.
Research methods were developed for using a special ultra-
let apparatus to destroy viruses in blood used for transfusion
d to kill the virus of influenza in material used for vaccination
inst that disease.
The ballistocardiogram, an instrument which records the
oke volume of the heart, was used as a means of calculating
output of the heart. The electrokymograph was used to
serve changes in the border of the heart as a means of deter-
ning special strain on the organ and a tendency to dilate and
arge.

**Great Britain.**—The National Health Service act, which en-
led everyone to comprehensive medical care, was part of a
ogram of social security aimed at "the prevention of indi-
dual poverty resulting from those hazards of personal fortune
er which individuals have little or no control." The program
d many critics; and the medical profession, while favourable
its aim, showed reluctance to enter the organized service it
tailed—a service which many believed must involve regimen-
tion and bureaucratic mediocrity. Throughout 1947 British
ctors negotiated about possible conditions of work, remunera-
on, and disciplinary machinery; and their decision on whether
join the service had to be reached early in 1948 if the act
as to come into operation on the appointed day in July 1948.
he British Medical association objected particularly to aboli-
on of the sale and purchase of practices, to exclusion of doc-
rs from "medically overcrowded" areas, to payment of a basic
lary to practitioners, and to the powers vested in the minister
health. Meanwhile the enthusiasm of those who regarded the
tional health service as a great opportunity for medical prog-
ss was damped by the economic situation, with its prospective
striction of expenditure on hospitals and health centres. An-
her serious obstacle was the continuing deficiency of trained
urses—a phenomenon common to most countries.
Opponents of the government argued that no act of parliament
uld in itself improve medical care: legislation did not create
e doctors and nurses needed to look after the thousands of new
spital beds admittedly required. The reply to this argument
as that the greater the shortages, the greater the need for or-
nization. Certainly this was true of hospital beds; and, even if
e general-practitioner service had to be postponed, the minister
as certain to take over the hospitals. During 1947 he appointed
e 14 regional boards to plan the hospital services.
Comparable schemes for public organization of medical serv-
es were on trial or under discussion in Scandinavia, the Nether-
nds, Northern Ireland, Eire, South Africa, Australia, New
ealand, and elsewhere. The South African model, introduced
slow stages, closely approached the straightforward "state
edical service," with salaried officers centrally controlled. The
New Zealand service, in which control was minimal, might need modification because too much money was spent on the family doctor and too little on the specialist and hospital. In the United Kingdom, on the other hand, some feared that excessive encouragement of the specialist would destroy the good general practitioner. To put the specialties in their proper place was a basic problem everywhere.

All this preoccupation with organization was closely related to the movement towards "social medicine." Doctors appreciated that advances in treatment were of little value unless they were made accessible to those who could profit by them. Also they now recognized that medicine should concern itself less with disease, isolated in hospital beds, and more with the "positive health" of people in their natural environment—the home, the office, the field, the factory.

A more social outlook on the medical needs of the community revealed that certain "uninteresting" disorders had too little attention—*e.g.*, neurotic illness, the infirmities of age, and rheumatism. It was also seen that vast benefits to the public were obtainable from undramatic innovations such as the better keeping of records, careful reablement or rehabilitation after illness, and practice by doctors in groups, and from fuller use of ancillaries such as the secretary, the health visitor and the social worker, who could save the doctor's time and extend his influence.

| Consumption. . . . . . . | 3,777.2 | 4,142.0 | 3,260.4 | 4,744.6 | 2,371.2 |

**United States.**—The drop of more than one-half in domestic production of mercury had been largely offset by reduced consumption, and imports were needed for less than 20% of the demand. The salient data of the industry are shown in Table II.

In the first three quarters of 1947 production was 1,341,400 lb., imports 482,400 lb., exports 58,520 lb., and consumption 1,831,600 lb. (G. A. Ro.)

**Merit System:** *see* Civil Service.
**Mesotrons (Mesons):** *see* Physics.

**Metallurgy.** The majority of the more striking metallurgical developments were in the field of process metallurgy, rather than in the metallurgy of the individual metals.

**Atomic Research.**—The wartime development of atomic fission was paying dividends in peacetime applications. Science had been enriched not only with four new metals—neptunium (No. 93), plutonium (No. 94), americium (No. 95) and curium (No. 96), but also with a host of new isotopes, and in addition, more plentiful supplies of many formerly known isotopes than had before been available. Altogether about 80 isotopes had been identified in the products from the operation of cyclotrons and fission piles, many of which had been isolated in sufficient amounts to distribute for scientific research, either by sale or on loan. Striking new discoveries were expected from the use of these isotopes in the fields of biological, medical, chemical and metallurgical research. (*See* also Atomic Energy.)

**Blast Furnace Operation.**—Research on the action of oxygen-enriched blast in the iron blast furnace indicated a possible increase of 20% in capacity and a saving of 10% in fuel.

**Flame Hardening.**—New techniques in the use of flame hardening made use of electronic methods of temperature control.

**Grinding.**—Feeding coolant through the spindle of a grinding wheel, where centrifugal force drives it out through the pores of the wheel to the grinding surface, results in greatly lowered grinding temperatures.

**Metal Finishing.**—Sapphire tips of gauge points, burnishers, and tools for machining soft metals were found to give up to 7,000 times the life of steel, and 1,000 times that of carbide tips.

**Moulding Dies.**—Beryllium-copper alloy moulds used in moulding plastics were more easily made than steel moulds, had lower cost, and better heat conductivity to dissipate the heat.

**Pickling.**—A mechanical device was being developed for the removal of scale from rolled steel. Operations in the experimental stage were soon expected to go into a pilot plant.

**Pumping Liquid Metals.**—Electromagnetic action had been used for a number of years to circulate liquid metal in certain types of electric furnace. The same principle was adapted to pump liquid metals, even those of high melting point.

**Refining.**—Vacuum melting and casting of beryllium may be used to remove some of the more volatile impurities in the metal, but showed little effect on iron, aluminum, copper or silicon.

**Soldering.**—A new silver solder, containing 20% silver, had high capillary action and tensile strength.

**Stamping Dies.**—A test die made from easily worked low melting point alloy could be hardened sufficiently by immersing it in liquid nitrogen to permit the striking of six to ten trial stampings. When any necessary adjustments had been made, the die was then duplicated in steel for regular use.

**Substitutes.**—Aluminum was being substituted for steel in pipes, which were cheaper on a pound basis, but cost more per foot. Extruded tubing of tenite plastic was being used for piping gas in homes in southern California.

Nylon was being satisfactorily substituted for steel in some types of small gears.

**Testing.**—A supersonic thickness gauge was being used to measure the thickness of sheet metal which is accessible on only one side.

A direct reading spectrometer was developed which woul termine simultaneously up to 16 different elements in the sample, turning out analyses continuously every five minute

**Welding.**—New welding rods were developed for specia uses in various lines—wear-resistant bronze, for high tem ture, for use on light gauge mild steel, for hard surfacing, for high tensile and impact strength. (G. A. R

**Metal Prices and Production:** *see* Mineral and M Production and Prices.

**Meteorology.** The subject of artificial weather attra wide attention during 1947; almost daily press carried accounts from Australia, Hawaii, South Ame or some part of the United States about attempts to pro rain by sprinkling clouds with "dry ice," or solidified ca dioxide. The first widely reported tests with dry ice to pre tate rain or snow were described before the American Mete logical society late in Dec. 1946. Some thought the met might be developed to dissipate fog and low clouds over ports, and to counteract hurricanes or divert them.

By the end of 1947 the evidence, although not conclus was sufficient to cause intensification of experiments and f tests to determine the practical possibilities of inducing rai snow to fall where needed. The results so far could be s marized thus: first, fog or cloud particles must be at temp tures near or below freezing for dry ice pellets or any ot known nucleating agent to condense out ice particles. The sulting snow or ice crystals grow at the expense of cloud dr lets and may then fall as snow or rain, thus dissipating cloud or fog. The requirement of freezing temperatures limi possible application to wintertime or to occasions when cl tops extend upward into freezing atmosphere. Second, rain in sufficient quantity to be of value may be precipitated, clouds at the shower stage from natural causes apparently m be present over the desired location. The effect of artificial me ures was still undetermined. Third, it was doubtful that r could be produced artificially over drought-stricken regions the absence of humid air masses of broad extent and without instability or the frontal formations in the atmosphere wh usually cause rain. The natural phenomena necessary for for tion of rain appear to involve quantities of air and moisture beyond the capacity of dry-ice techniques. Fourth, althou systematic tests on hurricanes were still awaited, many scient believed such large-scale weather disturbances to be beyond scope of artificial controls, at least temporarily. Fifth, if art cial rainmaking were developed to the point of commercial i portance a new field of litigation would be opened. Some le claims under consideration in 1947 were based on damage fr heavy rain and destructive winds accompanying storms t were allegedly induced by artificial means. Moreover, a f landowners talked of water rights to moisture in the clou above their property. Others on farms lying leeward of t rainmaking experiments feared they would be deprived of sho ers that otherwise would reach their lands and water their cro

**International Meteorological Organization.**—An event importance to meteorologists the world over was the conferen of directors of the International Meteorological organization Washington from Sept. 22 to Oct. 11, 1947. The meetings we concluded with adoption of a new charter providing for an inte governmental World Meteorological organization after ratific tion by 30 member nations. These were the most widely a tended and probably the most important meetings of the I.M. after its organization 70 years before. Directors of 60 forei meteorological services were present.

The conference approved a plan of negotiation with t

RSERK," an apt picture of the unusual weather in 1947, which included vy floods, destructive tornadoes and heat waves. Cartoon by Shoemaker in *Chicago Daily News*

ited Nations to bring the future W.M.O. into affiliation with U.N. The conference also reviewed the work of the ten hnical commissions which had held sessions in Toronto dur- August and early September and the regional commissions ich had met since the extraordinary postwar conference at ndon in Feb. 1946. The commissions on aeronautical meteor- gy, agricultural meteorology, maritime meteorology and syn- ic weather information in particular presented many plans new facilities and for international co-operation in increas- the accuracy and scope of weather reports. Uniform units measure and operating procedures, universal synoptic codes d standard values for certain physical constants were adopted. e conference elected new members for the interim executive nmittee composed of 25 directors from different countries.

**Forecasting.**—Agricultural, industrial and transportation in- ests and the general public had long pressed meteorologists to ovide weather forecasts for longer periods in advance. The rld food crisis in 1947 focused attention sharply on this prob- n. In the corn and wheat belts of the United States the un- ually cool, wet spring was followed by prolonged hot weather d drought during the late summer. Plans of export control thorities of the U.S. government were vitally dependent on eknowledge of the weather and its effects on crop yield. uring World War II the major belligerents spent huge sums on earch to develop new methods for long-range weather fore- sting because foreknowledge of weather was so important in culating the risks for strategic and tactical planning. To de- mine the reliability of forecasts military leaders in the United ates requested the National Academy of Sciences to appoint a mmittee of scientists to study the results of the best methods forecasting. After several months of investigation the com- ttee reported little evidence of skill in specific forecasts be- nd a period of three or four days. Although this conclusion plied primarily to detailed day-by-day forecasts rather than to neral monthly or seasonal trends and climatological expect- cy statistics, it served to epitomize the limitations of weather forecasting.

Despite discouragements research meteorologists and collaborating institutes and universities increased their work on methods for making forecasts more accurate and for longer periods. Among noteworthy efforts were the mathematical approach headed by scientists at the Institute for Advanced Study, Princeton, N.J., which included use of electronic computers; the studies of atmospheric circulation at the Massachusetts Institute of Technology, Cambridge, Mass., and the University of Chicago, and the extended forecast projects of the U.S. weather bureau. Other intensive studies in the composition and structure of the atmosphere and weather forecasting were in progress or about to be organized in universities of the west and southwest, with support of the U.S. air forces and navy. Among European nations, the U.S.S.R. appeared to be giving most attention to this subject.

The official meteorological bureaus of most countries were still issuing forecasts for periods of only 24 to 48 hr. Some issued regular forecasts in general terms for a week, but agreed that they showed little skill for forecasting more than the first three or four days. A very few issued experimental monthly or seasonal outlooks, but while they showed some evidence of skill none was reliable enough for general distribution and use.

Renewed attention was given during 1947 to calculation of future weather risks on the basis of expectancies derived from climatological statistics over many years. Monthly or seasonal weather guides of this kind give the frequency of occurrence of various weather conditions and could be projected into the future indefinitely to indicate the "probability" that the condition would occur, but this method did not show unusual conditions or anomalies for any definite time and place.

Most scientists agreed that progress in weather forecasting was most likely to come through extension of the system of upper-air soundings to give a quantitative analysis of the general circulation including elements which had been measured inadequately, if at all, such as the atmosphere's incoming and outgoing radiation and its effects at various levels. Undoubtedly the component quantities were so numerous and complex that they would require special mathematical treatment both for analysis and for computation of weather conditions at some future stage.

The widest gaps in the world-wide network of meteorological stations were still at sea, in polar regions and in other uninhabited or undeveloped areas. During 1947 two more stations were established in the arctic segment of the western hemisphere, one near Eureka sound at lat. 80° N.; long. 86° W.; the other at Resolute bay, lat. 75° N.; long. 95° W. The Eureka sound station was established entirely by air lift in April and was the most northerly permanent aerological station ever equipped, staffed and put into regular operation in this manner. The station at Resolute bay was established in August by means of surface icebreaker and transport ships. These two stations were staffed jointly by technicians from the national meteorological services of Canada and the United States. Their far northern reports added valuable information for the weather maps of the hemisphere and would assist in improving the daily and extended weather forecasting for Canada, the United States and western Europe.

On the oceans meteorology suffered from a shortage of fixed vessel weather stations or alternative sources of weather reports at sea. During World War II about 18 ocean stations were operated in the Atlantic to furnish weather reports and upper-air soundings four times or more daily. Eventually about 20 similar vessel stations were placed in the Pacific. All were spaced to give a network of representative weather reports. By agreement at the London meeting of the International Civil

Aeronautics organization in 1946, the peacetime requirements in the Atlantic were set at 13 vessel stations. Ships, equipment and personnel were to be provided by the principal maritime countries of North America and western Europe on the basis of their relative interest. Demobilization reduced the number in actual operation to two stations during part of the year,
the end of 1947 four were again operating. In the Pacifi
one station remained in the ocean east of Hawaii.

Because of the shortage of suitable ships and the cost o
ation, meteorologists were searching in 1947 for more ec
cal means of obtaining in
tion and upper-air sound
sea. Experiments were in
ress to develop buoyed
matic weather stations
there were tests also of ba
with altitude control by
or automatic device sim
those used for incendiar
poses by the Japanese
the war. Aircraft reconnai
was used extensively for
er observations by the air
and navy over the Pacif
Arctic oceans, and in
places during seasons of
cal cyclones to aid the w
bureaus in collecting r
and soundings necessary f
curate forecasting. The s

*Tables I, II and III are illustrative of variations in temperature, rainfall and sunshine in the United States during 1947 and are not the absolute extremes. Other places not listed in the tables may have had larger variations in these weather elements.

†Column headed "Annual dep." shows the departure from normal in the yearly figure. The normal is the average value over a long period of years. In the table of temperatures (Table I) the second line under each city shows the monthly normals for convenient comparison with the 1947 averages.

elopment board guided the arch program.

mong other research proj- worthy of note were the nderstorm studies near Wil- gton, O., the cloud physics lies relating to artificial hods for causing rain, inves- tion of microseisms as an cation of distant typhoons hurricanes, radar studies early detection of severe lo- storms, and meteorological k relating to atomic energy duction. Co-operating in one more of these projects were air forces, the navy, the al corps, the National Ad- ory Committee for Aeronau- and the weather bureau.

**he Weather in 1947.**—er most of the U.S. and thern Canada east of the ky mountains the tempera- es during Jan. 1947 averaged ch higher than usual. High- abnormalities were in Manitoba and North Dakota where artures of +14° F. raised the mean temperatures to 15° 20° F. Texas was exceptional. There the monthly tempera- e averages were between normal and 4° below normal. In the cky mountain and Pacific coast states averages were mostly to 4° below normal. However, the weekly averages during uary ranged from 18° or 20° below normal in Texas to 24° ve normal in South Dakota. Actual extremes ranged from 5° F. in Minnesota and −30° F. in Kansas early in the nth to + 52° F. in Minnesota and +63° F. in Kansas on the h. Total precipitation for the month was heavy east of the ssissippi, twice normal in parts of Alabama, Mississippi and nnessee and below normal in the western two-thirds of the S. and Canada except in Iowa. Lowest amounts were in Cali- nia and parts of Utah, Nevada and Arizona where only 25% less of normal precipitation fell. A severe storm late in Janu- brought extremes of weather to the central states. It caused ezing rain, sleet, snow and thunderstorms with sharp light- g. Deep snowdrifts halted traffic in Milwaukee and other rth central cities.

In the British Isles and western Europe mild weather in mid- uary gave no hint of the rigours of winter which were to fol- ; Jan. 20, 1947, brought the heaviest snowfall over south- st England since 1891. Although the average depth was gen- lly less than 12 in., traffic was stopped and villages isolated h 12-ft. drifts in some places. Temperatures were zero or er. Severe cold weather continued almost without interrup- n through February and the first half of March. Frequent ws added to the hardships. Then came spring thaws and ods that caused damage in England estimated at £12,000,000. eather records indicated that for England as a whole February s the most severe winter month since Jan. 1814, and the three nter months ranked tenth in lowest mean temperatures for preceding 200 years.

On Jan. 29 the lowest temperature at Greenwich was just der 10° F., the lowest since 1895. The mean at Oxford for oruary was 27° F., the coldest month there since records were gun in 1815. There was drifting ice in the North sea off the tish coast, an extremely rare occurrence. For three weeks dur- February the sky over London was continuously obscured by clouds. Precipitation during March was three times the normal amount in many parts of England and Wales and the heaviest during that month for a century.

In the U.S. during February temperatures averaged as much as 10° F. below normal east of the Rocky mountains, and from 2° to 8° above normal over and west of the mountains. In northern Florida minima as low as 18° F. occurred and frost caused damage to citrus crops estimated at $50,000,000. Feb. 1947, however, was a typical winter month with the usual fluctuations in temperature and with occasional storms that brought snow, freezing rain and gale winds to many parts of the north central states. Precipitation was generally a little below normal.

In temperature distribution during its first half, March was similar to February, warmer than usual west of the Rockies and colder eastward except in New England where it was about 2° above normal. Exceptional rainfall occurred at Baton Rouge, La., where on March 13, 7 in. fell in about 6½ hr., causing flood damage. In other parts of southeastern states precipitation exceeded twice the normal amounts, but in the far southwest and in central parts of the Ohio and Mississippi basins rain and snow were less than half the normals.

April weather was not unusual for the U.S. Average temperatures ranged within 4° of normal. In the southeastern states and west of the continental divide averages were slightly above normal; in the plains, Great Lakes and New England states, slightly below normal. Except in a few localities precipitation was close to normal. Heaviest anomalies were in Nebraska and Michigan where amounts were two-and-one-half times normal. Tornadoes and spring floods made their usual appearance. The tornadoes came with a low pressure centre that developed over southern California and moved east-northeastward across Kansas followed by a sharp cold front. In Texas and Oklahoma tornadoes on April 9 and 10 were the worst in 10 years; they caused 150 deaths, 1,000 injuries and $12,000,000 property damage. The worst floods were in lower Michigan, North Dakota and in coastal streams of the Gulf states.

May and June were unseasonably cool and wet in most of the central states, and spring planting was seriously delayed. During the second week of May unseasonably heavy frosts damaged crops and fruit in the Ohio valley, Maryland and Virginia.

Freezing weather extended as far south as North Carolina. Persistent rains in Arkansas, Kansas, Oklahoma and Texas caused floods in many of the streams, and snow in the northern plain states during the last week in May added to agricultural problems. In central Wisconsin the snowfall reached 9 in. in depth, and in northern Iowa 5 in.

Abnormal weather—cool and wet east of the Rockies, and warm and dry in the west—continued through most of June except in the Gulf states. The retarded season became so critical in the corn belt, especially in view of the world food shortage, that farmers laboured day and night, some by artificial light, to complete planting when the weather turned favourable. It was estimated that each day gained in this crucial stage added $10,000,000 to $20,000,000 to the total value of the corn crop in Iowa alone.

In June heavy flooding in the lower Missouri and central Mississippi valleys broke all-time records at many points. A crest of 40.3 ft. was reached later at St. Louis on July 2. Total precipitation from May 27 through June 30 was 15 in. in northern Arkansas and Iowa, and 8 in. or more over most of the Dakotas, Kansas, Nebraska and Illinois. Florida and the coasts of Georgia and the Carolinas recorded 8 to 12 in. The heavy rains caused damaging flash floods in parts of Kansas, Nebraska, Iowa and Missouri. Tornadoes were typical of May and June in number and distribution.

In July the weather turned generally hot and dry except in the Ohio valley and the Carolinas where it was cooler than usual, and in New England where it continued wet. By the last of August central and eastern U.S. and Canada, especially in southern Ontario, were suffering from heat and drought in contrast to the cold and rain of May and June. In Toronto the all-time records for sustained heat were exceeded during August and new records were established also in parts of the middle west. Exceptional was a very local flash flood in Erie, Pa., on July 22. In 24 hours 10.4 in. of rain fell, most of it between 9 A.M. and 6 P.M. During July temperatures averaged 2° to 4° above normal west of the Mississippi and in New England and Ontario, but in states along the Ohio river and in the southeast they were 2° to 4° below normal.

In August the weather was warmer than usual almost everywhere in the U.S. except in California, Oregon and Florida. Largest excess in temperature was in Iowa where the departure from normal was +10° F. This gave average temperatures between 80° and 85° for the entire month. Precipitation during August was only about half the normal in the plains, southern Rocky mountains and New England states, and except for local anomalies of 50% to 100% above normal in southern Ohio, northern Montana and coastal zones of Oregon, Texas and North Carolina, rainfall was elsewhere close to normal. For the summer as a whole (June, July and August) average temperatures were about 2° above normal except in the Ohio valley and the southeastern and plateau states where it was approximately average. Rainfall during the summer was about 50% normal in much of the south central and southwestern states.

The hot, dry summer weather continued through two-thirds of September, then gave way in the east to an unusually long period of fine weather, but in the west the brief periods of cooler weather were quickly followed by return to temperatures which averaged as much as 12° above normal in Kansas and Wyoming during the last week of September. Averages for the month were 6° above normal for Kansas and northern Texas. September was very dry in the far western and southwestern states with only 25% to 50% normal rainfall. At the end of the month the warm weather was quickly followed by killing frosts in the northern states. The short growing season was at an end and agricultural production for the world food program suffered.

Although several tropical cyclones were reported in the bean and Gulf of Mexico during August, September and ber, only two caused major and widespread damage. Th appeared about 750 mi. east of Martinique, W.I., on Se By the 17th it reached Florida. Winds of 140 m.p.h. or were reported from the storm area, in paths extending width of 120 mi. at times. In its passage near Miami, Fla New Orleans, La., the storm cut off communications from cities and isolated the principal hurricane warning headqu of the U.S. weather bureau in those two cities.

A smaller hurricane brought heavy rain but did relative tle damage except for flooding in southern Florida on Se and 24. Still another caused squalls and heavy rain on th coast of Florida and Georgia on Oct. 6. The second majo ricane appeared near Swan Island on Oct. 9, crossed sou Florida during the 10th and 11th and brought winds o m.p.h. and further heavy rains. This tropical cyclone was worthy because it apparently turned westward into Georgia having left the Florida coast and moved northeastward considerable distance into the Atlantic.

In the British Isles the unusual cold of February and M gave way to weather nearer normal in April with its usual variations in rainfall and condition of sky. In the south of land there was somewhat more sunshine than usual; and i north more rain, a record fall of 10 in. occurring at Esk muir. Although weather in May was alternately warm and it was not very unusual except for the maximum tempera on May 31. In London the highest was 90° F. In some p this heat wave gave the highest temperatures in May fo years. Continuation of the heat into June with little relief at night brought such abnormal temperatures that the m came to be known by some as "flaming June." Temperatur 90° F. and above were the more remarkable because of the trast with minima below zero only 10 or 12 weeks before Kew observatory near London 91° F. broke all previous records. The remainder of June was sunnier than usual in so east England, and warmer. Elsewhere it was typically unset

Rather warm weather even for the season continued du July. Thunderstorms were more frequent than usual. During last few days of the month many places in France reported m mum temperatures at record highs above 100° F. Au brought an unusually long period of fine weather. Mean perature at Kew was 68° F. Rainfall was negligible in m places and generally less than 25% of the average for Augus

Weather continued generally fair through September, the successive month with mean temperatures above averag most parts of the isles. In October it turned very dry ag and for much of England was the driest October on rec During November and December also the meteorological co tions throughout Europe were not unseasonable in general, in Switzerland shortage of rain threatened to cause shutdo in major hydroelectric plants and stop rail traffic.

In North America the last three months of 1947 were n worthy for several weeks of warm, dry weather, especially New England where many destructive forest fires occur Practically everywhere in the U.S. mean temperatures for O ber were above normal. The greatest excesses were in Iowa states bordering Lake Michigan where temperature means w in the 60s F. Not until the last of October was the period pleasant weather interrupted by wintry cold which brought sn to Montana, Wyoming and North Dakota. But it turned wa again the first of November and portions of North Dakota av aged 12° F. above normal for the week ending Nov. 4. A pressure centre which developed over Colorado and mo northeastward into Canada the second week of November ag reversed the temperature trend. The cold front carried tempe

es to freezing or lower almost everywhere east of the Rockies
ept in the coastal and southeastern states. In the northern
n and plateau states temperatures went below zero; killing
sts were extended to northern Texas, Arkansas and almost to
Ohio valley. Temperatures remained below normal in most
ons and the November averages were generally low, the low-
monthly departures being in Wyoming and Nebraska, 6° be-
normal. However, for the three autumn months as a whole
rage temperatures in the U.S. were above normal, about 2°
ve in most regions, but 4° above normal in the central plain
es. Precipitation was fairly close to normal in most states
ing November, and the totals for the three autumn months
e mostly representative of the season. In early December
w covered the ground throughout interior New England and
n Michigan to the western slopes of the Pacific coastal
ges and southward to Colorado and Utah. Depths were 12
or more in Minnesota, the Dakotas and the Rocky moun-
states. Exceptional were two snowstorms in the Boston,
ss., and New York city areas near the close of the year. The
t struck Boston Dec. 23 and 24 in time to give much of New
gland a white Christmas; the second buried New York city
northern New Jersey on Dec. 26 and practically stalled the
's business for two days. It marooned suburban trains and
upted street traffic and communications. Within about 20
25.8 in. of snow fell in the city. This was almost 5 in. more
n the amount that fell in the famous blizzard of March 1888
was the greatest depth of snow from a single storm in the
orded history of New York city. (*See* also DISASTERS;
ODS AND FLOOD CONTROL.) (F. W. RR.; X.)

## ethodist Church.

There were four church-wide Methodist gatherings in the United States
ring 1947. (1) A congress of 200 leaders met in Chicago, Ill.,
led by the board of temperance. Prohibition was scarcely
ntioned, the emphasis being on measures to protect dry terri-
y from invasion of the liquor traffic by means of newspaper
magazine advertising. Feb. 15, 1948, was named as Com-
ment day, the focus of a pledge-signing campaign. (2) More
n 200 rural pastors met in Lincoln, Neb., in July to consider
ns for strengthening this field, which is the chief recruiting
und for the ministry and which is too often left to men
o have seen their best days. (3) The 7th Ecumenical
thodist conference met in Springfield, Mass., in September
a nine-day session. This world congress has no authority
t affords a forum for the discussion of matters common to
thodism everywhere. It set up a new ad interim agency,
Ecumenical Methodist council, composed of 200 members
m 24 groups, the largest of which, the Methodist Church,
S.A., had 50 members. Bishop Ivan Lee Holt of St. Louis,
., and Dr. Wilbert F. Howard of Birmingham, Eng., were
chairmen; Prof. Victor Murray of Cambridge university
Bishop Paul N. Garber of Geneva, Switz., vice-chair-
n, and Harold Roberts of England and Oscar T. Olson
Cleveland, O., secretaries. (4) The National Methodist
uth conference, made up of 10,000 representatives of the
00,000 members of the Methodist Youth Fellowship, met in
eveland, O., Dec. 30. This unique assembly, sponsored by
board of education, gives youth its first opportunity to ex-
ess its mind on current problems in the church, the nation
the world. Its motto is "Christ Above All."

Officers of the Council of Bishops in 1947 were: Bishop Paul
rn of Nashville, Tenn., president; Bishop James C. Baker
Los Angeles, Calif., vice-president; Bishop G. Bromley
nam of New York city, secretary.

The year's obituary list is headed by five bishops of whom
o were "effective" and three "retired." Schuyler H. Garth (48) of Madison, Wis., perished with his wife in the crash of a U.S. army plane in China, Jan. 15; F. H. Otto Melle (72), broken by his wartime labours and cares, died in Berlin, Ger., March 26; at Naini Tal in his beloved India, where he had been a missionary 40 years, John W. Robinson (81) died on May 5; Bruce Baxter (54) of Portland, Ore., died there on June 20 in the midst of an active career; and Ernest G. Richardson (73), who had been recalled to active service in the Wisconsin area, died in Philadelphia, Pa., on Sept. 3.

The general conference, the supreme legislative body of the Methodist Church, was to convene in Boston, Mass., on April 28, 1948, and the six jurisdictional conferences in the United States were to follow within 60 days after its adjournment. Their chief function is the election of bishops. Among the numerous proposals for legislation were several dealing with the race question. Some proposed the abolition of the central jurisdiction, which segregates the Negro membership. Others advocated the complete removal of the jurisdictional feature of the unified church as being essentially divisive and a needless piece of machinery. Still others would restore episcopal elections to the general conference, where they were until 1940 when the three churches came together.[1]

The Methodist publishing house reported unprecedented sales volume in 1947, the total rising to $9,910,309, though mounting costs of paper and labour reduced profits. The appropriation of $400,000 for ministerial pensions was equal to that of 1946. *The Christian Advocate* (Chicago, weekly) had a circulation of 345,363.

The latest available statistics placed the membership, active and inactive, at 8,567,772; amount paid for ministerial support, $49,395,157; for world service, $10,555,589; for current expenses (except pastoral support) and on local church debts, $83,667,251; for other benevolences, $20,520,466; total paid for all purposes, $164,138,463.

Bishop Herbert Welch, chairman, reported for the committee on relief receipts for the year ending May 31, 1947, as $1,677,186, bringing the total for this purpose after 1940 to more than $6,000,000. The funds had been distributed to needy war-sufferers in 30 European and Asiatic countries and the Philippines. About one-half of the total was distributed through interdenominational agencies. A notable item in the relief program was the response to *The Christian Advocate's* appeal for gifts of $100 each for the families of German Methodist ministers. Within a few weeks the receipts exceeded $50,000.

Appropriations for missions for 1948, home and foreign, were $10,177,738, an increase of $796,239. Of this total, $3,857,539 was designated for overseas work, $2,048,535 for the home field, and $4,271,664 for the Women's Division of Christian Service, which supports activities for and by Methodist women at home and abroad. The Board of Missions approved the project for a Christian university in Japan, which was characterized as a "voluntary gift as a gesture of goodwill from the Christian people of America to the people of Japan."

The plan for extending aid to Methodist youth of foreign lands in the form of scholarships in schools and colleges in the U.S. and other countries was in full operation. In 1947, 195 young men and women were helped in the U.S., besides others in their own lands. (*See* also CHURCH MEMBERSHIP.)

---

[1] This article summarizes the activities of the new church which was formed in 1939 by the union of three Methodist sects—the Methodist Episcopal Church, the Methodist Episcopal Church, South, and the Methodist Protestant Church. It does not cover the activities of the numerous smaller bodies of Methodists, viz.—African Methodist Episcopal Church, African Methodist Episcopal Zion church, Coloured Methodist Episcopal Church, Wesleyan Methodist Church, Free Methodist Church, Primitive Methodist Church, etc.

**Mexico.** A federal republic of North America lying between the United States and Central America. Area, 767,168 sq.mi.; pop. (est. 1946) 22,752,738 (19,473,741, census 1940). Approximately 55% of the population was mestizo, 29% Indian, 15% white, with foreigners and others making up less than 1%. The language is Spanish, but an estimated 14% speak only Indian tongues. There is no official state religion, but the people are overwhelmingly Roman Catholic. The capital is Mexico City (pop. 1,965,997). Other principal cities are: Guadalajara, 228,049; Monterrey, 180,942; Puebla, 137,324; Mérida, 98,334; León, 86,089; Tampico, 81,334; Aguascalientes, 81,124; San Luis Potosí, 78,042; Torreón, 76,613; Veracruz, 70,958; Chihuahua, 57,456; Pachuca, 52,387. President in 1947 was Miguel Alemán (took office Dec. 1946).

**History.**—President Miguel Alemán began his term of office in the closing weeks of 1946. His plans were keynoted in his first major declaration of 1947 when he issued what purported to be his fourteen points. In summary his points were to: (1) expand production of foodstuffs so that Mexican people would have sufficient quantities at reasonable prices; (2) encourage adequate exports so as to assist in feeding other peoples in fulfilment of international obligations; (3) mechanize agriculture, improve co-ordination and extend ample credit to increase farm production; (4) modernize industry; (5) conserve industry established during the emergency which would be needed in the national economy; (6) foster development of new industries which would better the country; (7) defend the principle of fairness in regard to factors of production; (8) develop training, techniques and sciences; (9) foster harmonious development of potentialities of each region; (10) invest more than $300,000,000 in irrigation and electrical power plants, sufficient to water 3,400,000 ac. of land; (11) group industry adequately according to zone; (12) accentuate interest of the state in public health and adequate housing; (13) develop social security; and (14) raise the general standard of living. It should be noted that the program, ambitious though it may be, was relatively conservative. No mention was made of sweeping reforms or righting of injustices. Neither did the program discuss international relations or attitudes. Full attention was given to law, order and internal development.

The year began, however, with a major agricultural calamity, which grew as the year progressed. This was a serious outbreak of hoof-and-mouth disease which was estimated eventually to have affected almost one-third of the nation's cattle. The outbreak was traced to the importation of some blooded bullocks from Brazil. Interestingly enough, negotiations had originally been for United States stock, but the price was then felt to have been too high. As soon as the epidemic became known, certain of the border states of the United States began agitation for the closing of the Mexican border. This could have been very serious to Mexico, since beef export was an item of major importance and since Mexico needed exports to support its currency. A joint United States-Mexican commission was formed, which recommended the extreme measure of destroying all exposed and infected cattle. The Mexican government promised to reimburse the farmers at the rate of one peso (20.64 cents U.S.) per pound and to supply tractors and mules to substitute for draught animals. By December, almost 500,000 cattle had been sacrificed in the mass slaughter, but still the disease continued. Resistance to the government measures in rural areas ran very high. Farmers tried to hide cattle, smuggled cattle out of infected areas, and even offered armed resistance. In Ciudad Hidalgo, state of Michoacan, for example, a squad of six soldiers and a veterinarian were stabbed to death while making an inspection. As a result of the farmers' opposition, the government removed the soldiers and substituted civilians for sacrificing the animals to avoid repercussions against the army. ment was finally reached with the commission to temp policy by switching from eradication by destruction to sive use of vaccines and destruction of infected animals However, the year ended with the disease still largel checked.

One result of the attention given to the grazing industr the decision to improve the meat packing and processing ties of Mexico so as to make that country more self-suff Plans were laid for the establishment of three meat pa plants in Sonora, two in Chihuahua and in Coahuila, an each in Michoacan, Jalisco, Veracruz, and Tamaulipas. frozen and canned meats would be processed.

A much more pleasant note was sounded in the visit c president of the United States to Mexico and the return vi Pres. Alemán to the United States. The announcement made in January that arrangements were being made for a of President Harry S. Truman in March. Inasmuch as marked the centennial of the battle for Mexico City in th between United States and Mexico there was some co over the project. However, comment was generally very fa able, and when Pres. Truman arrived in his special plane "Sacred Cow," on March 3, he was given a very warm friendly reception, including a 21-gun salute. Pres. Truman his party were taken on a tour which included visits to pyramids and Mexico's newly formed volcano, San Paric Almost upon arrival, the United States president made th precedented and apparently unscheduled request of being mitted to lay a wreath upon the monument to the Mexican tary cadets, who had sacrificed themselves a century befo attempting to hold Chapultepec against the invading U States troops. This tribute to the Mexican national h brought immediate acclaim in Mexico and increased still ther the enthusiasm of the president's reception. Pres. Ale then accepted an invitation to visit the United States.

On April 29 the "Sacred Cow" arrived in Mexico City took aboard Pres. Alemán and his party, including Jaimé T Bodet, secretary of foreign relations, Ramón Beteta, secr of the treasury, and the United States ambassador, W Thurston. An ovation was given to Pres. Alemán at Wash ton, where he was met by Pres. Truman and a 21-gun sa After a tour of the Capitol, Pres. Alemán was invited to add the United States congress. He then travelled to New where he was given an ovation and Mayor William O'D proclaimed the day of his visit as Mexico day.

During Alemán's visit to the United States a $100,000 loan was arranged. By the agreement, $50,000,000 was loa to Mexico by the Import-Export bank, and the United St treasury agreed to purchase $50,000,000 worth of Mex pesos over the next five years to help support the Mex currency.

In November, Mexico played host to the second confere of U.N.E.S.C.O., the educational and scientific organization the United Nations. The conference was opened by Presid Alemán in the Mexico City opera house, Bellas Artes, on Nov Later sessions were held in the auditorium of the Normal sch where special attention was given to such subjects as exp tions, libraries, museums, primary education and educatio reconstruction. Mexico offered to set aside a school in the st of Nayarit to serve as a pilot establishment for testing precepts developed by U.N.E.S.C.O.

Except for a few local instances in some of the provin capitals, Mexico was relatively quiet in 1947. The leftist position was still headed by Vicente Lombardo Toledano, labour leader. Lombardo Toledano made several minor re ganizations in his party and keynoted his nationalist position

TA DANCES at the National stadium in Mexico City staged in honour of
Harry S. Truman during his visit to Mexico in March 1947

statement: "We do not serve Moscow, or Washington, only
xico." However, the A.F. of L. removed three of the Lom-
lo Toledano men from its leadership, showing further rift in
quarter. Conservative opposition in Mexico was more and
e being paced by the pro-clerical Sinarquista group. The
rquistas crusaded loudly against "communism" and at one
e publicly offered to raise 1,000,000 men to assist the United
tes in a war with Russia, which, needless to say, was given
fficial notice.

conomically, there were several significant developments in
xico. In the first place, final agreements were reached for the
lement of the British and Dutch oil expropriation claims.
se claims of $250,000,000 were scaled to $21,250,000. Also,
nal payment of $4,085,327 was made to United States firms,
ging the total U.S. payment to $29,137,700.

here was a general business lull in Mexico during 1947. Cost
living remained little changed (index in terms of pre-World
r II: 297.1, 1946; 284.8, 1947), and unemployment in-
ased to an estimated 5%. Also, the building boom in the
ital eased considerably, although there was still a housing
rtage. Steps were taken through subsidies to increase the
ing industry. Plans were made to grant approximately ten
ts per pound for all fish caught. It was hoped thus to in-
ase the interest of Mexicans in building a fishing fleet to
npete with the United States fishermen who were fishing in
near Mexican waters. With the depletion of the United
tes sardine supply and the migration southward of the giant
a, this could prove to be a very important move. Most dis-
ing, perhaps, was the drop in the price of silver which also
ected adversely upon the trade balance. Motion picture pro-
tion, from which so much had been expected, slumped from
to 60 pictures. The explanation was that costs had risen
e than 300% and, more important, that banking regulations
badly frozen credit. Mexican films were produced largely
short-term loans, since no important financial interests had
et been developed. As a result, much of the export market
atin America was being regained by United States and other
foreign producers. Another element of concern was the continued falling off of remittances from Mexican labour in the United States. In 1945 remittances were $40,000,000, in 1946, $10,000,000, and in 1947 they had dwindled even more.

On the brighter side of the economic picture, both manufacturing and agricultural production continued to rise. Increased irrigation and the governmental policy of granting five years of tax-free operations to newly licensed enterprises contributed to this effect. President Alemán specifically made a bid for the investment of foreign capital—but, of course, under the Mexican laws requiring a predominance of Mexican management and labour. There was some indication that the president's policy was meeting with at least limited success in this regard.

**Education.**—Education is free, compulsory and divorced from religion. Private schools are allowed, however, to teach religion. There were approximately 25,000 primary schools, with 2,765,568 enrolment (the federal government had, in 1946, 32,778 teachers and 1,837,400 students). Secondary schools had about 80,000 enrolment (47,332 enrolment in 522 government schools in 1946 including technical and agriculture). Also, the 10 universities had about 30,000 enrolment, of which 22,230 (1945) attended the autonomous University of Mexico, Mexico City. Six normal schools had 3,800 students in 1946. Illiteracy was about 35%; however, this number decreased about one-fifth under the impact of the new program of "each person teach one person to read," and as a result of special instruction given to all personnel in the army who were illiterate. An estimated 41.8% of illiterates were reached by the end of 1946.

**Finance.**—The monetary unit is the peso (value in Dec. 1947, 20.64 cents, U.S.). By July 1947 money circulation, including bank deposits, totalled $835,283,920 ($852,947,800 in 1946) of which $344,956,320 was in bank bills and $384,795,280 was in deposits. There were 362 banks with total assets of $517,981,440 and outstanding loans of $197,315,200.

The national income was $2,677,108,000 in 1946 ($2,474,323,200 in 1945, and still rising in 1947). Earnings in 1946 were: agriculture $279,672,000; grazing $134,160,000; fishing $17,544,000; forestry $33,024,000; mining $196,180,000; oil $28,896,000; manufacturing $695,568,000; commerce and finance $639,840,000; rentals $160,992,000; transportation $127,968,000; government service and public works $158,928,000; domestic service $86,688,000; entertainment, professional service, and other $94,944,000.

For 1947 the national budget totalled $247,974,514.74. Some of the larger items were $37,585,440 for army national defense; $8,297,280, navy; $42,910,560, education; $39,009,600, irrigation; $11,904,532, public aid; and $31,401,489 to be applied on the public debt.

**Trade and Communication.**—The balance of trade during 1946 was unfavourable for the second successive year for Mexico although the total volume of trade was higher than in previous years. During the first half of 1947 the unfavourable balance continued and volume continued to increase, running one-third to one-quarter greater than in 1946. In order to ease the unfavourable balance and to support the currency, severe restrictions were imposed upon certain classes of imports commonly known as luxuries. The effects of this move had not been fully tabulated by the end of 1947. Exports in 1946 equalled $404,750,400 ($275,234,400 in 1945). Gold, silver, copper, lead, zinc, oil and other mining products comprised the largest group of exports. Beef, henequen, tomatoes, chicle, bananas, coffee, guayule rubber, cotton, tuna fish, vanilla, vegetable wax and fodder stood high on the export list. Values according to certain general classes during 1946 were: animal products $26,439,840; vegetable products $82,931,520; mineral products $166,864,160; other $118,556,160.

Imports in 1946 were $544,276,800 ($330,941,760 in 1945). Manufactures, including machinery and processed items, comprised the largest portion of the imports; wheat, wool and rice figured heavily. Values according to certain general classes in 1946 were: food products $73,602,240; durable goods $110,506,560; investment goods $200,228,640; industrial products $95,728,320; and other products $59,567,040.

Communications were by sea, especially through Veracruz; by three main railways to the United States and one to Guatemala; by air to all parts of the hemisphere; and by a growing network of motor roads.

Merchant fleet gross tonnage in 1947 was 118,703 for freight and passenger service, and 3,095 for fishing. There were 236 craft of Mexican registry of which 23 were tankers (68,698 gross tonnage). In 1946 there were 1,036 locomotives, 17,491 freight cars and 560 passenger cars belonging to the national railroads of Mexico. These carried 26,124,510 tons of freight in 1945 and 39,000,000 passengers. Railroad milage was about 15,000. There were also more than 36,000 mi. of improved roads of which 5,000 were paved and 7,000 were traversable in all types of weather.

**Agriculture.**—Mexico had an estimated 37,050,000 ac. of tillable land, of which 13,410,556 ac. were under cultivation according to the 1940 census. More than 17,000,000 ac. were under cultivation in 1945. Forest land comprised 25,893,993 ac. (latest estimate by bureau of forestry 70,322,182 ac., of which 64,458,768 ac. had standing timber); grazing land 69,713,715 ac.; 2,471,000 ac. were estimated to be under irrigation by the end of 1945 (more than 2,000,000 ac. of this was under cultivation). Latest estimates on the amount of land which could be irrigated if all potential waters were employed totalled about 12,000,000 ac.

Agricultural production was (in tons): maize 2,843,160 (1946); wheat 380,100 (1946); rice 145,464 (1945); sugar 413,300 (1946); beans 201,666 (1945); large kidney beans 18,594 (1943); chick peas 109,688 (1945); bananas 5,169,000 stems (1945); pineapple 11,247 (exported 1945); coffee 58,406 (1945); henequen 167,000 (1945); chicle 11,590 (1945–46); oranges 254,200 (1945); green peppers 41,000 (1945); dry peppers 13,300 (1945); potatoes 140,000 (1945); cotton 443,000 bales (1946); sesame 72,500 (1944); tobacco 25,300 (1944); avocados 68,400 (1945); vanilla 164 (1943) and copra 48,520 (1944).

Animal census (1940) by head was: cattle 11,621,879; horses 2,511,175; mules 932,522; donkeys 2,341,539; sheep 4,401,014; goats 6,849,709 and hogs 5,067,642. An estimated 164,000,000 ac. were devoted to range.

Timber produced in 1946 was 330,564,000 bd.ft. of sawed lumber (mostly pine, mahogany, red cedar, white cedar and primavera). Other timber amounted to 303,017,000 bd.ft. and firewood, 278,860,400 bd.ft. Dyes and turpentine yielded 47,400 tons; charcoal, 177,000 tons; resins, 24,300 tons; vegetable wax 5,200 tons, other products, 41,200 tons.

**Manufacturing.**—Expansion of Mexican industry continued during 1947, but at a much decelerated rate. During the first six months of 1947, 26 new industries were registered in Mexico. This compared with 46 during the previous half year and 230 for the period Jan.–June 1946. They included semicellulose, maguey fibres, steel, vitamized milk, leather tanning, linen thread, Portland cement, metal containers, carbon steel, electric switches, table salt, viscose rayon, cement and appliances. Other important manufactures were cigarettes, textiles (cotton cloth totalled more than 600,000,000 yd. in 1946 and woollen cloth about 150,000,000 yd.), glass, sugar, shoes (3,523,700 pairs in 1946), chemical works, breweries, flour, paper, electricity (3,068,451,000 kw. hr. in 1945), ceramics, and woodworking.

Tourists entered Mexico in 1946 to the amount of 272,121.

Comparative average weekly wages for 1946 were: railroad $13.54; cotton spinners and weavers $9.87; silk spinners and weavers $13.14; mining $10.11; and oil $23.59.

**Mineral Production.**—Although mineral production was no longer the greatest single factor in Mexico economy, it still ranked very high in importance and was fourth in importance as regards national income. Surveys of strategic metals during World War II showed a vast potential awaiting development. During 1945 mining, except for coal and iron, fell off slightly, silver being worse hit. However, the first figures received for the period January–April 1947 indicated an improvement. Production of the various metals in 1946 was: gold 420,506 oz. troy; silver 43,263,800 oz. troy; copper 67,765 tons; lead 154,438 tons; zinc 153,768 tons; antimony 7,241 tons; arsenic 10,632 tons; bismuth 84 tons; cadmium 790 tons; coal 1,077,017 tons; chrome 115 lb.; tin 294 tons; graphite 24,189 tons; iron 311,032 tons; manganese 13,600 tons; mercury 443 tons; molybdenum 1,449 tons; tungsten 52 tons; and silicon 200 tons (1945).

Petroleum production continued to increase during 1946 and 1947, and was the highest after 1928. Crude produced in 1946 equalled 49,235,421 bbl. (8,675,551 bbl. heavy crude and 40,559,870 bbl. light crude). During the first six months of 1947, 27,676,163 bbl. of crude were produced and 33,201,229 bbl. of derivatives. Refinery products in 1946 comprised: fuel oil 25,763,702 bbl.; Diesel oil 5,033,044 bbl.; gasoline, crude, 11,538,282 bbl.; gasoline, refined, 6,491,311 bbl.; kerosene, crude, 3,126,344 bbl.; kerosene, refined, 1,641,281 bbl.; lubricants 330,250 bbl.; paraffin, crude, 103,156 bbl.; paraffin, refined, 106,855 bbl.; asphalts 2,216,181 bbl.; and other 396,861 bbl. Local consumption accounted for 40,670,757 bbl. of petroleum and petroleum products.

Well drilling continued at an improved rate. During 1946, 52 wells were drilled (31 producing, 11 dry and 10 salt water). Twenty-two wells had been drilled during the first six months of 1947.

**Mica.** The major world producers of mica are India, and the U.S., with smaller but significant out Brazil, Argentina, Madagascar, Norway, Rumania, Spa Sweden. From the standpoint of total tonnage, the States is the largest producer, but the bulk of the ou scrap mica, while it is sheet mica that is of chief importa

**United States.**—The significant data of the mica indu the United States are presented in the following table.

*Data of Mica Industry in the U.S., 1941–46*

(In short tons)

| | 1941 | 1942 | 1943 | 1944 | 1945 |
|---|---|---|---|---|---|
| Amount sold or used | | | | | |
| Sheet and punch . . | 1,333.2 | 1,380.9 | 1,724.1 | 761.7 | 649.3 |
| Scrap . . . . . . . | 32,500 | 43,262 | 46,138 | 51,727 | 41,060 |
| Total. . . . . . . | 33,833 | 44,643 | 47,862 | 52,489 | 41,709 |
| Imports. . . . . . . . | 8,300 | 11,294 | 13,759 | 7,242 | 9,405 |
| Sheet and punch . . | 1,008.4 | 1,622.4 | 2,750.9 | 2,516.5 | 2,124.4 |
| Scrap . . . . . . . | 1,251 | 2,179 | 2,048 | 2,412 | 3,567 |
| Splittings* . . . . . | 6,041 | 7,493 | 8,960 | 2,314 | 3,695 |
| Splittings, consumption. | 3,648.8 | 3,318.3 | 4,206.7 | 4,408.5 | 3,948.7 |
| Stocks, Dec. 31 . . | 4,775.8 | 4,380.7 | 2,258.6 | 1,997.5 | 1,532.3 |

*Includes other manufactured forms.

While the production of scrap mica rose to a record fig 1946, sheet mica continued to decline.

**Canada.**—Mica production in Canada dropped from short tons in 1945 to 2,261 tons in 1946, but there were n on the proportion of sheet mica included in the total.

(G. A.

**Michael (Mihai) I** (1921– ), former king of Ru was born on Oct. 25 at Sinaia, s Crown Prince Carol and Princess Helen, daughter of Co tine, king of the Hellenes. On the death of his grandf King Ferdinand, he was proclaimed king on July 20, under a regency, by virtue of his father's renunciation succession. He ceased to be king on his father's accessi June 8, 1930, when he received the title of Great Voev Alba Iulia. He was proclaimed king again on King Caro abdication on Sept. 6, 1940. King Michael took a leading in overthrowing, on Aug. 23, 1944, the authoritarian and German regime of Marshal Ion Antonescu. For his initiati this coup d'état and the participation of the Rumanian ar the final stages of World War II on the Allied side, Michael was awarded, in June 1945, the Order of Victory highest soviet military decoration. On Nov. 20, 1947, he to London to attend the wedding of Princess Elizabeth. Dec. 15 it was announced in Lausanne that King Michael engaged to Princess Anne of Bourbon-Parma. On Dec. shortly after his return to Bucharest, he abdicated and Rum was proclaimed a "people's republic."

**Michigan.** One of the north central group of states of U.S., Michigan was the 26th state admitte the union; it is popularly known as the "Wolverine Sta Land area 58,216 sq.mi. (excluding 39,960 sq.mi. of Great L water surface); pop. (1940) 5,256,106; (estimate, Jan. 1, 1 6,300,000. Of the state's population in 1940, 3,454,867 urban, 1,801,239 rural. Whites composed 95.9% of the pop tion, nonwhites 4.1% (215,934). Capital, Lansing (78,7 Larger cities were Detroit (1,623,452), Grand Rapids (164,2 Flint (151,543), Saginaw (82,794).

**History.**—The Michigan legislature convened for its reg biennial session on Jan. 1, 1947, to remain for 157 days, d longest session since 1865. All but 9 of the 132 seats were d by Republicans. A most difficult problem confronting the slature was the loss of one-third of the state's sales tax me through its diversion to local governmental units in ac- lance with the constitutional amendment adopted by popu- vote in Nov. 1946. The first seven months' operation of the ndment diverted $31,000,000 to schools, counties, cities, vil- s and townships. An attempt to retain a part for the state reating a single school district to care for state educational enses such as appropriations for the state university, colleges, schools, and the teachers' retirement fund, was found un- stitutional. The legislature provided by joint resolution for resubmission of the tax-diversion question to the electorate Nov. 1948. A tax of three cents a package on cigarettes, ected to yield about $18,000,000 in revenue, was levied, but ill to increase the gasoline tax from three cents to four s a gallon was vetoed by Gov. Kim Sigler.

n spite of its failure to solve the problem of revenue, to itself of undue lobbying activity, to break the state liquor nopoly, or to enact much of Gov. Sigler's "clean govern- it" program, the legislature could claim many major accom- nments. Among the 371 bills enacted into law (10 others e vetoed) were many important measures. A community perty law opened the way to savings in federal income taxes many Michigan residents; provision was made for the pay- t of $270,000,000 voted in 1946 to Michigan veterans of rld War II; the child labour laws were revised and codified; pulsory arbitration of labour disputes in public utilities and pitals was provided for; the state planning commission was lished and a department of economic planning created; the kmen's compensation system was reorganized; old-age pen- s were increased from $40 to $45 a month; $6,400,000 was ropriated to the University of Michigan and to Michigan e college for new buildings; the juvenile institute commis- was abolished and its duties transferred to the department ocial welfare; and provision was made for submitting to the tors the question of calling a convention to revise the state stitution.

n the biennial spring elections the Republican-endorsed can- ates Henry M. Butzel, Leland W. Carr and John R. Dethmers by substantial majorities in the nominally nonpartisan con- for three seats on the supreme court. Republicans also won places on the board of regents of the state university, two the state board of education and two on the board of agri- ture. In the election of state superintendent of public in- uction, Eugene B. Elliott, Republican incumbent, received ,377 votes to 203,116 for George F. Montgomery, Demo- tic candidate. A constitutional amendment relative to can- ing noncontest judicial primaries carried 273,308 to 203,075, le a proposal relating to the length of time corporations may d real estate lost 209,159 to 247,948.

n a program to strengthen the executive branch of the gov- ment, Gov. Sigler made a number of changes in personnel organization. A special session of the legislature in Novem- empowered him to abolish the existing state prison and ole system and to centralize control in executive hands. He ointed Joseph W. Sanford, warden of the federal penitentiary Atlanta, as the new corrections commissioner, made Garrett yns, former corrections director, head of the new division of sons and industries, and appointed Ralph Hall Ferris, former istant director in charge of probation, as director of the new ision of pardons, paroles and probation. As head of the de- tment of social welfare, newly organized and expanded, he ned W. J. Maxey.

The death of Henry Ford in June not only recalled his long eer in Michigan industry, but also focused attention upon the policies of his grandson and successor, Henry Ford II. Other Michigan citizens much in the news were Walter Reuther, newly elected head of the United Automobile Workers of America, whose principal problems at the close of the year were the maintenance of peace within the organization and the continued rise in cost of living; federal district Judge Frank A. Picard, who ruled against union claims to portal-to-portal pay in a decision resulting from his earlier ruling in the Mount Clemens Pottery company case; and Joe Louis, whose victory over Joe Wolcott aroused discussion in sports circles only overshadowed by the University of Michigan football team's winning the western conference championship and its consequent selection to play in the Rose Bowl contest on Jan. 1, 1948.

**Education.**—There were 5,282 school districts in the state public school system in 1947 with an average membership of 607,189 pupils and 19,823 teachers in the elementary grades and 351,602 pupils and 12,594 teachers in the secondary grades. The fall enrolment in Michigan's 68 universities, colleges and normal schools reached a peak of 100,571 full-time students, of whom 52,433 were veterans.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—The various state institutions of correction and their populations as of Dec. 1, 1947, were as follows: State Prison of Southern Michigan 5,704; Michigan reformatory 1,316; Marquette Branch prison 806; Detroit House of Correction 318; Cassidy Lake Technical school 80. There were 24 wayward minor boys and 42 wayward minor girls in custody. Expenditures of the state department of correction for the fiscal year 1946–47 were $6,137,444.

The activities of the social welfare department were considerably expanded when the legislature abolished the juvenile institute commission and placed the Boys' Vocational school in Lansing, the Girls' Training school in Adrian and the Michigan Children's institute in Ann Arbor under the jurisdiction of the department. More than $60,000,000 joint federal-state aid was granted to the aged, the blind and dependent children; more than $12,000,000 financed by state and local governments was spent for direct relief by the county welfare departments. The number of Michigan residents dependent to some extent upon these programs had risen from a wartime figure of 150,000 to 210,000, of which 92,000 represented old-age assistance. Numbers on direct relief declined from 93,000 in March 1946 to 57,000 in Dec. 1947.

Figures for the first ten months of 1947 indicated a death rate of 9.3 per 1,000, the lowest on record, and that births would probably exceed 150,000, breaking the 1946 record of 138,572. Figures for the same period indicated a divorce total of 24,500, 16% below the 1946 number, 29,158.

**Communications.**—The Michigan state highway department in 1946 started an $81,000,000 three-year construction program to be completed by 1950 with approximately half the cost to be borne by the federal government under the provisions of the Highway Act of 1944. At the end of 1947, of the projects under contract, representing a cost of $36,300,000, 114 had been finished and paid for, 54 were under construction and 17 had been put under contract. When all were finished they would provide 199 mi. of pavement; 151 mi. of gravel surface; 79 mi. of grading for future paving; 96 bridges, including several grade separations; and 218 mi. of bituminous concrete pavement resurfacing. The three-year program for county roads involved an expenditure of $17,762,020, one-half to be paid by the federal government. Contracts had been let for $7,134,798, involving 89 projects, which when completed would provide 306 mi. of new surfaces and 47 new structures.

**Banking and Finance.**—The 346 state banks in Michigan on Oct. 6 had total assets of $2,541,190.24; assets of 3 industrial banks were $7,962,396; those of 8 trust companies $45,873,524.37. Deposits had reached a total of $1,317,368,835.03, an increase of more than $440,000,000 from June 1941. Total assets of 78 national banks were $2,643,179,137.06 on Dec. 31, 1947. Total revenue from taxes, federal agencies, state enterprises, etc., for the fiscal year ending June 30, 1947, was $382,257,140.69; total operating expenditures, $369,480,278.42.

**Agriculture.**—In spite of lower yields caused by unfavourable weather conditions in 1947, the aggregate value of field and fruit crops was $418,000,000, an increase of 7% over 1946 and more than double the ten-year average (1936–45). Wheat and hay were above the previous year; corn, oats, potatoes, sugar beets, beans, apples and peaches, below.

Table I.—*Leading Agricultural Products of Michigan, 1947 and 1946*

| Crop | 1947 (est.) | 1946 |
|---|---|---|
| Corn, bu. | 44,165,000 | 50,512,000 |
| Winter wheat, bu. | 29,800,000 | 22,896,000 |
| Oats, bu. | 38,150,000 | 71,890,000 |
| Potatoes, bu. | 12,390,000 | 18,327,000 |
| Apples, bu. | 6,600,000 | 7,560,000 |
| Peaches, bu. | 4,526,000 | 5,100,000 |
| Field beans, 100-lb. bags | 3,129,000 | 3,841,000 |
| Barley, bu. | 3,450,000 | 5,037,000 |
| All tame hay, tons | 3,730,000 | 3,464,000 |

Because of the poor field crops, pig production for 1947 was the lowest since 1938. Cherries were down about 10%, popcorn 80%, alfalfa, alsike, red and sweet clover about 50%, while the maple syrup yield increased more than 125%.

**Manufacturing.**—Manufacturing in Michigan continued at about the pace set in the latter half of 1946. Unemployment stood at only 90,000 as compared with 110,000 at the end of 1946. Weekly man-hours were up 1.6 and weekly pay rolls 1.4. Average weekly hours were 40.4 in durable goods industries and 42.8 in nondurable goods. Average weekly earnings were $55.26.

The consumers' price index for moderate income families (Sept. 1941 = 100%) stood at 148.1 for all items in September (for food 181.5); although the increase in cost of living continued, the pace had slackened by the end of the year.

**Mineral Products.**—Michigan ranked first in the U.S. in salt and gypsum and led the midwest in the production of chemicals. Production of oil and gas, with 3,600 oil and 800 gas wells in operation, remained at a fairly constant level, with new discoveries and extensions of old fields balancing depletions from other areas. In 1947 for the first time an aeroplane was used to record magnetic attraction of iron deposits. As a result, known iron reserves were increased by about 10,000,000 tons.

Table II.—*Mineral Production of Michigan, 1945 and 1944*

| | 1945 | | 1944 | |
|---|---|---|---|---|
| | Quantity | Value | Quantity | Value |
| Iron ore, tons . . . . . | 11,834,652 | | 13,693,377 | $38,537,000 |
| Copper, lb. . . . . . . . | 60,801,716 | | 84,842,000 | 11,453,670 |
| Salt, tons . . . . . . . . | 4,285,493 | $14,942,443 | 4,287,758 | 14,921,719 |
| Petroleum, bbl. . . . . . | 17,267,493 | 24,262,364 | 18,490,000 | 26,600,000 |
| Cement, bbl. . . . . . . | 6,243,322 | 9,937,834 | 5,177,176 | 7,733,185 |

## Michigan, University of.

Enrolment levels established in the fall of 1946 were maintained and somewhat increased in 1947. For the first semester of 1946–47 the net total of resident students was 19,176, for the second semester 19,232 and for the entire year, which includes the 1946 summer session, 24,858. Nearly 5,500 others were enrolled in extension credit courses and short postgraduate professional courses, and 10,359 in noncredit extension courses. For the fall semester of 1947–48, 20,637 resident students registered. In view of increased costs occasioned by these larger numbers the state legislature of 1947 appropriated $8,570,000 for the university's operating expenses and $3,200,000 toward completion of the educational buildings already begun. The additions to the chemical laboratory and the engineering building, the food service building and a portion of the residence hall for men were occupied in the fall of 1947, and work continued on the other projects. On Jan. 24, 1947, the regents accepted from the war assets administrator the deed to the airport at Willow Run, including two large hangars, a number of smaller structures and more than 1,900 ac. of land. Reserving an adequate amount of space for purposes of research and instruction in aeronautical engineering and related sciences, the university leased the landing field and hangar facilities to a group of air lines which operated the airport as a terminal. Thus, one of the largest and most modern airports in the country was preserved for public use and at the same time invaluable laboratory facilities were acquired by the university. The deanship of the graduate school was filled by the appointment of Prof. Ralph A. Sawyer of the department of physics, who had served in the navy during World War II and had acted as technical director of the Bikini atom-bomb test. Other important events were the organization of a centre for Japanese studies and a survey research centre. (For statistics of endowment, enrolment, faculty, library volumes, etc., *see* UNIVERSITIES AND COLLEGES.) (F. E. R.)

## Mikolajczyk, Stanislaw

(1901– ), Polish politician, was born in Gelsenkirchen, Germany, the son of a farm labourer who emigrated from western Poland to work in the Westphalian mines. The family later returned to western Poland. He was wounded during the Russo-Polish War in 1920. After the war, he entered politics and at the age of 29 was elected to the sejm, serving from 1930 to 1935. He was made president of the Polish Peasant party in 1937. When the nazis invaded Poland in Sept. 1939, Mikolajczyk saw military action in the unsuccessful defense of Warsa
fled to Hungary and later escaped to France. He became
dent Paderewski's deputy in the Polish parliament in exi
succeeded to the presidency on Paderewski's death. Miko
became prime minister in 1943. He sought a settlemen
the Soviet Union on the Polish boundary dispute, but his
were hamstrung by anti-soviet elements within his cabin
he resigned Nov. 24, 1944. Mikolajczyk endorsed (Ap
1945) the Big Three decision on Poland which was reac
Yalta, and joined the new Warsaw government as deput
mier, June 23, 1945.

Throughout 1946, Mikolajczyk protested frequently th
Polish elections were not free and that the governmen
terrorist methods to intimidate his followers. In early 19
complained of the lack of "free and unfettered" electi
memoranda sent to the U.S., British and Soviet ambassac
Warsaw. Becoming increasingly unpopular with the Polis
ernment, Mikolajczyk fled Poland on Oct. 20 and made hi
to London and thence to the United States.

## Military Academy, U.S.

A government-maintaine
lege at West Point, N.Y
the training of young men for leadership in the profes
military service.

The new four-year curriculum went into full effect in th
of 1947. The nine additional professors authorized in 1946
selected and assigned to their respective departments. D
the previous summer the new four-year course in tactical
ing also began. Physical aptitude examinations for candi
were applied for the first time as a part of the regular ent
examinations in March. The exchange of visits between
shipmen of the U.S. Naval academy and the cadets
continued, as were the joint amphibious manoeuvres in
summer.

The course in military psychology and leadership wa
panded to a full year. A subdepartment was set up to han
under the department of tactics, consisting of a directo
associate director, who is a professional psychologist, an
tude officer and four instructors. In addition to its instruct
functions, the subdepartment is charged with the responsib
of implementing the policy on determining cadet aptitude
the military service.

MINISTRATION OF.

## Milk.

Production of milk in the United States in 1947
estimated by the U.S. department of agriculture at 1
276,000,000 lb., which was slightly above the total of 119,3
000,000 lb. for 1946 and somewhat short of the record proc
tion of 1945. The 1947 output was about 16% above the
war 1935–39 output. Total milk production was estima
at 834 lb. per capita, compared with 839 lb. in 1946 and 86
in 1945. Consumption of fluid milk and cream was estima
at about 403 lb. per capita, compared with 425 lb. in 1946
the high record of 433 lb. in 1945. More milk and cream w
used in butter and cheese than a year earlier. Exports of da
products declined in the first half of 1947, amounting to o
about 3% of the total production, compared with more than
exported in 1944.

The high production of milk in 1947 was remarkable beca he reduction in number of cows milked; the output per cow estimated at 4,900 lb., about the same as in 1946. In tember the production per cow was the highest in the 18 rs that records had been kept. This record was all the more arkable because of the high cost of feed. Dairymen main-ed a high rate of feeding in spite of the high prices. tures were good in the early summer, and the drought in summer was not severe enough to affect production to any iceable extent.

utter production in 1947 increased over the low record of 6 because of the larger milk supply; less milk was taken by whole-milk market. Butter prices were high, stocks low and supply much below the prewar level. The 1947 output was ut 12 lb. per capita, compared with nearly 18 lb. 1925–34. ese production increased at a rate somewhat below that of termaking, and ice cream production declined. The drop in ort demand early in the year reduced the output of dried condensed milk, but slightly more evaporated milk was de.

he price of milk to producers was at a high peak of $5.13 cwt. in Nov. 1946. The average in Jan. 1947 was $4.96 per ., followed by a steady decline to $3.64 per cwt. in June, n by a recovery to $4.35 in September and $5.02 in Decem-. The price of butterfat followed the same trend but did decline so much. During 1946 the price of butterfat had nped from 52 cents per pound in June to 90 cents per nd in October when controls were removed. The price in . 1947 was 74.5 cents per pound, 63 cents in June and 87.7 ts in December. The retail price of milk was raised in many as from about 16 cents per quart to 18 cents and in large es to 20 and 23 cents. While consumers resisted the price advances, the reduction of consumption was not large because of the advancing prices of other foods. (*See* also BUTTER; CHEESE; DAIRYING.)

## Mineral and Metal Production and Prices.

As will be seen from an examination of the world production tables shown in articles on the various minerals and metals scattered throughout this volume, most of the gaps in the data for the war years have been filled in. There are still some data missing, and it is quite likely that the war record will never be made complete, but at least it was in 1947 sufficiently complete for most of the important commodities to enable one to form a fairly accurate picture of the war production record.

Supplementing the world production data presented in connection with the various commodities, Table II gives the available data on mineral production in 1946 for the more important producing countries and their leading commodities. While space is lacking to make a table of this kind complete, enough data can be shown on one page to give the reader an idea as to the general distribution of production and the relative importance of the different producers.

Table I abstracts the opening and closing prices for the leading metals and their ores, as quoted on the New York and London markets during 1947. With only a few exceptions, it will be noted that prices advanced sharply after the relaxation or abandonment of wartime price control measures. In the New York market much of the advance had been accomplished by the end of 1946, but in the London market matters moved more

Notes Each item of data previous to 1946 is followed by a reference superscript indicating the year to which the figure belongs – $^{5}$ for 1945. $^{4}$ for 1944, and so on for the earlier years. A figure with less decimals than o in the column is an estimate. The letter "p" indicates a small production unknown in amount or less than the minimum base of the table; "P" indicates a larger but unknown production.

*Crude magnesite. †$K_2O$ equivalent of salts produced. ‡60% $WO_3$ basis.

Table III.—*Value of Mineral Products of the United States*

(Millions of dollars)

| Year | Metallics | Fuels | Nonmetallics | Total |
|---|---|---|---|---|
| 3 | 892.6 | 2,820.3 | 650.3 | 4,363.2 |
| 9 | 1,291.7 | 2,834.3 | 788.2 | 4,914.2 |
| 0 | 1,678.6 | 3,116.5 | 812.8 | 5,613.9 |
| 1 | 2,132.0 | 3,708.1 | 1,037.9 | 6,878.0 |

| 5 | 1,974.0 | 5,212.0 | 954.0 | 8,140.0 |
| 5 | 1,823.0 | 5,725.0 | 1,311.0 | .8,859.0 |
| 7 (est.) | 3,000.0 | 7,800.0 | 1,600.0 | 12,400.0 |

wly, as price controls were relaxed more gradually.

he *E. & M. J. Metal and Mineral Markets* weighted index nonferrous metal prices, which had previously stood at 96.42, nped to 117.11 in July 1946 with the expiration of the price trol bill, but was forced back to 114.25 in October by temary renewal of control measures. With the final scrapping of ce control in November it rose to 131.23 in November and .19 in December. After declining to 140.42 in Feb. 1947 aner advance followed, to 154.03 in May. After another dee to 148.73 in July, a fourth advance brought the year-end ex to approximately 152—a total increase of more than onef since midyear of 1946, 80% of which was crowded into the half of 1946, against 20% in 1947.

Table III shows the trend of the total dollar value of mineral duction in the United States, as reported by the U.S. bureau mines. Largely because of strikes, the 1946 value of metallics lined, but not enough to offset the increase in nonmetallics, alone the even greater increase in fuels. All told, the value mineral production increased to a new record high, 9% above 1945 level, and 5% above the former 1944 record, though metallics value was the lowest since 1940. The preliminary imate for 1947, which was due partly to increased outputs d partly to the inflated postwar prices, shows advances which surpassed anything in the previous production record of the S. Nonmetallics rose 22% over 1946 and 44% over the 1942 h; fuels were 36% ahead of 1946, which was also the previs record high; metallics soared to 64% above 1946 and 20% ove the 1943 record; while the total value advanced 40% er 1946 (the previous record year) and 47% over the war ak of 1944. (*See* also Strategic Mineral Supplies and the views of the various metals and minerals.) (G. A. Ro.)

**ineralogy.** New minerals described during 1947 included nigerite, a brown and weakly magnetic mineral ntaining tin and aluminum as the essential constituents, disvered in the tin-bearing pegmatites of Kabba province in cenl Nigeria (R. Jacobson and J. S. Webb, *Mineralogical Magae*, vol. XXVIII, pp. 118–128, and F. A. Bannister, M. H. ey, H. P. Stadler, *Ibid.*, pp. 129–136); and (2) groutite, a jet ck manganese mineral with the chemical composition $HMnO_2$, curring in the Cuyuna range in Minnesota and associated with n minerals (J. W. Gruner, *American Mineralogist*, vol. 32, 654–659).

In her article "Single Crystal Diamonds Are of Two Types" *ems and Gemology*, vol. V, pp. 455–461), Kathleen Lonsdale London showed that by X-ray diffraction patterns, diamond stals may be classified as (1) perfect and (2) mosaic single stals. Perfect single crystals possess a definite and continuous angement and spacing of the atoms which make up the crys, while mosaic crystals consist of many extremely small pert crystals. Studies on the fluorescence and phosphorescence the diamond on exposure to ultra-violet radiation were made George Switzer in "Fluorescent Diamonds" (*Ibid.*, vol. V, 392, 393, 398); by R. M. Shipley in "Notes on the Abunnce and Colour of Fluorescent Diamonds" (*Ibid.*, vol. V, pp. 5–398); and by G. O. Wild and H. Biegel in "The Fluorescence of Diamonds" (*Gemologist*, London, vol. XVI, pp. 228–229). Shipley estimated that approximately 65% of gem quality diamonds fluoresce strongly enough to be noticeable to the naked eye when exposed to an arc light and viewed with a Woods filter.

The great increase in the use of the diamond for industrial purposes led to the establishment of the Diamond Research laboratory of Industrial Distributors, Inc., at Johannesburg, South Africa. The laboratory was well staffed in 1947 to conduct extensive studies on the various properties of the diamond which should be of inestimable value to the industry.

On Sept. 23, 1947, the Linde Air Products company announced the first successful production of synthetic star rubies and star sapphires of good gem quality. The chief characteristics of these new synthetic gems were described by R. J. Holmes in *Gems and Gemology*, vol. V, pp. 452–454, 478. Limited numbers of these synthetic star gems were to be marketed.

Identification of natural and culture pearls by X-ray diffraction methods was discussed in an extensive article by W. H. Barnes (*Gems and Gemology*, vol. V, pp. 387–391, 428, 429, 440–444, and 471–474) and by A. E. Alexander in "Pearls Are Not What They Seem" (*Journal of Gemology*, vol. 1, pp. 2–5). In "The Present Status of the Japanese Pearl Culture Industry" (*Gems and Gemology*, vol. V, pp. 417–420) W. F. Foshag reviewed methods of culture, harvesting, production, and marketing of culture pearls. The industry was almost completely suspended during World War II, but was operating at about 30% capacity in 1947.

During the year, the fourth edition of B. W. Anderson's *Gem Testing* (London) and the fifth enlarged edition of E. H. Kraus and C. B. Slawson's *Gems and Gem Materials* (New York) were issued. The very useful and well-illustrated *Handbook of Gem Identification*, by R. T. Liddicoat of the Gemological Institute of America (Los Angeles) was also published.

At the meeting of the Mineralogical Society of America held in Ottawa, Canada, Dec. 30, 1947, the Washington A. Roebling medal was awarded to Professor Paul Niggli of Zürich, Switzerland, in recognition of his many significant contributions to mineralogy and petrography. (*See* also Mineral and Metal Production and Prices.) (E. H. Kr.)

**Mining:** *see* Mineral and Metal Production and Prices. *See* also under separate minerals.

**Minnesota.** A north central state of the United States, popularly known as the "Gopher state." Area, 84,068 sq.mi., of which 4,059 are water. Pop. (1940), 2,792,300. The urban population was 49.8% of the total. Capital, St. Paul (287,736). Other principal cities, Minneapolis (492,370); Duluth (101,065). The native-born white inhabitants in 1940 numbered 2,474,078, foreign-born 294,904 and Negro 9,928. The bureau of the census estimated the civilian population of the state at 2,597,580 on July 1, 1944; 2,617,538 on July 1, 1945; and 2,817,972 on July 1, 1946.

**History.**—Principal elective officials of the state in 1947 were: governor, Luther W. Youngdahl; secretary of state, Mike Holm; treasurer, Julius A. Schmahl; auditor, Stafford King; attorney general, J. A. A. Burnquist.

The 55th session of the legislature met in regular biennial session on Jan. 7, 1947, and adjourned on April 24, 1947. The 1947 legislature, by resolution, created a constitution commission of Minnesota, effective July 1, 1947, with an appropriation of $12,000, to study and consider Minnesota's constitution and report to the legislature, the governor and the supreme court by Oct. 1, 1948. The legislature established by law a Minnesota legislative research committee, with an appropriation of $25,000 for the biennium. It also created three new divisions of state government: youth conservation commission; division of housing and rent control; and department of business research and development.

**Education.**—The contribution of the state to local schools, including income from trust funds and fixed income tax allotments, was expected to amount to $66,705,660 for the biennium that began July 1, 1947. Total public school expenditures for the 1946–47 school year were $79,358,035, compared with $67,433,573 for the 1945–46 school year. In 1946–47, Minnesota had 8,124 elementary schools, 645 secondary schools, 6 public state teachers colleges and 11 junior colleges. Enrolment was 328,508, with 11,865 teachers in elementary grades; 164,605, with 7,994 teachers, in the secondary grades; 3,755, with 180 teachers, in junior colleges; 12,665, with 155 teachers, in adult education classes; and 306, with 25 teachers, in teacher training departments. Dean M. Schweickhard was commissioner of education.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—The aid to dependent children average grant per case rose 24.3% from Nov. 1946 to Nov. 1947, while old-age assistance and aid to the blind average grants per recipient rose 20.2% and 16.7%, respectively, during the same period. During the year ending June 30, 1947, $2,559,292 was spent on general relief, with the number of cases averaging 5,832; on old-age assistance, $23,128,837, with the number of recipients averaging 54,082. A total of $3,643,749 was spent on aid to dependent children, with the number of families aided averaging 5,492 and number of children helped averaging 14,043. An average of 952 persons shared in the total allowance of $485,490 in aid to the blind. The state prison, two state reformatories and two training schools for delinquents had 2,101 inmates on June 30, 1947.

**Communications.**—Minnesota had, at the end of 1946, 11,237 mi. of state trunk highways and 102,004 mi. of other highways, excluding city streets. Expenditures of the state highway department for construction, maintenance and administration during the year ended June 30, 1947, were $25,123,768, as compared with $14,794,000 for the year ended June 30, 1946. The state highway building program, with federal aid, was expected to make possible about $75,000,000 in construction in the first four postwar years. Railway mileage at the end of 1946 was 9,080 mi. There were 60 licensed municipal airports, 16 seaplane bases, 44 privately owned public airports and 119 privately owned landing strips for private use.

**Banking and Finance.**—Resources of Minnesota banks, on July 1, 1947, were approximately 6% lower than on July 1, 1946. The 495 state banks, 1 mutual savings bank and 4 trust companies had deposits of $887,298,000 and resources of $942,106,000, compared with deposits of $846,012,000 and resources of $898,844,000 on July 1, 1946. The 180 national banks had deposits of $1,844,515,000 and resources of $1,856,354,000 on July 1, 1947, compared with deposits of $1,960,700,000 and resources of $2,083,326,000 on July 1, 1946. The state had 41 state building and loan associations on July 1, 1947, with resources of $69,445,000, as compared with resources of $62,014,000 on July 1, 1946. The 30 federal savings and loan associations had resources of $175,943,000 on July 1, 1947, compared with resources of $152,767,000 on July 1, 1946. Total operating disbursements of the state government (excluding public debt redemption, stores for resale, annuities and pensions, land and interest in land) amounted to $140,738,007 for the year ended June 30, 1947, as compared with $116,901,122 for the year ended June 30, 1946. Outstanding state bonds and certificates of indebtedness were reduced $5,880,500 during 1947, to a net of $58,057,443, making a $71,730,217 reduction in nine years. Four principal trust funds of the state, income of which is devoted largely to schools, reached $160,561,621 on Dec. 31, 1947.

**Agriculture.**—Based on volume of production in 1947, Minnesota ranked first among the states in flaxseed; second in oats, alsike clover seed, and sweet clover seed; fourth in corn, spring wheat, barley, rye, all hay, and timothy seed; fifth in soybeans for beans; seventh in red clover seed; eighth in potatoes; and ninth in alfalfa seed. Butter production in 1946 was 175,891,000 lb. For the calendar year 1946, cash receipts from farm marketings totalled $1,054,876,000 with $811,281,000 from livestock and livestock products and $243,595,000 from crops.

*Leading Agricultural Products of Minnesota, 1947 and 1946*

| Crop | 1947 | 1946 |
|---|---|---|
| Corn, all, bu. | 191,041,000 | 239,888,000 |
| Oats, bu. | 163,332,000 | 197,506,000 |
| Barley, bu. | 25,838,000 | 21,257,000 |
| Wheat, all, bu. | 20,633,000 | 27,080,000 |
| Potatoes, bu. | 14,520,000 | 17,365,000 |
| Flaxseed, bu. | 15,103,000 | 9,303,000 |
| Hay, all, tons | 5,687,000 | 5,897,000 |

**Manufacturing.**—The 1939 census of manufacturers listed 4,008 manufacturing establishments employing 92,084 persons. The department of business research and development estimated there were 5,900 manufacturing establishments in 1947. The number of employees in manufacturing industries in Nov. 1947 was estimated at 199,858, 0.2% lower than in Nov. 1946.

**Mineral Production.**—An estimated 63,250,000 gross tons of iron ore were shipped from Minnesota mines in 1947, as compared with 50,010,067 gross tons in 1946. Tonnage shipped in 1947 was the largest for any peacetime year.

(R. B. J.)

## Minnesota, University of.

An institution of higher education at Minneapolis, Minn. At the outset of the fall quarter of 1947, enrolment of regular
collegiate students showed a tendency to level off. Vetera
rolled for the term numbered 16,736. The Duluth branc
of the state teachers' colleges, became a part of the univ
on July 1, 1947. The percentage of women continued to
reaching a new low of 24.9. A new school of veterinary
cine, operating within the College of Agriculture, Forestr
Home Economics (one of the four major units in the d
ment of agriculture) opened in the fall of 1947 with Dr. W
L. Boyd as director. During the year all of the work o
Minneapolis campus in fine arts, including the university g
but excluding art education in the College of Education
consolidated into a new department of fine arts. Dr. S. C.
dean of the Institute of Technology, retired on June 30,
During the year the head of the summer session was m
dean. After the fall of 1946, students in the state teachers
leges, the junior colleges and the liberal arts colleges of M
sota were permitted, if they met admission requirement
register jointly at the university. (For statistics of endow
enrolment, faculty, library volumes, etc., *see* UNIVERSITIES
COLLEGES.)

## Missions, Foreign.

For foreign missions the year
was in general one of advance.
toration of staffs depleted by World War II continued. I
missionaries, both Catholic and Protestant, re-entered J
and the regions from which they had been expelled by
Japanese invasion—Korea, east China, the Philippines,
and Burma. Indonesia was still disturbed politically, but
churches had strong Indonesian leadership, much of it yo
In the Netherlands many missionary candidates were prepa
chiefly for Indonesia. Germany had more aspirants for mis
ary service than could be sent. Many lands under governm
with which Germany had been at war were still closed to
sionaries of German citizenship. For both Catholic and Pro
tant missions the United States was increasingly the main re
voir for funds. From it came also more and more of
personnel.

In Protestant circles the most outstanding event of the
was the meeting in July of the International Missionary cou
at Whitby, Ont. The International Missionary council was
agency through which the majority of Protestant missions
operated for world-wide planning and action. In the Wh
meeting, the unity of spirit of older and younger churches (th
of the occident and the nonoccident) was marked. A w
Christian community which knew no distinctions of race
obviously emerging. At Whitby stress was laid upon evangel
—the presentation of the Christian faith to all men.

Some political and social movements were working advers
to Christianity. The intensification of Arab self-consciousn
brought difficulty to Christian missions, for Islam was identi
with Arab culture. Anti-Christian nationalist attitudes w
especially acute in Egypt. In Ceylon the growth of national
was accompanied by emphasis upon Buddhism as the co
munity faith and by restrictions on the churches and missio
Madagascar saw a wave of antiforeignism which at one st
wished to kill or expel all white men and which was, accordin
in part antimissionary. The civil war and mounting inflation
China were serious problems, and in the spreading commun
areas missions found operations impeded or impossible.
India, however, the emergence of the two dominions of In
and Pakistan and the communal disturbances between Hin
and Moslems and Moslems and Sikhs seemed for the moment

k in favour of Christian missions. There must be noted, too, consummation of the Church of South India, a union of licans, Methodists, Presbyterians and Congregationalists.

(K. S. L.)

**ssissippi.** A southern state of the U.S., admitted to the union in 1817, popularly known as the "Mag- a state"; area, 47,716 sq.mi. (47,420 sq.mi. land and 296 ni. water); pop. (1940), 2,183,796; capital, Jackson (62,- ). Other cities: Biloxi (17,475); Greenville (20,892); Gulf- t (15,195); Hattiesburg (21,026); Laurel (20,598); Merid- (35,481); Natchez (15,296); Vicksburg (24,460). Of the e's population in 1940, 432,882, or 19.8%, were urban. In o there were 1,106,327 whites; 1,074,578 Negroes; 2,177,324 ive-born; 6,472 foreign-born. On July 1, 1944, the bureau he census estimated the civilian population of the state at 75,877.

**History.**—For 1948–52 the elected officers of the state, sen in the Democratic primaries in Aug. 1947 and in the eral election of that year, were: governor, Fielding L. ight; lieutenant governor, Sam Lumpkin; secretary of state, er A. Ladner; attorney general, Greek L. Rice; state tax ector, Mrs. Thomas L. Bailey; state treasurer, Robert W. y; state auditor, Carl N. Craig; state superintendent of pub- education, J. M. Tubb; state commissioner of agriculture, E. Corley; state land commissioner, Walter L. McGahey; e commissioner of insurance, Jesse L. White; clerk of reme court, Tom Q. Ellis.

**ducation.**—In 1946–47 there were 1,313 white elementary schools in sissippi and 3,345 Negro elementary schools, a total of 4,658. The olment in elementary schools was 470,012, of whom 217,056 were tes and 252,956 Negroes. The state had 556 white high schools and Negro approved high schools, with a total enrolment of 76,840 in 6–47. There were 9,128 white elementary and high school teachers luding superintendents and principals) and 6,426 Negro elementary high school teachers (including superintendents and principals), a l of 15,554 teachers. The total enrolment in white elementary and schools was 277,447; in Negro elementary and high schools, 269,405.

**ocial Insurance and Assistance, Public Welfare and Related Programs.**—m July 1, 1946, to June 30, 1947, the state department of public fare paid $7,123,884 to 43,938 recipients of old-age assistance; $527,- to 2,213 recipients of aid to the blind; and $1,401,921 for aid to 6 families for 16,895 dependent children. The department continued regular program of child welfare services on all types of problems cting children, particularly those children in rural areas. Special child fare workers were assigned to 11 county departments of public wel- , to the State Industrial and Training school and to the Negro Juve- reformatory. A state-county program of foster boarding care for dren was inaugurated. The department of public welfare continued its vice to the Mississippi state parole board in making preparole investi- ions and in supervising parolees and persons out on suspended sentence. Through its division for the blind, the department maintained a state- nced program of sight conservation, restoration and services and con- ued its program of training adult blind persons to work on factory-type ing machines. This division continued to serve as the channel for fed- funds for vocational rehabilitation of blind civilians.

**Communications.**—In 1947 the state maintained 6,742.6 mi. of high- ys. In 1947 the counties maintained approximately 53,983 mi.

n 1947 state maintenance expenditures were estimated at $3,082,- .43; in 1946, $2,156,904.64. In 1946 county expenditures for main- ance costs amounted to $10,156,908.27.

The total mileage of railroads in the state on Dec. 31, 1947, was 24.02 mi.

**anking and Finance.**—On Oct. 6, 1947, there were 181 state banks in ssissippi, with 22 branch banks and 32 branch offices. There were 25 ional banks in Mississippi. The resources of the state banks were 73,351,099.77 and the total deposits were $538,066,451.16; the re- rces of the national banks were $224,783,638.24 and total deposits e $212,643,311.86.

The balance in the general fund account as of Jan. 1, 1946, was ,156,889.38; on Dec. 31, 1947, it was $27,199,678.84. The special d account as of Jan. 1, 1946, was $8,131,891.17; on Dec. 31, 1947, was $21,097,415.07.

On Dec. 31, 1947, the full faith and credit debt of the state of Missis- i was $15,326,000; outstanding highway bonds amounted to (payable n the gasoline tax) $56,478,000, making a total state debt of $71,- ,000.

**griculture.**—The 1945 census reported 265,528 farms, with 19,616,533 in farms. In 1946, cropland harvested was 6,022,000 ac. The 1946 eipts from marketings were $303,576,000, of which $207,934,000 were n crops and $95,642,000 from livestock and livestock products; the ue of farm products consumed in farm households was $109,018,000.

**Manufacturing.**—The value of all manufactured products in Mississippi the year 1945 was $439,000,000.

Table I.—*Leading Agricultural Products of Mississippi, 1946 and 1945*

| Crop | 1946 | 1945 |
|---|---|---|
| Cotton (500-lb. bales) | 1,040,000 | 1,560,000 |
| Cottonseed, tons | 432,000 | 640,000 |
| Corn, bu. | 36,465,000 | 48,580,000 |
| Oats, bu. | 11,160,000 | 14,880,000 |
| Hay, tons | 1,182,000 | 1,139,000 |
| Sweet potatoes, bu. | 5,152,000 | 5,916,000 |
| Sugar-cane syrup, gal. | 3,500,000 | 3,520,000 |
| Sorghum syrup, gal. | 1,400,000 | 1,680,000 |
| Peanuts, lb. | 7,700,000 | 9,100,000 |
| Pecans, lb. | 4,050,000 | 6,500,000 |

The amount of wages paid in 1945 to persons employed in all industries employing eight or more persons amounted to $237,000,000 as against the amount of $234,000,000 for 1944, and $94,000,000 in 1939.

**Mineral Production.**—The total value of mineral production in 1945, including natural gas, sand and gravel and other mineral products, was $20,982,489.30, and in 1946, $32,709,705.80.

Table II.—*Principal Mineral Products of Mississippi, 1946 and 1945*

| Mineral | Value, 1946 | Value, 1945 |
|---|---|---|
| Natural gas | $ 157,384 | $ 355,298 |
| Sand and gravel | 1,926,923 | 1,143,331 |
| Petroleum | 30,323,206 | 19,290,062 |
| Other mineral products | 302,191 | 193,797 |

On Dec. 31, 1947, there were approximately 1,073 producing oil wells in the state.

(A. B. Bu.)

**Missouri.** A west north central state of the U.S.A., admitted to the union in 1821; popularly known as the "Show Me" state. Area 69,674 sq.mi. of which 404 are water. Pop. (1940) 3,784,664 (51.8% urban, 48.2% rural); 3,425,062 (90.5%) native white, 114,125 (3%) foreign-born white and 244,386 (6.5%) Negro. The bureau of the census estimated that on July 1, 1946, the population of the state was 3,776,250. Capital, Jefferson City (1940 census) (24,268). Largest cities: St. Louis (816,048), Kansas City (399,178), St. Joseph (75,711), Springfield (61,238).

**History.**—The 64th general assembly (Jan. 8–May 23, 1947), with Republicans in control of both houses, passed important legislation. An act relating to labour disputes forbids any employee of the U.S. or of the state from calling, supporting, or participating in any strike against his employer. It bars any employee from engaging in or inducing any strike not authorized by a majority vote in a collective bargaining unit at an election supervised by the state. It prohibits jurisdictional and sympathy strikes, as well as secondary boycotts. It also provides that any collective bargaining agreement between an employer and a labour organization shall be enforceable in the courts. An act relating to labour disputes in public utilities authorizes the governor to take possession of any public utility in case a strike, work stoppage or lockout would result in the failure to continue the operation of the utility so as to interfere with the public interest, health and welfare. A law concerning schools provides that in all public and private schools (except privately operated trade schools), and in all state-supported colleges and universities, regular courses of instruction are to be given in the constitution of the United States and of the state of Missouri, and in U.S. history. It also provides that no student in such educational institutions be given a certificate of graduation unless he has passed a satisfactory examination in these subjects. A motor vehicle act provides for staggered registration of motor vehicles and permanent retention of licence plates by the owners. The assembly, by joint resolution, ratified the proposed amendment to the U.S. constitution limiting the president's tenure of office.

In 1947 investigations were made into vote frauds in the Aug. 6, 1946, Kansas City primary. A Jackson county grand jury indicted 71 persons on May 27. That night thieves stole ballots and other evidence the jury had impounded in a courthouse vault. Thereafter two federal grand juries, investigating the vote frauds and the theft of ballots, indicted 41 persons for vote frauds; and of the seven tried in 1947, three were convicted and one pleaded guilty. No one was indicted for the theft of ballots.

The major state officers (1947), all Democrats, were: Governor, Phil M. Donnelly; lieutenant governor, Walter N. Davis; secretaries of state, Wilson Bell (died May 20) and Edgar C. Nelson (appointed May 23); auditor, Forrest Smith; treasurer, Robert W. Winn; attorney general, James E. Taylor.

**Education.**—For the school year ending June 30, 1947, the public school system consisted of 7,631 elementary schools, with 316,877 pupils and 16,899 teachers; 852 secondary schools, with 152,294 pupils and 6,297 teachers; three state colleges and three state teachers' colleges, with 11,031 students and 469 teachers; Lincoln university (Negro), University of Missouri, (Rolla) School of Mines and Metallurgy, schools for the deaf and blind and a Negro vocational school. Hubert Wheeler was state commissioner of education.

Under the G.I. Bill of Rights and the Vocational Rehabilitation act for disabled veterans, 69,808 veterans of World War II were enrolled in schools and colleges and 21,855 were receiving job training in Missouri on Dec. 31, 1947.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—For the year ending June 30, 1947, unemployment insurance totalled $18,320,205, and the government employment services made 107,063 placements. For the same period old-age assistance amounted to $43,931,653, aid to dependent children $7,262,505, general relief $3,672,440 and blind pensions $1,053,281; the monthly average number of persons receiving old-age assistance was 109,752, aid to dependent children 45,582, general relief 27,060, blind pensions 2,865. During the year ending June 30, 1946, the state penitentiary had an average of 2,540 inmates per day; the reformatory and industrial schools, 960. In the same period expenditures for the penal and correctional institutions amounted to $2,034,822.

**Communications.**—On Dec. 31, 1946, Missouri had 16,471 mi. of state highways and 100,504 mi. of rural roads. During 1946 the state highway department spent $29,504,187 (state and federal funds), of which $9,093,515 was for construction and $8,140,047 was for maintenance. On Dec. 31, 1944, railroad mileage totalled 6,882 mi. There were 965,547 telephones in use on Dec. 1, 1947.

**Banking and Finance.**—On June 30, 1947, Missouri had 484 state banks, with deposits of $1,988,613,000 and resources (loans and investments) of $1,857,100,000; 80 national banks, with deposits of $1,141,562,000 and resources (loans and investments) of $1,140,969,000; 163 building and loan associations, with resources of $217,085,648.

During the fiscal year ending June 30, 1947, the receipts of the state treasury totalled $173,238,984; disbursements $157,870,646. The state debt on July 1, 1946, was $59,000,000 and on June 30, 1947, $53,000,000.

**Agriculture.**—During 1946 cash income from crops and livestock was $867,163,000, and cash income from government payments was $26,083,000. The value of Missouri's 1946 crops was $526,094,000, and the value of the 1947 crops, harvested from 12,534,300 ac., was estimated at $526,302,000. The 1947 production of corn, oats, soybeans and potatoes was from one-third to one-half less than in 1946, principally because of a wet spring, floods in the late spring and early summer (inundating 1,409,000 ac.), and summer drought.

Table I.—*Leading Agricultural Products of Missouri, 1947 and 1946*

| Crop | 1947 (est.) | 1946 | Value, 1947 |
|---|---|---|---|
| Corn, bu | 98,441,000 | 163,355,000 | $241,180,000 |
| All hay, tons | 4,392,000 | 4,214,000 | 70,272,000 |
| Winter wheat, bu | 24,438,000 | 18,195,000 | 57,429,000 |
| Cotton, bales | 320,000 | 307,000 | 49,600,000 |
| Oats, bu | 30,107,000 | 57,133,000 | 30,107,000 |

**Manufacturing.**—The number of persons employed in the manufacturing industries in Sept. 1947 was 356,800, an increase of 7½% over Aug. 1946, but 17% less than the wartime peak of 430,500 in July 1943. In 1939 Missouri's industries manufactured products valued at $1,388,056,267, employed 178,538 wage earners and 24,275 salaried persons and paid $190,735,851 in wages and $58,937,137 in salaries.

Table II.—*Principal Mineral Products of Missouri, 1946 and 1945*

| Mineral | Value, 1946 | Value, 1945 |
|---|---|---|
| Lead | $30,326,416 | $30,370,900 |
| Cement | 12,142,018 | 6,134,452 |
| Bituminous coal | 9,137,000 | 10,322,177 |
| Stone (exclusive of sandstone) | 8,996,440 | 6,055,747 |
| Clay (raw and products) | 7,221,000 | 3,774,478 |
| Lime | 5,931,485 | 5,031,222 |
| Zinc | 5,425,096 | 5,100,250 |

**Mineral Production.**—In 1946 the value of Missouri's mineral production was $87,100,000, an increase of 18% over 1945. (R. P. Br.)

**Mohammedanism:** *see* ISLAM.

**Molotov, Vyacheslav Mikhailovich** (1890– ), soviet statesman, was educated at St. Petersburg Polytechnical institute and during his youth organized bolshevist student groups. He was appointed president of the soviet of people's commissars in 1930, was named foreign commissar on May 3, 1939, and sign nazi-soviet nonaggression pact in Aug. 1939.

On May 6, 1941, Joseph Stalin took over the premie Molotov retained the foreign ministry portfolio and was vice-premier. During and after World War II, he act Stalin's right hand in diplomatic dealings with the Allies a headed the soviet delegation at the U.N. conference i Francisco in Aug. 1945.

After World War II, Molotov was the Soviet Union's pal delegate at most of the major international parleys. erally unbending and uncompromising, he engaged in fre verbal clashes with western bloc delegates.

In 1947, he protested formally against U.S. Undersecreta State Dean Acheson's statement that soviet policy was "a sive and expanding," and found Secretary of State Geor Marshall's explanation unconvincing. In turn, Molotov rej a U.S. protest against a Moscow journal's slurring referen Pres. Harry S. Truman as a contender "for the laurels o little corporal from Munich."

The soviet foreign minister did not conceal his hos toward the Truman "doctrine" of U.S. aid to Greece and key; subsequent enunciation of the Marshall plan, in whic U.S. would underwrite a program for the economic recove Europe, left him at first suspicious and later openly antagon and on July 2 at a conference in Paris he turned dow Anglo-French proposals for the European recovery program

Following the Paris parley, Molotov proceeded briskl knit eastern European nations into a strong politico-econ bloc. This policy, aided by speedy soviet negotiation of treaties with nations in its orbit, was loosely called the "Mol plan."

The failure of the London conference of foreign ministe the close of 1947, was blamed on the U.S.S.R. by Mars Molotov, however, said the responsibility must be place the "U.S. ruling classes," contending that only soviet R wanted the parley to end in a peace treaty.

**Molybdenum.** The molybdenum production of the U States, as reported in the following t accounted for 80%–90% of the world output.

*Metal Content of Molybdenum Concentrates, 1939–46*

(In millions of pounds)

| | 1939 | 1940 | 1941 | 1942 | 1943 | 1944 | 1945 |

*Including exports. †Second half only.

Demand declined sharply after the close of World War and the 1946 output was the lowest after 1936. Even so, duction was kept in advance of consumption, and heavy a tions were made to stocks, which at the end of 1947 stood considerably more than a year's supply at the existing rate consumption.

The operating rate was stepped up in 1947, giving 20,820, lb. of metal content of concentrates turned out in the first th quarters. Shipments also improved, to 14,857,100 lb. of c tained molybdenum, but consumption in the second and th quarters was at a rate of 22,500,000 lb. a year. (G. A. Ro.

**Monaco.** A principality on the Mediterranean co bounded on the land side by French territo Area: 375 ac. (0.59 sq.mi.); pop. (1946 census) 19,242. Ch towns: Monaco (1,854), La Condamine (9,421), Monte Ca (7,967). Language: French. Ruler: Prince Louis II.

**History.**—In June, celebrations of the 25th anniversary

nce Louis II's reign took place. The state of war with Ger-
ny was ended by decree on Sept. 1. (J. Ra.)

**ducation.**—(1947) Primary schools 9, scholars 1,960; secondary schools
scholars 559.

**inance.**—Revenue (1946) frs. 262,000,000; expenditure (1946) frs.
,000,000. Currency French francs, 1 franc=0.841 cents U.S. (July
7).

**ourist Industry.**—(Aug. 1945–July 1946) Visitors to hotels and
rding houses 39,779. The chief manufactures are perfume and
tery.

**onazite.** The supply of monazite in the United States, obtained from imports from India and Brazil, in-
ased from 384 short tons in 1944 to 549 tons in 1945; since
nazite is one of the source materials for atomic energy,
vernment regulations prevented the publication of the 1946
ports. (G. A. Ro.)

**onetary Units:** *see* Exchange Control and Exchange
tes.

**ongolia** (Outer and Inner). A vast, arid, sparsely settled tableland in northeastern Asia, bounded north
Siberia, east by Manchuria, west by Sinkiang, south by the
inese provinces of Kansu, Shensi, Shansi and Hopei. The
tion next to the Great Wall of China and south of the Gobi
ert is known as Inner Mongolia; it is a part of China. Outer
ongolia, north and west of Inner Mongolia, is an independent
ion. Area (Outer and Inner Mongolia): 956,844 sq.mi. Pop.
t.): between 6,000,000 and 8,000,000. Lack of water, type
soil and the short growing season make agriculture impossi-
in the greater part of the area. The chief industry is grazing
the Mongols live a nomadic life, moving wherever water
pasture are available. Religion: Lamaism, a variety of
ddhism. Of the male population 30% live in lamaseries.

**Outer Mongolia.**—Pop. (est. 1941) 900,000; area 580,158
mi. Capital, Ulan Bator (formerly Urga) (100,000). In the
aty of Aug. 1945 with the U.S.S.R., China agreed to recog-
e the independence of Outer Mongolia if this met with the
hes of the people of the area. China officially recognized the
lependence of the Mongolian People's Republic on Jan. 5,
46, after a plebiscite had been held. In Feb. 1946 treaties
re concluded with China and the U.S.S.R. In June and July
1947 there were border skirmishes between Chinese and
ongolian forces in the Peitashan region of Sinkiang.

The application of the Mongolian People's Republic in June
46 for membership in the United Nations was rejected by the
curity council in 1946 and again in 1947 after the general
embly had recommended reconsideration. The U.S.S.R.
ongly supported the application. China opposed it, charging
Mongolian People's Republic with invasion of the Chinese
ovince of Sinkiang, while the United Kingdom and the
ited States voted against it on the ground that no information
garding the country was available and that its independence
d not been proven.

*Economic and Social Developments.*—All processing of agri-
ltural products, power plants, mining and even such minor
dustries as automobile repair and printing are in the hands of
te combines. Land and all natural resources are nationalized.
ate co-operatives produced goods valued at 64,000,000 tugriks
1941, and in 1940 handicraft co-operative organizations
rned out goods valued at 19,000,000 tugriks (1 tugrik=
146 U.S.). Soviet sources reported 163,000 ac. under cul-
ation. In 1941 there was a total of 27,000,000 head of cattle.
1944 there were 285 primary schools, 36 secondary schools,
echnical schools and 190 nomad schools. In 1947 there were
hospitals, 52 dispensaries and 234 medical centres.

*Government.*—The constitution drafted in 1940 established
government strikingly similar to the soviet system of the U.S.S.R. The supreme organ of the state is the Great Hural which is elected by the hurals of the provinces and the hural of Ulan Bator. The constitution specifies that it must meet at least once in three years. A second body, known as the Little Hural, is elected by the Great Hural and serves as the supreme organ of government when the former is not in session. The Little Hural chooses a presidium of seven members which functions in its place when it is not in session. The administrative functions are carried on by a council of ministers whose membership consists of the heads of the ten departments of government. Local government is based on a system of hurals of the various geographical subdivisions. All men and women 18 years of age or over have the right to vote.

**Inner Mongolia.**—Inner Mongolia is a part of China and includes the provinces of Jehol, Chahar, Suiyuan and Ningsia. Chinese reside in the cities and on the farms while the Mongols predominate in the grazing areas.

The area was occupied by the Japanese in 1937 and organized into a new state, Menchiang. On the surrender of the Japanese forces in Aug. 1945, most of Chahar and Jehol were taken over by the Chinese communists. On Oct. 11, 1946, Chinese nationalists captured Kalgan, capital of Chahar. There were no major changes in the military front in Inner Mongolia in 1947. In July the nationalist armies were forced to evacuate Peipiao, Jehol rail and coal centre. The success of the nationalists in holding most of the territory they had captured was attributed to Gen. Fu Tso-Yi who was able to mobilize the people in the district into well-trained militia. At the close of 1947 the communists controlled the northern section of Chahar and most of Jehol. The nationalists controlled Suiyuan, Ningsia and the southern half of Chahar.

According to Chinese estimates, the population of Inner Mongolia was more than 7,000,000. Principal products of the area are wool, furs, coal, iron, opium, cereals and linseed.

**Montana.** A northwestern state of the United States, popularly known as the "Treasure state." Land area 146,316 sq.mi.; water area 822 sq.mi.; pop. (1940): 559,456 (1947 est., 582,300); principal cities (1947 pop. est.): Helena, the capital (18,000); Butte (39,000); Great Falls (38,000); Billings (32,000); Missoula (22,000); Anaconda (13,600); Bozeman (12,500); Kalispell (14,000). Of the total population in 1940, there were 540,468 whites, of whom 484,826 were native born and 55,642 were foreign born. The urban population was 211,535 or 37.8%. The Indian population numbered 16,841.

**History.**—Incumbents in the principal state offices in 1947 were: Sam C. Ford (Rep.), governor; Ernest T. Eaton (Rep.), lieutenant governor; Sam W. Mitchell (Dem.), secretary of state; R. V. Bottomly (Dem.), attorney general; George P. Porter (Rep.), treasurer; John J. Holmes (Dem.), auditor; Elizabeth Ireland (Rep.), superintendent of public instruction. In the 1946 elections the veteran statesman Burton K. Wheeler, seeking a fifth term in the United States senate, was defeated in the primary by former Associate Justice Leif Erickson who in turn lost in the general election to Zales Ecton (Rep.). Mike Mansfield (Dem.) and Wesley D'Ewart (Rep.), were re-elected representatives to congress. Paul T. Smith (Dem.), was elected railroad and public service commissioner, and Frank Murray (Dem.), clerk of the supreme court. Hugh Adair and Lee Metcalf were elected to the supreme court on a nonpartisan ticket. Elections for the state legislature returned strong Republican majorities in both houses.

**Education.**—There were 1,467 elementary schools in Montana in 1947, with an enrolment of 68,278 and a teaching staff of 3,382. There were 179 high schools with 27,650 students and 1,333 teachers. The net amount spent on the operation of these schools was $17,095,758. After a careful state-wide study of public elementary and secondary schools, made by a special commission of nine members, a bill was introduced into the legislative session in 1947 providing for sweeping changes in school district organization and financial methods, but was rejected.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—Approximately 19,500 persons received public assistance in 1947. Grants totalling $7,347,141 were distributed as follows (figures in parentheses indicate the average number of recipients per month): old-age assistance (10,696) $4,892,190; aid to dependent children (4,413) $1,344,405; aid to needy blind (396) $191,909; subsistence (1,242) $404,170; medical care (375) $64,331; hospitalization (428) $409,552; burials (39) $40,584. Unemployment benefits of $919,106 were paid to 7,934 persons, an average of $14.39 per week for 8.05 weeks, or $115.84 per claimant. Correctional institutions with their average populations and total expenditures in 1947 were: Montana state prison, 364 inmates, $263,372; state industrial school, 76 inmates, $93,095; vocational school for girls, 36 inmates, $53,248.

**Communications.**—In 1947, the state highway commission maintained 8,756 mi. of highways, of which 1,222 mi. were unsurfaced. State highway expenditures in 1947 were $10,164,425, including federal aid. There were 95 designated airports, of which 26 were suitable for large commercial or military aircraft.

The railway mileage was 5,235 mi. The number of telephones was 93,700.

**Banking and Finance.**—There were 110 banks in the state in 1947. The 39 national banks had total deposits of $279,768,000, and their total assets were $292,618,000. State banks had total deposits of $242,052,393, and their total assets were $253,229,473. There were 16 building and loan associations with assets of $18,572,851. For the fiscal year 1946–June 30, 1947, the net state income, all sources, was $45,585,968.56 and the expenditures were $40,007,481.34, plus bonds redeemed of $3,368,000. The gross debt of the state on July 1, 1947, was $4,992,000 and the net debt, $4,454,776.

**Agriculture.**—Unusually high prices and increased production of many principal crops boosted the total value of agricultural products harvested in Montana during 1947 to the all-time peak of approximately $288,000,000, which was $66,500,000 more than in 1946 and nearly 3 times the average value for the preceding decade. All wheat, with a value of $166,000,000, accounted for three-fourths of the gain over 1946 in the total crop value. Other grains and flaxseed were responsible for 21% of the increased value. More new land was brought under cultivation in 1947 and the acreage of crops harvested was about 380,000 more than the acreage in 1946.

Table I.—*Leading Agricultural Products of Montana, 1947 and 1946*

| Crop | 1947 | 1946 |
|---|---|---|
| Wheat, bu. | 64,325,000 | 62,888,000 |
| Hay, tons | 2,773,000 | 2,569,000 |
| Barley, bu. | 17,940,000 | 17,550,000 |
| Oats, bu. | 10,478,000 | 10,912,000 |
| Sugar beets, tons. | 893,000 | 891,000 |
| Corn, bu. | 2,988,000 | 2,520,000 |
| Flaxseed, bu. | 1,008,000 | 518,000 |
| Potatoes, bu. | 1,820,000 | 2,210,000 |
| Dry beans, 100-lb. bags | 364,000 | 280,000 |
| Alfalfa seed, bu. | 112,000 | 120,000 |
| Mustard seed, lb. | 17,360,000 | 38,250,000 |
| Seed peas, 100-lb. bags | 244,000 | 348,000 |

**Manufactures.**—The total value of manufactures (1939 census) was $151,885,026. Total employment in 1939 was 10,898, and wages and salaries paid, $15,832,241. There were no official figures on the value of manufactures in Montana after 1939, but reports of the state unemployment compensation commission show that an average of 17,000 persons (wage and salary earners) were employed in manufacturing in Montana in 1947 with total wages of about $40,000,000. For the year 1947 electrical power to a total of 2,779,116,000 kw.hr. was generated in the state.

Table II.—*Industrial Products in Montana, 1946 and 1945*

| Products | 1946 | 1945 |
|---|---|---|
| Cheese, lb. | 3,470,000 | 4,172,438 |
| Butter, lb. | 9,453,000 | 9,899,081 |
| Ice cream, gal. | 2,797,000 | 1,588,491 |
| Beet sugar, tons. | 117,000 | 128,000 |
| Flour, sacks | 4,121,000 | 3,426,383 |
| Mill feed, lb. | 142,760,000 | 132,996,509 |
| Beer, bbl. | 271,469 | 265,000 |
| Gasoline, gal. | 177,463,481 | 159,491,392 |
| Electric power generated, kw.hr. | 2,315,056,000 | 2,318,036,000 |

**Mineral Production.**—Increased production in most metals, coupled with increases in the prices of silver, copper and lead, brought about a marked improvement in most phases of Montana's metal-mining industry in 1947 and reversed a four-year downward trend with a 57% over-all gain in the total value of the five metals. Zinc production increased 155%, lead 87%, silver 82% and gold 23%. Copper production showed a decrease of 1%.

Table III.—*Principal Mineral Products of Montana, 1947 and 1946*

| Mineral | Value, 1947 | Value, 1946 |
|---|---|---|
| Copper | $24,087,250 | $18,947,844 |
| Zinc | 10,009,350 | 4,091,880 |
| Silver | 5,386,560 | 2,644,697 |
| Lead | 4,526,000 | 1,805,040 |
| Gold | 3,024,000 | 2,467,745 |
| Total value | $47,033,160 | $29,957,206 |

Crude oil production in Montana in 1947 totalled 8,705,607 bl compared with 8,801,000 bbl. in 1946. The coal tonnage produced 3,131,625 in 1947 and 3,800,000 in 1946. Natural gas deliveries to lines at wells in Montana fields were approximately 32,000,000,000 each year. (E. E.

**Montenegro:** *see* YUGOSLAVIA.

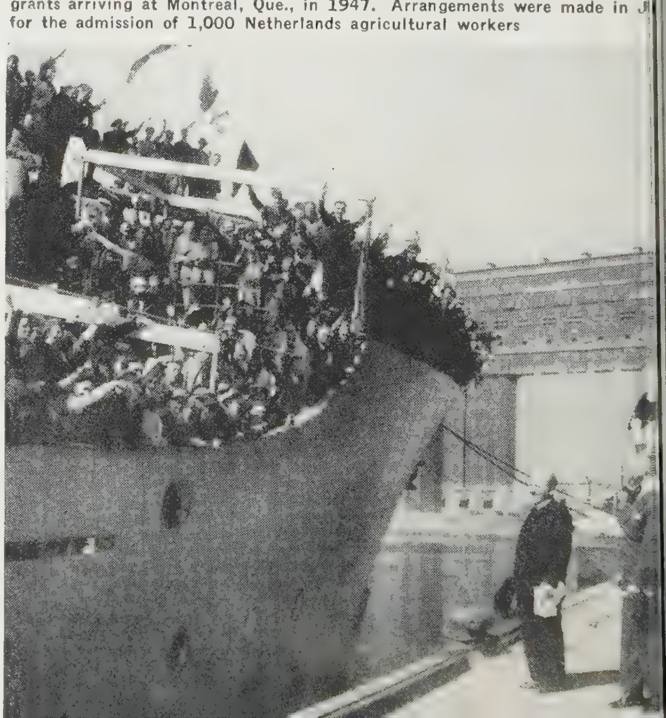
# Montgomery of Alamein, Bernard Law Montgomery,

1st Viscount, of Hindhead (1887– British army officer, was born in Londor Nov. 17, and was educated at St. Paul's school. He serve France in World War I, and in World War II led the 8th a from Egypt to Tunis and in the landings in Sicily and Italy. was later in command of the 21st army group in the operat in northwest Europe. In 1946 he succeeded Field Marshal count Alanbrooke as chief of the imperial general staff. main duties were to adapt imperial defense to the condition reduced British forces.

At the invitation of Marshal of the Soviet Union Alexar Vasilevsky he visited the U.S.S.R. in Jan. 1947 where he methods of Russian military training, and was received Stalin, who gave a dinner in his honour. In May, on the an versary of their liberation, he visited the islands of Jersey Guernsey. In the summer he visited British troops in Palest India, Ceylon and Singapore, and as the guest of the N Zealand and Australian governments visited the two domini Continuing his tours of foreign countries, in the autumn he w to Rhodesia and the Union of South Africa. In the late su mer, on his return from the far east, he was concerned w problems of reducing the size of the armed forces. His c account of the conduct of the campaign in northwest Eur was published under the title *Normandy to the Baltic.*

# Montreal.

A city in the province of Quebec, Canada, f called Ville Marie, founded in 1642 on the site the Indian village of Hochelaga, Montreal is on an island at confluence of the Ottawa and St. Lawrence rivers, approximat 1,000 mi. from the Atlantic ocean and 2,760 mi. from Liverp It is at the head of ocean navigation and is the terminus vessels from the Great Lakes. It is served by three canal s tems—the St. Lawrence canals (1,230 mi. to the Great Lak



DR. J. D. VAN ROYEN, Netherlands ambassador to Canada, waving to im grants arriving at Montreal, Que., in 1947. Arrangements were made in J for the admission of 1,000 Netherlands agricultural workers e eastern United States canals, via the Richelieu river and ake Champlain (length 127 mi.) and the Ottawa river canals ength 119 mi.).

The population of the city proper, as estimated by *Lovell's irectory* (1947), was 1,376,462, and of greater Montreal ,594,712.

The city is governed by a mayor and a council of 99 members, of whom one-third are appointed by public bodies, one-third elected by the property owners and one-third by the citizens generally. The mayor is elected by the citizens. The council appoints from among its members six councillors to act as n executive committee.

Greater Montreal is supervised by the Metropolitan commission, on which the city and suburban municipalities are represented.

The port of Montreal is the largest in Canada. Deep-sea-vessel arrivals in 1947 (commercial) numbered 898, with a net tonnage of 3,512,360. The number of coastal- or inland-vessel arrivals (commercial) in 1947 was 2,408, with a net tonnage of ,415,886. In addition there were noncommercial vessels (such s warships, pleasure boats, yachts, etc.) numbering 127, with a et tonnage of 20,285.

The assessed value of real estate, as of April 30, 1947, was 1,294,413,315, of which $944,646,993 was taxable and $349,66,322 was exempt from taxation. In 1947 building permits were issued for 2,909 new buildings having a value of $41,484,82, and for 2,662 repairs, having a value of $9,797,645.

Bank clearings for 1947 were $13,062,526,776. (J. A. Ma.)

**Montreal, University of.** The French University of Montreal provided physical facilities in its spacious buildings for many congresses and conferences held in the Canadian metropolis throughout 1947; chief among them were the pest control operators, the World Congress of the Young Christian Workers (J.O.C.) with delegates from the five continents taking part in the deliberations, the International Conference bureau, the Action Sociale Catholique (L.I.C.).

A subscription campaign was launched in October to provide the funds necessary to execute the plans drafted for the completion and development of the university, an objective of $11,000,000. The whole population of Montreal and neighbouring counties, without distinction of social rank or creed, immediately responded to the call for support.

The university was the recipient of several gifts apart from the subscription, chiefly a bequest of $100,000 willed by Angelina Ritchot.

The institute of experimental medicine and surgery was housed in its proper quarters in September.

Lectures were given by members of the *Académie Française:* Emile Henriot, Etienne Gilson, Dr. Pasteur Vallery-Radot. (O. M.)

**Montserrat:** *see* LEEWARD ISLANDS.

**Mormons.** The year 1947 was the centennial of the arrival of the Mormon pioneers in Utah under Brigham Young (July 24, 1847). Celebrations of this event were held throughout the state during 1947 under the direction of a commission appointed by the governor and presided over by President David O. McKay of the First Presidency.

During the year the church accelerated its efforts to amplify its welfare program. Besides the help it extended to the needy in the U.S. and Canada (99,602 lb. of clothing and 8,742,386 lb. of food), it sent to European war-stricken countries 2,200,544 lb. of food and clothing, mostly to Germany, but also to Austria, Belgium, England, Finland, France, the Netherlands and Norway. The bulk was produced under the welfare plan; a small percentage was purchased on the open market.

Building operations were intensified. In 1947, 70 meeting houses (chapels) were under construction, at costs running from $10,000 to $200,000 each. Commitments had been made for more than 500 other meeting houses at approximately the same costs.

Activity among the priesthood organizations of the church (all male members twelve years of age and over hold some grade of the priesthood) was intensified with a view to bringing about a feeling of stronger brotherhood among the members. (*See* also CHURCH MEMBERSHIP.) (J. R. Cl.)

**Morocco:** *see* FRENCH OVERSEAS TERRITORIES; SPANISH COLONAL EMPIRE.

**Mortgages, Farm:** *see* AGRICULTURE; FARM CREDIT ADMINISTRATION; FARMERS HOME ADMINISTRATION.

**Mortgages, Home:** *see* HOUSING.

**Moscow.** The year 1947 was likely to prove a decisive one in Moscow's history. On Sept. 7 the whole of the U.S.S.R. celebrated the 800th anniversary of the foundation of the city, which was marked by the bestowal of the Order of Lenin on its citizens and an order of the day from Joseph Stalin. The most significant feature of the whole affair was the stress laid on Moscow as the true and ancient capital, the mother of the centralized Russian state. For some time past there had been a steady movement toward the exaltation of Moscow above Leningrad, a movement reflected in attempts to curb the traditionally independent and experimental frame of mind of Peter's capital, and in the gradual transfer of talent to the old capital in the heart of the Russian plain—from the Academy of Sciences on the one hand to individual ballerinas of outstanding talent on the other. The 800th anniversary of the foundation of the seat of the old Muscovite princes and the first Russian tsars set the seal on this process, which underlined the affinity of the soviet regime with the isolationism and obscurantism of Russia before Peter the Great.

On the material side, the anniversary was made an occasion for announcing the resumption of the ten-year development plan for Moscow, begun in 1935 and interrupted by World War II. For the last six years, while steel skeletons of giant buildings rusted and half-completed blocks of flats steadily crumbled away, innumerable slum dwellings scheduled for demolition continued to house constantly increasing numbers. In 1947 the city council re-started work on the unfinished constructions and cleared the ground for others postponed for many years. Even the giant Palace of Soviets, planned as the tallest building in the world, was to be proceeded with, although every Muscovite had long taken it for granted that the war would provide an excuse for abandoning the project. In addition to this, other skyscrapers were planned, including a 20-story office and apartment block on the Smolenskaya; while the Academy of Sciences was to have a magnificent building on the river front and 1.2 mi. of office blocks and laboratories lining the Kaluga road. For the ordinary Muscovite, the star-shaped underground was to be provided with an outer circle which, by 1952, would bring half the population within easy walking distance of the system; three great arterial boulevards were planned to lead outward from Dzerzhinsky square; while housing space was to be increased by 1.2 sq.mi. of living space by 1950. Since Moscow had at least 2,000,000 more inhabitants than it had room for it would plainly be some time before the housing situation could prove equal to the city's new role as the so-called "cultural centre of the world." (W. E. Cw.)

**Motion Pictures.** U.S. box-office business held up fairly well in 1947. But box-office grosses were accounted for in part by increased admission prices, and there was growing complaint by exhibitors against the necessity of playing some outstanding attractions at advanced rates. Financial statements of the leading film companies generally continued to be healthy, though somewhat off from the high levels of 1946.

The long agitation over asserted communist influence in motion pictures at last reached its climax in the fall of 1947, with the hearings at Washington, D.C., by the house of representatives committee on un-American activities.

Among those who testified were Eric Johnston, president of the Motion Picture Association of America; producers Louis B. Mayer, of Metro-Goldwyn-Mayer, Jack L. Warner, of Warner Bros., Walt Disney, of Walt Disney Productions; director Sam Wood; among the actors were Adolphe Menjou, Gary Cooper, Robert Montgomery, Robert Taylor and Ronald Reagan.

Opinions on the extent of communist penetration differed sharply. Mayer insisted that the communists could not inject their propaganda into pictures because scripts were carefully edited to prevent this. On the other hand, Menjou charged that communists in Hollywood, though in a minority, were highly dangerous because of the sinister way in which they operated.

J. Parnell Thomas, chairman of the committee, asserted that communists had been able to insert propaganda insidiously into various pictures, but by the end of 1947, such instances had not been officially specified.

Ten Hollywood writers, directors and producers refused to state if they were communists and were cited by congress for contempt. Their cases were scheduled for court action in 1948. Those cited were Ring Lardner, Jr., Dalton Trumbo, Samuel Ornitz, John Howard Lawson, Alvah Bessie, Adrian Scott, Edward Dmytryk, Lester Cole, Herbert Biberman and Albert Maltz.

Shortly after adjournment of the committee hearings, leading film executives, meeting in New York, announced a policy of refusing to hire known communists. They discharged or suspended those of the ten witnesses cited for contempt who were in their employ. The industry feared that the communist investigation would give added strength to the movement for government censorship of films. Johnston declared on the stand:

> We insist on the right to decide what will or will not go into our pictures . . . I don't propose that government shall tell the motion picture industry, directly or by coercion, what kind of pictures it ought to make.

In the summer of 1947, the British government placed a tax of 75% on the earnings of foreign films. Repercussions in both Great Britain and the U.S. were sudden and sharp. The U.S. Motion Picture Export association voted to stop all shipments to England of American motion pictures made by its members. British exhibitors protested to their government that they could not keep their theatres open without the U.S. product because the British film makers did not turn out enough pictures to keep the theatres supplied.

Returns from Great Britain constituted the greater part of the foreign market revenue of the U.S. industry. It was estimated that approximately $68,000,000 came annually from the British market, which the new tax would reduce to about $17,000,000. In addition, the British action increasingly agitated the unsettled state of U.S. foreign markets already harassed by hindrances and restrictions. A number of countries, suffering like Great Britain from dollar shortage, considered imitative action.

J. Arthur Rank, whose productions were probably the finest to come out of England, announced a loss of $8,000,000 and a curtailment of production. This further aggravated the plight of the British theatres in the matter of obtaining suffici product to keep their doors open.

The British tax situation, still unameliorated at the end 1947, threatened revolutionary changes in the U.S. product structure. The loss of revenue called for stern retrenchme Economy waves swept U.S. studios, and thousands of employ were thrown out of work. Every effort was made to acqu greater efficiency in production. The choice lay among (a) creased efficiency, (b) increased admission prices, (c) decreas quality. In the main, industry leaders hoped that the lat two possibilities could be avoided. It was apparent that sup productions, costing $3,000,000 or more, would be rarities some time.

Tightening of revenues served to reverse the trend of seve years toward increased independent production. The period lush profits had made independent production so inviting th increasing concern had been felt by the major studios. Ho ever, during 1947, a number of independent companies ceas production. Two, Rainbow and Liberty, were absorbed by Pa mount. The long and complicated litigation between David Selznick and Mary Pickford, Charles Chaplin and United Artis was settled out of court with Selznick selling his stock back the company.

Late in 1947, Donald M. Nelson resigned as president of t Society of Independent Motion Picture Producers.

Protest against the 20% federal tax on theatre admissio was made by exhibitors at hearings of the house of represent tive ways and means committee. The American Theatres ass ciation submitted an estimate, based on theatre collections, an average weekly attendance at U.S. motion-picture houses 91,491,129 for the 12 month period ending April 30, 1947. T federal admission tax from film theatres for this period was est mated at $333,027,705.

Late in 1947, 20th Century-Fox's *Forever Amber* became t third of a trilogy of pictures around which violent censorsh battles had raged, its predecessors being Howard Hughes's *T Outlaw* and David O. Selznick's *Duel in the Sun*. *Foreve Amber*, based on the best-selling novel of that name, dealin with a lady of many lovers in the reign of Charles II of England, first was banned by the Legion of Decency and then give an "objectionable in part" rating after some changes had bee made. In Dec. 1947, the Motion Picture Association of Americ tightened its production code, with emphasis on film conten titles and advertising. Crime pictures were dealt with especially

Appeals were taken to the U.S. supreme court from the findings of the U.S. district court in New York, in 1946, in th government's antitrust action against eight motion-picture companies. The government sought to separate theatre ownershi from the film companies. The distributor defendants asked revision of methods prescribed for picture distribution. Arguments on the appeals were to be heard early in 1948.

In 1947, the Production Code administration approved 36 U.S. features and 37 foreign, a total of 402. In 1946, 397 U.S features and 28 foreign features went through the Johnston office, a total of 425, or 23 more than in 1947.

The studio strike, called by the Conference of Studio Unions in jurisdictional strife with the International Alliance of Theatrical Stage Employees, went into its second year. Peace efforts continued, and there were withdrawals and loosening of restrictions by a number of the striking organizations. But officially the strike continued in effect, although the studios showed little sign of practical harassment by the situation.

From the standpoint of type of product, the most significant development of 1947 was the filming of two pictures dealing with anti-Semitism: 20th Century-Fox's *Gentleman's Agreement* and RKO's *Crossfire*.

*Gentleman's Agreement* won the New York film critics award the best picture of the year; Elia Kazan, who directed it and *oomerang,* was voted the best director. Deborah Kerr was ven honours as the best actress, and William Powell, the best ctor. The Italian film *To Live in Peace* was judged the best reign language offering of the year.

Among the newcomers to attract the most attention in 1947 ere Alida Valli and Louis Jourdan in *The Paradine Case,* ichard Widmark in *Kiss of Death,* Barbara Bel Geddes in *The ong Night* and Wanda Hendrix in *Ride the Pink Horse.*

The outstanding U.S. films of 1947 included: *Gentleman's greement, Mourning Becomes Electra, A Double Life, Cary nd the Bishop's Wife, Black Gold, Lady in the Lake, The Farm- 's Daughter, Miracle on 34th Street, Life with Father, Mother ore Tights, Cass Timberlane, The Long Night, Road to Rio, ossessed, Boomerang, Unconquered, Welcome Stranger, Bach- lor and the Bobby Soxer, Perils of Pauline* and *Secret Life f Walter Mitty.*

The *Motion Picture Herald's* annual poll showed the following stars as the leading box-office attractions in 1947: Bing rosby, for the fourth year, headed the list as the top moneyaker. The other nine were Betty Grable, Ingrid Bergman, ary Cooper, Humphrey Bogart, Bob Hope, Clark Gable, regory Peck, Claudette Colbert and Alan Ladd.

Academy of Motion Picture Arts and Sciences awards for 946:

Best picture, *The Best Years of Our Lives,* Samuel Goldwyn, RKO; performances: actor, Fredric March in *The Best Years of Our Lives;* actress, livia de Havilland in *To Each His Own,* Paramount; supporting actor, arold Russell in *The Best Years of Our Lives;* supporting actress, Anne axter in *The Razor's Edge,* 20th Century-Fox; best direction, William Vyler for *The Best Years of Our Lives;* best written screen play, Robert . Sherwood, *The Best Years of Our Lives;* best original screen play, Muriel ox and Sydney Box for *The Seventh Veil,* J. Arthur Rank-Sydney Box-rtus, Universal; best original motion-picture story, Clemence Dane for *acation from Marriage,* London Films Prods., Ltd., Metro-Goldwyn-ayer; best art direction—black and white—Lyle Wheeler and William arling for *Anna and the King of Siam,* 20th Century-Fox; colour, Cedric ibbons and Paul Groesse for *The Yearling,* Metro-Goldwyn-Mayer; best inematography—black and white—Arthur Miller for *Anna and the King f Siam;* colour, Charles Rosher, Leonard Smith and Arthur Arling for *he Yearling;* best sound recording, John Livadary for *The Jolson Story,* olumbia; short subjects—cartoon, *The Cat Concerto,* Metro-Goldwyn-ayer (Frederick Quimby, producer); one-reeler, *Facing Your Danger,* Varner Bros. (Gordon Hollingshead, producer); two-reeler, *A Boy and His og,* Warner Bros. (Gordon Hollingshead, producer); best film editing, aniel Mandell for *The Best Years of Our Lives;* best scoring of a dramatic r comedy picture, Hugo Friedhofer for *The Best Years of Our Lives;* best ong, "On the Atchison, Topeka and Santa Fe" from *The Harvey Girls,* Metro-Goldwyn-Mayer (music by Harry Warren, lyrics by Johnny Mer-er); best special effects, Thomas Howard, visual, for *Blithe Spirit,* J. rthur Rank-Noel Coward-Cineguild, United Artists; best interior decora-ion—black and white—Thomas Little and Frank E. Hughes for *Anna and he King of Siam;* colour, Edwin B. Willis for *The Yearling;* special awards, ocumentary—short subject, *Seeds of Destiny,* U.S. war department; Irv-ng G. Thalberg memorial award, Samuel Goldwyn; other special awards, aurence Olivier for his outstanding achievement as actor, producer and irector in bringing *Henry V* to the screen; Harold Russell for bringing ope and courage to his fellow veterans through his appearance in *The Best ears of Our Lives;* Ernst Lubitsch for his distinguished contributions to he art of the motion picture; Claude Jarman, Jr., outstanding child actor f 1946. (L. O. P.)

**Educational Motion Pictures.**—The leading producing organization in the field, Encyclopædia Britannica Films Inc., reeased during 1947 a schedule of 48 new subjects and announced lans for the production in 1948 of 25 additional films, making total of more than 500 subjects available through E.B.F. Durng 1947, *Atomic Energy* was the largest-selling E.B.F. subject, ollowed by *Gray Squirrel, Adventures of Bunny Rabbit* and *eart and Circulation.* E.B.F. also reported that its all-time est-selling subject during the 18 years of its activity had been *ound Waves and Their Sources.* Other popular E.B.F. subects were *Body Defenses Against Disease, Digestion of Foods, lectrodynamics, Electrons, Molecular Theory of Matter* and *lant Growth.*

Coronet Instructional Films reported it had 120 subjects vailable for delivery as of Dec. 31, 1947, with 5 additional ubjects scheduled for January release. Of these, 90 subjects were available in colour as well as black-and-white. Coronet reported that 35% of all prints sold in 1947 were in colour. This amounts to nearly 50% in dollar value of Coronet sales and indicates a strong interest in colour films for educational purposes, although prints cost twice as much as black-and-white. Coronet announced a production schedule of 60 subjects for 1948, to be released at the rate of 5 a month. Coronet's most popular subjects in 1947 were those dealing with basic skills—*How to Study, Know Your Library, Maps Are Fun, Global Concepts in Maps, Spelling Is Easy, How to Read a Book* and *Improve Your Reading.* Among the new subjects made by Coronet were films on *Dancing, Secretarial Training, Powers of Congress* and *Political Parties.*

SCENE from *Shoe-Shine,* Italian film released in the U.S. during 1947

United World Films completed 19 subjects in 1947 and announced a release schedule of 67 new subjects for 1948. It was also expected that United World would soon distribute in America the first children's films being produced in England by Mary Field of the J. Arthur Rank organization, including 8 features, a 5-part serial and 18 issues of a children's film magazine, besides travelogues and nature subjects.

RKO-Radio Pictures published in Jan. 1948 a 40-page catalogue of 16-mm. versions of its most notable features, many of them recommended by the National Education Association Department of Secondary Teachers for school use, including Walt Disney features based on children's classics, as well as historical and biographical films.

Young America Films reported a total of 46 sound films and

53 slide films available at the end of 1947. Of these, 34 were exclusively Young America productions; 12 were productions of other companies, released through Young America Films. The company announced a production schedule of 15 films for 1948. Greatest in demand among Young America items was *The House I Live In,* a plea for racial tolerance, featuring Frank Sinatra and previously released to theatres by RKO. Most popular of Young America's own productions were *We the People, What Is Four?, What Makes Rain?* and *Safety to and from School.*

Teaching Films, Inc., completed, in less than a year, 9 sound films and 17 filmstrips. The company's best film was *Rhythm Is Everywhere.*

During 1947, British Information Services further developed its policy of granting on an exclusive basis the sales rights of many films to a number of dealers throughout the U.S., while retaining its own rental service for these films. One of its most successful films of the year, *Instruments of the Orchestra,* was handled in this manner. The Benjamin Britten *Variations and Fugue,* which forms the sound track, was recorded by Columbia Recording company under the title, *A Young Person's Guide to the Orchestra.* Another important British release was *Charter of the United Nations.* The sales rights are held by Films of the Nations, Inc., official distributor of United Nations Films. B.I.S. films were being increasingly used on television programs. The 15 film libraries maintained throughout the country by B.I.S. continued to distribute prints of more than 350 subjects to schools, clubs, industries, churches, adult groups and individuals.

The *Reader's Digest,* at the request of the Department of Secondary Teachers of the National Education association, released in Oct. 1947 an excellent kit of six filmstrips entitled *Our American Heritage,* for high school classes in English and the social studies, including visualizations of *The Vocabulary of Freedom* and *The Literature of Freedom,* as well as sections on the appreciation of American democracy. Within three months, the schools purchased 1,100 of these kits.

Religious films and filmstrips became increasingly available in Protestant churches. The Protestant Film commission released its first production, *Beyond Our Own,* which was well received. The Wartburg Press completed *The Way of Peace,* a colour film utilizing puppets. Hack Productions reported an increasing demand for *The Frontier Parson.* The number of productions offered by Cathedral Films, Inc., included 23 films and 23 filmstrips. Among the most notable filmstrips were those produced by The Pilgrim Press, Church Screen Productions, Church-Craft Pictures and the Department of Visual Aids of the Congregational churches. United World Films, joining the trend, announced the formation of a religious film division. *Audio-Visual Guide* published a list of 50 sources of religious films. Although William H. Mooring, motion-picture editor of *The Tidings,* official weekly of the archdiocese of Los Angeles, reported in Dec. 1947 that no worthwhile movies geared to the purposes of Catholic education had been produced, Loyola Films had launched a series of Catholic teaching films and announced the availability of 15 Biblical films for parish schools.

Most active of the organizations interested in visual education was the N.E.A. Department of Secondary Teachers. That organization launched the Audio-Visual Awards project and established the idea of an annual Audio-Visual Education week, Oct. 27–31, to measure progress of its ten-point program for improvement of audio-visual methodologies, publication of bibliographies of audio-visual materials, investigation of children's film standards, development of "pilot" schools, fostering of book-film relationships, co-operation of schools with churches and community organizations in developing children's film programs, improvement of instruction in critical appreciation photoplays, stimulating of school-made films, and co-ordinat of research studies. The program received the support of st and local authorities through proclamations of governors, m ors and boards of education. It received endorsements from National Association of Visual Education Dealers, the All Non-Theatrical Film association and the Film Council of Am ica. Manufacturers, producers, distributors and university tension authorities announced that they would present proj tors, screens, films, photographic accessories, pictured encyc paedias and other materials as practical awards to supplement t "glory" of committee citations for outstanding work, with view to setting up demonstration centres throughout the U A total of $20,000 worth of equipment had been officially pro ised by the end of 1947 for presentation on the anniversary National Audio-Visual Education week, the last week of O 1948. It was suggested that A-V week be made internation after 1948.

The Film Council of America was organized during Wor War II as the National 16-mm. Advisory committee to help t treasury department and the Office of War Information boo the civilian war effort. It became known as the Film Council America in 1946 and was made up of seven national organiz tions. They were: American Library association; Education Film Library association; The National University Extensi association; The National Education association; The Nation Association of Visual Education Dealers; The Allied No Theatrical Film association; Visual Equipment Manufacture council.

During 1947 a board of trustees of nationally noted leaders education and business was named. Nearly 100 community fil councils had been formed by early 1948, and the year's goal w 350 new councils. Each of these, made up of community lea ers, held regular meetings and interested other groups in usi informational films at club meetings for discussion and to fost better understanding and better education.

The council appointed Thurman White of the University Oklahoma its travelling executive director and adopted a plan establish these local councils under the leadership of C. Reagan of Texas, founder and first president of the council, an Stephen M. Corey of the University of Chicago, chairman the board of trustees. In two months of activity, the counc reported the enrolment of 45 local councils as of Dec. 31, 194

Among the most noteworthy projects of the Film council wa the Films of the World festival held in Chicago during Oct. an Nov. 1947, when for the first time in history the outstandin 16-mm. informational films produced all over the world we shown for eight consecutive Saturday afternoons. Several othe cities also started film festivals of informational motion picture before the year's end.

The 1947–48 *Anfa Year Book* listed 131 manufacturers o projectors in the audio-visual field, 178 producers, 260 sponso of 16-mm. films, 712 film libraries and 2,330 individuals in it audio-visual directory. The 1946 *Year Book* had listed onl half as many.

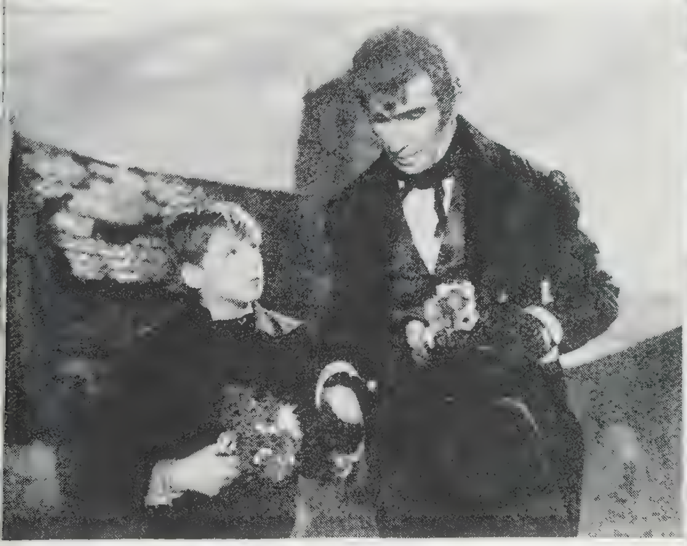
One of the leading 16-mm. distributing organizations, Film Incorporated, estimated in Dec. 1947 that there were 50,00 sound projectors in the schools. Its mailing lists included 35,00 schools so equipped. L. C. Larson, head of the Indiana University Film centre, predicted that the number of machines in th schools would be tripled by 1950. This would mean that th goal set by the American Council on Education—at least on projector for every 200 students—would be reached withi three years.

Publishers, after many years of hesitation, were joining th audio-visual trend in considerable numbers by the end of 1947

bove: **GREGORY PECK AND CELESTE HOLM** in a scene from *Gentle-ian's Agreement*, chosen by the Motion Picture Academy of Arts and ciences as the best picture of 1947. Miss Holm's performance as a supportng actress was voted the best of the year and Elia Kazan's direction won a hird award for the film

ight: **RONALD COLMAN** was chosen by the Motion Picture Academy of rts and Sciences as the best actor of 1947 for his role as the Shakespearian ctor in *A Double Life*. The musical score for the picture was voted the est of the year

elow: **ANTHONY WAGER** and Bernard Miles in a scene from *Great xpectations* which won the 1947 Motion Picture Academy of Arts and ciences awards for the best art direction and best set decoration in black nd white



Right: **LORETTA YOUNG** as the Swedish maid in *The Farmer's Daughter*, for which she won the 1947 Motion Picture Academy of Arts and Sciences award as the best actress of the year

Below, left: **SCENE** from *The Bachelor and the Bobby-Soxer*, written by Sidney Sheldon and voted the best original screen play of 1947 by the Motion Picture Academy of Arts and Sciences

Below, right: **EDMUND GWENN** playing Santa Claus in *Miracle on 34th Street*. He was selected by the Motion Picture Academy of Arts and Sciences as the best supporting actor of 1947 and the picture was chosen as the best written screen play and the best original motion picture story of the year

McGraw-Hill announced the completion of 24 films and 22 filmstrips. John Wiley and Sons announced the establishment of a text-film division. Popular Science Publishing company produced 65 filmstrips. Plans for filmstrips were also announced by Silver Burdett and by Macmillan. D. C. Heath and Co. and other firms announced correlations of projected pictures with textbooks. These publishers were wisely not expecting to derive direct profits from film production but were planning to charge their film expense to the promotion of their books and magazines.

Bibliography.—William S. Hockman, *Projected Visual Aids in the Church;* Henry Clay Gipson, *Films in Business and Industry;* Forsyth Hardy, ed., *Grierson on Documentary; Informational Film Year Book 1947* (Edinburgh); Alice P. Sterner, *Radio, Motion Picture, and Reading Interests;* Edgar Dale, *Audio Visual Methods in Teaching;* Charles F. Hoban, Jr., *Movies That Teach;* John R. Miles and Charles R. Spain, *Audio-Visual Aids in the Armed Services.* A pamphlet on *Foundations for Teacher Education in Audio-Visual Instruction,* No. 9 in Series II of the American council's notable *Studies on Motion Pictures in Education,* appeared in 1947. (X.)

**Technical Developments.**—For more than 12 years the Academy of Motion Picture Arts and Sciences in Hollywood has had a branch known as the Research council, whose function it was to handle co-operative efforts of the industry in standards, certain equipment developments, and to disseminate technical information. The activity of this Academy Research council was taken over by the Motion Picture Research Council, Inc. This is a nonprofit activity supported by producing companies in Hollywood. In 1947, it was in the process of expanding its staff and its activities to cover all technical phases of the industry. A small camera crane, the design of which was started by the Academy Research council, was completed by the new organization, and a Hollywood manufacturing concern was expected to start delivery of these cranes early in 1948. Set lighting was to be one of the important projects under active consideration by this new group.

*Standards.*—The American Standards association continued consideration of the special temporary standards adopted during World War II and revised previously existing standards for the motion-picture industry. As a result, 15 new standards were approved which, with those previously approved, brought the total to 40 for this industry. Approximately 20 additional items were proposed for standardization. The A.S.A. also initiated a project on sound recording standards to include magnetic recording techniques.

*Camera.*—In England, G. B. Kalee successfully introduced the Newall camera, said to be similar to the Mitchell NC. A new colour camera designed for three-colour separation negatives was also introduced in England under the name British Tri-Colour camera.

*Varifocal Lens.*—A new varifocal or "zoom" lens was announced at the 1946 spring conventions of the Society of Motion Picture Engineers under the trade name of Zoomar. This lens was placed in use during 1947 on television, 16-mm. and 35-mm. newsreel cameras. Some spectacular results were obtained but the quality was believed not to be satisfactory for 35-mm. entertainment films. The manufacturer was reported to be working on further developments. (*American Cinematographer,* March 1947; *S.M.P.E. Journal,* Dec. 1946.)

*Photography from a Helicopter.*—After experimental work on suitable camera mounts, RKO, Warner Bros. and Universal used a helicopter for production photography. Although results were not entirely satisfactory, further improvements were expected to be made. (*American Cinematographer,* Sept. 1947.)

*Photographic Effects.*—Paramount in Hollywood developed a complicated but highly precise servomechanism and electronic recorder and repeater to permit recording and repeating the exact pan and tilt movement of a camera. This permits camera motion in certain types of process photography where previously only a stationary camera could be used. (*American Cinematographer,* Dec. 1947.)

*Electronic Fire and Gas Light Effect.*—Warner Bros. developed an electronic device whereby an actual gas flame being photographed (either an old-fashioned gas light or a gas burning fire) can be used to control, through a photoelectric tube and a thyratron amplifier, incandescent electric lights to produce sufficient intensity for photography while accurately following variations in the gas flame. (*S.M.P.E. Journal,* April 1947.)

*Compact Source Lamp.*—Two English manufacturing firms, the General Electric company and the British Thompson-Houston company developed a new mercury-cadmium arc lamp called the "compact" source. Tests were successfully made in both black-and-white and colour photography. It was expected that during 1948 these lamps would be in use for production photography. In the U.S. both the General Electric company and Westinghouse Electric and Manufacturing company were actively engaged in the development of a similar light source. This development represented one of the most important in the lighting field in a quarter of a century and was being watched with interest by producing companies. The *Journal of British Kinematograph Society* for Oct. 1947 carried an article on this new light source.

*Flashtubes.*—The flashtube is basically a gas-filled glass or quartz tube with two electrodes operated by the discharge from a suitable electrical condenser. While it is not new, it was considerably improved during the previous six or seven years with the result that some interest was shown in the U.S. in the possibilities of using such lamps for motion-picture photography. Reasonably successful tests were made with these lamps flashing at the rate of 72 times per second, but further development work was required in the lamps and their associated power circuits. (*S.M.P.E. Journal,* May 1947.)

*Sound.*—New sound recording and reproducing equipment were introduced in various countries, including Visatone and Gaumont-Kalee in England, and Western Electric and RCA in the U.S. In general, this equipment represented refinements over prewar equipment with lower flutter and distortion.

*Magnetic Recording.*—Before and during World War II, Germany
important strides in improving magnetic recording and reproduction
paper or plastic tapes coated or impregnated with magnetic mate
This work was continued in several countries, and in the U.S. was co
ered for motion-picture as well as other activities. RCA had equip
designs available for application to its photographic recording and re
ducing equipment at the end of 1947. These designs permit modifica
of existing equipment for magnetic recording and reproduction when u
a plastic base coated with magnetic material and having dimensions
perforations like 35-mm. photographic film. No commercial use was n
of this equipment during the year. Incidental recordings were, howe
made on nonsynchronous magnetic recorders and used by various mot
picture producing companies.

*Colour.*—The Agfa colour process, as developed in Germany, was sai
be in use in the U.S.S.R. and Czechoslovakia, but no information on
use was available. It apparently was not used in any other countries.
the U.S. improvements in Ansco colour continued. The first 35-mm. th
rical release was a two-reel travelogue entitled *Climbing the Matterh*
filmed in Switzerland and released by Monogram. (*American Cinema*
*rapher,* Sept. 1947.) A feature picture entitled *Sixteen Fathoms Deep*
being produced in Hollywood by Arthur Lake Productions. The proces
use by Republic Productions, Inc., under the trade name Trucolor, was
proved and was reported by Eastman Kodak company to be an appl
tion of the Kodacolor principle with dye couplers in the emulsion. This
is processable by the user. Cinecolor, Inc., expanded its Hollywood p
to a capacity three times that available before the war. This company
using a two-colour process but was also working with a three-colour pro
which was being used for some cartoons and for 35-mm. enlargements m
from 16-mm. Kodachrome. Various other colour processes were repo
to be in the research laboratories but were not yet ready for commer
use.

*Fifty-Millimetre Film.*—It was reported that in 1946 20th Century-
Film corporation and several equipment and film manufacturing compa
were developing a new system of motion-picture entertainment involv
a film of 50-mm. width with stereophonic sound recorded and reprodu
from three program sound tracks and a control track. Some additio
work was done on this and several private demonstrations were made.
decision, however, was reached as to the commercial application of this fi

*Sixteen-Millimetre.*—The release of entertainment films in 16-mm.
sions continued to grow. The importance of this release caused car
consideration in Hollywood of all of the standard equipment and techniq
involved in producing 16-mm. releases from 35-mm. originals and in h
dling and exhibiting such prints. Among other problems being conside
were: making two composite prints on a 32-mm. film arranged so that s
ting down the middle produces two 16-mm. prints; also, print life a
function of projectors; film handling equipment and shipping practices.

*Television.*—The development of theatre television equipment was c
tinued. One or more theatre installations were believed to have been m
in England, but no such installations were made in the U.S. The po
bility of applying television equipment and techniques to the production
motion pictures was also under consideration in various countries. It
believed that preliminary tests had been made in both England and
U.S. The Eastman Kodak company announced a 16-mm. motion-pict
camera designed specifically to photograph a television receiving catho
ray tube. This camera, coupled with high-speed developing processes a
developed by the Eastman Kodak company, made possible a demonst
tion at the fall conventions of the Society of Motion Picture Engineers
the possibilities of photographing a television image on motion-picture fi
RCA and Paramount were also known to have developed equipment a
methods for such photography in 35-mm.

**Mexico.**—The industry in Mexico continued to develop w
the full facilities of the Churubusco studio, including its labo
atory, becoming available. The Tepeyac studios, built duri
1946, were found to have structural troubles in their stag
which necessitated a major rebuilding program which was co
pleted by the close of the year. This studio, with its laborato
was expected to be in full operation in 1948.

**South America.**—Argentina had not overcome the handica
of the war years, but with the new building program project
for 1948 was expected to produce 60 feature pictures that ye
as compared with 58 before World War II. A new branch of t
motion-picture industry was growing in Brazil. Activities alrea
under way and projected for the near future indicated the pos
bility that Brazil might well become an important producer
motion pictures. (W. V. W.)

**Canada.**—The National Film board was active througho
the year, producing not only commentaries on Canadian li
but also special films such as *File 136,* an account of royal Can
dian mounted police activities, *Red Runs the Fraser,* the salmo
run, and *The Feeling of Rejection,* a study in psychiatry com
mended by the American Medical association. Organized as t
responsibility of one of the cabinet ministers, steps were take
to establish the NFB as a crown company with a budget of i
own and make it responsible directly to a parliamentary com
mittee.

The only active large-scale private film producing compan
was Quebec Productions Corp., Montreal. It took over a mil

ary camp at St. Hyacinthe and converted barracks into studios nd sound stages. One 1947 production was experimentally lmed in two languages simultaneously. There were two sets of ctors, one doing a scene as soon as the other had finished. This as *La Forteresse* in French and *Whispering City* in English, thriller with a Quebec city setting.

In 1946, 227,538,798 Canadians spent nearly $60,000,000 on dmissions to 1,477 movie houses. British Columbia had a per apita expenditure of $8.10; Ontario came second with $7.56; nd Prince Edward Island was ninth with $3.17. (C. Cy.)

**Great Britain and Europe.**—There were widespread activiies in European film production during 1947, in spite of the conomic problems that affected most of the film industries. Most of the leading countries of Europe wished to consolidate heir film industries and expand their production. Their problem was the universal one, lack of sufficient raw materials and equipment necessary to the manufacture of high quality motion picures. The United Nations Educational, Scientific and Cultural rganization *Report on the Commission on Technical Needs,* ublished in Paris, Sept. 1947, examined these deficiencies in en European industries, especially in the case of France, the most severely pressed of the more important film-producing naions. Nevertheless, culturally and artistically speaking, the European industries were progressing. A number of international ilm festivals were held during 1947 at Cannes, Prague, Vienna, Locarno, London and Edinburgh, and most notably at Brussels, where many countries received awards for various aspects of heir filmcraft at a festival sponsored by the Belgian government. Among the year's international film conferences should e included that at Brussels for film critics, that at Paris for ilm scriptwriters and that at Prague for film technicians.

The major problem for Britain during 1947 arose when the British government, for long under fire for spending too many of its scarce dollars on film importation from the United States (some $70,000,000 a year as against some $30,000,000 prewar), imposed in August a 75% tax on the potential takings of imported films intended for normal exhibition throughout the country. (The immediate result of this decision in both the U.S. and Great Britain is described in the U.S. section, above.) British producers, also, were faced with a possible falling-off in their overseas market, particularly in the distribution of British films in the United States; there was a general feeling that with rising production costs the less ambitious type of feature film would take the floor in 1948 and that higher-budget pictures would be virtually eliminated once existing commitments were cleared. Documentary film sponsorship (still largely, though not entirely, a governmental affair) was going through a new stage of enquiry to save waste and delays. Nevertheless, some 200 reels of finished documentary subjects were completed for the central office of information.

In spite of these problems of finance and administration, some important productions appeared during 1947. They include: *Great Expectations* (director, David Lean), *Odd Man Out* (Carol Reed), *School for Danger* (Wing-Commander E. Baird), *Hue and Cry* (Charles Crichton), *Black Narcissus* (Michael Powell and Emeric Pressburger), *Take My Life* (Ronald Neame), *They Made Me a Fugitive* (Alberto Cavalcanti), *Frieda* (Basil Dearden), *Holiday Camp* (Kenneth Annakin), *The October Man* (Roy Baker), *Fame Is the Spur* (Roy Boulting), *Captain Boycott* (Frank Launder) and *The End of the River* (directed by Derek Twist, mostly in Brazil). Among production experiments were two feature-length films for children, *The Little Ballerina* (Lewis Gilbert) and *Bush Christmas* (made by Ralph Smart entirely in Australia). British production units worked in several European countries for films to be released in 1948, and some important productions were completed, including among others: *Hamlet, Oliver Twist, Anna Karenina, Brighton Rock, Red Shoes, Scott of the Antarctic* and *Vice Versa.* Documentaries included *The World Is Rich* and *A City Speaks* (Paul Rotha), *A String of Beads* (Ralph Keene), *The Cumberland Story* (Humphrey Jennings) and the excellent series *This Modern Age,* sponsored by the Rank organization.

In France the economic crisis increased the over-all production cost of feature films by 10.7 times, but the average rise in theatre admission prices was only 3.9 times. Attendance at theatres, however, rose 40% above the prewar figure. The industry was further burdened by crippling taxation. The production of feature-length films was estimated at 45 for 1947, as against 94 in 1946 and 113 in 1938. Nevertheless, France was still in the van of production, winning the major award with *Le Silence est d'Or* (René Clair) at the Brussels festival, and releasing a number of important films during the year, including: *Les Portes de la Nuit* (Marcel Carné); *Le Bataillon du Ciel* (Joseph Kessel); *Le Diable au Corps* (Claude Autant-Lara); *Copie Conforme* (Jean Dreville); *Voyage Surprise* (Pierre Prévert); *Les Maudits* (René Clement); and *Antoine et Antoinette* (Jacques Becker). The French producers seemed to share with other European film makers the desire to increase the psychological realism of their films.

Russian production began to revive after the severe reduction in film making occasioned by war and invasion. Undoubtedly the most important event during 1947 was the opening in Moscow in February of the first theatre permanently equipped to project stereoscopic films, the outcome of 12 years' research work by the engineer Semen Ivanov. He replaced his prewar grid screen by one of a new type. The first feature film to be released was *Robinson Crusoe* (director, A. N. Andreevski), and the new screen and its effect was described in this way by Gordon Macleod: "It was only when Crusoe in his shipwreck throws a rope to a drowning sailor that you get the first shock. The rope comes hurtling and curling right out of the screen into the darkness over your head. At you! You duck. We all did. After that we were ready for anything. . . . Sometimes the foreground itself comes alive. As Crusoe advances down a corridor of undergrowth, the camera tracks backwards in front of him. Out in the auditorium about three rows in front of you, leaves and lianas materialize in the air, dangle and dance, and float away into Crusoe's face. Parakeets and small birds sit on them; or fly out at you from the screen and vanish over your head; or form themselves out of nothing into a cluster of wings in the darkness. Their musical chattering is also in the air all round you and there is no need here as in an ordinary cinema to adjust this depth of sound to the flat conventions on the screen several yards away." (From the British Film institute's journal *Sight and Sound,* autumn 1947, p. 118, London.)

Among other soviet films of 1947 were *The Vow* (M. Chiaureli), *Admiral Nakhimov* (V. I. Pudovkin), *The Stone Flower* (A. Ptushko, in Agfacolor), *Glinka* (L. Arnshtam) and *Cruiser Varyag* (V. Eysmont). There was also an increase in the number of feature films intended to popularize science, led by Alexander Dovzhenko's *Mitchurin,* the biography of a well-known Russian scientist.

One of the interesting movements in Europe was the attempt, official and otherwise, to encourage widespread national film production. Portugal, Holland, Belgium, Norway, Hungary, Greece, Rumania, Bulgaria, Yugoslavia and Poland (the two latter with nationalized industries) were among countries developing or planning film making, while Denmark, a pioneer centre for production 40 years ago, was reviving its industry after a temporary boom in production, 1940–45 (90 feature films).

More important were the old-established production centres of Sweden and Czechoslovakia. Film making in Sweden was based in Stockholm, and pictures were made at an average cost of $80,000; colour films were beginning to be produced both in Cinecolor and Technicolor. In all, Sweden produced as many as 50 feature films in a year. Important films included the comedian Nils Poppe's *The Balloon* and *Mr. Cinders* and the dramatic actor Stig Järrel's production *Wicked Eyes*. The outstanding director in Sweden was probably Alf Sjöberg, famous as the director of *Frenzy* (*Hets*).

Czechoslovakia produced about 40 feature films a year before World War II. During the war the nazis renovated and enlarged the studios at Barrandov near Prague, making them probably the finest in Europe. These studios were used for the production of German films until Czechoslovakia was liberated. The Czechs nationalized their film industry in Aug. 1945, produced 12 feature films in 1946 and planned to double this output in 1947. They were also concentrating on the production of admirable puppet and cartoon films (many in Agfacolor) as well as documentary and educational pictures. A film technical institute was founded to train technicians for the studios.

Finally, it is necessary to note the revival of film production in Germany and Italy. Germany's film companies operated under licence from the occupying powers; D.E.F.A. (*Deutsche Film Aktion-gesellschaft*) operated under soviet authority and Studio 1945 under British authority, while Erich Pommer, the celebrated pioneer producer of the German theatre before Hitler and now a U.S. citizen, took charge of production on behalf of the U.S. authorities. The first feature films began to appear during 1947. Production was also reviving in Austria.

One of the most remarkable artistic revivals of 1946–47 took place in Italy, particularly in the films of Roberto Rossellini, *Open City* and *Paisa*. These films, together with Luigi Zampa's *To Live in Peace*, Vittorio de Sica's *Shoe-Shine* and Aldo Vergano's *The Sun Still Rises*, achieved a high place in the European film festivals during the year. U.S., British and French companies also made films in Italy. (R. MAN.)

## Motor-Boat Racing.

One of the outstanding achievements in motor-boat racing in 1947 was the record piled up by 29-year-old Daniel Foster, from California, driving the Allison-powered, Ventnor-designed Gold cup class hydroplane "Miss Peps V," owned by Walter, Roy and Russell Dossin, brothers, of Detroit, Mich. Foster became the first driver in history to win the President's cup, the national sweepstakes and the Gold cup all in one season.

In the 135-cu.in. hydroplane class, Tommy Caldwell's "Blue Blazes" set a new mile record at 88.782 m.p.h. and Bob Sykes, driving Burney Edwards' "Mighty Chevron," raised the five-mile competition record to 70.588 m.p.h.

Division II of the 225-cu.in. class, with an engine price limit of $600, actually outstripped Division I, with a $900 limit to which no new engines were built. No new racing outboard motors appeared either, but competition was keen.

The racing runabout classes were active, and Frank Foulke, with "Sagana," set several new Class D records, including one of 58.245 m.p.h. in competition, which was two miles over the Class K record made with far more powerful engines.

In England, Sir Malcolm Campbell attempted to better his world's motor-boat speed record of 141.74 m.p.h., with his "Blue Bird," equipped with a jet motor, but the boat proved unstable at high speeds and the tests were postponed pending alterations.

Speedboat racing was revived to a limited extent in France with no outstanding developments. (H. L. ST.)

## Motor Transportation.

Like all other forms of industry, transportation by bus and truck felt the impact of economic forces in the rising cost of doing business. This was particularly true of bus operations both regards the upward trend of wages and the price of materi and supplies. In one respect, however, the motor transportat industry was fortunate. The bottlenecks that were retarding flow of new vehicles and supplies to the industry were eas This made it possible to further the plans designed by ma companies to carry forward their plans for replacements wh have made it possible to operate more economically.

**Production Figures.**—The production of new vehicles w speeded up. In the bus field production of new vehicles ga promise, according to preliminary figures compiled early in D cember, of reaching a mark of 19,000 for transit or city ty buses, 5,000 of the intercity type, 850 trolley buses and abc 17,000 school buses. These figures indicate 1947 as the larg bus production year in the history of the industry. Manufact ers also predicted an all-time record in the production of mot trucks. As the year drew to a close truck production for t year was estimated at 1,500,000 vehicles. This compares wi 805,260 for 1942, 667,150 for 1943; 749,488 for 1944; 668,5 for 1945; 940,553 for 1946.

New production records were also made in tires. The yea production of tires was estimated in December to be in exce of 101,000,000. Of these it was estimated that 78,000,000 we for passenger cars; 18,000,000 for trucks and buses; 5,000,0 for farm units. The 1,100,000 ton consumption of rubber by t industry in 1947 compares with 1,034,000 in 1946, the previo record. Of the 1947 figure of rubber consumption about 74 went into tires. Consumption in 1947 was about 50–50 natur and synthetic.

**City and Intercity Bus Operations.**—City bus compani as well as city-suburban and intercity short haul or suburba carriers found it increasingly difficult to keep the cost of servi within the limits of operating revenue. Traffic declined to son extent, but even with higher fares the revenue from operati was not enough for comfort, as it was too close to the cost service. As an offset to these higher costs the tendency amon city and city-suburban companies was to seek fare increase This was particularly true among companies both private owned and city-operated in the larger cities. Among the fir were the municipally-owned carriers in Detroit, San Francisc Cleveland and Chicago. In all instances the need was par mount to adjust fares and not to discourage riding. In short th companies were called upon to operate as economically as poss ble, but at the same time to do so in a manner that would kee the service attractive to the consumer. In general the same fa tors that affected the city companies governed the outlook of th intercity carriers in the problems they faced, but the intercit carriers were in a much better position to fit their service passenger demand than were the local types of carriers. Mor over, the intercity carriers benefitted in passenger appeal by th spread between their rates and the rates of the competing carr ers. Long-haul intercity companies enjoyed a better profit pos tion than either of the two groups of local carriers that wer asking for fare increases. During the year the Interstate Con merce commission initiated an inquiry on its own motion int the basis of rates charged by the interstate motor bus carrier Regional hearings were held in Boston, Seattle, San Francisc and Atlanta. Other hearings were to be held in the early part o 1948.

**Truck Facts.**—Like the bus industry, the truck industry fel the impact of higher costs and higher wages with the result tha the operating ratio and the expenditure relationship of expense to gross revenue of Class I motor carriers of property, all types for the year 1946, based on Interstate Commerce commissio figures, was 96.1% and only three and nine-tenths cents of ne revenue out of every dollar of gross revenue was left. Afte

38 the operating ratios were 95.1 for 1939; 95.6 for 1940; .1 for 1941; 94.2 for 1942; 96.2 for 1943; 97.2 for 1944; 99.3 1945. The figures of truck registration by states, including vate and for-hire trucks for three years, were 1943, 4,480,176; 44, 4,513,340; and 1946, 4,834,742. It was estimated that dur- 1947 trucks were giving employment to 5,500,000 men and at there were then 24,000 commercial fleets of 8 trucks or ore, with some 4,000 companies hauling furniture alone. Farm- owned more than 2,000,000 trucks whereas at the beginning World War I there were fewer than 350,000 trucks in the ited States. The American Trucking association reporting in ov. 1947 pointed out that truck loadings had reached a record gh in the first nine months. The increased pressure of mount- costs led to a consideration of rate boost proposals by motor rrier members of at least nine motor tariff bureaus.

**School Bus Service.**—Approximately 82,000 buses were used ily to transport children to and from their schools during the ar 1947. Research revealed that all states had adopted in me measure the standards recommended by the National hool Bus conference and incorporated them into the state law. the nation-wide automobile accident toll rose throughout e year, greater emphasis was placed on the training of school s drivers and the necessity for correct maintenance procedure existing vehicles. Several states continued experiments with hool children as drivers and, on the whole, found them to be fer than adult drivers. Almost all states were in need of new hool buses and if the demand were fulfilled, the nation should e a complete replacement fleet of school buses within the next ve years.

**Taxes and Road Building.**—Eighteen states adopted consti- tional amendments to assure that motor vehicle user taxes are plied exclusively for road purposes and a number of other ates took initial steps toward this same end. In still other ates these funds were dedicated to highways by statute. The ct remained, however, that many states still practiced what was nerally known as diversion of their motor vehicle tax revenue. s for road building 32% of postwar federal-aid highway funds, portioned to the states under the 1944 federal-aid act, were nder contract as of Oct. 1, 1947—24 months after the time the rst funds were made available to the states. The dollar amount f contracts awarded was $471,000,000 federal funds for a total st of $942,000,000 of construction after dollar matching by e states. Of this amount, projects completed accounted for 118,000,000 in federal funds, or 8% of the apportionment to e states. The total construction cost was $236,000,000. Also cluded in the total contracts awarded for projects actually nder construction was $304,000,000 in federal funds with a tal cost of $611,000,000. To counteract spiralling prices, the ate highway departments and Public Roads administration dopted a policy which resulted in the rejection during 1946 of ids for work estimated to cost $141,000,000, or about 22% f all bids taken. During 1947 an attempt was made to hold e price level and highway costs did not advance much beyond e 1946 level.

Except for gasoline tax increases in 8 states the industry fared ell at the hands of the 44 state legislatures in session early in e year. Size and weight limitations were increased in a num- er of states. In others new legislation provided broader au- ority in the making of reciprocal agreements, while changes, ostly of a minor or clarifying nature, were made in the regula- ry laws of several other states. Encouragement for the future f transportation by truck and bus was found in the co-opera- ve efforts being made jointly by groups of highway users and ublic officials. A constructive move was the appointment of a int Committee on Sizes and Weights of Motor Vehicles by the otor Transportation committee of the American Association of State Highway Officials and several national organizations representing the users and manufacturers of motor vehicles and motor vehicle equipment.

**Substitutions of Service.**—One of the questions asked frequently is the extent to which buses and the trolley buses have replaced streetcars, particularly in city service. The vast system of interurban electric railway lines has passed out of the picture, supplanted by buses. Even in the large cities buses continued to make inroads on the streetcar. Streetcars of the so-called P.C.C. (Presidents' Conference Committee) type, the latest word in vehicles of this kind, were being operated in Brooklyn, Chicago, Pittsburgh, Boston, Philadelphia, Washington and Baltimore to mention a few cities, but in each of them the programs for improvements in the future contemplated a greater and ever greater use of buses. Among the largest cities that were either all-bus or all-bus and trolley bus were Houston, Seattle, San Antonio, Rochester, Akron, Memphis, Syracuse, Worcester, Fort Worth, Jacksonville, Nashville and Hartford. A significant development of the year was the full conversion of the Third Avenue system in the borough of Manhattan, N.Y., to bus operation, thus completing the elimination of streetcars from the streets of that borough. In the period from 1931–40, 14 buses or trolley buses were purchased for city service for every streetcar.

(*See* also AUTOMOBILE INDUSTRY; MUNITIONS OF WAR.)

(C. W. S.)

**Canada.**—The value of road building and highway maintenance projects totalled about $187,000,000 during 1947. The nine provincial highway departments spent about $150,000,000 while the federal government and various municipal governments made up the balance. An interesting precedent in highway construction were the negotiations for Canada to have a 99-year lease on 15 mi. of U.S. territory in the state of Washington to enable British Columbia to eliminate 53 mi. of mountain-climbing roads over two summits and save $2,000,000 in construction costs. The by-pass was to be part of the southern B.C. transprovincial highway system. The provinces continued to urge federal aid for the improvement of the various provincial sections of the so-called Trans-Canada highway.

Trucking companies faced increasing costs during 1947. An arbitration board granted highway transport employees in the area between Windsor, Ottawa and Montreal, wage increases averaging 27%. The 1,050-member Automotive Transport association of Ontario thereupon applied to the prices board for a 20% increase in the highway freight rate on less-than-truckload traffic. Competition between Canadian railways and the trucking industry continued, and the annual meeting of the A.T.A. charged that "railway labor is making common cause with railway management in a mass attack on the trucking industry."

Year-end boosts in the cost of gasoline further increased the difficulties of the truckers. (C. CY.)

**Great Britain.**—Throughout 1947 nationalization was the major issue for the British road transport industry and coloured all developments. The Transport bill, which became an act in August and would come into operation on Jan. 1, 1948, provided for eventual nationalization of trucking businesses which operated more than 50% of traffic over a radius of more than 25 mi. from their depot. The industry protested that compensation terms had been fixed at a low figure.

On the passenger side, operators of regular bus lines also had difficulties to face. They were not to be nationalized out of hand, but in areas where the minister of transport might consider it necessary, a co-ordination scheme could be put into force. The clauses in the act were vague and it was by no means certain how they would be applied. The government contended that there could be a great deal more co-ordination between one bus undertaking and another and also between bus services and the railways. Those face to face with the practical difficulties of operation were less sure. They contended that co-ordination, as far as practicable, between the owners of about one-half the buses in Britain and the railways had been assured by the close liaison existing between the railways and the bus companies in which they were financially interested.

Co-ordination between rival operators on the road had been assured in the past by self-interest or by rulings of the area traffic commissioners established under the Road Traffic act, 1930; no doubt more effective measures could be evolved in the course of time, but here again there were many instances where apparent anomalies worked to the public benefit. Thus, to and from the outskirts of many large cities the company-operated services charged a minimum fare higher than that on the vehicles of the municipal bus service running over the same road. For the passenger this had the advantage of keeping the short riders off the long-distance buses and of increasing their speed to the perimeter of the urban area. As indicated, a financial interest was held in many bus companies by the railways, with from 33% to 49% of the ordinary share capital and this would, on Jan. 1, 1948, automatically give the nationalized railway executive of the British transport commission considerable power in the bus business.

For some time in the early part of 1947 some of the bus-owning groups conducted a considerable advertising campaign against nationalization.

Haulers had everything to gain by postponement of nationalization and through the employers' organization, the Road Haulage association, conducted a vigorous campaign—"Hands Off Road Transport." When the act became an accomplished fact, however, they were inclined to accept the situation and to try and make as good a job as possible of the nation's long-distance road transport under the new order. In the case of haulage concerns, it was not certain that, except for the railway-owned haulers, which included the world-famous firms of Pickford and Carter Paterson, the vesting date would be Jan. 1, 1948, since the government concern would have to examine the activities of some 48,000 haulers with 141,000 vehicles. The road transport executive was not yet appointed at the end of December. It was roughly estimated that perhaps not more than 30,000 vehicles would be involved in nationalization, just over the number in the 60-mi. radius wartime scheme. In addition, there were 306,000 goods-carrying vehicles (according to a government return issued in 1946) in Great Britain owned by 149,192 traders and used for the conveyance of the traders' own goods. These were unaffected by the act.

All owners of motor vehicles continued to experience difficulty in obtaining spare parts, tires, and, of course, new vehicles. These difficulties were accentuated by the fuel crisis early in the year, which held up spares production; by the shortage of dollars for carbon black used in rubber tire manufacture; and by the increasing volume of British-built commercial vehicles allocated to export markets. Bus owners, with 55,000 buses and coaches, many more than ten years old, were also affected by the bottlenecks in the body-building industry, induced by shortages of material and labour, and by the lack, from time to time, of window glass and paint, which were largely devoted to housing purposes. Of 3,000 buses of postwar design on order by the London Passenger Transport board, only 80 had been delivered by Oct. 1947, and another 80 were expected at the end of the year. By mass production methods output would be stepped up to 100 a month by the end of 1948. Shortage of buses did not prevent abandonment of further street railway undertakings, the most notable being those of Bolton and Salford. There were in 1947 under 6,000 tramcars on British street railways. Fewer than a dozen British cities would retain streetcars in the f and some of those that two years ago intended to continu means of transport decided on conversion to the bus or t coach.

With 2,622,521 motor vehicles in 1939 running on 180,52 of road Great Britain had 14.5 vehicles per mi. of road- greatest density in the world. Big schemes for road imp ments, motorways and the alleviation of traffic congestio such projects as the Severn bridge were halted by the inte cation of the austerity drive announced in Oct. 1947. The ish road motor transport industry, together with that of maintenance, continued to employ something like 1,25 people.

**Mountbatten, Philip:** *see* EDINBURGH, DUKE OF.

## Mountbatten of Burma, Louis (Francis Albe Victor Nicholas) Mountbatten,

1st EARL (19 ), the sec son of admiral of the fleet the marquess of Milford Haven, born at Frogmore House, Windsor, on June 25, 1900, and cated at Osborne, Dartmouth and Christ's college, Cambri He entered the royal navy in 1913, served in World War H.M.S. "Lion" and H.M.S. "Queen Elizabeth," and at the break of World War II commanded the 5th destroyer flot Appointed to H.M.S. "Illustrious" 1941; chief of comb operations, with the acting ranks of vice-admiral, lieute general and air marshal, 1942; supreme allied commander So east Asia, 1943; he successfully conducted the campaign aga the Japanese which culminated in the recapture of Burma.

In Dec. 1946 it was announced that he had been appoi rear admiral commanding first cruiser squadron, Mediterra fleet. In the house of commons on Feb. 20, 1947, Clement At stated that the king approved his appointment as viceroy India to succeed Viscount Wavell. The terms of his appo ment stated that Lord Mountbatten of Burma was "entrus with the task of transferring to Indian hands the responsibi for the government of British India in a manner that will ensure the future happiness and prosperity of India." transfer of power to the two new dominions of India and P istan took place on Aug. 15, and Viscount Mountbatten Burma became governor-general of the dominion of India.

For his service in World War II he was created a viscount 1946, and in Aug. 1947 was created an earl in recognition of viceroyalty.

He was known as Prince Louis Francis of Battenberg u 1917, when his father relinquished his title and assumed surname of Mountbatten.

## Mount Holyoke College.

This institution for the hig education of women in libe arts, founded in 1837 by Mary Lyon, is situated at South Ha ley, Mass. The campus covers nearly 600 ac. with more th 70 buildings. Registration figures for the 1946–47 session cluded 1,133 undergraduates and 58 graduate students, rep senting 42 states and territories and 12 foreign countries. (F statistics of endowment, enrolment, faculty, library volum etc., *see* UNIVERSITIES AND COLLEGES.) (R. G. HA.)

**Mozambique:** *see* PORTUGUESE COLONIAL EMPIRE.

**Mules:** *see* HORSES.

**unicipal Government.** Federal activities touched municipal interests at many points ring 1947. The cities continued to resist efforts at the state vel to channel all federal-aid airport construction funds through e states. The problem of intergovernmental fiscal relations as much to the fore, with a senate subcommittee designated study the situation and work out an equitable reallocation of x resources between the respective governmental levels. A mmittee of state governors conferred with subcommittees of e congressional revenue committees on the same question. The nerican Municipal association in turn urged the development a federal-state-local intergovernmental fiscal policy, as well the removal of state restrictions on local revenue programs, id the balancing of state grants-in-aid with increased local taxg powers. A major disappointment in the federal-local picture as the failure of congress to grant a proposed additional $50,-0,000 for postwar planning advances to local governments, though inflationary prices in any event presented a major stacle to public works planning and construction.

**Unified Municipal Policy.**—An important step toward development of a genuine national municipal policy was taken at e annual convention of the American Municipal association, hich broadened its constitution so as to make it an association cities and city officials instead of a federation of state leagues municipalities, as it had formerly been. A new research and formation service, the American Municipal service, was proided within the A.M.A. framework; and the American Assoation of Municipal Legislators, consisting of elected mayors, ouncilmen, aldermen, and commissioners was organized as a omponent part of the A.M.A.

**Personnel.**—The number of nonschool city employees connued the upward trend which was resumed in 1945, the last ear of World War II, and the totals in 1946–47 were well bove the prewar years of 1940–41. Nonschool city pay rolls ontinued the rapid rise which was evidenced particularly in 946. Totals for nonschool city employees and pay rolls for the revious eight years were as follows:

Table I.—*Total Nonschool City Employees and Pay Rolls, 1940–47*

| ear and Month | | Employees (In Thousands) | Pay rolls (In Millions) |
|---|---|---|---|
| 940 | July | 923 | $108.2 |
| 941 | July | 934 | 110.6 |
| 942 | July | 911 | 113.5 |
| 943 | July | 882 | 119.4 |
| 944 | July | 882 | 123.9 |
| 945 | July | 890 | 131.0 |
| 946 | July | 968 | 153.6 |

In 1946, 85 cities shortened the work week of some or all of heir employees, and this trend continued in 1947, adding large ums to municipal budgets for the hiring of additional employees. Pay increases to city employees in keeping with rising livng costs were a major element of most city budgets; 17 cities utomatically provide such rises on the basis of the bureau of abour statistics' consumers' price index or comparable indexes.

As a result of the nation-wide epidemic of strikes of municiaal employees in 1946, 12 states enacted legislation in 1947 outawing or restricting strikes by some or all public employees. new labour-management committee was set up by Boston, vhile St. Louis temporarily discontinued its committee. Louisille, Toledo and New York also had active labour-management rganizations, and several other cities were considering estabishing such groups.

A major development in the field of public personnel trainng was the New York city program initiated by Mayor William 'Dwyer, under which members of the city's new bureau of nalysis were being given an intensive 12 weeks' training course n administrative management under the supervision of City college as a first step in the complete modernization of the city's administrative structure.

**Municipal Finance.**—The pattern of postwar municipal finances which emerged in 1946 continued largely unchanged throughout 1947. Inflationary prices intensified the struggle to adjust municipal budgets to conditions that were getting rapidly out-of-hand. Rising relief rolls and the greatly increased cost of running public institutions such as hospitals, with their special food requirements, were new factors to be considered, along with the phenomenal rises in city pay roll, general commodity, and construction costs. In New York an additional $161,000,000 was being sought for the city's 1948 budget, which had passed the $1,000,000,000 mark by $31,000,000 in fiscal 1947. Baltimore's proposed 1948 budget of $83,000,000 represented an increase of almost $13,000,000 over 1947. San Francisco's city, county and school costs, exclusive of public service enterprises, in the 4 year period 1943–44 to 1947–48 increased over $31,-000,000.

Choice of a remedy lay between increased state aid, in the form either of direct grants or shared taxes, or a grant of new taxing power to local governments to supplement the relatively declining local property tax. According to the Tax institute, New York city, the trend in the direction of greatly increased state aid was tending to slow up, and a new trend in the form of new local taxes authorized by state legislatures was distinctly discernible in 1946–47. Outstanding among these new state grants of local taxing powers were the Pennsylvania legislation, conferring on local taxing bodies the right to adopt practically any tax or licence fee not levied by the state, and the New York state provisions empowering counties, outside New York city, to impose any of a list of six nonproperty taxes, the proceeds to be used for educational purposes only, and empowering cities of 100,000 population or over, other than New York, to impose any of the taxes granted to the counties but not used by them, plus two additional taxes, the proceeds in both cases to be used for any municipal purpose whatever. New York city was additionally empowered to increase its local revenues an estimated $24,300,000 annually through the imposition of 5 specified new taxes.

Service charges for municipal services, both within and beyond the city limits, were increasingly utilized by the cities in 1947. With the addition of Nevada, the number of states sharing some portion of their tax revenues with the local governments reached 44; New York returned over $87,000,000, Massachusetts about $45,000,000, Ohio $41,500,000, and New Jersey $41,100,000.

Year-end median tax delinquencies of selected cities with populations of 50,000 or more reached a low of 3.2% of the year's levy for 1946—the latest data available—compared with 3.3% for 1945 and a high of 26.35% in 1933. Total tax collections however appeared to have reached their peak, with median ratios to the year's levy of current plus back tax collections of 101.2% in 1943, 100.8% in 1945 and 100.3% in 1946. Property tax rates showed a slight decline of $.05 per $1,000 of assessed valuation. Assessed valuations, on the other hand, increased on an average per capita basis an unprecedented 15.7% over the preceding year. A survey of over 49 major population centres showed increased assessed valuations in every one, and a total increase of over $3,000,000,000, attributable 57% to new construction and 43% to a higher level of value.

According to the *Bond Buyer,* new state and municipal financing for the year amounted to the unprecedented total of $2,351,-181,262, compared with $1,203,557,909 in 1946, and the previous all-time high of $1,500,000,000 for 1940. In November a total of $1,115,740,121 of new bond issues, submitted chiefly at the general election, was approved, the highest for any month since the record was first compiled in 1926; approvals for the previous November (1946) totalled $1,043,376,000, and for October 1947, $59,533,000. Rejected proposals totalled $43,000,000, compared with $89,000,000 rejected in Nov. 1946. State funds, mostly for veterans' aid, accounted for $835,000,000 of the approved total, while local approvals amounted to about $280,000,000, an increase of more than 35% over the $206,000,000 approved in 1946. This marked a resumption in local public works construction which had been deferred in accordance with official and unofficial requests earlier in the year. Municipal bond interest costs, according to the *Bond Buyer's* index for 20 municipal bonds, rose to 2.35% on Dec. 31, 1947, the highest since April 1942, when the average was 2.38%. For the first time after 1941, there was a slight increase in the total volume of local debt. Gross local debt outstanding as of June 30, 1947, amounted to $13,847,000,000, compared with $13,564,000,000 in 1946, an increase of 2%. On an index basis of 1940=100, the annual volume of local debt for each year from 1941 through 1947 was: 100.6, 98.6, 94.4, 87.9, 84.7, 81.1, 82.8. The indebtedness of cities, as distinguished from other local governmental units, constitutes roughly about 60% of all local debt; in 1946, for instance, it amounted to $8,101,000,000 out of a total of $13,564,000,000 for all local governments.

**Council-Manager Cities.**—A total of approximately 70 cities in the U.S. adopted council-manager government in 1947, compared with the record high of 75 in 1946, bringing the grand total—exclusive of counties—to 747. Hartford, Conn.; Worcester, Mass.; and Richmond, Va., were among the larger cities voting adoptions, subject in the case of Richmond to approval by the state legislature. Houston, Tex. and three other cities voted to abandon the plan.

**Proportional Representation.**—Ten referenda on proportional representation were voted on at the Nov. 1947 elections. Proportional representation was reaffirmed for the third time in Cincinnati—though for the first time at a general election—and rejected in Pittsfield and Fitchburg, Mass. Four Massachusetts cities—Worcester, Quincy, Medford and Revere—adopted proportional representation along with the council-manager plan, while Boulder, Colo., New York city and Long Beach, N.Y., repealed it. The major defeat in New York city by a vote of 935,276 to 586,151 was attributed largely to the election to the city council of two representatives each of the Communist and American Labor parties at the last city election in 1945.

(A. M. Ds.; L. Gu.)

**Great Britain.**—The Town and Country Planning act which passed into law on Aug. 6, 1947, provided for the transfer of planning powers from county district councils to county councils who, with the county borough councils, were to be the future planning authorities. Under the Police act of 1946 all separate noncounty borough police forces merged into the county forces on April 1, 1947, so that county and county borough councils became the future police authorities. Fire brigades, which were, throughout the country, amalgamated in the national fire service in 1941 were, under the Fire Services act, 1947, to go back to local authority administration, not, as before the war, to the county district and borough councils, but to county and county borough councils. The trend of the year was, therefore, to enlarge the functions of county councils at the expense of the district councils and noncounty borough councils; and preparatory work was done on questions of management, finance and transfers of personnel.

A departmental committee on greater London water supply was appointed before which the Metropolitan Water board urged that the area of administration for London water supply (about 570 sq.mi.) should be enlarged to 2,700 sq.mi., for technical efficiency.

An outstanding event was the publication of the first a report of the Local Government Boundary commission 1946). The commission investigated a number of areas w view to possible adjustment of boundaries, amalgamati areas, or alterations in the status of local authorities. Th port made no definite suggestions for adjustments, but a nu of interesting preliminary considerations were outlined. proposals of the commission caused considerable stir i areas most likely to be affected, particularly in south Lanca —a densely populated area with a number of inter-re problems somewhat akin to those of Greater London. The mission's report contained the suggestion that a Greater chester authority, or county council, might be formed. No authority ever consents willingly to surrender its power t other local authority, which explains why south Lancashire so stirred.

The impending transfer of hospital services to the brought into question the financial relations between central local government. The Local Government act, 1929, conta a formula for the distribution of government block grant local authorities. This formula was never satisfactory, bu alternative was difficult to devise. The relief of local aut ties from the cost of hospital services called for revision o amounts and distribution of government grants. Rateable v was traditionally used as one of the factors in settling the sh of respective local authorities, but this factor was found uns factory by reason of the varying standards of valuation in areas. Accordingly, the government proposed that the wor making valuations for rating should be performed by the ernment itself over the whole country. The Local Governm bill was introduced in October to deal with these various ters. It also contained provisions to authorize payment to m bers of local authorities for travelling, subsistence and los earnings while on official business, and to empower local auth ties to develop their public relations work.

Throughout 1947, shortage of administrative staff, hos staff, manual workers and materials caused difficulties. cuts in the early part of the year and increasing demands the diversion of man-power to productive industry occasio exhaustive and trenchant investigations by each local autho into its own staff needs. The pre-existing shortage of staff not however make possible any spectacular saving of m power units.

The important work of housing which was gathering mon tum during 1946 suffered a severe set-back in the unusually clement conditions of the winter of 1946–47. The econo crisis which became clearly apparent in the summer of 1947 the minister of health to announce that no new contracts housing work could be approved for the time being.

Much thought was given to the recommendations of the C tis committee on the care of children deprived of a norm home life, and to the problem of the care of the aged. National Assistance bill was introduced at the end of Octo to abolish the poor law, and to make the central governm responsible for "out-relief," leaving local authorities the d of providing institutional relief and a general welfare service the aged and incapacitated.

The National Association of Parish Councils was formed April. Parish councils were at one time regarded as an expe ment which had failed. They gradually emerged after 19 into prominence with the growing interest taken by the count dweller in local government affairs. Associations had long be in existence for other types of local authorities. That for par councils completed the series.

For the municipal elections in England and Wales held Nov. 1, in which one-third of the members is elected each ye

Table II.—*Municipal Elections, England and Wales, Nov. 1947*

| | Total candidates | Elected | Not elected | Gains | Losses |
|---|---|---|---|---|---|
| ervatives . . . . . . . | 1,737 | 1,269 | 468 | 643 | 18 |
| ur . . . . . . . . . . | 2,600 | 824 | 1,776 | 43 | 695 |

iereas in the metropolitan boroughs the entire council is cted every three years), the analysis of results in 388 oughs is given in Table II.

The striking features were a trend of local politics away from bour, which lost heavily, and the exceptionally heavy poll, rywhere 40% to 50%, in some places higher. Labour lost trol of 24 councils, gained 1; several were now equally ided. (*See* also AIRPORTS AND FLYING FIELDS; HOUSING.)

(W. E. J.)

## unitions of War.

**Army.**—The year 1947 was one of research and experimentation in muni- ns. This extended into many lines—planes were developed, nodeled, or redesigned to attain greater speed and manoeu- bility; rocket testing was carried on extensively at White nds, N.M.; chemical warfare agents were tested at Edgewood enal in Maryland; signal corps apparatus was subjected to d trials in New Jersey and elsewhere.

*Explosives.*—A new method was found to manufacture nitro- thane, an explosive more powerful than T.N.T., yet safer handle; it involved reacting methane, commonly known as rsh gas, with nitric acid under a pressure of 100 pounds r square inch.

*Liquid Oxygen.*—Through the combined efforts of the army forces, the national bureau of standards, and the Bendix iation corporation, a simplified and practical liquid oxygen nverter was developed. Known as a heat-transfer type, this nverter met all requirements for breathing purposes during ing operations.

*Lubricants.*—A new type of synthetic nonpetroleum motor to last the lifetime of an automobile or aeroplane engine thout having to be changed was developed. Made from na- ral gas and carbon and hydrogen compounds, it resembled dinary motor oil in appearance and feel, was wax-free, flowed eely at −30° F. and did not thin out at high temperatures.

*Mortars.*—Two new types were tested, an 81-mm. with a ecial mount and an old type 16-mm. which was adapted as one-man weapon.

*Optiphone.*—A new device to provide telephonic communica- on over a narrow beam of white or dark red light made pos- ble single-channel, two-way break-in speech communication. ne complete unit weighed 145 lb. and had an optical range to 4 mi. during daylight and up to 7 mi. at night with dark d filter.

*Production.*—To be prepared to meet a possible production nergency, Operation "Janmat" (joint army and navy machine ols) rounded up tools from surpluses and from production nes where they were least needed. The corps of engineers vestigated extensively to determine the feasibility and cost constructing and operating underground plants and storage tes. Two types of underground plant sites were considered: st, existing mines, such as gypsum, copper, lead, zinc, lime- one, marble, sandstone, salt; and, secondly, underground ambers excavated to suit the requirements of particular ant or storage facilities involved.

*Quartermaster Items.*—Troxane, a new heat tablet, was oroughly tested in Alaska and in the Aleutians. It burns thout odour or poisonous gases and produces a steady, blue me not easily blown out by the wind. A new water-purifying blet, using iodine instead of chlorine, made drinking water safe and was less objectionable in taste and colour. A new ration, increasing calories from 3,331 to 3,800, replaced C and K rations. A new type of suit with fabric of 3-oz. nylon rather than the former 8-oz. twill was manufactured for Task Force "Furnace," operating in the Arizona desert.

*Radar.*—The signal corps brought out a lightweight radar set, capable of being transported by plane and set up in forward areas inaccessible to larger detector equipment. It was officially designated as AN/TPS-3. Packed, the set weighed 1,340 lb., required one operator and one maintenance man, withstood temperatures between −40° F. and 140° F., and was unaffected by humidity up to 100%. With auxiliary equipment, it could identify aircraft within its range as friend or foe. A microwave spectroscope was also developed for the analysis of chemical substances, using radar waves from 1.2 cm. to 1.6 cm. in length. This device could identify the more complicated molecules, such as hydrocarbons, without the laborious chemical processes involved in breaking them down and analyzing their various components.

Through collaborative effort with the national bureau of standards there was developed a microtube only a trifle larger than a grain of rice.

*Ribbon Parachute.*—A double ribbon parachute, one acting as a pilot, successfully lowered a 75-mm. howitzer weighing 2,240 lb. from a Fairchild C-82 Packet plane.

*Rifle.*—The M 1 rifle was modified to fire either 8 shots fully automatic or 20 shots in rounds.

*Teleran.*—The Radio Corporation of America and the army air forces co-operated in important laboratory advances in teleran, the revolutionary system of television-radar air navigation and traffic control. Using principles and equipment developed during World War II for radar and airborne television, teleran was devised to provide the pilot with an aerial road map which combined in a single clear picture on his instrument panel all the traffic, route, weather and special information needed. In this development, four new technical advances were demonstrated: (1) a storage orthicon television pick-up tube, (2) a picture tube employing high intensity phosphors for greater image brilliance, (3) an optical map-mixing technique which improved teleran image and simplified insertion of additional information when required and (4) a time multiplexing system which provided for simultaneous transmission of images representing different altitude layers and selective reception of the proper image by planes in any of these layers.

*Trucks.*—A mammoth 60-ton, 1,000-h.p., 45-m.p.h. combination truck dynamometer was manufactured to test the tractive effort of large U.S. army wheeled and tracked combat vehicles over various types of terrain. It rated a maximum drawbar pull of 60,000 lb. at a speed as low as 2 m.p.h. (R. S. T.)

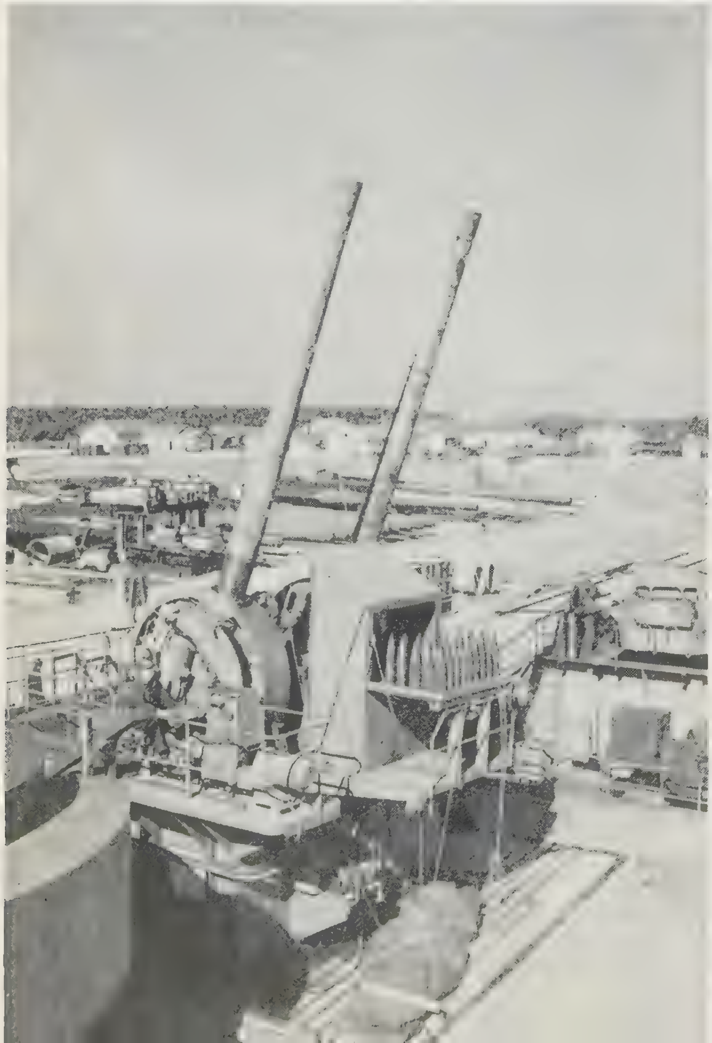
**Navy.**—Production of new U.S. navy munitions was held to small quantities for experimental purposes or for equipping the few new ships under construction. The new 6-in. and 8-in. mounts were installed in new light and heavy cruisers, although none of these ships reached completion during 1947.

The greatest stress was laid on research and development under programs carefully co-ordinated by the Joint Research and Development board with Vannevar Bush as chairman.

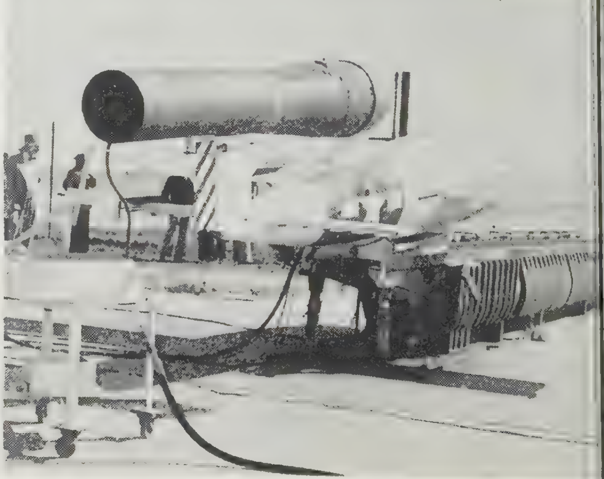
Great progress was made in the field of guided missiles (*see* below). A number of programs showing some duplication of end results were pursued in recognition of the need for parallel attack on the exceedingly complex problems. Among subsonic missiles there were actual tests under conditions approximating service of the more successful developments. One test of a supersonic missile involved the launching of a German V-2 rocket from the flight deck of the large aircraft carrier "Midway." Although the launching was successful, the subsequent

Above: NEW AUTOMATIC 3-IN. 50-calibre anti-aircraft gun being tested at Dahlgren, Va., in the presence of Secretary of the Navy Forrestal in March 1947

Below: SIX-INCH dual-purpose anti-aircraft guns, designed for rapid fire close-in defense on light cruisers, developed for the U.S. navy at Dahlgren, Va., in 1947



Below, IMPROVED VERSION of the German V-1 buzz bomb, reac launching at a press demonstration staged in March 1947 at the Naval Air Missile Test centre, Point Mugu, Calif.



Below: THE KDD-1, a jet-powered aircraft target drone being catap during demonstration tests in April 1947, at the U.S. navy's g missile centre, Point Mugu, Calif.

nt of the missile was not satisfactory, for reasons not con- ted with the launching conditions.

The close co-operation of the U.S. navy with science and in- try was continued, showing its most striking results in the nblebee supersonic guided missile program undertaken by Applied Physics laboratory of Johns Hopkins university, of timore, Md., for the bureau of ordnance. Building on the k of the previous years, test flights were made with most en- raging results in the flight of ram-jets and in the guided nt of subsonic test vehicles.

Recognizing the problems posed by increased speeds of air- ne targets, special emphasis was placed on automatic or rly automatic fire-control devices for both aircraft and anti- craft uses. Predominately electronic in character, these equip- nts—even with the rigorous application of the techniques of iature tubes and circuits—became enormously complicated difficult to mount in available spaces in planes or ships and maintain operable with service personnel.

nvestigations in underwater weapons, notably torpedoes, re pointed at increasing range, speed and accuracy, as well as proving wakeless characteristics of submarine-launched tor- does, and the water-entry abilities of aircraft torpedoes. The ilities at Morris dam in the Los Angeles metropolitan water tem were operated as a branch of the Naval Ordnance Test tion, Inyokern, Calif., to conduct tests of water entry—for h torpedoes and bombs—under controlled conditions with a ximum of recorded data. (G. F. Hy.)

**Air.**—Reliable experts on technical developments in weapons ieved that at least 10 years, and possibly 15 or 20, would be quired to develop and perfect weapons for "push-button" war- e. Not only would it be necessary to spend vast amounts of ney for research and development, but such branches of ap- ed science as aerodynamics, radar, electronics, telemetering, vomechanisms, gyros, computers, thermodynamics, combus- n, metallurgy, propulsion, hydraulics, ballistics, meteorology, nospherics and chemistry all would have to contribute to a ccessful long-range guided missile.

In the United States a team under the over-all direction of National Defense council pressed ahead in the solution of ese numerous problems during 1947. Contracts were awarded dozens of university and industrial laboratories and to many craft, engine and electronics companies.

Indicative of the program's importance was the fact that Guided Missiles" had become Division 1 of the Standard Aero- utical Index being compiled by the Institute of the Aeronauti- l Sciences, under air force contract, with full navy co-opera- on. By the fall of 1947 the second phase of the program was ell under way, and the division was being broken down into a mber of sections such as guidance and control, launching, pro- lsion, etc., with dozens of sub-sections within each.

At least three major lines of activity were being pursued: ) the program for development of a 4,000-mi. intercontinental issile to be powered by a rocket engine or atomic energy at personic speeds; (2) shorter-range guided missiles for use om carriers or converted battleships, or for release from air- aft; (3) improvements in the weapons actually used in World ar II, including faster and more powerful fighters and bomb- s, improved aircraft armament (guns and rockets), better air- rne radio and radar equipment (including proximity fuses and rious homing devices) and more deadly bombs.

During 1947 some progress was made on the long-range ob- ctives, despite the lack of adequate funds. The Joint Research d Development board instituted a "panel on the upper atmos- here" under the committee of geographical sciences, to survey ograms and eliminate duplication of effort, and to recommend ldition or deletion of special projects. Cosmic rays were studied with balloon-borne instruments, with captured V-2 rockets equipped with intricate scientific apparatus recovered by parachute; and with specially equipped B-29s, which made a series of flights between the northern part of the U.S. and the magnetic equator. The navy also announced the development of the Neptune (Glenn Martin Co.), a giant supersonic rocket 45 ft. long, capable of reaching a height of 38 mi. within 75 sec. in its thrust-borne phase, after which it "coasts" straight up for another 197 mi. to a total height of 235 mi., more than twice the height reached by the German V-2s, besides weighing only one-third as much as these war-developed weapons; its alcohol-and-oxygen-burning engine developed 200,000 lb. of thrust. Its first flight was scheduled for mid-summer 1948.

Developments of the shorter-range guided missiles included several ram-jet and rocket-powered supersonic missiles, and the following navy projects: the Lark, with vertical wings for better stability; the Loon, an improved pulse-jet-powered version of the V-1 buzz-bomb, with a speed of 400 m.p.h. and range of better than 200 mi.; Little Joe, a shipboard-launched and Jato (jet-assisted take-off)-rocket-propelled short-range missile, guided by radio against enemy aircraft, with a proximity fuse for automatic explosion in case of near misses; and Kingfisher, a new jet-propelled version of the Bat (used in the late Pacific phase of World War II), which transmitted radar signals to the target, and homed on the radar echoes.

The air force had two very promising projects under development in 1947, a Fairchild XBQ pilotless aircraft missile, and a guided missile at the Ryan factory, described as one of the most compact weapons of its type ever designed, with a built-in "brain." Flight testing of these and similar projects, including advanced tests on the Boeing needle-nosed GAPA (ground-to-air-pilotless-aircraft), was carried on at the Alamogordo Air base, N.M., centre of air force guided missile testing. The most important over-water testing facilities were located at the Naval Air Missile Test centre, Point Mugu, Calif.

In the category of immediate improved weapons the following may be mentioned: New, more powerful and lighter-weight versions of the atom bomb; nonnuclear fission high explosive deeply penetrating bombs tested by B-29s on submarine pens in Europe; the M-3 .50-cal. machine gun for fighters and bombers, firing 1,250 rounds per minute; operational development of the navy's powerful attack planes by Douglas and Martin; increased range of both air force and navy jet fighters; production of the Boeing B-50 fast heavy bomber and the Consolidated Vultee extra long range B-36.

Without neglecting the program for rapid development of turbine-powered commercial transport planes, Britain devoted much effort to advanced military development of guided missiles and rockets, as well as sharply improved interim weapons. The U.S.S.R. developed, with the help of German technicians, jet-propelled fighters, one or two long range bombers, and a greatly improved V-1 type buzz-bomb. (*See* Aviation, Military.) (N. F. S.)

A significant development during 1947 was the crystallization of plans by the British and Australian governments for the new rocket testing range in Australia, and the initiation of large scale civil engineering works in furtherance of the project. Estimates published in Canberra during September forecast an expenditure of £(A)23,000,000 over the next five years.

In Britain a considerable degree of secrecy was maintained regarding progress at the rocket research station at Westcott in Buckinghamshire, but details of a guided projectile designated "Stooge," originally designed as an anti-aircraft weapon, were published. Trials of this weapon were completed at the guided missiles range at Aberporth on Cardigan bay. A series of tests with rocket-propelled model supersonic aircraft was started in

October, aimed at solving the problems anticipated in controlled flight at trans-sonic and supersonic speeds. (*See* also ATOMIC ENERGY; JET PROPULSION; NAVIES OF THE WORLD.)

**Murphy, Robert Daniel** (1894– ), U.S. diplomat, was born on Oct. 28 in Milwaukee, Wis. Entering the foreign service in 1917, he became consul in Paris in 1930 and later counsellor of the embassy. After the collapse of France in 1940, he was assigned to the Pétain government as U.S. chargé d'affaires in Vichy and chief U.S. representative in French North Africa.

Murphy was given a large part of the credit for preparing the groundwork of the Allied invasion of North Africa in Nov. 1942 and for his services in this connection, he was awarded the D.S.M. and raised to the rank of minister to French North Africa.

Although beset by a storm of criticism, Murphy worked steadfastly in early 1943 toward settling the De Gaulle-Giraud dispute, his aim being establishment of a French government that the U.S. would recognize. Later that year Murphy was appointed delegate to the Mediterranean Advisory commission with rank of ambassador.

In Aug. 1944, he became political adviser to Gen. Dwight D. Eisenhower with the task of helping to set up the machinery for Allied military government of the reich.

In 1946–47, Murphy was deputy secretary of state to both James F. Byrnes and George C. Marshall, in which post he conferred with the deputies of the other Big Four powers to handle the preparatory work for the quarterly conferences of the foreign ministers. On Feb. 21, 1947, he was also appointed political adviser to Gen. Lucius D. Clay, military governor of the U.S. zone of the reich.

**Murray, Philip** (1886– ), U.S. labour leader. A native of Scotland, he was born in Blantyre on May 25 and emigrated to the United States in 1902. Naturalized in 1911, he became a member of the international board of the United Mine Workers of America the next year, president of the union's fifth district in 1916, and international vice-president in 1920. Murray succeeded John L. Lewis as president of the Congress of Industrial Organizations (C.I.O.) on Nov. 22, 1940, when Lewis fulfilled his pledge to quit if Roosevelt were reelected. But Murray did not follow Lewis in his bitter opposition to Roosevelt's foreign policy. A split developed in May 1942, when Lewis ousted Murray as U.M.W.A. vice-president. Murray fought back, and the C.I.O. went along with him; Lewis and the mine workers walked out. During World War II Murray fought to maintain the no-strike policy, to use manpower more efficiently, to streamline the War Labor board, to stabilize prices, etc. Immediately following conclusion of World War II, the C.I.O., under Murray's guidance, launched its campaign for continued high wages and better working conditions. On Jan. 23, 1946, two days after the steelworkers went out on strike, Murray launched a sharp attack on corporation tax laws, charging that if the steel industry did not operate another day in 1946, it would regain $149,000,000 in tax rebates, representing a sum 29% above the level of the industry's prewar earnings.

In 1947, Murray continued his attacks on "big business," but sternly forbade his steelworkers union to strike during the life of the two-year agreements reached with the steel industry in April. He urged the A.F. of L. on Oct. 13 to join the C.I.O. in a united political front to defeat supporters of the Taft-Hartley law in the 1948 national elections, but his appeal was rejected by Pres. William Green. On Dec. 18, Murray was named by Pres. Harry S. Truman to membership on the 12-man national labour-management panel.

**Museums.** For the museums of the United States, 1947 marked by important co-operative projects preparations for expansion as well as by significant activiti their normal programs of research and exhibition.

In New York the Metropolitan Museum of Art, the Mus of Modern Art and the Whitney Museum of American agreed to co-ordinate their work for ten years. The Metro tan museum, for example, undertook to purchase for fu transfer selected older paintings and sculptures from the seum of Modern Art, providing the latter with greater m and freedom for buying current art. The American Museu Natural History and the Sperry Gyroscope company co-oper in a study of the balancing action in the halteres of the d fly for possible application in aviation. Museums joined other groups to organize the National Council for Historic and Buildings which would channel resources and opinion saving important historical remains in the U.S. At the in national level, exhibitions were borrowed and lent across Atlantic, and American committees of the International C cil of Museums were working to lay the factual basis mutual help within the framework of the United Nations E cational, Scientific and Cultural organization.

Most museum construction projects were postponed by costs, but preparations were made for erecting, enlarging renovating many museum buildings. Denver voted a $350 bond issue to provide an addition for the Colorado Museu Natural History. In Texas, the Fort Worth Children's mus received a $300,000 building fund, also through a munic bond issue. Selling its old building in downtown Boston, New England Museum of Natural History moved to tempo quarters until a new plant could be built. In Detroit the torical society raised funds to construct the first unit of museum building. The Museum of Modern Art was given p erty worth $1,000,000 adjacent to its present home and plan an addition.

Scientific expeditions from U.S. museums were working Africa, Latin America, the Pacific and particularly within U.S. Among the most significant discoveries were rich bed fossil mammals and primitive dinosaurs in New Mexico fo by the American Museum of Natural History.

Visitors to the newly installed mediaeval and renaissance leries of the Joslyn Memorial Art museum at Omaha, N found the paintings displayed in association with furnit pottery and other arts to present a rounded picture of the ture. This was characteristic of the effort by museums to the public greater understanding and enjoyment of their lections. The Chicago Natural History museum continued on its outstanding Hall of American Archeology with miniature groups on the customs of the moundbuilders and the late Savannah river Indians. The Civil War room of Chicago Historical society was reinstalled using mod methods. In New York the new Jewish museum was opened

Special temporary exhibitions are an educational med bringing people to the museums for repeated visits. Three the most important during 1947 concerned textiles. The Me politan museum borrowed from the French government tapestries comprising a unique and comprehensive summary this art form. In Chicago the Art institute arranged a ma display of Oriental rugs. The Museum of Modern Art not o exhibited the winning designs in its competition, "Textiles the Home," but also had them displayed by selected retail st across the country to help bring good art to U.S. homes.

(R. H. Ls.

**Accessions to Art Galleries and Art Museums.**—Nota additions were made to museum collections throughout United States during 1947. Claude Lorrain's "Roman C ına near Tivoli," a painting signed and dated 1636, was quired for the Cleveland museum through the William H. rlatt fund. A most important canvas by El Greco entitled . John the Baptist," was purchased for the M. H. de Young seum in San Francisco. A rare hellenistic bronze statuette of nperor Selencis IV was acquired by the William Rockhill lson gallery in Kansas City, Mo. This remarkable 2nd cen- y bronze was found near Naples where the emperor was held tive by the Romans.

Boston's Museum of Fine Arts acquired a fine late work by cholas Poussin called "Achilles on Skyros," two paintings easant Boy" and "Peasant Girl" by Giovanni Battista Piaz- ta, the 18th century Italian, and the "Portrait of Victorine urend," dated 1862, by Edouard Manet.

The Art institute of Chicago received as a gift the important arles H. and Mary F. S. Worcester collection comprising 70 ms. These include "Two Orientals" by Gentile Bellini, dam and Eve" by Lucas Cranach and "The Chastisement of ve" by a close follower of Polidoro Caldara Caravaggio. Chi- ;o was also given the Winterbotham collection, 35 modern ropean and Mexican paintings purchased over the past 25 ırs. Outstanding in the group are the "Circus Fernando" by nri de Toulouse-Lautrec, "By the Window" by Henri Matisse d "The Philosopher" by Giorgio de Chirico. According to the nterbotham plan, pictures which have not stood up over the ars may be sold.

Three paintings of unusual interest were acquired by the De- it Institute of Arts. Earliest in the group is Jacob Jordaen's oly Family with St. Anne," painted about 1617. Next is ter Paul Ruben's "Archduke Ferdinand," done in 1635, a ıdy for the large picture in the Prado, Madrid. The third pic- e is James McNeill Whistler's famous "Nocturne in Black d Gold: The Falling Rocket," which featured in the libel suit ainst John Ruskin in 1875.

Buffalo's Albright Art gallery added the "Yellow Christ," a table painting by Paul Gauguin dated 1889, and the Spring- ld (Mass.) Art museum also purchased two important French ctures, Théodore Gericault's "Madman, Kidnapper," and Jean ançois Millet's intense "Portrait of Virgine Roumy."

A superb El Greco, "The Agony in the Garden," passed from e Arthur Sachs collection to the Toledo museum.

A full-length portrait of George Washington (one of the three rsions of the so-called Landsdowne type) by Gilbert Stuart, ıs purchased from the Pierrepont family for the Brooklyn useum. (*See* also ART EXHIBITIONS; ART SALES.)

(F. A. Sw.)

**Great Britain.**—Because of continued shortage of labour d materials, few of the London museums and galleries were lly open by the end of 1947: the Wallace collection, which d opened its main gallery on the first floor by the middle of e year, and the Soane museum, which reopened in the autumn, ere exceptions. The National gallery, with 18 of its larger rooms pen, could exhibit a good part of the permanent collection; rious special exhibitions were also held: one of Spanish inting (in conjunction with the Arts council), a selection from e Dulwich gallery pictures, and one of cleaned pictures, ar- nged by the authorities of the gallery as a reply to criticisms hich had been made of their habit of cleaning their pictures. ne Victoria and Albert museum could not show more than a action of its treasures, but several special exhibitions of great portance were held: one of French tapestries (in conjunction th the French government), one of Nicholas Hilliard (the ost comprehensive exhibition of early English portrait minia- res), and one of the pictures, plate, and other relics collected the first duke of Wellington, and presented by the present ke to the nation, together with Apsley house, as a permanent Wellington museum. The Tate gallery, with only a few of its rooms open, tried not so much to exhibit a representative selection of the whole collection as to arrange exhibitions illustrating one particular artist or movement, supplementing these, when necessary, by loans: thus during the year exhibitions were held of Alexander Cozens, William Hogarth, John Constable and William Blake; while the gallery, in conjunction with the British council, circulated exhibitions on the continent of modern British painting and (in conjunction with the National gallery and the British museum) of J. M. W. Turner. The British museum still had many departments closed, but the print room reopened in September, with an exhibition of the finest drawings of the collection, together with one of Indian miniatures, arranged in connection with the winter exhibition of Indian art which opened at Burlington house in November. The Victoria and Albert museum also arranged, in connection with the same exhibition, one of the human figure in Indian sculpture. Neither the Fitzwilliam museum, Cambridge, nor the Ashmolean museum, Oxford, had been able to reopen to their full extent. The Birmingham art gallery had an important exhibition in the summer illustrating the Pre-Raphaelite movement, the centenary of which would fall in 1948. (J. GE.)

## Music.

Soviet Russia's ideology apparently did not permit compromise in 1947 with the nations that fought and conquered common enemies, yet Russian music was still much akin to that which creative men in other parts of the globe produced. The world première of Sergei Prokofiev's *Sixth Symphony* took place in Leningrad, Russia, under the direction of Mavrinsky on Christmas day. The *Tenth Symphony* of Dmitri Shostakovich was awaited with great curiosity. To celebrate the 30th anniversary of the Bolshevik revolution, 1,000 special compositions were written. Dmitri Kabalevsky's new opera, *The Indomitable* and Aram Khachaturian's new *Overture* must be mentioned first. The latter work needed the assistance of 110 men, including 18 trumpeters. Prokofiev also offered *Holiday Overture* and the second part of his opera, *War and Peace*. Little was heard about the music life in the Russian satellite countries, although it was known that symphony orchestras were functioning in Belgrade, Yugoslavia; Budapest, Hungary; Sofia, Bulgaria; and Bucharest, Rumania. In Warsaw, Poland, the local Philharmonic orchestra under composer-conductor Maklakiewicz scheduled a season of 25 concerts with several guest conductors. Franco Autori (Buffalo Symphony) offered contemporary U.S. symphonic works both in Warsaw and Cracow, Poland.

The Philharmonic orchestra in Ankara, Turkey, vied with European concert activity by asking Herman Scherchen to conduct the nine symphonies of Beethoven early in 1947.

Seventy thousand dollars was raised at a dinner in New York city for the support of the Palestine Philharmonic Symphony. Eleven guest conductors representing nine countries were to lead the organization. Gruenthal's *Exodus* was outstanding among new works by Palestine composers.

News from the opposite side of the Asiatic continent revealed the existence of a Korea Symphony orchestra under the conductorship of a young Manchurian refugee. Music in Australia received a forceful impetus when Eugene Goossens forsook Cincinnati, Ohio, for Sydney, to assume leadership of a newly formed symphony orchestra and a large conservatory of music.

South America enjoyed an immensely rich concert season both in opera and the symphonic field. Desiré Defauw was asked to go to Johannesburg, Union of South Africa, and launch a symphony orchestra.

Italy returned slowly to its normal state of music making during 1947. The Rome opera started its new season with Weber's *Oberon*. La Scala in Milan, Italy, featured [Ildebrando] Pizzetti's new opera, *Gold.* Vienna, Austria, invited seven nations to an international music festival devoted mostly to works of living composers: Arthur Honegger, Paul Hindemith, Arnold Schoenberg, etc. News of the revival of the once powerful Universal Edition was welcomed. The State opera as well as five or six symphonic organizations seemed to flourish despite the disturbed political situation. The 25th Salzburg festival had sold-out houses. A new opera, *Danton's Death,* by Gottfried von Einem, was the chief offering among the larger works performed.

The Prague festival was greatly enhanced by the presence of Shostakovich. Bohuslav Martinu's *5th Symphony* and Alois Hába's quarter-tone opera, *The Mother,* received their first performances. The programs also honoured the Turkish composer, Erkin. The usual array of international guest-conductors featured works of their respective countries.

Music in Germany was recovering slowly from the chaos of fifteen years of totalitarian reign. The Chamber Music festival in Frankfurt as well as the one held in Darmstadt, gave German musicians a chance to meet in peaceful and constructive sessions. Radio Frankfurt and Radio Munich broadcast symphonic, operatic and chamber music for German audiences. Two new German operas were presented—Orff's *Agnes Bernauer,* (Stuttgart) and Kauffmann's *Das Perlenhemd,* (Munich). The State Opera in Berlin produced Rimsky-Korsakov's *Sadko* with Russian talent, and premièred the Russo-German composer Boris Blacher's oratorio *Der Grossinquisitor.* The latter's opera, *The Flood,* was given by the Heidelberg Opera house. The spasmodic music life of Berlin reached a climax in the unusual teamwork concert of Wilhelm Furtwaengler and Yehudi Menuhin, tickets for which were sold in the black market. Walter Gieseking's re-entry into Berlin with the Berlin Philharmonic under a Rumanian conductor in a program featuring Brahm's *Second Piano Concerto* and Mahler's *2nd Symphony* was an outstanding event. Berlin's most important broadcasting station was situated in the U.S. zone, permitting the programming of contemporary U.S. music.

The Ninth International festival in Lucerne, Switzerland, offered Benjamin Britten's *Rape of Lucretia* and *Albert Herring,* with the original Glyndebourne, England, cast. The Zurich Municipal opera bracketed Belá Bartók's *Duke Bluebeard's Castle* with Zoltán Kodály's *Spinning Room,* during the summer festival weeks. First performances of operas by Swiss composers took place in Bern: *The Faun* by Walter Furrer; in Basle: the *Raskolnikoff* by Heinrich Sutermeister; and in Zurich: *Le malade imaginaire* by Hans Haug. The intrepid Basle conductor, Paul Sacher, brought two works to the attention of the music world: Honegger's *Fourth Symphony* (*Deliciae Basilensis*) and Igor Stravinsky's *Concerto for Strings in D.* New symphonies by Willy Burkhard, Paul Mueller and Walter Lang as well as a *Cello Concerto* by Othmar Schoeck, found favour with audiences. Frank Martin's *Petite Symphonie Concertante* was heard at many of the continental festivals.

Geneva held another international competition for musical performers during September and October in which 428 candidates from all European countries, the U.S., Canada, South America, Egypt, Turkey, Lebanon, Armenia and Cuba took part.

Paris enjoyed a year of musical offerings of prewar magnitude. Festivals of Bach, Beethoven, Wagner, Ravel and modern Polish music, as well as concerts by the Amsterdam Concert-Gebouw and the Prague Symphony orchestras were heard by large audiences. Five Paris orchestras competed on Sunday afternoons. Symphonic contributions were made by Guy Ropartz (*Fifth Symphony*), Arrieu (*Violin Concerto*), Grunenwald (*Bethsebée*), Martinet (*Orpheus*) and many newcomers. The outstanding sensation however, was Francis Poulenc's opera-bouffe, *Les Mamelles de Tirésias.* The Orchestra National featured three oratorios by Françaix, Alexander Tcherepnine and Ah Adnan Saygun. A Bach festival in Strasbourg and the 21st tival of the International Society for Contemporary Musi Copenhagen, Denmark, as well as the International Week Modern Music in Venice, must be recorded.

Belgium and the Netherlands reported a great renascenc extensive music activity by native composers and symph organizations.

London was the host to many continental orchestras (Ams dam, Vienna and Radio Turin) and offered a Richard Str festival in the presence of the 83-year-old German maste summer festival engaged the services of three English orches and one French orchestra, and provided opera, concerts, ba and recitals; it succeeded despite the difficulties of the econo situation. The première of Britten's latest opera, *Albert Her* took place in Glyndebourne. During the International Fest of Music and Drama in Edinburgh, Bruno Walter and Vienna Philharmonic celebrated their reunion by giving se concerts. Other orchestras heard were the Liverpool, the S tish, the Halle and the British Broadcasting orchestras. Th were opera performances, ballets, dramatic productions, exh tions of paintings, solo recitals and chamber music evenings Joseph Szigeti, Artur Schnabel, William Primrose and Ér Fournier.

The Canadian Broadcasting corporation honoured 13 na composers in a series of weekly broadcasts. Winnipeg sp sored a new symphony orchestra.

In the United States the Metropolitan Opera company g 57 performances in 14 cities, and the New York Philharmo presented 28 concerts in 24 cities in 28 days. An entirely and immensely successful undertaking was launched by the Francisco Symphony orchestra, giving 56 concerts covering n of the states of the Union. Aaron Copland's South Ameri tour of good will brought him into contact with most of Brazilian and Argentinian colleagues.

Tanglewood (in the Berkshire hills of Massachusetts) in duced Mozart's *Idomeneo, Rè di Creta* (written in 1780) played host to many composers, among them Honegger, had just arrived from Buenos Aires, where he conducted *Jeanne d'Arc au bûcher.* Carmel, Calif., held its 19th Ann Bach festival, competing successfully with the older one Bethlehem, Pa. Central City, Colo., in the Rockies gave *Fidelio* and 13 *Martha* performances to capacity audiences. lumbia university, New York city, N.Y., had a summer festi of contemporary music. Howard Hanson and the Eastm school, Rochester, N.Y., featured 44 works by U.S. compos in its annual Festival of American Music; 13 received their f performance. Harvard University was the site of an unus gathering of 100 music critics. The National Gallery of Art Washington, D.C., programmed 33 works by living U.S. co posers. The University of Michigan, Ann Arbor, Mich., star to publish the U.S. edition of 47 volumes containing the co plete works of Bach as collected by the German Bach society

The following opera premières took place during 1947: Vi Thomson's *The Mother of Us All,* Bernard Rogers' *The W rior,* Kurt Weill's *Street Scene,* Sessions' *Lucullus* and Gi Carlo Menotti's *The Telephone.* The latter one-act ope bracketed with the same composer's *The Medium* (1946), joyed a long run on Broadway and went on tour. Marc Bli stein's *The Cradle Will Rock* had its first complete full orches performance. A large number of symphonies appeared on p grams of major symphony orchestras: Elie Siegmeister's *Fi* Persichetti's *Third,* Alexander Tansman's *Seventh,* Ernst K nek's *Fourth,* Sessions' *Second,* Hindemith's *Sinfonia Sere* Mark Brunswick's *First,* Broeckman's *Second,* Randolph Jon *First,* Cecil Effinger's *First,* Douglas Moore's *Second,* Mor

SSED CHOIRS AND ORCHESTRAS at the International Festival of School sic held in April 1947 at Montreal, Que., where 12,000 Canadian and U.S. dents took part in a 3-day program

ould's *Third,* John Powell's *First,* Don Gilles' *Symphony* $5\frac{1}{2}$ or *mphony for Fun* (Toscanini) and Peter Mennin's *Third.* Vio- concertos by Erich Korngold, George Antheil and Efrem mbalist, and piano concertos by Hindemith, W. S. Huffman, , Jacques de Menasce, Robert Casadesus and Roy Harris (for o pianos and orchestra) had their world premières. Biblical ntatas by Copland (*In the Beginning*) and Lukas Foss (*The ng of Songs*) as well as Jaromir Weinberger's cantata *Eccle- stes* were also heard in first performance. Paul Creston's *Fan- sy for Trombone and Orchestra,* Copland's *Concerto for arinet* and *Letter from Home,* Ernest Bloch's *Second Quar-*, Marion Bauer's *Sun Splendor,* Gardner Read's *Pennsylvania ite,* Samuel Barber's ballet-suite *Medea* and Herbert Elwell's *ncoln: Requiem Aeternam* as well as shorter works by David einfeld, Dai-Kong Lee, Jack Kilpatrick, Alan Schulman, liot Carter, Otis Clement and Robert R. Bennett were pre- ièred in the different cities. Among important first U.S. per- rmances were: Britten's *Rape of Lucretia* performed by Car- lli's new Opera theatre, Mahler's *Sixth Symphony,* Stravin- y's *Concerto for Strings,* Bartók's *Second Piano Concerto,* onegger's *Third Symphony* (*Liturgique*), Strauss' *Metamor- iosen,* G. Francesco Malipiero's *Third Symphony The Bells,* livier Messiaen's *The Ascension* and *Hymne pour grand orches- e,* Ralph Vaughan William's *Concerto for Two Pianos,* John arbirolli's *Concerto for Oboe,* Henri Barraud's *Offrande a une nbre* and Vauclain's *Symphony in One Movement.* The young razilian conductor Eleazar de Carvalho made Boston audi- nces familiar with two works by his compatriots: Camargo uarnieri's *Prologo e Fuga* and Heitor Villa-Lobos' *Madona.* eroy J. Robertson of Provo, Utah, won $25,000 in a contest of omposers sponsored by Henry Reichhold of Detroit, with a mphonic work, *Trilogy,* in three movements. Stravinsky per- itted the "democratization" of one of his lyrical ideas from e *Firebird,* under the name of "Summer Moon." (R. Gz.)

**Popular Music.**—The three leading tunes of 1947 were prob- bly "Near You," "That's My Desire" and "Peg o' My Heart," nd each of them won the attention of the public through a sin- e phonograph record of comparatively obscure origin.

"Near You," which headed radio's Hit Parade six times, made s first impression in a band recording conducted by its com- oser Francis Craig whose name, like that of the lyricist Kermit oell, was about as unfamiliar as that of the record-maker, Bullet" or the publisher, "Supreme."

"That's My Desire," by Carroll Loveday and Helmy Kresa, ad been obscurely published 16 years before, with the copy- ght later assigned to Mills Music, Inc. A Mercury record by Frankie Laine catapulted it to a prosperity, which was shared by Laine and the manufacturer.

The real "old-timer" of the top trio, however, was "Peg o' My Heart," which was first heard in 1913 when Alfred Bryan's words and Fred Fisher's music capitalized on Hartley Manners' play of the same name. It was a Vitacoustic record by the Harmonicats (three harmonicas and a guitar) that brought back this charmingly unpretentious ballad of the past. The song was on the Hit Parade for 20 weeks, 10 times at the top.

Perhaps the most significant triumph of nostalgic material was achieved by the "Anniversary Song," appearing in the motion picture, *The Jolson Story.* It was generally credited to Jolson himself and to an industrious adapter, Saul Chaplin, but the actual composer was a Rumanian named Ivanovici, and it may be dated as far back as the early 1880s.

Other successful revivals of 1947 included "Heartaches," by Al Hoffman and Al Klenner, Joe Howard's "I Wonder Who's Kissing Her Now" (by way of another biographical film), James Thornton's "When You Were Sweet Sixteen" (a permanent favourite with barber shop quartets) and the mawkish "Guilty" of Gus Kahn, Harry Akst and Richard Whiting.

There were several successful novelties, with the honestly nonsensical school represented by "Chi-Baba, Chi-Baba" and the exhilarating "Zip-a-Dee-Doo-Dah" of Walt Disney's juvenile picture *Song of the South.* A strange piece of whimsy called "Open the Door, Richard" drove the country mad for a time, and there was a doggedly rural atmosphere in such songs as "Feudin' and Fightin'," "Huggin' and Chalkin'," "A Gal in Calico," etc. Radio's Arthur Godfrey recorded a "Too Fat Polka" which was generally accepted as funny.

Hoagy Carmichael's "Ole Buttermilk Sky" held its own through the early months of 1947, as did "The Old Lamplighter," "For Sentimental Reasons" and the melodious "Oh, But I Do" of Leo Robin and Arthur Schwartz. Jack Lawrence's "Linda" was a spring and midsummer hit, as was "Mam'selle," whose music was credited to the motion picture director, Edmund Goulding, with words by Mack Gordon. Other titles appearing frequently in the Hit Parade were "I'll Close My Eyes," "I Wonder, I Wonder, I Wonder," "Managua, Nicaragua," "My Adobe Hacienda," Frank Loesser's "I Wish I Didn't Love You So," "You Do," "How Soon?," "The Lady from 29 Palms," "It's a Good Day," "And Mimi" and "An Apple Blossom Wedding." Late in the year Carl Sigman emerged as the composer of two hits, "Civilization," with words by Bob Hilliard, featured in the Hartmans' musical show, *Angel in the Wings,* and "Ballerina," with lyrics by Bob Russell. Both were complete surprises to Tin Pan Alley. A recording by Robert Merrill gave new and unexpected life to Yale's "Whiffenpoof Song."

In the field of musical comedy there were two solid successes, *Brigadoon,* selected by the New York critics as the best of the year, and *Finian's Rainbow,* which was actually the more popular, with a reminiscent but delightful score by Burton Lane and some fascinating words by E. Y. Harburg. The hit song of this show was "How Are Things in Glocca Morra?" (echoing an old German tune). Richard Rodgers and Oscar Hammerstein II offered their most advanced piece of work in *Allegro,* which contained "So Far" and other moderate hits. The conventional *High Button Shoes,* glorified by an outstanding ballet, won general favour.

Popular singers of the year, on records and radio, were led by Dinah Shore and Jo Stafford on the feminine side, with Perry Como, Buddy Clark and Art Lund the outstanding male vocalists. Top ranking bands were those conducted by Ted Weems, Eddy Howard and Francis Craig; smaller combinations such as the Harmonicats, the Three Suns and the King Cole Trio were also prominent. (S. SP.)

**Music in Industry.**—During 1947 the benefits of music for industrial and office workers earned increasing recognition and acceptance from management, labour and union officials. This widespread endorsement could be attributed directly to the type of music specifically planned for work purposes. Chiefly through the expansion of wired music services, functional music became available and was rapidly utilized in more and more industrial areas of the United States.

Continuing research, field study and occupational analysis emphasized the importance of authoritative instead of haphazard programming and scheduling of work music. Workers at monotonous, repetitive tasks benefit from musical patterns quite different from those used for workers subject to physical exertion. The objective in the first instance is relief from boredom; in the second case, relief from muscular fatigue. Still another type of program is required for office workers whose tasks are tediously routine yet demand concentration.

Banking institutions made more and more use of specialized music to create an air of friendliness and cordiality. In ever-increasing numbers, retail establishments such as department stores, specialty shops and beauty parlors realized that the specialized programs of wired music resulted in more amicable relations between clerk and customer. (*See* also RADIO.) (X.)

**Recordings.**—The demand for records of all kinds in 1947 was greater by far than it had been during the previous year when the various companies, slowly getting back into production after the war, were scarcely able to meet the public's clamouring needs.

In the United States a dispute between the American Federation of Musicians and the National Associations of Broadcasters, regarding the payment of increased monies for the playing of disks on the radio, ended in the expiration of their contract on Dec. 31, without hopes for an immediate renewal. This entailed a stoppage of all new recordings in 1948 or, at least, until the interested parties could come to terms. In the meantime, since the subject of the dispute did not cover the broadcasting of disks already made, most of the manufacturers bolstered themselves against the coming lean period with a back-log of pressings from existing disk masters.

The record manufacturers in England, France, Italy and other countries, all of them faced with a greater demand in the U.S., redoubled their efforts to supply their export trade, as well their domestic needs, by going into greater production.

With respect to new developments in recording techniques, there was not much that had not been already initiated in the year before. Most of it, at any rate, was concerned with further experimentation in the field of tape or wire recordings for either home or industrial use. (R. BR.)

## Nagy, Ferenc

(1903– ), former Hungarian prime ister, was born in 1903 in Baranya cou of a Protestant peasant family. A farmer by profession, he gan his public career as a local agrarian politician and an ac member of the Calvinist community. Elected to parliamen 1939 as an Independent Smallholder, he played a part in posing German designs on Hungary, and went into hiding 1944 when Germany had established control. The first pr sional government formed in Dec. 1944 in Debreczen appoi Nagy minister of reconstruction and the national assem elected in Nov. 1945 made him its speaker. In this capa he addressed a memorable appeal in Jan. 1946 to the west powers to relieve Hungary's grave postwar needs. Shortly a his election to the presidency of the republic, Zoltan Tildy pointed Nagy as his successor as prime minister on Feb. 4, 19 The latter's term of office was an uneasy one. His attempts collaborate with the communists failed. Under communist p sure Ferenc Nagy consented to the expulsion from his party several eminent politicians alleged to be antidemocratic ments, in the hope that there would be a decrease in tens after the coming into force of the peace treaty in 1947. T political consequences of the trial of Gen. Lajos Dalniki Ve and his fellow prisoners and of the arrest by the soviet auth ties of deputy Béla Kovács led to Nagy's resignation in drama circumstances (*see* HUNGARY). In the United States Nagy p lished the story of his resignation in the *Saturday Evening P* and signed a joint declaration of east European agrarian lead against soviet interference, in company with Vlatko Mačhek the Croat, Milan Gavrilovich for the Serb and Georgi M. Di trov for the Bulgarian Peasant parties. (B. ME.

## Narcotics and Narcotic Traffic.

The second sess of the Commiss on Narcotic Drugs of the Economic and Social council of United Nations, meeting in July 1947 at Lake Success, N. considered the situation created by development of new sy thetic drugs with possible habit-forming characteristics, p ticularly the drug Amidone (*see* below). This drug, like m phine, is dangerous from the standpoint of habituation. T commission agreed to recommend a protocol for limiting t manufacture of synthetic narcotic drugs to the estimated me cal needs of the world, in accordance with the terms of the 19 convention, and for controlling the international trade in the drugs by a system of import and export certificates, as provid by the Geneva convention of 1925.

**Coca Leaf.**—At the request of the government of Peru f a survey of the effects of the chewing of coca leaf by a lar part of the population in Peru, Bolivia, Colombia, Chile a Argentina, the Commission on Narcotic Drugs recommended the Economic and Social council that a commission of inqui should be sent to these countries to study the social and ec nomic aspects of the problem. The commission agreed to i clude a psychiatrist and an expert in industrial hygiene on th commission of inquiry.

It was also recommended that the study should include t possibilities of limiting the production and regulating the di tribution of coca leaves.

**Illicit Traffic.**—The Commission on Narcotic Drugs studi the reports of governments on the illicit traffic in narcotic dru and noted that Mexico, Iran, India and Turkey were the sourc of illicit traffic in opium.

he commission requested the Economic and Social council ecommend to the government of Mexico that it take appro- te measures in fulfilment of its international obligations to press the illicit cultivation of opium poppies. Evidence was ented of many thousands of acres of opium poppies under ivation, and the existence of 20 to 30 secret landing strips Mexico for the use of planes in smuggling opium to the ted States. An outgrowth of this illicit traffic was a shooting ay at Woodbine Check, near Mexicali, between U.S. nar- c and customs officers and Mexican smugglers; several of latter were reported to have been killed.

**Var Stocks; Limitation of Production.**—The Commission Narcotic Drugs recommended that any narcotic drugs not ered by import or export certificates, as required by the rnational narcotic conventions, which might come to light n surplus military supplies should be treated as seizures of it drugs and dealt with accordingly. This recommendation made because of a number of large sales of such stocks ch had been brought to the commission's attention.

he commission also requested the Secretariat of the United ions to prepare an appraisal of world medical needs in terms aw opium, and approved a draft questionnaire on the limita- and control of the cultivation and harvesting of the coca .

**pium.**—The commission noted with gratification the re- s of the prohibition of smoking opium in the far east. Opium oking had been declared illegal in all parts of the world ex- t in certain Indian states and in Siam. In Iran, the parlia- nt was considering a law to prohibit the production of opium. s law would provide the death penalty for any person found oking the narcotic.

he commission agreed that strict wording should be inserted he treaty with Japan for narcotic control; that import cer- cates issued by the Japanese government should require in- sement by the Permanent Central Opium board before being ed upon by another country; and that there should be no ex- ts, manufacture, or production of narcotic drugs in Japan.

**Amidone and Metopon.**—The new synthetic narcotic drug idone was brought under the provisions of the U.S. federal cotic laws as an opiate by a finding of the secretary of the asury and a proclamation of the president. This action placed idone under the same federal control as morphine. Consid- ble research was conducted on a number of Amidone-like stances.

The new morphine derivative known as Metopon, produced der a government-owned patent, was made available to physi- ns for the relief of pain in terminal cancer cases. With a ited supply, distribution was being carefully controlled ough a few channels in order that the U.S. public health vice could obtain a clear picture of the effects of this drug oughout the United States.

**Addiction.**—There had been no marked increase in addiction ce the end of World War II, in sharp contrast to conditions vailing after World War I. Relatively few former soldiers been found to be addicted. With limitation of opium pro- ction and international control of synthetic narcotic drugs in offing, it was quite possible that large-scale addiction would prevented. Reports from territories in the far east formerly der Japanese occupation indicated enormous decreases in drug diction. Another great decrease had resulted from the closing government-owned smoking opium shops throughout the far t. (*See* also DRUG ADMINISTRATION, U.S.)

**National Association of Evangelicals.** This is an interchurch organization in the United States, having in its membership 29 denominations. It gained about 78,000 additional members in 1947. During the year its national office was moved from Boston to Chicago. Regional offices were maintained in Boston, New York, Newark, N.J., Philadelphia, Washington, Cincinnati, Chicago, Minneapolis, Los Angeles and Portland, Ore. It represents the conservative wing of Protestantism. Among its principal commissions are war relief, with operations in 15 countries; missions, serving 81 boards with passport, visa, purchasing and transportation service; publications, *United Evangelical Action* and *Sunday Schools,* devoted to the preparation of lesson outlines and the revival of the Sunday school convention; radio, acting as a clearinghouse for numerous programs; chaplain counsellors for industry, and for youth, devoted to the correlation of various denominational and interdenominational organizations. Officers elected at Omaha, Neb., in May, 1947, were Dr. R. L. Decker of Kansas City, Mo., president; Dr. Stephen W. Paine of Houghton, N.Y., first vice-president; Dr. William H. Rutgers of Grand Rapids, Mich., second vice-president; H. J. Taylor of Chicago, Ill., treasurer; Seth A. Rohrer of Elkhart, Ind., secretary; Dr. J. Elwin Wright of Boston, Mass., assistant to the president. (J. E. WT.)

**National Education Association** of the United States held its 85th annual meeting and its 26th representative assembly at Cincinnati, O., July 7–11, 1947. The assembly with 2,259 delegates was the largest in the association's history. The association was in the second year of its Victory Action Program (1946–51). Its work was carried on through 25 commissions, councils and committees; 29 departments; and 15 headquarters divisions. In the international field it worked through the World Organization of the Teaching Profession which held its first meeting in Glasgow, Scotland, Aug. 7–13, 1947. During the fall and winter of 1947–48 the association asked its members to contribute at least $1.00 each toward a fund for the relief of teachers in war-devastated countries. The association was making progress in its campaign for federal aid to public schools as embodied in S. 472 and H.R. 2953. The senate bill was favourably reported to the senate by the senate committee on labour and public welfare. The house bill was favourably reported to the house committee on education and labour by a subcommittee of that body. Both bills were pending before the second session of the 80th congress. "The Schools Are Yours" was the theme for American Education week, Nov. 9–15, 1947. Among new publications issued by the association during the year was the *NEA News,* which began publication Sept. 12, 1947, and which goes weekly to about 30,000 educational leaders. The association was organized in Philadelphia, Pa., in 1857. It had in 1947 a membership of 386,643 and its affiliated state associations had a membership of 755,740. There were 1,970 affiliated local associations in 1947 as compared with 1,106 in 1943. Its official organ is the *NEA Journal,* edited by Joy Elmer Morgan and issued to all members monthly except June, July and August. The president for 1947–48 was Glenn E. Snow, president of Dixie Junior college, St. George, Utah; executive secretary Willard E. Givens. (*See* also EDUCATION.) (J. E. Mo.)

## National Geographic Society.

In 1947 the National Geographic society and the U.S. army air forces conducted an expedition to Bocaiuva, Brazil, to observe the total solar eclipse of May 20. Participating in the work were scientists from Lick observatory, Yerkes observatory, Georgetown observatory, the national bureau of standards and the U.S. Naval Research laboratory, under the direction of Dr. Lyman J. Briggs, chairman of the Research committee of the society. The many tons of astronomical instruments used in the studies and the personnel of the party were flown from the United States by the army air forces. Observations were made of the behaviour of the radio-reflecting layers during the eclipse and extensive measurements were recorded of temperature and humidity at various levels up to 50,000 ft. Numerous photographs both in black and white and in natural colour were taken of the four "contacts" of moon and sun, of the sun's prominences and of the corona. A special project involved the photographing of a star field near the limb of the sun as the basis for computations to test the Einstein "shift" theory, a phase of the theory of relativity.

To study a section of the Mid-Atlantic ridge 1,200 mi. east of Bermuda, an expedition was conducted in the summer of 1947 by the society in co-operation with the Oceanographic institution of Woods Hole, Mass., and Columbia university. The Mid-Atlantic ridge is an undersea mountain range stretching from subarctic to subantarctic latitudes. The expedition was under the leadership of Dr. Maurice Ewing of the faculty of Columbia university. From the research ship "Atlantis," a staff of specialists dredged up more than a ton of rock fragments from the underwater mountain slopes and obtained numerous cores of mud deposits from the adjoining ocean bottom.

Studies of auroras being conducted by the society and Cornell university were continued from the principal base at Ithaca, N.Y., under the direction of Dr. C. W. Gartlein of the Cornell faculty. Additional data were obtained to aid in the classification of the various auroral forms and the measurement of their intensities and the heights to which the displays reach above the earth's surface. Further work was carried on during the year in the society's study of North American birds under the leadership of Dr. Arthur A. Allen of Cornell university. The field researches were conducted in Georgia and the Adirondack mountains.

The society's cartographic division in 1947 designed, drew and published four ten-colour wall maps which were issued as supplements to the *National Geographic Magazine.* In all 6,400,000 copies of the charts were distributed to the society's members. Two of the maps are units in a series of charts covering portions of the United States on a scale greater than can be used for a complete map of the country. That of the central United States shows the states of Texas, Oklah Arkansas and Louisiana, a region in which cattle-raising, c farming, and oil, gas and sulphur production are dominar dustries. That of the southeastern United States embraces complete states south of the Potomac river and east o Mississippi river, and parts of adjoining states. This is the of the old south and border states in which most of the fig took place during the Civil War. The map of Canada, A and Greenland covers a broad arc of arctic and suba America. Because of the very large segment of the earth incl within its borders it was produced according to the new metric projection designed by Wellman Chamberlin of th ciety's cartographic division to minimize distortion. The of the countries of the Caribbean includes the islands of sea and the countries which border it and the Gulf of Me Insets show on a large scale the Canal Zone and the prin islands.

A monograph *The Round Earth on Flat Paper,* a notable tribution to the science and art of mapmaking, was publi during the year. A foreword by Gilbert Grosvenor traces history and emphasizes the importance of the map service the National Geographic society.

Membership of the National Geographic society in 1947 1,635,000. Its headquarters are at 1146 Sixteenth Street, N Washington 6, D.C. Officers in 1947: president and ed Gilbert Grosvenor; vice-president and associate editor, Oliver La Gorce; secretary, Thomas W. McKnew; and treas Robert V. Fleming. (G. Gr

## National Guard.

The national guard during 1947 m the most rapid growth in its hist bringing its membership by Dec. 15 to 208,374, the grea peacetime strength the guard had ever had except in 1940 1941 when with the threat of war an attempt was made t its ranks prior to induction.

Upon the return of the national guard to state contro 1946, the guard was completely reorganized, with an ulti goal of 683,000 men, and with an accent upon air units mobile ground units, supplied with the latest weapons equipment, and trained as an "M-day force," capable of mediate mobilization in case of enemy attack.

When complete the national guard was to consist of 25 fantry divisions, 2 armoured divisions, 21 regimental com teams, 14 anti-aircraft artillery brigades, 12 wings, 27 gro 72 fighter squadrons, 12 light bombardment squadrons and necessary supporting troops. Plans included the organiza of 5,879 army and 514 air units, allocated to the various st on a basis of population and strategic necessity.

When a unit has recruited 25% of its officers and 10% its enlisted men, and can meet required standards for armo facilities, it is "federally recognized." At the beginning of year 1947, the guard had 1,106 such federally recognized u with a membership of 23,385 men. By the end of the y 3,916 units had been recognized. This represented a growth approximately 900% in membership and 300% in units dur the year.

Approximately 82,000 of this increased membership gained during a two-months' recruiting drive, the first in guard's history. It was launched on Sept. 16, the annivers of the induction of the first national guard troops in 1940 World War II, and proclaimed by the president as natio guard day.

The guard held to the army's rigid requirements as to ph ical fitness, intelligence and military aptitudes, and each u as soon as organized, entered immediately upon its train ssion. Only World War II officers were accepted during the rganization period. Initial enlistments were accepted from n 17 to 34 years of age; veterans up to 54 years of age ld enlist, depending upon the length of their military service.

Approximately 50,000 men attended the 15-day encampments shorter school sessions in lieu of camps during the summer 1947, the first such field training after 1940. All army ools, varying in length from ten days to ten months, had n opened to national guardsmen. These schools offer a iety of courses, many of which have a civilian as well as itary value. Courses in watch repairing, diesel motors, ding and photography are examples.

One of the greatest problems was in supplying and equipping rapidly growing units with the latest weapons developed ing and after World War II. Three fighter squadrons were be equipped with jet-propelled P-80 Shooting Stars. Other units were being equipped with the same aircraft used by United States air force.

The national guard had become, by successive acts of con- ss, the dual responsibility of the state governments and the eral government. The federal government supplied equip- nt, uniforms and pay for weekly training classes and summer d training; the state was charged with recruiting and hous- or armouries. However, since plans called for a guard ce much larger than in any previous time, part of the re- onsibility for armouries would have to be assumed by the leral government if the guard was to reach full strength.

While enlarging its units through recruiting and maintaining id training standards, the new national guard had also readily cepted the other half of its dual role, that of furnishing to states a local disaster force, for the alleviation of distress d the protection of property in case of local emergency. r example, fighter squadrons from California and Louisiana w emergency supplies into Texas City, Tex., at the time the disastrous fire in April 1947. Within 30 minutes after explosion and fire at Stanford, Conn., men of the 963rd ld artillery battalion arrived with stretchers, blankets and her supplies. Tornadoes in Oklahoma and Arkansas, and ods in Michigan, as well as many other lesser tragedies, ved to dramatize the necessity for an on-the-spot group, uipped, organized and trained to handle such emergencies.

## ational Labor Relations Board.

More cases were filed with this in- pendent agency in the fiscal year 1947 than in any year after ssage of the National Labor Relations act.[1]

A total of 14,909 cases were brought to the board's attention. is represented an increase of 2,649 cases, or 21.6%, over those cketed during the previous year, and was the greatest number ceived in the board's 12-year history.

Of the 14,909 cases docketed in the fiscal period, 10,677, or .6%, involved representation questions and the remaining 232, or 28.4%, charges of unfair labour practices.

With the 4,605 cases pending on its books from the previous ear, the board had on its docket during the fiscal period 19,514 cases. During the year it closed 14,456 of them, leaving 5,058 cases pending on July 1, 1947. Of these, 2,443 involved unfair labour practice allegations; the remaining 2,615 involved conflicting claims of representation.

Most of the representation cases were closed by board-conducted elections, consent elections or cross-checks of company pay rolls with union authorization cards. The remaining cases closed were either withdrawn by the parties filing the petitions or dismissed by the board for lack of merit.

During the year the board conducted 6,920 elections and cross-checks in which 805,474 employees cast secret ballots for the organization of their choice. About 90% of those eligible to vote went to the polls and, by secret ballot, signified their choice of bargaining representative. Eighty-five per cent of those voting marked their ballots in favour of a bargaining agent.

Only 886 of the 6,920 elections held during the year were ordered by the board. The greater number of them were held with the consent or agreed-upon stipulation of all parties.

Affiliates of the American Federation of Labor were successful in obtaining majority designation in 2,196 polls out of 3,581 elections in which they participated during the year, receiving 208,524 votes. Unions affiliated with the Congress of Industrial Organizations were selected in 2,138 out of 3,410 contests, receiving 288,381 votes. Unaffiliated unions were chosen in 860 instances out of a total of 1,317 ballotings in which they participated, receiving 124,827 votes. In the remaining 1,726 contests, 183,742 votes were cast against union representation.

The board carried over from its previous year 2,225 unfair labour practice cases. With the 4,232 new such charges filed during the year, the total to be handled was 6,457. Of these, 4,014 cases were closed in the fiscal period, leaving a balance of 2,443 pending on July 1, 1947.

These unfair labour practices concerned acts of employers which discourage or interfere with self-organization of employees or the practice of collective bargaining. For example, employers are specifically prohibited from interfering with, restraining, or coercing employees in the exercise of their rights to organize and bargain collectively; dominating or interfering with the formation of any labour organization; discriminating against any employee to discourage or encourage membership in a labour organization; discharging or otherwise discriminating against an employee because he has filed charges or given testimony under the act; and, lastly, employers are prohibited from refusing to bargain with the representatives selected by a majority of employees in an appropriate bargaining unit.

To remedy such unfair labour practices the board is authorized to issue cease and desist orders and to take such affirmative action including reinstatement with or without back pay, as will effectuate the policies of the act. In the 1947 fiscal period the board ordered the reinstatement of 4,114 workers found to have been discriminatorily discharged. Back pay awards of $1,104,660 were given to 2,656 of the reinstated workers. Thirty-six company unions were disestablished. In 273 cases collective bargaining was ordered, while in 658 instances notices of compliance with board decisions were directed to be posted. These posted notices informed employees that they were free to engage in collective activity without interference, as guaranteed in the act.

In its 12 years of operation, more than 100,000 cases had been filed with the agency. During that time the board conducted more than 36,000 elections in which 8,000,000 workers signified their choice of bargaining representative. During this period the board ordered the reinstatement of more than 300,000 workers found to have been discriminated against, and directed back pay awards totalling more than $12,000,000. About 2,050 company unions were ordered disestablished and in another

---

[1] On June 23, 1947, one week before the close of the fiscal year, the 80th congress ssed, over presidential veto, the Labor Management Relations act of 1947 (Taft- rtley act), greatly amending the National Labor Relations act. The new act enlarged National Labor Relations board from three to five members and separated the prose- ting and judicial functions by vesting final authority for investigation and prosecution all unfair labour practice cases in the board's general counsel. Among other provi- ns, the new act provides for four additional types of elections to be conducted by the ard and specifies certain union practices as illegal.

The text of this article relates only to the board's operations under the old law.

8,000 cases notices of compliance with board decisions were directed to be posted.

Decisions and orders of the board are not self-enforceable. Either the company or the board may petition the circuit court of appeals. Beyond this, either party may appeal to the supreme court.

In the fiscal year, 68 board decisions reached the circuit courts. Of these, 48 were enforced in full, 10 were set aside and 10 were modified. Of the 6 cases that reached the supreme court in the fiscal year, board orders were enforced in each instance.

A total of 654 cases had been litigated in the federal courts from the time the act was passed. In the circuit courts, 394 board orders were enforced in full; 83 were set aside; 177 modified; and 14 remanded to the board for further consideration. Of the 56 cases that reached the supreme court, board orders were enforced in 54 cases; in only 2 cases were board orders set aside.

The board's jurisdiction extends only to those industries engaged in or affecting interstate commerce.

While the board has its headquarters in Washington, D.C., it maintains 28 regional offices, each responsible for servicing a particular area. (*See* also LABOUR UNIONS; LAW; STRIKES AND LOCK-OUTS.) (P. M. HG.)

## National Mediation Board.

The National Mediation board is an independent agency of the U.S. government charged with administration of the Railway Labor act. This statute provides procedures for settlement of disputes on the railroads and airlines for the purpose of preventing interruptions to commerce arising out of labour disputes. In disputes over employee representation, the board is authorized to conduct elections and certify representatives designated by majority vote of employees. In disputes between employees and employers over changes in rates of pay, rules or working conditions, the board has authority to endeavour by mediation to settle the dispute and thus prevent interruptions to commerce arising out of work stoppages.

In 1947, the U.S. economy was notably affected by postwar adjustments and mounting prices. Labour unrest was general and strikes or threatened strikes were common. As in other industry, there were but few days during the year when, on some railroad or airline, there was not a threatened interruption to service as a result of unsettled labour disputes. For the most part the step-by-step procedures of the law for achieving peaceful settlements were effectively applied and thus the threatened interruptions were averted. As a result, in scores of cases, substantial financial loss to the railroads and airlines as well as related industries, to their employees, and loss in service to the public were avoided by the orderly settlement of disputes as contemplated by the law.

Although the law's effectiveness was demonstrated many times, its failure in a few cases during the year serves to emphasize the need for the law and alertness in applying its procedures.

During 1947, the prolonged strike of employees of the Toledo, Peoria and Western Railroad, a small midwestern carrier, was brought to an end. The strike began on Oct. 1, 1945, when operation of the road was returned to private management by the Office of Defense Transportation which operated the property during World War II. The dispute which led to the strike extended back to 1941 when the employees began negotiations in an effort to secure improved wages and working conditions.

Refusal of the railroad's management to agree to the employee's proposals led to one of the most bitter and exten labour disputes in recent railroad history. Some striking ployees lost their lives, and the carrier's president was as sinated under mysterious circumstances which remained solved. Following his death the new management made ag ments with the striking employees and thus the strike terminated on April 22, 1947, nearly 19 months after it be

During the year there was one strike among airline ployees covered by the act. This stoppage involved pilots American Overseas Airlines and extended from Sept. 30 to 18. Although mediation was unsuccessful in averting the str mediation was resumed by members of the National Media board after the stoppage began. Following extended con ences, the disputing parties were finally brought into agreem and the strike was terminated. The stoppage involved about pilots, but grounding of planes resulted in the furlough of s 1,300 nonstriking employees and the stranding of more t 1,000 passengers at various overseas points.

Other strikes during 1947 on carriers covered by the Rail Labor act were of short duration or of minor importance.

During the year, a total of 574 applications for service w received and docketed by the board. There were 436 cases posed of and, of this number, 224 were wage and rule dispu and 212 were employee representation disputes. (*See* also R ROADS.) (T. E. S.

## National Parks and Monuments.

During the ye 1947 travel to areas administered by the U.S. national park service increa 17% over 1946. The total number of visitors was 25,265,2

Most important event of the year was the establishment June 20 of Everglades National park. This new park was de cated on Dec. 6 by the president of the United States w appropriate ceremonies held at Everglades city, Fla. Loca near the southern extremity of the Florida peninsula, the p embraces an area of 454,000 ac., eventually to be increased approximately 1,282,000 ac. by the addition of lands to be p chased with funds provided by the state of Florida.

Other new areas added to the national park system dur 1947 were the Theodore Roosevelt National Memorial pa 35,370 ac., on the Little Missouri river in North Dakota, a Kennesaw Mountain National Battlefield park near Mariet Ga. Kennesaw Mountain National Battlefield park includes Kennesaw Mountain National Battlefield site, a smaller ar which formerly served to memorialize the battle.

At the close of 1947 the national park system included units, classified as follows: 28 national parks, 4 national hist cal parks, 85 national monuments, 11 military parks, 2 batt field parks, 1 memorial park, 6 battlefield sites, 11 historic sit 9 memorials, 10 cemeteries, 3 parkways and the system national capital parks.

Two national monuments were formally dedicated for pub use. The first of these, Fort Frederica National monument St. Simon's Island, Ga., is the site of an English colonial o post, established in 1736. The second, Whitman National mon ment in the state of Washington, is the site of the Whitm mission, once a landmark on the Oregon trail where Dr. Marc Whitman and Narcissa Prentiss Whitman ministered to t spiritual and physical needs of the Oregon Indians until mass cred by them in 1847.

In 1947, the name of Boulder Dam Recreational area in A zona and Nevada was changed to Lake Mead Recreational ar

NZE STATUE of Thomas Jefferson, sculptured by Rudolph Evans, being ight into the Jefferson memorial at Washington, D.C., in April 1947, to ace the plaster model installed in 1943 when metal could not be spared

r Boulder dam, which impounds Lake Mead, was renamed over dam in honour of former President Herbert C. Hoover. Fort Raleigh National Historic site on Roanoke Island, N.C., ional park service archaeologists had excavated a small earth t believed to be the remains of a fort constructed by mem- s of Raleigh's expedition in May 1585. Service archaeologists l also uncovered the remains of Fort Vancouver in the state Washington, the old fortified post which served as western dquarters of the Hudson's Bay company from 1829 to 1845.

A disastrous forest fire on Mount Desert Island, Me., in tober, invaded Acadia National park and burned 8,750 ac. or 67 sq.mi. within the park in addition to 8,438 ac. outside. tal damage to the forests in this park could not be readily ermined until the hardwoods should leaf out again. Where the rn was complete, the return of the forest would be exceed- ly slow, for the duff and humus were largely consumed by fire.

Representatives of the United States International Park com- ssion met with a newly created International Park commis- n of Mexico in Mexico City, July 15 to 19, inclusive, to dis- ss plans for establishing a national park in the Mexican states Coahuila and Chihuahua contiguous to the Big Bend National rk in Texas and a Coronado International memorial in the exican state of Sonora as a companion area to the proposed ronado International memorial in Arizona.

The United States travel division, a unit of the national park rvice which was suspended during World War II, was re- tablished toward the end of the year with J. Lee Bossemeyer Fayetteville, Ark., as chief. Bossemeyer was formerly head the San Francisco, Calif., field office of this agency, which s known prior to World War II as the U.S. travel bureau. ohibited by statute from competing with private agencies, the vel division would assist the travel industry in every way ssible to acquaint the people of the United States and visitors om other countries with the educational and recreational ad- ntages the United States and its territories have to offer. The vel division would formulate and carry out its program with aid and guidance of an advisory committee comprised of six presentatives of the federal government and six additional embers chosen from industry to represent the various regions the United States. Russell E. Singer, executive vice-president of the American Automobile association, had accepted the chairmanship of this advisory committee. (N. B. D.)

**Great Britain.**—In July 1947 the reports of the national parks committee, set up in 1945 by the minister of town and country planning, and its two special committees dealing with wildlife conservation and footpaths and access were published. This committee recommended that 12 parks covering 5,682 sq.mi. should be set up in 3 annual instalments, as follows: the Lake district; north Wales; the Peak district; Dartmoor; the Yorkshire dales; the Pembrokeshire coast; Exmoor; the South Downs; the Roman wall; the north Yorkshire moors; Brecon Beacons and Black mountains; the Norfolk Broads.

The committee recommended that the national parks should be controlled by a national parks commission with park committees for each of the 12 parks, that a further 52 areas of outstanding landscape beauty, scientific interest and recreational value should be designated conservation areas, and that a coastal footpath should be made available to the public.

Under the national land fund instituted in 1946, by which land is accepted by the exchequer in lieu of death duties, three properties were handed to the national trust as places of historic interest or natural beauty: Hartsopp Hall estate in the Lake district, Cotehole, Cornwall, and Townend farm, Troutbeck, while Tregonnan house, near Padstow, Cornwall, was handed over to the Youth Hostels' association. Early in 1947 it was announced that Alderley Edge, a woodland in Cheshire, was to be transferred to the national trust.

A statue, by Sir William Reid Dick, of King George V (1865–1936) was unveiled on the lawns of Westminster abbey on Oct. 20 by King George VI. The monument was the centrepiece of the national institution known as King George's Playing fields.

**Italy.**—In October the Italian ministry of agriculture and forests transferred the control of the national park of the Gran Paradiso to an independent body subsidized by the government and the authorities of Aosta and Turin. The park of the Gran Paradiso covers approximately 220 sq.mi. in the Aosta valley, in northern Piedmont. With this new control the surviving ibex which had almost been destroyed by hunters during World War II would be preserved.

**Switzerland.**—During the year considerable opposition was expressed to a project to set up power generating stations on the river Spöl, which flows through the Swiss National park situated to the east and west of the Ofen pass in the lower Engadine. On the fringe of the national park it was proposed to construct a dam of a height of about 420 ft. and empty the river Spöl for a length of about four miles, where a series of small lakes would be constructed. The Federal National Park commission, which is nationally supported, and the League for the Protection of Nature both protested against these proposals on the grounds that the seclusion of the park would be violated and the birds and game would be scared by the noise of the proposed engineering work.

## Naval Academy, U.S.

The United States Naval academy, located at Annapolis, Md., was founded in 1845, and is maintained by the government, under the immediate supervision of the bureau of naval personnel of the navy department, for the education and training of young men for the naval service.

The Naval academy renewed emphasis on its traditional role as an undergraduate institution, stressing fundamentals and leaving to postgraduate or special schools of the navy such branches of study as are not basic and properly undergraduate. Postwar curricular studies, which stressed the concept that the Naval academy was but one link in the chain of naval education, were further developed with a consistent view of the academy's undergraduate function. The return to summer practice cruises made possible a reallocation of time among the academic departments which provided increased opportunity for emphasis on fundamentals.

"Camid II," an amphibious operation participated in by 780 midshipmen of the Naval academy and 600 cadets of the U.S. Military academy, was held in the Chesapeake capes area in Aug. 1947. Exchange of faculty members on a yearly basis and students of the first class on a week-end basis between the Naval and Military academies were other typical aspects of the closer co-operation of the service academies in the accomplishment of mutual objectives.

The first, second and third classes of midshipmen, together with designated N.R.O.T.C. midshipmen, were sent on practice cruises in northern European waters aboard the carriers "Randolph" and "Kearsarge," the battleships "New Jersey" and "Wisconsin," and the destroyers "Cone," "Stribling," "O'Hare" and "Meredith." Included in this operation was a short period of indoctrination aboard submarines for first classmen. The joint cruises for academy midshipmen and those of the 52 universities having N.R.O.T.C. units was one of the steps taken for further integration of naval reserve and academy sources of officer personnel under the Holloway plan.

Rear Admiral James L. Holloway, Jr., U.S. navy, assumed his duties as superintendent of the Naval academy in Jan. 1947.

Entrance requirements were rendered more flexible for candidates entering in 1948 by the elimination of chemistry as a part of the regular entrance examinations and as a required subject for admission by either of the certificate methods.

Curricular aims were being increasingly focused upon preparation for the broader aspects of a naval career with decreasing emphasis on the purely junior officer qualifications of graduates. (For statistics of enrolment, faculty, library volumes, etc., *see* UNIVERSITIES AND COLLEGES.) (R. S. CR.)

**Navies of the World.** At the end of 1947 the distribution of the world's warships had undergone considerable alteration, compared with the situation 12 months earlier. The two principal sea powers, the United States and the British empire, had discarded not only the majority of their older vessels, but also a substantial proportion of the additional units constructed during 1939–45. While a great many of these ships had been broken up or converted to mercantile use, others had been acquired by smaller nations as replacements for obsolete tonnage.

Some of the surrendered German ships which had been divided among the navies of the United States, the British empire, France and the U.S.S.R. were utilized as targets or for various experiments, only a minority being incorporated in the fleets of their new owners. At the end of the year the fate of the Italian ships which under the peace treaty were to be divided among the same four nations had not been finally settled. Offers had been made by the United States and British governments to leave the more important of the units assigned to them in Italian hands, to be broken up or otherwise destroyed; but the attitude of the French and Russian governments to this proposal had not been made known.

In the far east, a division had been made of the 92 m war vessels captured when Japanese resistance ended, 23 u each being taken over by the United States, British, Chi and Russian navies. These ships comprised destroyers, es and patrol vessels, mine sweepers and other ancillary craft.

In spite of the heavy reduction of expenditure on naval ar ments by the two principal powers, research work on weapons continued. Some of these, naturally, took the form improvements on war inventions of the Allies; others v adaptations of ideas of the axis countries, some of which not reached the operational stage when hostilities ceased. proved antisubmarine devices, more effective anti-airc weapons, guided missiles of unexampled range and power new methods of propulsion were reported to be among problems under investigation by naval scientists and technici So far as warship design was concerned, nothing fresh wc appear to have been initiated, beyond the inclusion of cert approved devices in the equipment of the limited number new vessels ordered to be constructed.

Of the fresh types produced in large numbers under the st of war, several had almost disappeared from the princi navies, *e.g.*, the corvette, the motor torpedo boat and land ships and craft of all but a few categories.

Though it had become known that in the 18-in. gun bat ships "Musashi" and "Yamato," of more than 63,000 t standard displacement, and the aircraft carrier "Shinano," 59,000 tons, the Japanese had built by far the largest war v sels in history, there appeared to be no disposition on the p of the leading naval powers to emulate these examples megalomania, possibly because none of the three achieved a thing of note before being sunk. In fact, it would seem th

NETLOAD OF FOOD delivered to Little America IV by the U.S.S. "Yanc being lowered onto the frozen surface of the Bay of Whales early in 19 Supplies were then brought to the camp site of the U.S. navy's antar expedition by tractor-drawn ten-ton sleds

the whole, the lessons of the war failed to encourage further
wth in the size of ships.

'ublication during 1947 of documents discovered in enemy
iives and of the results of interrogations of prisoners, threw
h light on many of the principal events of World War II,
ishing valuable material for its historians. Not the least
ortant fact that emerged from this material was the im-
ise influence exerted by Allied command of the sea.

**Jnited States Naval Strength.**—At the end of 1947 the
ooo-ton battleship "Kentucky," whose armament was be-
'ed to include guided missiles of a new type, was still some
ance from completion. The battle cruiser "Hawaii" was also
inished, but the new large aircraft carrier "Coral Sea" had
n commissioned during the year. Disposal of the old battle-
os "Idaho" and "New Mexico" had reduced the total of this
egory to 15. From the aircraft carrier "Midway" had been
nched experimentally during the year a guided missile of a
v type, said to resemble the German V-2 in design. A pro-
m of new construction introduced in 1947 included two sub-
rines, the "Tang" and the "Trigger," of a novel design to
orporate the latest devices in their equipment. Other sub-
rines were to be adapted for experimental use in Arctic
ers. An even larger proportion of the total strength of the
t was laid up in reserve than during 1946. Ships of war
l to be completed included five cruisers, nine destroyers and
en submarines.

Strength of personnel had been brought down to 395,000 offi-
s and men in the navy and 83,700 in the marine corps.

**British Naval Strength.**—With the disarming of three obso-
e battleships, the strength of the royal navy in this category
s reduced to ten ships, only five of which were of late design.
escort aircraft carriers had been discarded with two excep-
ns, one of which had been lent to the Netherlands for a term
years. The number of cruisers had also decreased with the
posal of the oldest units, and the completion of three laid
wn during the war was deferred indefinitely. Construction of
aircraft carriers was also held up for the time being, pending
cision concerning their armament. Two destroyers of novel
sign were ordered to be built; it was possible that one of
ese might be propelled by gas turbines, in the light of experi-
nts carried out in 1947 with a smaller craft so engined. A
mber of the escort vessels and mine sweepers built during
orld War II were sold or otherwise disposed of during the
ar. Similar reductions were effected in the fleets of the over-
as dominions.

Personnel, the strength of which was fixed in the early part
the year at 192,665, was further cut to a total of 147,000 at
later date. To facilitate this reduction, a great many ships at
me and abroad were paid off or greatly reduced in comple-
ent, temporarily bringing down the effective strength of the
me fleet to one cruiser and four destroyers.

**France.**—Financial stringency curtailed plans for the reor-
nization of the French fleet. Work on a cruiser which was
der construction had to be stopped, and a proposal to build
new aircraft carrier had ultimately to be deferred indefinitely.
ven corvettes and a number of other vessels which were on
an had to be paid off and returned as a measure of economy,
d training of personnel was also affected. Three destroyers
d 27 other vessels of the former German navy, which were in
S. hands, were directed to be transferred to the French flag
the end of 1947, but it was not clear whether they would all
commissioned or their material utilized for repair work.
rsonnel was reduced to about 50,000.

LST's which brought Netherlands troops and supplies for amphibious landings at East Java in July 1947, during the colonial warfare between Indonesian republicans and colonial authorities

**U.S.S.R.**—Three old battleships, of which one was on loan
om the British navy, constituted the principal strength of the
viet fleet in 1947. Eight cruisers, one of them lent from the U.S. navy, about 45 destroyers and 120 submarines were also believed to exist. Very large flotillas of small craft, many of them lent by Allied Powers during World War II, made up the bulk of the remaining strength. Little was known about new construction, but it was not believed to be important.

**Italy.**—Having been reduced by the peace treaty to 2 battleships, 4 cruisers, 20 destroyers, 20 corvettes and various auxiliary vessels, the Italian navy adapted itself to its new status in 1947. During the summer a cruise around the Italian coasts and islands was undertaken for the benefit of the personnel, which was limited to 22,500. As mentioned above, final arrangements for disposal of tonnage to be divided among four Allied Powers under the peace treaty had still to be carried into effect.

**Other European Countries.**—In the royal Netherlands navy little alteration in strength took place during the year, the completion of two cruisers being deferred owing to the pressing need for materials for mercantile construction.

A proposal to purchase a cruiser for the royal Norwegian navy was defeated by a narrow vote, with unfortunate results as regards the naval training program. An eighth destroyer was passed into service, and a new royal yacht was bought. No other ships of importance were acquired, but it was arranged to reconstruct five prewar torpedo boats to enable them to be used as escort vessels. Personnel numbered about 5,000.

Denmark completed two small destroyers laid down before the war and chartered three submarines from the British navy. Good progress was made with the construction of the six small torpedo boats in hand. Total personnel numbered nearly 4,000.

Sweden completed one of two cruisers under construction; the second was expected to be ready early in 1948. Two new destroyers were also about to join the fleet, and two more were authorized to be built. Throughout the year the navy was maintained in a high state of efficiency, with a total personnel of 10,000.

Finland was obliged under the terms of peace with the U.S.S.R. to hand over its only coast defense ship, five submarines and a number of motor torpedo boats, leaving under the Finnish flag only a few mine sweeping and patrol craft.

Poland augmented its naval forces by some small craft from the Russian navy; otherwise there were few changes.

Spain continued to proceed slowly with the construction of 20 new destroyers and a number of other vessels. Apparently slow delivery of materials was the chief cause of delay. Personnel numbered 20,000 with reserves.

| Siam | — | — | — | — | — | — | — | 4 |

*Though precise information concerning the Russian and Yugoslav navies was not available, the above figures were believed to be reasonably accurate. Other navies, composed of smaller craft than the above, were those of Mexico, Cuba, Belgium, the Dominican Republic, Venezuela, Ecuador, Uruguay, Finland, Bulgaria, Iran, Egypt and Iraq.

Portugal arranged for the modernization in England of its five destroyers. A new surveying vessel was acquired.

Turkey acquired 13 fleet mine sweepers and a number of smaller craft from the British navy.

Greece obtained six patrol vessels and two dock landing ships from the United States, besides some smaller craft.

Rumania was reported to be negotiating for the return from Russia of two destroyers seized during World War II. Bulgaria had acquired four motor torpedo boats and six motor launches from the Russian navy. From the same source the Yugoslavs were reported to have received 6 submarines, 20 motor torpedo boats and a depot ship. Otherwise, there existed only a remnant of the prewar naval strength.

**South and Central America.**—Though Argentina had introduced an impressive program of naval construction, the only additions to the fleet in 1947 were four frigates formerly belonging to the United States.

Brazil purchased a few auxiliaries in the United States in 1947. It was hoped to acquire the U.S. cruisers "Nashville" and "Phoenix" in the following year.

Chile bought two transports and an oiler in the United States in 1947 and was expecting to receive the cruiser "Boise" from the same source during 1948.

Peru had strengthened its navy by the acquisition of two ex-Canadian frigates and a couple of auxiliaries in 1947. Colombia added a frigate and two small patrol craft to its forces during the year. The Dominican Republic was reported to have bought two corvettes; Venezuela acquired six ex-Canadian corvettes and a former U.S. landing ship; Cuba and Mexico were reported to be negotiating for other vessels; and Ecuador purchased an ex-U.S. frigate.

**Asia.**—China, in addition to 23 miscellaneous vessels acquired with the disposal of captured Japanese ships, took over a cruiser and a destroyer from the British navy in 1947. A quantity of additional tonnage was expected to be transferred from the United States navy.

The Siamese navy purchased two corvettes and a fleet mine sweeper from the British navy during 1947.

**Africa.**—Egypt proposed to purchase three sloops, two corvettes, four fleet mine sweepers and a number of smaller craft in England. (*See* also MUNITIONS OF WAR.)

## Nebraska.

One of the states formed from the territory the Louisiana Purchase, Nebraska lies in lower Missouri valley in the west north central part of the U admitted to the union in 1867; land area 76,653 sq.mi.; wa area, 584 sq.mi.; pop. (1940) 1,315,834; estimated 1,301,000 the bureau of census on July 1, 1947; capital, Lincoln (81,98 largest city, Omaha (223,844). In 1940, 39% of the populat was urban. About 1% of the total population is Negro about 8% foreign-born, principally German and Scandinavi

**History.**—State officers for the 1947–49 period were: g ernor, Val Peterson (Rep.); lieutenant governor, Robert Crosby; attorney general, Walter R. Johnson; auditor, Ray Johnson; secretary of state, Frank Marsh; treasurer, Edw Gillette; state superintendent of public instruction, Wayne Reed; chief justice, Robert G. Simmons.

The legislature of 1947 enacted laws providing for a co of industrial relations, adjusting salaries of the constitutiona elected state officials, providing a tax on cigarettes for the fi time, authorizing a building program for state institutions w proceeds of a 1.1 mill levy on real property, authorizing the co munity property tax and extending provisions of the anticlo shop amendment to the state constitution. The legislative co cil, composed of 16 legislators, was directed by the 1947 leg lature to investigate and report on proposed changes in st budgetary procedure, centralization of the state university a the teachers colleges, allocation of proceeds of the gasoline t laws relating to schools and revision of the school code, completion of panels and murals in the state capitol and state's public assistance program.

**Education.**—Elementary and secondary education is generally direc by local school districts of which there were nearly 7,000 in 1947, w some supervision from the state superintendent and with slightly m than $1,000,000 annual state aid. The total enrolment in elementary a secondary schools in 1946 was 230,147, and the teaching staffs numbe 12,125. Expenditures for 1945–46 were $29,530,870. Higher educat is directed by the state university at Lincoln and four state teach colleges.

**Social Insurance and Assistance, Public Welfare and Related Programs.** The state appropriation for public assistance for the 1947–49 period v $36,406,284, of which $18,402,019 were federal funds. In Oct. 1947 number of persons receiving general relief was 1,513, and each recei a monthly average of $28.15. At the same time 7,375 dependent child received an average of $29.42 monthly aid; 471 blind persons recei a monthly average of $41.32; 24,351 persons received a monthly aver of $37.61 for old-age assistance. The state maintained 5 correctional penal institutions with a population of 1,154 as of July 1, 1947, a 11 other institutions for children, mentally ill, and other depender with a population of 6,648. These institutions were under the su vision of a board of control to which the state appropriated $13,921, for 1947–49.

**Communications.**—The total highway mileage of the state in 1947 v 100,666. State appropriations for highway purposes for 1947–49 w $16,500,000 plus $11,500,000 in federal funds. In 1947 there were r airports in the state. Total railway mileage in the state in 1947 v 6,326. Fifteen radio stations operated in the state, eight of which w located in Omaha and Lincoln.

**Banking and Finance.**—State banks numbered 282 in 1947 with to assets of $395,523,900. There were also 44 building and loan associatio with assets of $80,963,914; 127 credit associations and credit unio with resources of $12,316,790. The assets of eight trust compan amounted to $17,313,701. National banks in July 1947 numbered 1 with resources of $938,461,000. The total assessed valuation of the st as determined in Aug. 1947 was $2,316,658,000. The tax rate for st purposes was set at 5.99 mills, calculated to produce $13,876,783. R ceipts for the fiscal year ending June 30, 1946, were $57,429,745, a expenditures amounted to $56,984,705. Total appropriations for 1947— were $117,631,050, including unexpended balances and $35,892,230 fe eral aid. The state had no bonded debt, though that of local subdivisio in 1946 amounted to $50,132,457. This did not include the indebtedn of the public power and irrigation districts which, on July 1, 194 amounted to $40,381,000.

**Agriculture.**—The total acreage harvested in 1947 for the crops listed

*Leading Agricultural Products of Nebraska, 1947 and 1946*

| Crop | 1947* | 1946 |
|---|---|---|
| Corn, bu. | 152,775,000 | 231,362,0 |
| Wheat, bu. | 95,252,000 | 90,677,0 |
| Oats, bu. | 62,384,000 | 71,708,0 |
| Barley, bu. | 10,516,000 | 11,529,0 |
| Potatoes, bu. | 8,960,000 | 11,725,0 |
| Sugar beets, tons. | 876,000 | 825,0 |
| Alfalfa hay, tons. | 2,101,000 | 1,786,0 |
| Wild hay, tons | 2,400,000 | 1,836,0 |

*Estimated Nov. 13, 1947.

table was 18,305,000. As of Dec. 1, 1947, the total farm income for year was estimated to be about $1,250,000,000, exclusive of government payments, as compared with $899,710,000 for 1946.

**anufacturing.**—Manufacturing is not of major importance in the econ- of the state. Most establishments are engaged in the processing of 1 products. Although no comprehensive figures were available after 9, it was estimated that employment by concerns covered by the nployment compensation laws would total 149,000 as of Nov. 1947.

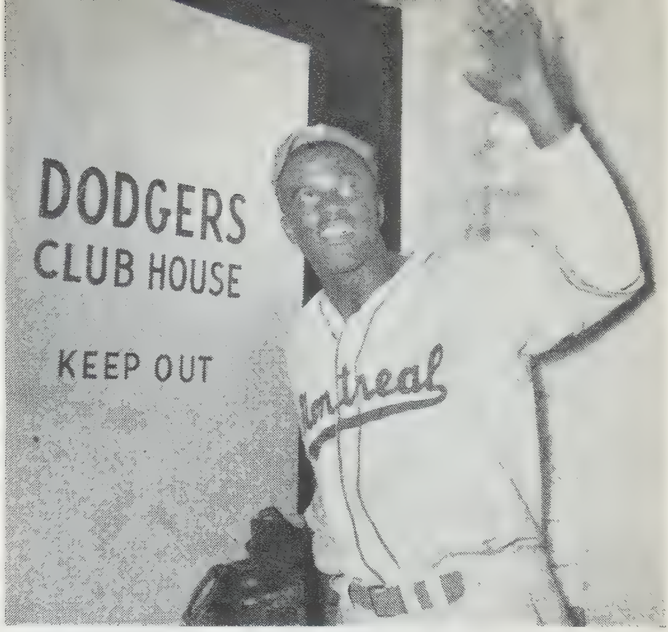
**ineral Production.**—Aside from clay, sand, gravel and building stone, t of which is consumed locally, the state has no mineral wealth of sequence. There are deposits of petroleum which produce an annual out of approximately 5,000,000 bbl. (A. C. BE.)

**crology:** *see* OBITUARIES.

**groes, American.** There was measurable improvement both in status and integration of the gro in the armed forces. Negro personnel totalled 58,437 or % of the peacetime army, with an 8.3% participation in rseas assignments. Commissioned and warrant officer nums reached 937, of whom 110 were in the regular army, with adets at West Point. Navy Negro personnel reached 31,844 l the policy of admitting Negroes to regular commissions was ugurated.

**egal and Political.**—Despite failure of federal legislation national Fair Employment Practices committee (F.E.P.C.), ilynch and anti-poll-tax laws, there were significant advances the civil rights front. Two presidential commissions, one on il rights and the other on higher education, presented detailed orts revealing the extent of discriminatory practices against Negro and other minority groups and took a forthright stand inst such discriminations in law and practice. Two immete results of the report of The President's Committee on vil Rights were the strengthening of the civil rights' division the department of justice and a precedent-breaking filing by attorney-general of a supporting brief in the case before the S. supreme court contesting restrictive real estate covenants. o decisions of United States courts declaring South Caroa white primary legislation unconstitutional were granted rough the 4th U.S. circuit court of appeals upholding the iginal verdict of Judge T. Waties Waring. The U.S. supreme urt also invalidated several Mississippi court convictions on e grounds of evidence of the systematic exclusion of Negroes om jury panels. Documented charges of widespread social, onomic and civil discrimination were filed by the National sociation for the Advancement of Colored People (N.A.A.P.) and supporting organizations before the United Nations d were received by the assistant secretary-general for social airs for reference to the appropriate U.N. commissions. Simr representations and legislative recommendations for a world arantee in an international bill of rights were made to the N. Human Rights commission. The American Heritage undation, sponsors of the Freedom Train, set a policy of peritting no stops on this tour of historic documents where guartees of unsegregated access were not obtained: accordingly heduled stops at Memphis, Tenn., and Birmingham, Ala., were ncelled, while other southern cities, notably Atlanta, acceded the stipulation. As gauged by press comments and resoluons of church and other civic organizations, liberal sentiment pporting this and similar progressive stands indicated, even in e south, increasing public sentiment for more consistent demoatic practice.

**Industrial and Economic.**—Despite employment set-backs ere was some definite improvement on the Negro labour ont. Agitation for F.E.P.C. legislation continued strong; the S. supreme court supported the railway firemen's suit against e Brotherhood of Locomotive Firemen for restricting promoon of Negro firemen. As a result of threats of outlawing the ion by the N.Y. State Commission Against Discrimination, he Brotherhood of Railway and Steamship Clerks, A.F. of L., removed its membership restriction clauses and gave full voting rights to Negro auxiliary locals. The United Auto Workers, C.I.O., elected a Negro to its executive council, and Negro participation, particularly in C.I.O. unions, moved forward considerably.



JACKIE ROBINSON, first Negro player to enter major-league baseball, joined the Brooklyn Dodgers as first baseman in April 1947

Under F.E.P.C. and consumer pressures, the employment and upgrading of Negroes gained measurably, especially in public utilities, retail department stores and soliciting salesmen.

**Educational and Cultural.**—The President's Commission on Higher Education advocated as an integral part of its report the complete elimination of educational segregation, and recommended explicit provision in all future federal aid and national educational projects forbidding discrimination on grounds of race, colour or creed. A delayed minority report of four southern members called for gradual application of the above drastic recommendations. In the St. Louis Roman Catholic diocese, after group defiance of an episcopal order abolishing segregation in the parochial high schools, Archbishop Joseph Ritter threatened excommunication for noncompliance, and organized resistance ceased. In Gary, Ind., similarly, a strike against an order abolishing segregation in the high schools was broken by administrative and school board insistence. The N.Y. state department of education proposed a substitute plan for the Austin-Mahoney bill which would effectively guarantee nondiscrimination in that state's public and private schools. The Oklahoma and the Texas decisions upholding segregation in their state universities was appealed to the U.S. supreme court.

As against the 1946 registration of 53,030 Negro college students, *The Crisis* reported a total of 74,095 with 6,052 bachelor degree graduates, 360 master's degrees, 8 Ph.D.'s and 360 professional degrees in 1947. On both the faculty and the student level, integration of Negroes in mixed colleges continued. Charles S. Johnson was inaugurated Nov. 7 as the first Negro president of Fisk university. Dr. E. Franklin Frazier was elected president of the American Sociological society. Ralph J. Bunche, organizer and director of the Trusteeship division of the U.N., was chosen head of the U.N. secretariat for Palestine, after having drafted the report of the visiting U.N. commission to Palestine. Actors Equity association gave the National theatre of Washington, D.C., until May 31, 1948, to change its policy of not admitting Negro patrons; otherwise, Equity members would be forbidden to appear there. *Deep Are the Roots* and *Anna Lucasta* made successful debuts in London, with *Finian's Rainbow* to follow. Canada Lee co-starred notably with John Garfield in the film, *Body and Soul.* Mrs. Edith Isaacs brought out a definitive history of *The Negro in the American Theatre;* John H. Franklin, a comprehensive history of American Negroes entitled *From Slavery to Freedom.* Frank Yerby duplicated his 1946 best-seller success with a second novel, *The Vixens,* and Willard Motley's *Knock on Any Door* was a similar success. Jackie Robinson, of the Brooklyn Dodgers, first Negro in major league baseball, received the Comiskey Memorial award of the Baseball Writers' association as the "Outstanding Rookie of the Year." Negro players were taken on the major league teams of Cleveland and St. Louis. Several interracial games broke new precedents in intersectional football games between southern and northern teams. (*See* also LYNCHING.)

## Nehru, Jawaharlal

(1889– ), Indian statesman, historian and writer, was born on Nov. 14 at Allahabad of a distinguished Hindu family. For his early career, see *Encyclopædia Britannica.* Next to Gandhi, Nehru was regarded as the most influential of Indian nationalist leaders. After the outbreak of World War II, he split with Gandhi over the latter's insistence on nonviolent resistance in the event of a Japanese invasion. After the Congress party issued a mass call for a large-scale civil disobedience movement on Aug. 8, 1942, the British authorities arrested Nehru and other nationalist leaders. During his imprisonment at Ahmadnagar fort, Nehru wrote *The Discovery of India* (publ. 1946), a distinguished historical work. He was released on June 14, 1945, and took a leading part in negotiations with the British cabinet mission in New Delhi in March 1946. The following May, he was elected president of the Congress party and later head of the first all-Indian Executive council (the "caretaker government").

Although Nehru originally opposed the partition of India into separate Moslem and Hindu states, he subsequently yielded and upon India's attainment of freedom on Aug. 15, 1947, he became prime minister of the new dominion of India. He denounced the rioting that rocked India after independence and declared, Sept. 9, that his government would meet the crisis "on a war basis." On Nov. 25, he bluntly charged that tribal rioting in Kashmir was being incited by high Pakistani officials.

## Nepal.

An independent kingdom lying between Tibet (N.), Pakistan (E.) and India (N.E., S. and W.) and including Mt. Everest. Area: *c.* 54,000 sq.mi.; pop. (1942 est.) 5,574,000. Capital: Kathmandu (pop. *c.* 108,800). Sovereign: Tribhubana Bir Bikram. Prime minister: General Sir Padma Shumshere Jung Bahadur Rana.

**History.**—Far-reaching plans for constitutional and social reforms were announced by the prime minister in May: freedom of the press, of speech and the right of free association were guaranteed. As a result of the measures taken by the prime minister to implement these promises the Nepal national congress called off the agitation for civil liberties which it had been organizing earlier in the year. A United States good-will mission to Nepal led to the signature of an executive agreement of friendship and commerce and the establishment of diplomatic relations between Nepal and the United States (April. 25).

(J. RA.)

## Nervous System.

Several authors reported instances of cure of such fatal disease as tuberculous meningitis by streptomycin, an antibacterial agent with unusual ability to retard the growth of the tubercle bacillus. C. P. Mehas and W. E. Truax reported a case of tuberculous meningitis in a woman, 31 years old, who recovered following the injection of 282 grams of streptomycin. The total perio treatment was 175 days. The patient was cured but develo partial deafness in the left ear with a left lateral nystag (oscillatory movements of the left eye from side to side) inability to stand erect without swaying.

E. Appelbaum and C. Halkin reported a cure in a nine- old boy who had tuberculous meningitis. He was treated 27 days with intramuscular and intrathecal (spinal canal) in tions of streptomycin. This child was perfectly normal months after the beginning of the meningitis.

Paul Rhoads reported a case of tuberculous meningitis i 19-year-old girl who had been sick for 22 days. She develo deafness during the course of her treatment, but after treatm was stopped the deafness disappeared.

S. A. Waksman stated that tuberculous meningitis was initely arrested by the use of streptomycin. Treatment consis of large doses of streptomycin injected into the muscles into the spinal fluid by way of the lumbar and cisternal (ne routes. H. Wissler and M. Streit reported a case of tubercul meningitis in a two and one-half-year-old child. They gave b intramuscular and intraspinal injections of streptomycin. intramuscular injections were given for 25 days and the in spinal (intrathecal) injections for 54 days. Their patient proved but was not regarded as definitely cured. The auth warned that streptomycin may cause permanent damage in form of blindness, deafness, internal ear disturbances (la rinthine) and defective intelligence.

**Epilepsy.**—A. E. Loscalzo reported on a full three ye study with 3 methyl-5, 5-phenylethylhydantoin in 67 co-ope tive epileptic patients. He concluded that the seizures w reduced in approximately 60% and that the emotional sta was improved consistently. New drugs for epilepsy were rece ing extended controlled study. ## Netherlands.

A kingdom of northwest Europe, bounded the north and west by the North sea, on t east by Germany and on the south by Belgium. Area: 13,4 sq.mi.; population (census, May 1947, provisional figures) 635,936. Chief towns (pop. census May 1947, provisio figures): Amsterdam (cap., 807,490); Rotterdam (645,417 The Hague (534,135). Language: Dutch; religion: Christi (1947 est., Dutch Reformed church 40%, Roman Catho 40%). Ruler: Queen Wilhelmina; prime minister: Dr. L. J. Beel.

**History.**—The changed economic conditions, arising out the practical disappearance of Germany as Holland's seco most important customer and main industrial supplier, ma themselves severely felt during 1947. Negotiations with t military authorities of the U.S.-British zone of occupation, which Belgium also took part, failed to produce the desir diversion of shipping traffic from Hamburg and Bremen Rotterdam and Antwerp. These conditions further strengthen the already existing economic collaboration between Hollar and Belgium, and the year saw the practical fulfilment of mo of the provisions of the Benelux agreement, the final aim which was full customs union between Holland, Belgium ar Luxembourg.

[The Linggadjati agreement with the new Republic of In- iesia, granting *de facto* recognition to the republic, was ied on March 25, but failed to bring about the expected icable settlement between Holland and its most important mer colony. Adopted as a compromise between parties who l not given up certain fundamental differences in their view- nts, it brought difficulties of interpretation as soon as it ie to the practical execution of the rather vaguely worded eral principles. Negotiations broke down on July 17, and Dutch, declaring themselves responsible *de jure* for law l security, then launched a military operation against the ublic which gave rise to a complaint to the United Nations urity council by Australia and India. The council passed a se-fire resolution on Aug. 1 and a vote on Aug. 25 for an nediate investigation by a consular commission and for the itution of a Three Power committee to bring the parties ether again in renewed negotiations. (*See* NETHERLANDS DIES.)

)n Oct. 15 a bill was passed placing the Netherlands king- n under the temporary regency of the heiress to the throne, ncess Juliana, to afford Queen Wilhelmina (*q.v.*) the oppor- ity of a much needed rest from state affairs. The queen umed her duties on Dec. 1. (F. H. Aw.)

**ducation.**—In 1946: secondary schools (day) 291, pupils 84,135, ening) 128, pupils 13,573; schools for mentally or physically de- ive children 171, pupils 20,392; training colleges for teachers 86, lents 5,748. In 1945: infant schools 1,963, pupils 209,726; elemen- schools 7,845, pupils 1,311,798; technical and domestic science ools 672, pupils 154,523; agricultural training schools 192, students 351. Universities, 1947 (including the *hogescholen*) 10, students 327.

**inance.**—Draft budget 1948: ordinary services, estimated, revenue, 38,200,000 guilders; expenditure 2,378,100,000 guilders; extraordi- y services, estimated, revenue 2,841,900,000; expenditure 3,909,700,- guilders. National debt (Jan. 1, 1947) 17,166,926 guilders (nomi- sum); bank note circulation (Aug. 1947) 2,781,000,000 guilders; l reserve (Aug. 1947) 502,105,000 guilders. Exchange rate (July 7) 1 guilder = 37.75 U.S. cents.

**rade and Communication.**—Foreign trade: imports (1946) 2,145,054,000 ders, (Jan.–June 1947) 1,036,240,000 guilders; exports (1946) 784,- ,000 guilders (Jan.–June 1947) 740,468,000 guilders. Communications transport: (1947) roads suitable for motor traffic 8,092 mi.; railways n to traffic 1,784 mi.; navigable waterways (1946) 4,405 mi.; air- s, distance flown by civilian airways (Royal Dutch Airlines K.L.M. 6) 11,185,149 mi., (Jan.–June 1947) 6,875,000 mi. Shipping: total nber of ships (Jan. 1947) 812; tonnage 1,693,884; new ships built 46) 44; tonnage 132,971. Ships entered (1946) 6,468; tonnage 251,799; liners cleared 6,185; tonnage 13,014,904. Road traffic (April 7), vehicles licensed: civilian cars 64,400, trucks 57,300, vans 3,300, es 3,300, motorcycles 77,200. Radio sets (Jan. 1947) 697,279; radio tribution connections (Oct. 1946) 458,995.

**Agricultural and Mineral Production.**—Agricultural exports (1946) 385,- ),000 guilders; (Jan.–June 1947) 293,500,000 guilders. Industrial ex- ts (1946) 401,900,000 guilders; (Jan.–June 1947) 448,800,000 lders. Production (harvest 1946, revised figures) in short tons: wheat ,288; rye 502,400; barley 194,310; oats 468,132; pulse 87,555; rape d 5,457; flax, rippled 61,545; linseed 8,795; potatoes 4,742,999. Pre- inary estimates for harvest 1947: wheat and rye 879,000; other grain ps 672,000. Mineral production in short tons (1946): coal 9,141,500; t 191,417; cement 443,700; bricks (number) 544,100,000. Figures for iron and ferro alloys and zinc were not available; in 1938 these re respectively 304,260 and 22,550 short tons. (*See* also CURAÇAO; RINAM.)

**etherlands Colonial Empire:** *see* CURAÇAO; NETHER- NDS INDIES; SURINAM.

**etherlands Indies.** The Netherlands Indies stretch 3,000 mi. from east to west and 00 mi. from north to south, between 6° N. and 11° S. lati- de, and from 95° to 141° E. longitude. They include the ands of Sumatra, Java, the Celebes and Borneo (whose north- stern part is under British rule), and many smaller islands, to- ther with the western half of New Guinea. Area: 735,000 mi.; pop. (est. 1942) 72,000,000, all but 2.6% of them being digenous (Java 40,000,000, Sumatra 8,000,000, the Celebes 00,000, Borneo 2,500,000). Capital: Batavia (pop. 1930, 5,184). Languages: Malay is to a certain extent a language intercommunication between different population groups eaking 25 main languages and 250 dialects; Dutch is increasingly used. Religion: Moslem (90%), Christian (*c.* 2,500,000) and Hindu (*c.* 1,000,000). Lieutenant governor general: Dr. Hubertus Johannes van Mook. Indonesian Republic: president, Achmed Soekarno; prime minister: Sutan Sjahrir.

TWO MACHINE GUNNERS captured during the fighting in and about Bandoeng, West Java, in Aug. 1947

**History.**—The year 1947 was characterized by successes in implementing the 1946 Linggadjati agreement for the formation of a United States of Indonesia, to come into force in 1949, in the eastern part of the archipelago and in Borneo, against its partial failure in the territories of Java and Sumatra. East Indonesia, having formed an autonomous state of that name toward the end of 1946, and being recognized as such by the Netherlands, applied its energies to the completion of its internal political organization, a president and parliament being duly elected, and to the rehabilitation of its shattered economy. Similar developments in Borneo brought early results, in particular through the initiative of the young sultan of Pontianak in West Borneo, Hamid II, answered by a federation of his equals in the eastern half of the island. Co-operation with Dutch administrative and economic experts went smoothly, and provided tangible proofs that the Linggadjati scheme of reforms—which also forecast co-operation with Holland in a Netherlands-Indonesian union—presented a workable basis for the future.

In Java, however, the attitude of the Indonesian republic remained doubtful. The Linggadjati agreement, ratified by the Dutch parliament in Dec. 1946, went slowly through a ratification procedure at the capital Djokjakarta, and the document was at last signed formally by the republican delegates, together with the Dutch commissioners-general, in March. It was clear, however, that fulfilment of the terms of the agreement and a cessation of lawlessness and terror would be more difficult to accomplish. On May 27 the commissioners-general submitted a memorandum to the republic which summarized a joint Dutch-Indonesian program for financial and economic reconstruction on which agreement had been reached by the delegations, together with a proposal to bring about its fulfilment against eventual extremist opposition; the latter project aimed at the creation of a joint Dutch-Indonesian *gendarmerie* or armed police force, which would have to crush internal anarchy. On this proposal, contacts with Jokjakarta, the republican headquarters in Java, ceased forthwith, and the hitherto co-operative republican cabinet headed by Sutan Sjahrir had to resign. The U.S. offer of mediation was rejected by the republic, and both sides prepared for a showdown.

On July 27 Dutch forces sallied forth from their perimeters at Batavia, Bandoeng, Semarang and Soerabaja on Java, and Palembang, Medan and Padang on Sumatra. Meeting little organized opposition, they quickly occupied the western and eastern parts of Java, as well as wide areas in south and east Sumatra; troops were then concentrated for a sweep over the central part of Java, and the republic, confined to this part of its former territory and out of touch with Sumatra, seemed to have entered on its last days.

Late in July, however, the United Nations Security council intervened in the conflict, which was interpreted as endangering world peace, and on Aug. 1 it came forward with a resolution calling on both sides to end hostilities. Lengthy debates were held on the situation in the Indies; these discussions threw into relief the international political implications of conflict in a country of Indonesia's strategic importance. Finally the Security council asked for information on the facts of the case from consuls of various countries accredited in Batavia, who were commissioned to submit a joint report. It offered to mediate between the parties and established a commission of three members (representing Belgium, Australia and the U.S.); this commission would have to contact the Netherlands authorities in Batavia and the republican leaders in Jokjakarta in order to bring about an end to the political deadlock; it arrived in the Indies on Oct. 26. After some local investigations, the commission prepared the way for renewed discussions between Dutch authorities and a delegation from the republic. In order to provide a neutral meeting place, the U.S. ship "Renville" was sent to Batavia harbour, and the first talks under United Nations' patronage took place on board on Dec. 8.

**Trade and Communication.**—Production capacity in 1947 was reduced to 55% of the 1939 level; exports in 1947 were estimated at $105,000,000, as against $351,000,000 in 1940, and imports would be much greater, mainly for reconstruction purposes. Communications: it was expected that the ocean-going merchant fleet would be back at the 1939 level by the end of the year, but inter-insular shipping would need more time for recovery (1939: ocean-going and inter-insular shipping, 214 ships of 1,007,000 gross tonnage); losses in World War II and after in the railroad and tramway system amounted to $123,000,000, and the cost of reconstruction (to take five years) was estimated at $66,000,000; cost of reconstruction of postal, telegraph and telephone systems (five to ten years) was estimated at $15,000,000.

**Agriculture and Mineral Production.**—In view of the country's mainly agricultural character, the program of postwar reconstruction was first concerned with an increased agricultural output. War losses had been estimated at $528,000,000, and of the western-owned plantations at $253,000,000 (rehabilitation to cost $330,000,000 there). Indonesian grain production (rice and maize) was estimated at 5,060,000 short tons, 72% of the 1940 figure. In mineral production war losses in the oil industry and other branches of the mining industry amounted to $217,000,000; the tin industry made a rapid recovery, production for the first four months of 1947 being 5,480 short tons of ore and 1,650 short tons of pure tin.

**Industry.**—Gross production before World War II was estimated at a value of $211,000,000 annually. Total war losses were estimated at $160,000,000 and rehabilitation costs at $113,000,000. In 1947 industrial enterprises in the areas returned to Dutch administration worked at one-third of 1939 capacity. (W. G. P.)

**Neutrons:** *see* ATOMIC ENERGY; PHYSICS.

## Nevada.

Nevada was admitted to the union of states on Oct. 31, 1864, as the "Battle-born state"; it is best known, however, as the "Silver state." Land area, 109,802 sq.mi.; water area, 738 sq.mi.; it ranks sixth in size among the states. Population was 135,414 (est. 1946, U.S. census bureau) a decrease of 24,376 from the estimated wartime peak. The capital is Carson City (2,478). Reno (21,317), Las Vegas (8,422), Sparks (5,318), Ely (4,140) and Elko (4,094) are the largest cities.

**History.**—The 1947 legislature passed a greater number of laws than any previous session; included in the enactments were greatly increased appropriations for Nevada's schools, increased salaries for officials, deputies and stenographers and a state retirement act. Gambling taxes were doubled; a cigarette measure was enacted; and measures were passed to increase the r enue from civil actions, liquor and marriages. Laws to allow closed shop died in committee, but a state retirement act enacted. Legislation passed to aid veterans was negligible, the appropriation for the Nevada national guard was eliminat

Revenue from Nevada's gambling law for the fiscal year J 1, 1947, showed that at least $30,988,497 passed over gambling tables, compared with $21,575,472 in the previous cal year. As of July 1, 1947, the state's new gambling tax 2% on all gross revenue went into effect and was estimated net Nevada more than $1,000,000 per year in receipts.

On Jan. 1, 1948, state officers were: governor, Vail M. P man; lieutenant governor, Clifford Jones; secretary of st John Koontz; state controller, J. P. Donovan; state treasu Dan W. Franks; superintendent of public instruction, Mild Bray; attorney general, Alan H. Bible; chief justice of supreme court, Edgar Eather.

**Education.**—On Jan. 1, 1948, Nevada had 197 elementary schools a total enrolment of 20,378; teachers numbered 699; high schools tota 41 with enrolment of 6,236, staffed by 290. Enrolment was 1,802 in kindergartens with 21 teachers. The total school enrolment was 28, as compared with 23,114 pupils on Jan. 1, 1946.

The 1947 legislature appropriated sufficient funds to pay teacher salary minimum of $2,400 yearly, graduating to a top minimum $4,080 for elementary and high school teachers with six years of col education and 20 years of teaching experience.

**Social Insurance and Assistance, Public Welfare and Related Programs** The amount spent for social security was $1,104,113.83 for the fis year ending June 30, 1947. Aid to the deaf, dumb, and blind expense $10,750. Nevada spent $2,047,441.89 for unemployment security be fits, an increase of nearly $400,000 over the 1946 total. On Jan. 1, 19 the state prison had 263 men and 3 women; total expenditures for fiscal year ending June 30, 1947, were $164,840.73. The state indust home had 26 boys and 5 girls on parole; support of the school for fiscal year 1947 was $28,990.99. The state hospital for mental dise had 342 inmates on Jan. 1, 1948; expenditures for the 1947 fiscal y were $208,578.73. The orphans' home had 82 inmates on Jan. 1, 19 and cost to the state for the 1947 fiscal year was $58,490.38.

**Communications.**—During 1947 highway mileage construction was 98, mi. of oil-surfaced highway and 40,949 mi. of gravel-surfaced highw Expenditures for the fiscal year which ended on June 30, 1947, w $7,689,523.78, an increase of $4,971,439.39 over the 1944–1945 fis year.

Railroad mileage was 1,783.40 mi. and railroad sidings totalled 1,07 mi. making a total of 2,860.11 mi. as of Jan. 1, 1948.

Airways and airports totalled 55 on Jan. 1, 1948, and consisted o army, 1 navy, 5 Civil Aeronautics administration; 4 state, 8 county, municipal, 17 commercial and 1 private. The office of the Civil Ae nautics administration recommended that 24 new airports, 21 exist airports and 3 seaplane bases be developed under the terms of the F eral Airport act during the fiscal years 1948–51.

During 1947 the Public Service commission granted a certificate public convenience and necessity to Bonanza Air Lines for the transp tation of passengers and express by aeroplane between Reno, Nev., Tonopah to Las Vegas, Nev. Four round-trip schedules per week w given over this route.

**Banking and Finance.**—On Jan. 1, 1948, there were 8 main office ba with 17 branches, a total of 25 banks serving Nevada; the total resour of these banks were $175,512,422.33; deposits were $166,556,924.89. First National Bank of Nevada had ten branches with total deposits $116,120,694.14 and resources of $122,592,903.19. The Nevada Bank Commerce, Reno, Nev., had 4 branches and total deposits of $14,7 898.27 and resources of $15,318,580.91. The Ely National bank w one branch at McGill had deposits of $6,447,865.44 and resources $6,856,836.63. The Bank of Nevada at Las Vegas with one branch Boulder City had deposits of $9,069,180.97 and resources of $9,6 594.92. The Security National bank of Reno with one branch at Bab had deposits of $8,525,647.38 and resources of $8,733,190.97. The F National Bank of Ely had deposits of $4,750,470.19 and resources $5,063,989.93. The Farmer's Bank of Carson Valley, Inc., Mind Nevada, had deposits of $4,003,050.50 and resources of $4,224,311. The First National Bank of Lovelock had deposits of $2,937,118.00 a resources of $3,084,014.42. Total resources of Nevada banks increa $5,157,773.34 during 1947, showing substantial growth during the ye

Of state funds on July 1, 1947, cash on hand was $5,607,592.19; t cash received, including cash balance on July 1, 1946, of $5,364,077. was $18,033,804.62; cash disbursements during the fiscal year w $12,426,212.43. There was no state debt on Jan. 1, 1948. Total securit held by the state treasury on Jan. 1, 1948, totalled $23,351,000. vada's Post-War Reserve fund totalled $1,553,000 in U.S. bonds $199,409.87 in cash. Actual cash balance in the state treasury on Jan. 1948, was $4,128,731.71.

**Agriculture.**—The 1947 farm and ranch production was about the sa

*Leading Agricultural Products of Nevada, 1946 and 1945*

| Crop | 1946 | 1945 |
|---|---|---|
| Barley, bu. | 680,000 | 640, |
| Potatoes, bu. | 672,000 | 760, |
| Wheat, bu. | 545,000 | 485, |
| Hay, tons | 666,000 | 613, |
| Oats, bu. | 308,000 | 351, |
| Corn, bu. | 70,000 | 64, |

that of 1945, according to estimates of the U.S. department of iculture; both acreage and yield varied little from the 1945 farm sus figures. The 1945 final figures gave the number of cattle and calves Nevada as 479,315, sheep and lambs 533,915, horses 38,338, mules ɔ8, goats 16,185, and chickens 284,627.

Cows milked during 1945 were 14,553 and milk produced was 10,524,- gal.; wool produced was 4,528,763 lb.

**ineral Production.**—The quantity and value of zinc produced in Nevada 1946 attained the highest levels in the history of the state, surpassing previous record of 1945 by 6% in quantity and 12% in value. ite Pine county (Ely) produced 62% of the state total value of the principal metals, gold, silver, copper, lead and zinc. Lincoln county oche) ranked second with 20% of the total value, leading the state the production of lead, silver and zinc. Scarcity of experienced miners dicapped production in 1947 in spite of higher metal prices. At the of the year there were only 4,067 men employed in Nevada mines as npared with 7,885 in 1942.

Production from nonmetallic mines was estimated at 3,800 tons. Protion of tungsten, mercury and manganese, however, was seriously afed by increased mining costs. (E. C. D. M.)

**ew Brunswick.** New Brunswick, one of the three maritime provinces of Canada, entered the ion in 1867. Area, 27,985 sq.mi., of which 512 sq.mi. are sh-water lakes; pop. (1941 census) 457,401 (1947 est.) 491,-o. Cities (1941) are Saint John (51,741), Moncton (22,763), edericton, capital (10,062).

**History.**—Liberal premier John B. McNair continued in ice. The most serious drought after 1934 curtailed hydroctric power. Cloud banks over the Nepisiguit watershed were ombed" with dry ice crystals to induce rainfall. The government reorganized the New Brunswick Planning board (defunct ter 1942) and gave it power to beautify the provincial counside and bring planning to villages and towns.

**Education.**—Enrolment in educational institutions for the 1944–45 school ır was 103,237. To promote education, the province increased teachers' nimum salaries to $1,100, established a teachers' college and gave addinal financial aid to school districts.

**Transportation.**—The "D. J. Purdy" was declared obsolete and for the st time in 130 years there was no river boat on the Saint John river. e Cape Tormentine trans-Northumberland Strait ferry terminal was exnded and improved to handle the new "M. S. Abegweit."

**Agriculture.**—Apple yield in 1947 was 330,000 bu. A federal horticulal experimental station was begun at Washademoak lake to encourage phases of orcharding. Livestock (cattle, horses, swine, sheep) producn in 1946 dropped to 445,000 (1944· 494,000). After 13 years of search, the Fredericton experimental farm announced a blight-resistant tato which it was estimated would save maritime farmers $1,000,000 year.

**Industry and Resources.**—Steps were taken to speed oil and gas flow at oney creek, which produced 390,000 bbl. of oil and 650,000,000 cu.ft. gas in 1946. The 1947 cut of hardwoods and softwoods ran to 270,-o,000 bd.ft., 20% higher than in 1946. The 1947 live mink show was e largest in New Brunswick's history, and featured new colour phases. periments with draggers for fishing proved successful and the reconruction department announced the number would be increased. Mineral oduction in 1946 amounted to $4,409,064.

**Production.**—Gross value of 1945 production was $254,926,964. Net lue was $133,984,112, which was 2.2% of Canada's total. Per capita oduction was $286.29. (C. Cy.)

**ew Caledonia:** *see* FRENCH OVERSEAS TERRITORIES.

**ewfoundland and Labrador.** A British colony of North America, with spended constitution. Area: Newfoundland 42,734 sq.mi.; abrador 110,000 sq.mi.; pop. Newfoundland 312,899 (1945); abrador 4,780 (1938). Capital: St. John's (pop. 1947, 57,849). anguage: English; religion (1945 census): Roman Catholic 5,952; Church of England 100,873; United Church 79,768; alvation Army 22,543. Governor: Sir Gordon Macdonald.

**History.**—In May a delegation of the national convention elected in 1946 to draw up recommendations on Newfoundnd's future form of government) visited Great Britain for dissions with the dominions office. The discussions hinged on e question of the future financial and fiscal relations between e two countries should Newfoundland opt for self-government. ritain made it clear that it was not prepared in this case to ntinue financial support, and the British government considred it impossible to guarantee to maintain its purchases, since ewfoundland was in the dollar area. Some members of the visiting delegation expressed their dissatisfaction with their reception in London. When a similar delegation visited Ottawa in June to find out on what basis Newfoundland might enter the Canadian confederation, the Canadian government provided all the information desired, at the same time maintaining an impartial attitude. The delegation returned to Newfoundland on Sept. 30 with a report containing information essential for the assessment of the position. In November the text of the proposed arrangements for Newfoundland's entry was sent to the governor of Newfoundland by the Canadian government; in his accompanying letter the Canadian prime minister emphasized that the decision rested with the people of Newfoundland. There seemed to be no clear-cut trend of opinion among Newfoundlanders at home: antipathy to confederation was less strong than formerly, but a movement known as the Responsible Government league received the support of some prominent businessmen and members of the legal profession. (J. RA.)

**Education.**—In 1946: schools 1,198; scholars 70,460; teachers 2,231 (including 307 uncertificated teachers).

**Banking and Finance.**—Revenue (est. 1947–48, in Canadian dollars) $35,702,500; expenditure (est. 1947–48) $37,574,300; public debt (1947) $73,996,000. Exchange rate, 1947: Canadian and U.S. dollar at par.

**Trade and Communication.**—Overseas trade, 1944–45 (in Canadian dollars): imports $65,898,707; exports (incl. re-exports) $65,588,498; reexports $2,297,495. Communication: roads (1946) main and secondary 2,200 mi.; railways 747 mi.; motor vehicles licensed (1945) 6,903.

**Mineral Production and Fisheries.**—Exports (1946–47, in short tons): fluorspar 31,383; iron ore 1,395,354; limestone 365,478; copper 19,646; zinc 104,809; newsprint 345,113. Value of fish exported (1946–47, in Canadian dollars): dried codfish $15,615,916; fresh and frozen fillets $4,516,804; herrings $4,908,267.

**New Guinea:** *see* NETHERLANDS INDIES; PACIFIC ISLANDS UNDER TRUSTEESHIP; TRUSTEE TERRITORIES.

**New Hampshire.** One of the New England states of the United States and one of the original group of 13, popularly known as the "Granite state"; area, 9,304 sq.mi., including 280 sq.mi. of water. Population (1940) was 491,524, of which 57.6% was urban and 42.4% rural. Estimated population, July 1, 1947, excluding armed forces overseas, was 547,000. In 1940 there were 490,989 whites, including 422,693 native-born and 68,296 foreign-born. Capital, Concord, with estimated population (1943) of 27,495. Other cities: Manchester (78,436); Nashua (33,914); Portsmouth (20,530); Berlin (16,480); and Dover (16,393), as of 1943.

**History.**—The general court convened on Jan. 1 and was adjourned on July 1. An unusually large number of important measures were passed, including the following: an act permitting women to serve on juries on a voluntary basis; an act creating an advisory fiscal officer, to aid the legislature in preparing budgets and framing appropriation bills; an act creating a state housing authority backed by $7,000,000 of state credit to assist municipal housing authorities in constructing low rent public housing for veterans of World War II. The Willey labour act was passed regulating labour union activities. Under its provisions employees may bargain for a closed or a union shop only when two-thirds of those voting and 50% of all employees vote by secret ballot in favour of the closed shop. Under the terms of an equal work, equal pay law, discrimination in wages because of sex was prohibited. The legislature authorized the convening of a constitutional convention in May 1948.

State officers in 1947 were: governor, Charles M. Dale; secretary of state, Enoch D. Fuller; state treasurer, F. Gordon Kimball; commissary general and adjutant general, Charles F. Bowen; attorney general, Ernest R. d'Amours; commissioner of education, Edgar Fuller.

**Education.**—In 1946–47 there were 154 one-room public elementary schools with a total of 3,540 pupils and 154 teachers; 381 classified public elementary schools with 45,296 pupils and 1,713 teachers; and 82 public high schools with an enrolment of 18,587, and 926 teachers. Total estimated expenditures for public elementary schools and high schools during the year 1946–47 were $8,750,000. The general court in its 1947 session passed an act increasing state aid to local municipalities for primary and secondary education from $400,000 to $2,000,000 annually. In 1940 private and parochial elementary and secondary schools had an enrolment of 25,007.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—In June 1947 there were 2,517 cases on general relief with an expenditure of $90,151, as compared with 2,315 cases in June 1946 with an outlay of $72,272. Expenditures for public assistance under the Social Security act were $374,401, as compared with $314,198 for June 1946. The total for June 1947 included $268,466 for old-age assistance, $93,005 for dependent children and $12,930 for aid to needy blind. During the calendar year 1946, net contributions and interest to the amount of $3,700,000 became available for unemployment compensation, while $791,000 was disbursed in benefits to the unemployed. A total of 16,278 former service men and women received benefits of more than $3,300,000, a large increase over the number of beneficiaries and amounts paid in 1946.

On Jan. 1, 1944, there were 207 persons in prison and in reformatories in New Hampshire. The net appropriation for the state prison at Concord for the fiscal year ending June 30, 1947, was $150,113; and for the Industrial School for Committed Minors at Manchester, $108,313.

**Communications.**—At the end of 1944 there were 12,502 mi. of rural roads in New Hampshire, including highways under state, local and federal control. Disbursements from state highway funds for the calendar year 1945 amounted to $6,935,000. In 1945 there were 951 mi. of steam railways in the state. At the close of the same year there were 29,162 business and 75,868 residential telephones in operation.

**Banking and Finance.**—As of June 30, 1947, there were in New Hampshire 51 national banks with deposits of $171,745,000 and resources of $191,264,000, as compared with 51 banks with deposits and resources, respectively, on June 30, 1946, of $186,678,000 and $204,499,000. Fifty-six state-chartered banks reported deposits of $350,113,398 and resources of $390,743,788, as compared with 55 institutions reporting deposits and resources, respectively, of $333,919,000 and $371,790,000, on June 30, 1946. There were 25 state-chartered building and loan associations with resources of $19,937,724, as compared with $17,800,000 for the previous year. State-chartered savings banks and savings departments of trust companies reported deposits of $335,305,661.84 as of June 30, 1947, an increase of $17,379,932.69 over the total for June 30, 1946, and representing an all-time high record for savings deposits in the state. The Laconia Federal Savings and Loan association reported assets of $1,901,806 and members' share accounts of $1,381,311 on June 30, 1947, while the Manchester Federal Savings and Loan association reported assets of $13,535,029 and members' share accounts of $11,861,107, as of Dec. 31, 1946. Time deposits in savings departments of national banks within the state amounted to $42,924,000.

Cash receipts of the state treasury department for the fiscal year ending June 30, 1947, were $42,036,085.31; cash disbursements $41,660,618.94; cash balance, June 30, 1947, was $5,939,682.05. Cash balance July 1, 1946, was $5,564,215.68. Gross fixed bond and note debt, June 30, 1947, $8,285,000.00; net bonded debt, $4,673,768.43.

**Agriculture.**—In 1945 there were 18,786 farms in New Hampshire with a total acreage of 2,017,049 and of an average size of 107.4 ac. Estimated acreage from which crops were harvested or hay cut or which was planted in orchards amounted to 435,602. The total value of farm lands and buildings in 1945 was approximately $80,394,869. Estimates by the U.S. department of agriculture for 1946 reported cash receipts from farm marketings as $50,231,000, including such major items as chickens and eggs, $20,211,000; milk, $13,859,000; cattle and calves, $2,869,000; and harvested crops, $9,101,000. Government payments amounted to $1,817,000, in addition to which an estimated valuation of $7,350,000 was placed upon products used by farm households. It was estimated that cash receipts from farm marketings in 1947 would exceed those for 1946 by approximately 20%.

The estimated apple crop for 1947 was 838,000 bu., a little less than twice as large as that for 1946 and about 11% above the 10-year level for 1936–45. More favourable weather conditions resulted in a large increase over 1946 in the production of maple syrup. Severe drought in the late summer and autumn adversely affected certain crops, and a government estimate placed the potato crop at 893,000 bu., as compared with the 1,250,000 bu. produced in 1946.

Lumber production in 1945 amounted to 290,000,000 bd.ft. as compared with 356,000,000 bd.ft. in 1944. Severe forest fires in Oct. 1947 burned an estimated 20,000,000 ac. with losses running to almost $1,000,000.

**Manufacturing.**—State authorities estimated the value of products manufactured in New Hampshire in 1945 to have been at least $525,000,000. To this total textiles contributed about 28%, leather and leather products 25%, and paper and pulp 10%. Their contribution (63% of the total) was, however, relatively less than the 75% of the total which the same industries contributed in 1939. The number of persons employed in manufacturing in March 1946 was estimated at 93,800, as compared with the 1943 peak of 102,000, and gross wages and salaries paid in the same year were placed at $171,800,000.

In 1945 New Hampshire enjoyed an estimated business of $110,000,000 from recreational enterprises, which thus continued to rank next to manufacturing and ahead of agriculture as a source of income. Assessed value of recreational property was $49,713,788.

*Leading Agricultural Products of New Hampshire, 1947 and 1946*

| Crop | 1947 (est.) | 1946 |
|---|---|---|
| Corn, bu. | 528,000 | 533,000 |
| Oats, bu. | 224,000 | 259,000 |
| Hay, tons | 473,000 | 443,000 |
| Potatoes, bu. | 893,000 | 1,250,000 |
| Apples, bu. (commercial) | 838,000 | 456,000 |
| Maple syrup, gal. | 51,000 | 36,000 |
| Maple sugar, lb. | 10,000 | 12,000 |

**Mineral Production.**—Principal mineral resources were feldspar, m building stone (chiefly granite), brick clays, sand and gravel. In 1 New Hampshire ranked second among the states in the production mica. With the ending of the war there was a decline in the value of state's mineral production, the total for 1945 being but $801,000, compared with $1,166,000 for 1944. (W. E. Ss.

**New Hebrides:** *see* French Overseas Territories.

## New Jersey.

The third state of the U.S. to enter the uni New Jersey is situated on the middle Atlan coast between New York and Philadelphia. Its 1940 populati of 4,160,165 ranked it ninth among the states. The state bure of vital statistics estimated its population on July 1, 1947, 4,435,000, exclusive of those in the armed forces overseas. area is 7,836 sq.mi., including 314 sq.mi. of water. Capit Trenton (1940: 124,697). The largest city is Newark (42 760); second is Jersey City (301,173).

**History.**—The outstanding event in New Jersey in 1947 w the adoption of a new constitution to replace the 1844 char which had been amended on only four occasions in the 103-ye interval. Constitutional revision was the main goal of Govern Alfred E. Driscoll's first year in office.

The new constitution provides for a more liberal Bill Rights; better defined legislative power; a stronger, more sponsible executive; a simple, unified system of courts; sounder basis of taxation and finance; and a simplified, le expensive method of amendment. The following provisions m very briefly be noted: no person may be limited in his privileg because of race, colour, sex, religious belief, national origin ancestry; labour's right to organize and bargain collectively guaranteed to those in private employment; the legislature m provide for absentee voting by members of the armed forces peacetime; and it may provide for a verdict by not less th five-sixths of a jury in civil cases.

The term of assemblymen is increased from one to two yea and of senators from two to four, and the legislators may their own salaries; the legislature may not elect any admin trative, judicial or executive officer except the state audito and home rule for municipalities is encouraged. The governo term is increased from three to four years, and he may succe himself once; he is elected in odd-numbered years; and he given effective supervision over all executive department hea (except the auditor). The parole system is given constitution recognition, and civil service has a constitutional status.

The old "true value" of assessment is dropped; existing t exemptions are given constitutional status; transportation and from any school may be authorized within reasonable limi by the legislature; slum clearance can receive tax relief; and new limitation is placed on the state debt.

**Education.**—New Jersey had 1,594 elementary schools in 1947, 2 junior and senior high schools, 21 trade and industrial schools a numerous parochial and private institutions on the primary, secondar college and university levels, among the latter Princeton universit Stevens Institute of Technology and Seton Hall. Rutgers universit a state university since 1946, continued its rapid expansion.

Increased enrolments continued, with all institutions attempting improve the makeshift accommodations which featured the first postw year. New Jersey teachers enjoyed an average increase of $400 in salar but teacher shortage was still a problem.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—The average monthly grant for old-age assistance in New Jersey, as June 30, 1947, was $40.76 (an increase of $7.46) and for depende children $78.49 (an increase of $13.34). Grants to the blind average $42.07, up $6.77, and general relief assistance averaged $49.29 per cas up $11.20.

**Banking and Finance.**—Deposits in 154 state banks, trust companies a savings banks totalled $2,621,195,000 on June 30, 1947, a drop of mo than $92,000,000 from June 30, 1946, mostly resulting from U.S. go ernment withdrawals since all other deposits increased more than $101 000,000. Government deposits generally dropped $194,282,000 to $116 906,000 in the same period. Of the 132 commercial banks, 79, wit 75.6% of total deposits, were members of the federal reserve syster Government securities made up 53.8% of the total assets ($2,843,923,00 of all the banks, compared with 60.5% the year before, while ca represented 13.6% of the total as compared with 12.9%. There was further reduction in the total real estate owned of $278,000, a drop

.2% from June 30, 1946. As of Jan. 1, 1948, the state's bonded debt ood at $81,080,000. Sinking fund assets of $23,393,246 left a net debt $57,686,755.

**Agriculture.**—About 2,000,000 ac., or 40% of New Jersey's land area, devoted to agriculture. New Jersey ranked high in potato production, th 13,140,000 bu. in 1947, a slight drop. Peaches increased to 1,617,- o bu., but the apple crop fell to 1,935,000 bu. Processed asparagus ok 21,450 tons of a crop which produced 1,144,000 crates additional r market. Tomato canning is an important industry; 292,000 tons went to that enterprise, with 1,925,000 bu. going to market.

An outstanding poultry state, New Jersey sent about 10,000,000 ickens to market; approximately 1,330,000,000 eggs, a great increase er the 1946 figure, were produced, and about 250 hatcheries produced ,000,000 chicks. The dairy industry ranks high with about 470,000,000 . of milk produced yearly by 156,000 milk cows of the 215,000 cattle the state.

**Manufacturing.**—The year 1947 saw relatively little labour disturbance; ere were no large-scale work stoppages. New Jersey industry continued ll speed ahead toward maximum peacetime production. The state is presented in 90% of all industries, with more than 8,000 factories and ops employing 200 different classifications of labour. There was conlerable plant expansion during the year. (S. Gn.)

## ew Mexico.

Fourth largest state in the southwestern United States, popularly known as the "Sunine state"; admitted to the union in 1912. Area 121,666 q.mi. (121,511 sq.mi. land, 155 sq.mi. water); pop. (1940) 31,818; rural 355,417; urban 176,401; native white 477,065; egro 4,672; foreign-born 15,247. On July 1, 1946, the bureau f the census estimated the population of the state at 528,997.

**History.**—The administration, legislature and congressional epresentation were Democratic in 1947. The chief officers of ne state elected in the 1946 elections were: governor, Thomas Mabry; lieutenant governor, Joe M. Montoya; secretary of tate, Mrs. M. A. Romero; auditor, E. D. Trujillo; treasurer, I. R. (Ray) Rodgers; attorney general, Clyde C. McCulloh; uperintendent of public instruction, Charles L. Rose; commisoner of public lands, John E. Miles. New legislation makes it felony to accept a bribe for altering an election ballot, proides for a survey of the state educational system and for a chool-lunch program.

**Education.**—For the school year 1945–46 there were 732 schools. The ural schools enrolled 45,760 pupils; employed 1,455 teachers, average alary $1,733.30; total expenditures were $5,326,432.86. Municipal chools enrolled 82,814, employed 2,362 teachers, average salary $2,037.50 nd total expenditures were $8,394,607.19.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—During the calendar year 1947, $392,109 was paid out for civilian unmployment benefits; for unemployed veterans, $3,051,499; and for selfmployed veterans, $1,068,951.

On June 30, 1947, $628,000 had been spent for old-age and survivors nsurance, and $5,332,995.09 for public assistance.

The penitentiary appropriation was $189,500 for 655 inmates (Sept. ); insane asylum, $696,000, 980 inmates (Nov. 15); Los Lunas Mental ospital (the new name for the School for Mental Defectives), $164,000, 8 inmates; Industrial school, $97,500, 62 inmates (November); Girls' Velfare home $105,000, 122 inmates (December).

**Communications.**—New Mexico had an estimated 63,126 mi. of roads in 947: 9,957 mi. constituted the state highway system. The state highvay department expended $15,086,178.69. Steam railway companies operated 2,526 mi. of main track (1946). There were 103 airports and pproximately 832 mi. of airways operated by three scheduled air carriers. There were about 74,300 telephones.

**Banking and Finance.**—On June 30, 1947, there were 24 national banks vith deposits of $187,897,000; loans $58,341,000; investments $84,708,000; and 22 state banks with deposits of $68,009,000; loans $20,565,000; nvestments $31,452,000. Total resources of 12 building and loan associaions in 1946 were $6,537,394,62 and of 7 federal savings and loan associations $7,250,321.89.

**Table I.**—*Leading Agricultural Products of New Mexico, 1947 and 1946*

| Crop | 1947 (est.) | 1946 |
|---|---|---|
| ame hay, tons | 510,000 | 514,000 |
| Grain sorghums, bu. | 1,488,000 | 1,127,000 |
| Winter wheat, bu. | 9,120,000 | 2,648,000 |
| Corn, bu. | 1,904,000 | 2,256,000 |
| eans, bags | 273,000 | 308,000 |
| Cotton, bales | 160,000 | 145,000 |
| Cottonseed, tons | 64,000 | 58,000 |
| orage sorghum, tons | 84,000 | 159,000 |

The total of all state receipts for the fiscal year ending June 30, 1947, vas $55,666,160.87; expenditures $53,319,432.35. The gross and net lebt were respectively $22,569,000 and $22,343,248.93.

**Agriculture.**—The total value of agricultural production in 1946 was 67,178,000 (est.); acreage harvested 1,333,000 (est.). Livestock was alued at $112,736,000, Jan. 1, 1947.

**Manufacturing.**—Manufactured products were valued at $25,123,641 in 939; an average of 3,250 employees received $2,912,993 in wages.

**Table II.**—*Principal Mineral Products of New Mexico, 1947 and 1946*

| Mineral | Value, Year ending June 30, 1947 | Value, Year ending Oct. 31, 1946 |
|---|---|---|
| Copper | $20,404,404.94 | $12,927,701 |
| Potash | 39,296,180.00 | 15,035,037 |
| Coal | 6,011,226.68 | 5,351,388 |
| Zinc | 6,928,805.14 | 2,840,124 |
| Lead | 1,270,575.59 | 214,996 |
| Silver | 335,206.14 | 172,822 |
| Gold | 109,009.97 | 77,917 |

**Mineral Production.**—Potash was New Mexico's chief mineral in 1947. For the year ending Dec. 31, 1946, 36,714,473 bbl. of oil, valued at $55,071,709.50, were produced.

A marked increase in value of mineral figures between the two 12-month periods reported was largely due to better reporting of production to the state mine inspector. The reporting year was changed to a period ending June 30. (F. D. R.)

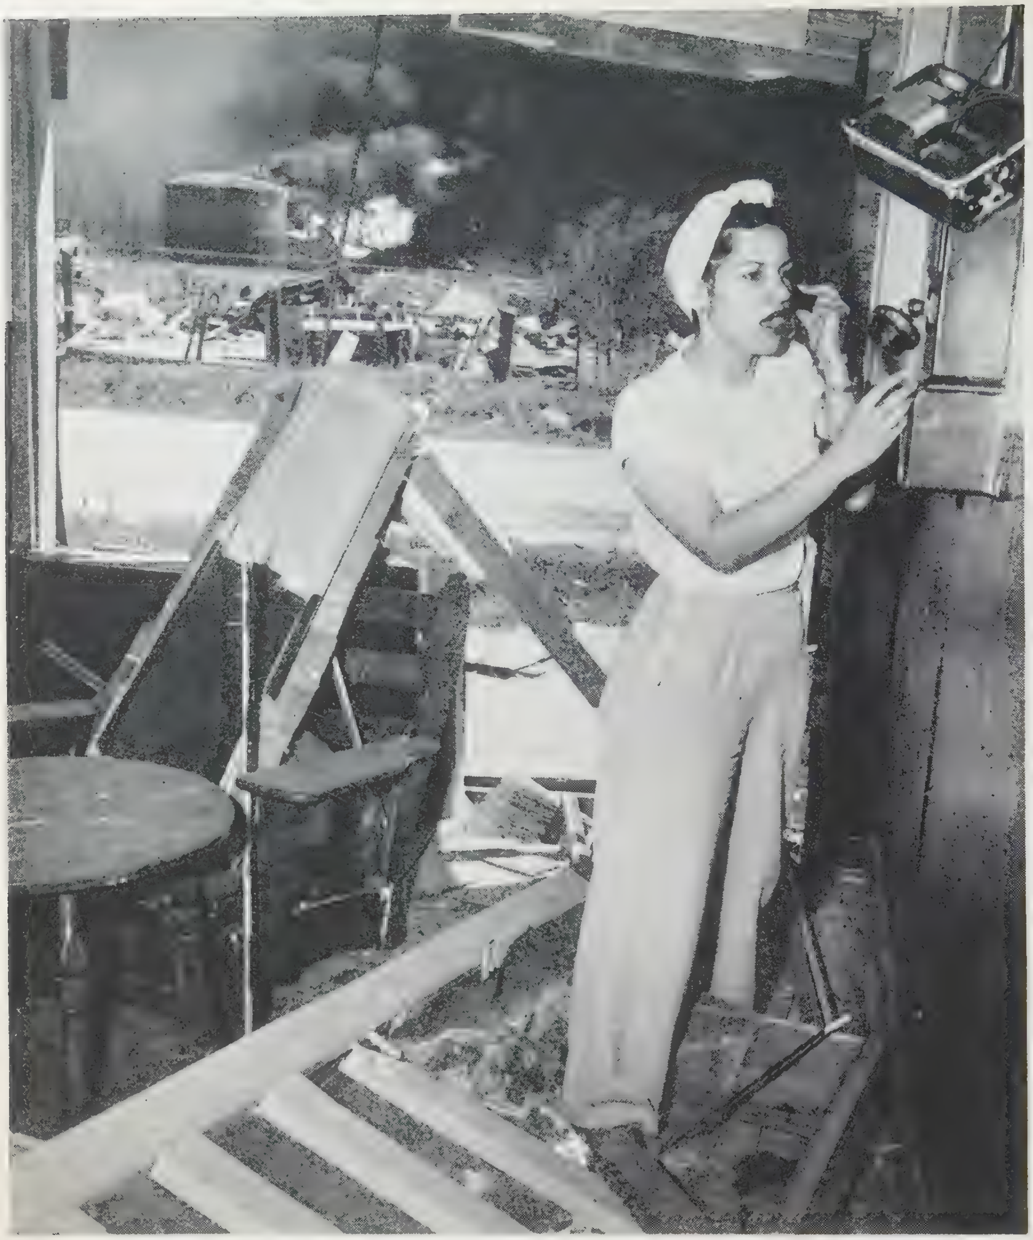
## Newspapers and Magazines.

Paper shortage, labour disputes, strikes and rising costs of production—all part of the nation-wide wave of inflation—made 1947 a difficult year for the newspapers and magazines of the United States.

In the news field, the year was relatively quiet, and there was no sign of the expected postwar spasm of sensationalism; economics, government and foreign affairs overshadowed the crime wave in the news columns. The United Press listed the "Ten Biggest News Stories of the Year" thus: (1) the high cost of living; (2) the "cold war" with Russia inside and outside the United Nations; (3) passage of the Taft-Hartley labour law and subsequent litigation; (4) the Hughes and the Meyers congressional investigations; (5) the Texas City, Tex., disaster; (6) the romance and marriage of Princess Elizabeth of England; (7) the partition of India; (8) the series of air disasters; (9) Arab-Jewish controversy over Palestine and the United Nations decision to partition that area and (10) the world series in baseball.

Labour disputes hit some leading newspapers early in the year. The 86-day strike of the American Newspaper guild against J. David Stern's *Philadelphia Record* and *Camden Courier* and *Post* (N.J.) which had started on Nov. 7, 1946, ended with the suspension of the newspapers on Feb. 1 and their later sale to the *Bulletin* company. The two Gannett newspapers of Rochester, N.Y., the *Times-Union* and *Democrat and Chronicle*, settled their strike on Feb. 8 after three months. The *Kansas City Star* and *Times* were shut down for 16 days, beginning Jan. 17, by a strike of contract carriers. During a strike that closed the *Colorado Springs Gazette-Telegraph* on Jan. 27, striking printers published a rival newspaper. The tie-up of Sherman H. Bowles's four newspapers of Springfield, Mass.—*News*, *Republican* and the two *Unions*—which began on Sept. 26, 1946, continued through the year, but the *News* resumed publication on Feb. 17, 1947, in spite of the unsettled strike. The *Asbury Park Sun* (N.Y.) was suspended and sold in February because of a printers' strike. The two newspapers of St. Petersburg, Fla., whose printers had been on strike since Nov. 20, 1945, received labour board permission in Feb. 1947 to ignore a union that would not bargain. Three newspapers of St. Louis, Mo.—*Globe-Democrat*, *Post-Dispatch* and *Star-Times*—were closed for three days by a pressmen's strike which ended April 15. The *New Bedford Standard-Times* (Mass.) in September took its labour troubles to the U.S. supreme court.

Before passage of the Taft-Hartley act in June, the International Typographical union and other unions spent $1,500,000 for advertisements in 110 newspapers to oppose the bill. At the 89th convention of the I.T.U. in Cleveland, O., on Aug. 22, Pres. Woodruff Randolph declared that his printer unions would sign no contracts with employers but would work only under "conditions of employment." Late in November the situation broke in Chicago. On Nov. 22, six Chicago newspapers com-



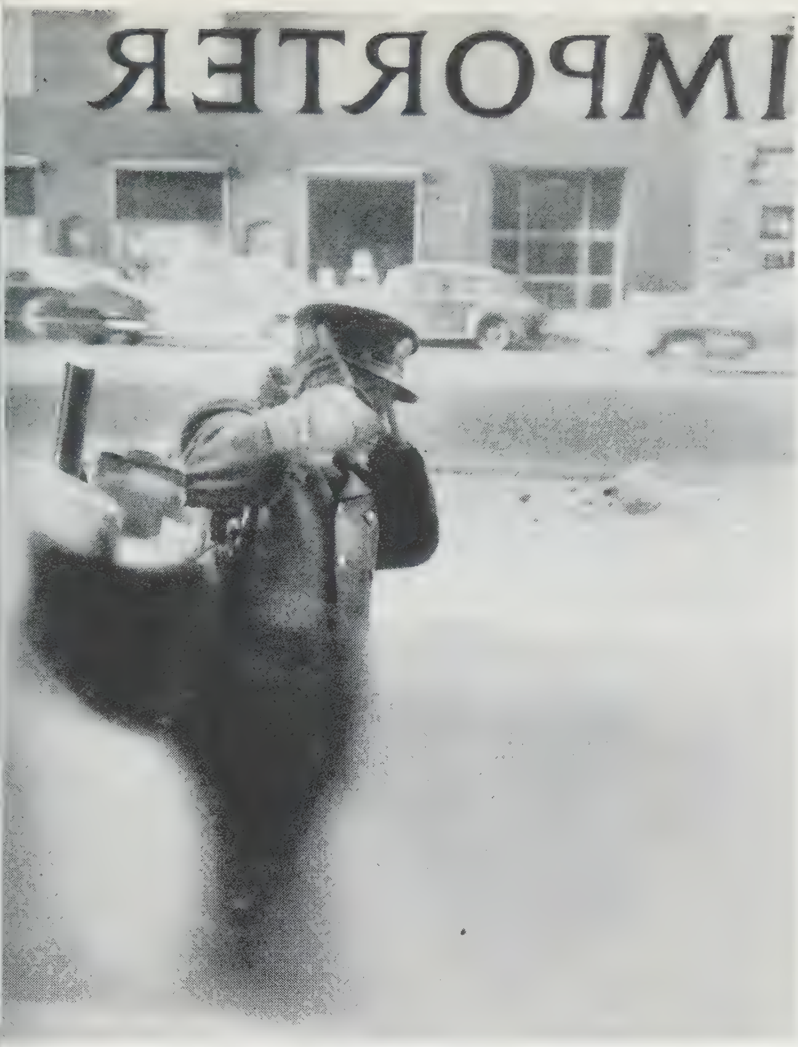
**NEWS**—Johnny Thompson of Acm Newspictures won first prize fo this dramatic picture, "Hell o Earth," taken during the Texas City disaster. Second prize winner wa Peter Marcus of the *Minneapoli Tribune* for "A Dog's Best Friend," and Jack Teehan, of Keene, N.H. won third prize for his picture, "Los and Found"

# "News Pictures of the Year" CONTEST WINNERS

These pictures were awarded first prize in the news, feature and sports categories, respectively, in the fifth annual "News Pictures of the Year" competition and exhibition, sponsored jointly by the University of Missouri School of Journalism and the *Britannica Book of the Year*. A total of 1,000 photographs were submitted in the competition.

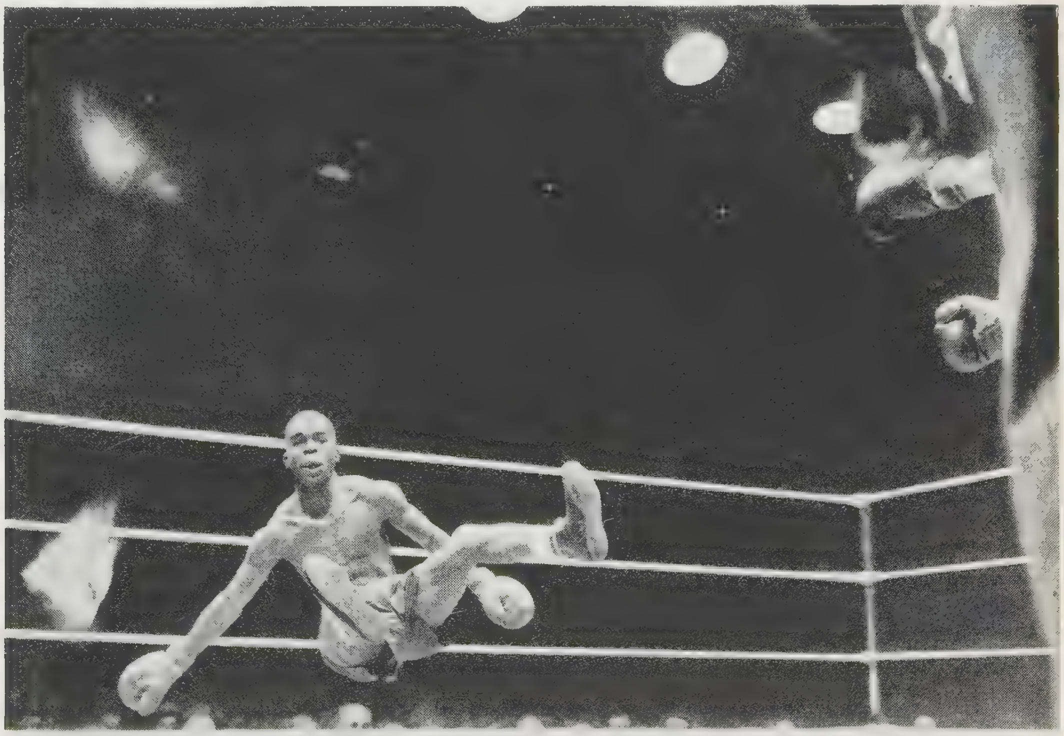
Judges were Joseph Costa of King Features, photo supervisor of the *New York Sunday Mirror Magazine* and president of the National Press Photographers Association; Frank J. Scherschel of *Life*; A. Aubrey Bodine, photographic director of the *Baltimore Sun* Sunday picture magazine; Robert Ghio, representing the University of Missouri School of Journalism, and Walter Yust, editor-in-chief of the *Encyclopædia Britannica*.

The 100 best pictures submitted in the competition were published in a book entitled *The Great Pictures—1948*.



**FEATURE**—Tom Johnson of the *Chicago Tribune* received first prize for this picture entitled "Ten Below." Second prize went to Francis Reiss of Columbia, Mo., for a *Life* picture, "New Yorkers Prove They Are Not Their Brother's Keeper." Two pictures tied for third place: "Contour Plowing," by Wallace Kammann of the *Minneapolis Star*, and "At the Races," by Hans Marx of the *Baltimore Sun* ←

**SPORTS**—First prize winner was this picture taken at a boxing match by Chester Gabrysiak of the *Chicago Tribune* entitled "With the Greatest of Ease." Winner of second prize was a golfing picture, "Body English," by Charles Knoblock of the Associated Press, and third prize went to Mathew Zimmerman of the Associated Press for another boxing picture, "Smash Hit" ↓



plained of "slow-down," and on Nov. 24 all their composing-room employees walked out. All Chicago newspapers then printed editions typewritten on Varitype machines and reproduced by photoengraving. Meanwhile, similar threats were heard on the three newspapers of Detroit. By December, 15 newspapers in eight cities were publishing photographically, with more than 1,500 employees on strike, and 239 other newspapers had I.T.U. contracts expiring before Dec. 31, all waiting for one of the test cases "to set the pattern."

After the suspension of the *Philadelphia Record* on Feb. 1, following the 86-day guild strike, the American Newspaper guild had a quiet year. Its strike vote taken five months before against the *Philadelphia Inquirer* was rescinded late in February, and the former employees of the *Camden Courier and Post* on Feb. 26 started a new daily *Free Press*. At its 14th annual convention in Sioux City, Ia., June 23–28, the guild reported 24,000 members and began a campaign for 40,000. After the withdrawal of Milton Murray, the guild in August voted for a new president for the first time after 1941 and elected Harry Martin of the *Memphis Commercial Appeal*. In November the guild officers filed the noncommunist affidavits required by the Taft-Hartley law.

The year 1947 brought great increase in newspaper operating costs and income. In May the Hearst papers announced a cost increase of 30% in one year; a study of one 50,000-circulation daily showed costs up 27%; another study of smaller newspapers showed costs up 32% and income up 28%; only newspapers of more than 50,000 circulation reported income rising faster than costs. Several studies showed circulation income greater than advertising. However, in spite of paper shortage, advertising income broke all records. Rises in sales prices were common; in March 1,252 newspapers were selling for 5 cents a copy, the *Chicago Tribune* went to 4 cents in February and the *New York Sunday Times* to 15 cents in November. After a total circulation gain of 4.8% in 1946, an even greater increase was expected for 1947.

The outstanding newspaper ownership change of the year was in Chicago. Marshall Field, in August, paid $5,338,000 for the employee-owned *Chicago Times*, afternoon tabloid, organized the Sun-Times company, moved his morning *Chicago Sun* from the plant of the *Daily News* into the *Times* building, converted the *Sun* into a morning tabloid on Sept. 29, and began issuing the two tabloids daily from the same plant, with a joint tabloid *Sunday Sun-Times*. Richard J. Finnegan continued as editor of the *Times*. In Philadelphia, the two newspapers of J. David Stern which were suspended on Feb. 1 were sold separately—the *Philadelphia Evening Bulletin*, which bought both, converted the *Record* into a Sunday newspaper on Feb. 9, and sold the *Camden Courier and Post* on May 14 to a new company headed by Harold A. Stretch, formerly of the *Inquirer*. On Dec. 15 the *New York Journal of Commerce*, owned by Bernard J. Ridder, paid $1,250,000 for the *Chicago Journal of Commerce*; it was announced that the two would be continued as separate newspapers. The *Seattle Star* (Wash.) suspended on Aug. 13, and in November was purchased by David Stern III, son of J. David Stern of Philadelphia. The 60-year-old *Brooklyn Citizen* (N.Y.) suspended on Aug. 29. John and Anna (Roosevelt) Boettiger, former publishers of the *Seattle Post-Intelligencer*, launched the daily *Arizona Times* in Phoenix. Among the noted newspaper centennials of the year were: the *Chicago Tribune* celebrated its 100th birthday on June 10 with a 28-page centennial edition transmitted by radio to 50 newspapers in 35 countries, and the publication of several historical books; the *St. Louis Post-Dispatch* celebrated on April 10, and a three-cent stamp was issued in memory of its founder, Joseph Pulitzer; the *Philadelphia Evening Bulletin* published a 24-page roto edition on April 12.

*A Free and Responsible Press*, the report of a three-y study conducted by the 13-man Commission on Freedom of Press, financed with grants of $215,000 by Time, Inc. a Encyclopædia Britannica and headed by Dr. Robert M. Hutch of the University of Chicago, was published late in March, f lowed by several volumes by individual members. Among steps toward world-wide press freedom during the year we meeting of a 12-member United Nations Subcommission Press Freedom in May; a proposed treaty presented in April Richard J. Finnegan of the *Chicago Times;* announcement an international meeting in Geneva, Switzerland, early in 194 a formal agenda proposed in August by the International ganization of Journalists.

Public hearings were held in April on the Mason bill (H 110) designed to exempt newsgathering from antitrust laws a to free the Associated Press from the 1946 ruling of the supre court, but the bill was not passed. Newspapers made vigoro protest against a proposal to increase second-class postal rat

Associated Press announced in August that 441 radio statio had associate memberships; many newspapers were involved the 259 new AM radio stations started during the year, and t number of newspaper FM station projects could only be es mated. The number of tabloid newspapers was said to ha risen to 48. United Press and Acme developed picture servi for television stations.

**U.S. Magazines.**—The year 1947 was a quiet one in t magazine world. Although circulations increased strikingly a available advertising was record-breaking, magazines faced t same difficulties of paper shortage and rising costs that em barrassed the newspapers. Few new magazine ventures we announced, and there were no notable demises. In one fiel church publications, circulation gains were most marked; o survey indicated that 57 Protestant and Catholic periodica showed a gain of from 10% to 500% in circulation in sev years, going to a combined circulation of more than 4,225,00 double that of 1940. One new project was a four-colour tablo comic weekly circulated by McClure Newspaper syndicat Stanley Walker, formerly of the *New York Herald-Tribun* became editor of the new magazine *Scene* of Ft. Worth, Te in October. The Curtis Publishing company of Philadelph made news three times during the year: first by breaking i time-honoured rule to admit liquor advertising in *Holida* second by arranging with Western Union telegraph company have ads on 350,000,000 blanks and envelopes announcing th subscriptions might be ordered by wire; third on Nov. 15 b raising the sale price of *Saturday Evening Post* to 15 cents copy, or $6 a year, and advertising rates to $11,200 a page. *Li* magazine joined with the *New York Times* and Houghto Mifflin company to pay $1,000,000 for U.S. rights to Winsto Churchill's memoirs—about $1 a word. (G. M. Hy.)

**Canada.**—Newsprint remained in short supply througho 1947 and printing costs went up, resulting in continued limita tions of the sizes of newspapers and sometimes a reduced co erage of news events because pressure for advertising space co tinued. Most dailies raised their prices to 5 cents a copy.

There were two flurries in Canadian newspaper publishin during the year. One came when the Canadian Daily New papers association presented a brief to the radio committee o parliament in which it declared that government policy forbid ding new licences to newspapers to operate radio stations wa discrimination which threatened "the very life of the pres because facsimile reproduction would be completely controlle by the crown-owned Canadian Broadcasting corporation. Th second flurry came when opposition members of parliament un successfully objected to the policy of carrying papers as secon ss mail at a cost of $7,200,000 a year to the post office.

Specific developments of interest included a $250,000 suit of Southam Newspaper company against the officers and memrs of the International Typographical union because the *Vanuver Province* (B.C.) lost $200,000 in revenue and incurred 0,000 additional expenses when forced to suspend between ne 5 and July 23, 1946, as a result of a strike.

The communist *Toronto Tribune* (Ont.) had a six-month reer beginning May 1 as a daily, before reverting to weekly atus. (C. Cy.)

**Great Britain.**—The year 1947 was one of great hopes and d disappointment for British newspapers. With an increased pply of newsprint and the removal of sale restrictions, circuions rose considerably in the early months; but the fuel ergency in February, and the economic crisis later, both relted in setbacks. By the end of the year, with the supply of wsprint again reduced, circulations had once more become abilized.

During the fuel emergency, in order to save electric power, e publication of all periodicals and trade and technical papers as suspended for two consecutive issues, by an agreement beeen the ministry of fuel and power and the proprietors' assoation; and the daily newspapers reverted temporarily to their artime size.

In response to the government request for an immediate reuction in newsprint consumption to save dollar expenditure, e rations of newspapers were reduced from July 21, 1947. or the morning papers the cut was equivalent to a reduction one page per issue (two pages in tabloid newspapers) from e maximum paging then in force. The reduction could be fected either by reduced paging or reduced sale. These cuts ere estimated to effect a dollar saving of a little more than 1,000,000 in the first six months. The decision was severely iticized as endangering the freedom of the press, and 20 abour M.P.'s abstained from voting after a house of commons ebate.

The names of the chairman, Sir W. David Ross, provost of riel college, Oxford, and the 16 other members of the royal ommission to inquire into the control, management and ownerhip of the press were announced in March. The first meeting f the commission was held on April 30. The commission pubshed written memoranda of evidence but heard oral evidence ntirely in private.

In March the *Times* attained a sale of nearly 275,000. The ales of the *Daily Telegraph,* which in 1930 were less than 00,000, reached 1,000,000 in April. The *Daily Mail* and the *aily Herald* both exceeded 2,000,000 and the *Daily Express* ,000,000 copies a day. The *Evening News* with 1,600,000 laimed the highest net sale of any evening paper in the world.

The board of trade appointed a committee to advise on seection and production of new periodicals. Among new publiations were *Coal,* a monthly magazine prepared for the new ational coal board; the *Times Review of Industry,* which inorporated the *Times Trade and Engineering,* and *Hansard igest.*

Final steps were taken in March 1947, to convert Reuters ews agency into a world news agency under the ownership and ontrol of newspapers of the United Kingdom, Australia and ew Zealand.

J. W. Robertson Scott, founder and editor of the *Countryan,* retired and was succeeded by J. Cripps. Both Robertson cott and J. Bone, late London editor of the *Manchester Guardn,* were made Companions of Honour. Dr. L. P. Jacks retired rom the editorship of the *Hibbert Journal* which he had held nce its foundation in 1902. Sir Bertram Ford, managing director of the *Birmingham Post* and *Birmingham Mail,* retired after 33 years' service. Sir Walter Layton received a barony in the New Year honours and became Lord Layton.

**Europe.**—The activity of the press in many European countries was restricted by the shortage of newsprint. Even in Sweden, cuts up to 25% in consumption of newsprint for newspapers were imposed.

The German news agency, launched by the British military authorities for the supply of news, was taken over by the Germans during the year; it distributed between 30,000 and 40,000 words a day throughout the British zone, in which 45 newspapers were licensed. In January British newspapers and periodicals were on sale again in the British zone for the first time since 1939. A special edition of the *Manchester Guardian Weekly* was printed in Hamburg.

The British government protested to the Bulgarian government against the arbitrary closure of opposition newspapers and against the press law in Bulgaria, which gave wide powers to the minister of information. A strict censorship of British newspapers was imposed in Rumania. (*See* also ADVERTISING.)

(D. HN.)

## New York.

One of the original 13 states of the United States, popularly known as the "Empire state," New York covers an area of 49,576 sq.mi. of which 1,647 are water. With a population of 13,479,142 (federal census, 1940) and an estimated population of 14,207,052 exclusive of persons in institutions (New York state department of health, July 1, 1947), it is the most populous state. The foreign-born population in 1940 was 2,853,530. The urban population was 11,165,893. The 1947 population of principal cities estimated by the state health department and their percentage increase from 1940 included: Albany (state capital), 134,966 (up 3.4%); New York city 7,835,392 (up 5.1%); Buffalo 620,700 (up 7.8%); Rochester 338,492 (up 4.2%); Syracuse 225,423 (up 9.4%); Yonkers 143,560 (up 0.7%); Utica 103,694 (up 3.2%); Schenectady 96,893 (up 10.7%); Niagara Falls 91,915 (up 17.8%); Binghamton 90,391 (up 15.4%). The health department estimate showed a state-wide increase of 5.4% from 1940.

**History.**—Governor Thomas E. Dewey approved 908 bills passed by the 1947 legislature. Among the principal measures enacted were: continuation of a reduction in state personal income tax and 25% reductions in the corporation and unincorporated business tax rates, originally effected in 1946; the Young-Demo Merit Rating bill, permitting tax credits to employers estimated at $140,000,000 in the fiscal year ending June 30, 1948, based in part on employment experience records; an act prohibiting strikes by public employees; continuation of the state's stand-by rental control law for state regulation of residential rents in the event federal controls lapse; extension of commercial rent controls in New York city to July 1, 1948; measures making permanent certain temporary taxes on motor fuel, liquor, cigarettes, inheritances and estates, gross utilities receipts and unincorporated business; a measure channelling federal funds for airport development through the state department of commerce.

A $32,000,000 increase in state aid for education was appropriated to provide increases in pay of $300 each for 72,000 public school teachers, establishing a minimum annual salary of $2,000 for the period Jan. 1, 1947, to March 31, 1948. Another measure set a minimum salary schedule for teachers in New York city beginning at $2,500; in other cities of 100,000 population or over, starting at $2,200; and elsewhere, starting at $2,000. To enable localities to raise revenue to finance increased cost of teachers' salaries and for other purposes, the legislature granted new taxing powers to counties and cities over 100,000 population. This measure permitted the local legislative bodies to impose certain taxes on retail sales, motor vehicle use, amusements and other specified items.

The legislature passed for the second time a proposed constitutional amendment to provide $400,000,000 for a World War II veterans' bonus. This was approved by the voters at the November state-wide election, making possible individual bonus payments, ranging from $50 to $250, starting Jan. 1, 1948. Special taxes were to become operative to retire the debt thus incurred within a period of ten years. The special taxes were a one cent tax on each pack of cigarettes and a change in personal income tax reduction from 50% to 40% of the normal tax.

In the November election, the voters approved public housing propositions and five constitutional amendments. The housing propositions permit issuance of bonds up to $135,000,000 for loans to municipalities for slum clearance and low rent housing. This sum represents the balance of a $300,000,000 housing program previously authorized. Amendments approved by the voters permit more extensive use of the absentee ballot; authorize legislators to set their own salary by law; provide an alternate method of removal or retirement of judges and justices; create a new supreme court judicial district consisting of Queens, Nassau and Suffolk counties; authorize state construction and maintenance of ski trails on state forest preserve lands on Gore, South and Pete Gay mountains in the Adirondacks and Belle Ayre mountain in the Catskills.

New York state established an emergency housing program which had provided (to Oct. 1947) homes for 35,000 veterans in 214 veterans' emergency housing and educational projects located in 39 communities and at 52 colleges. When this $69,800,000 project should be completed, it would provide additional homes for 50,000 veterans and their wives and families. For disabled veterans who are paralyzed and paraplegics, the state constructed especially designed apartments at Marine park and the maritime base in New York city.

Besides the additional housing facilities provided for veterans at the schools and colleges, the state education department had a program of education aids for ex-service people. In 1947, approximately 100,000 veterans of World War II were attending schools and colleges in the state. On the recommendation of Governor Dewey, 4,800 war service scholarships were issued for colleges, business, professional and technical and trade schools in the state. These scholarships had a value of $350 a year for tuition and fees for four years. There were also 100 war orphan scholarships of $350 a year each for tuition and $100 a year for maintenance to resident children of deceased or disabled veterans.

Chief officers of the state during 1947 were: Thomas E. Dewey, governor; Joe R. Hanley, lieutenant governor; Frank C. Moore, comptroller; Nathaniel L. Goldstein, attorney general; Thomas J. Curran, secretary of state; Benjamin F. Feinberg, majority leader of the senate, and Oswald D. Heck, speaker of the assembly—all Republicans. United States senators: Robert F. Wagner, Democrat, and Irving M. Ives, Republican.

**Education.**—During the 1945–46 school year, New York state's educational system included: school districts, 5,112; common school districts, 4,215; union free districts, 415; central rural school districts, 319 (344 in 1947); cities and villages under separate superintendents, 162; grade pupils, 1,255,197; high school pupils, 576,664; and college and university students, 171,122 (regular), 51,021 (summer) and 52,203 (extension). During the year ending June 30, 1946, the approximate cost of maintaining public schools (including salaries of 73,079 teachers) was $378,143,894, excluding moneys raised by bonds.

Established to meet housing and college space difficulties, three state colleges (Sampson at Sampson, Champlain at Plattsburg and Mohawk at Utica), which comprise the Associated Colleges of Upper New York and operate as a single unit, had during 1947–48, 8,500 students, of whom about 7,200 were World War II veterans. There were more than 110 colleges and universities in the state.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—During 1946 approximately 3,300,000 men, women and children received health and welfare services through 1,524 local public and private voluntary agencies and institutions under the supervision of the state department of social welfare, at a total cost of about $325,000,000. Of t sum, $197,000,000 came from public funds and $128,000,000 from p vate voluntary funds. During 1946 expenditures for aid to dependent cl dren totalled $30,956,336; for old-age assistance, $52,732,075; for aid the blind, $1,737,439; and for home relief and veteran assistan $26,967,005.

During 1947 the state operated 18 mental hospitals, 2 mental insti tions, 6 schools for mental defectives, 1 epileptic colony, 1 hospital criminal insane and 1 for conduct insane. There were 7 state prisons reformatories and 3 institutions for defective delinquents. State expen tures for prisons, reformatories, etc., for the fiscal year ending March 1947, were $15,863,886.36. The number of inmates on Oct. 31, 1947, w 15,949.

**Communications.**—New York state had 82,140 mi. of roads in 1946, which 11,799 were state highways (exclusive of cities and incorporat villages), 16,994 county and 53,347 town roads. The 40 railroads in t state operated more than 7,000 mi. of tracks. The state maintains a s tem of more than 500 mi. of canals including the Erie, 340; the Cha plain, 63; the Cayuga-Seneca, 92; and the Oswego, 24. Including t rivers and lakes which are part of the New York State Barge Canal s tem, the total length is more than 800 mi. Although no tolls are charg the canals and waterways yielded a revenue of $518,204.29 in 1946 fr the use of terminals, the sale of electric power and the operation of gra elevators. Airports had almost doubled in number in the two-year peri after V-J day. The New York state department of commerce reported July 1947 a total of 287 airports in the state.

**Banking and Finance.**—As of June 30, 1947, 114 state banks had to resources of $471,768,243 and deposits of $434,650,051; 145 trust co panies had total resources of $19,387,671,655 and deposits of $17,45 080,977; 5 private banks had total resources of $263,334,943 and posits of $226,387,577; 13 industrial banks had total resources of $17 026,132 and deposits of $151,486,012; and 131 savings banks had to assets of $10,629,941,202 and deposits of $9,583,259,401. As of Jan. 1947, 172 saving and loan associations had total resources of $433,52 286 and due to shareholders $381,926,104.

The comptroller's report for the fiscal year ended March 31, 194 showed that the state had an operating surplus of $58,712,842. Revenu for the year were $658,850,262.76 and expenditures $600,137,420.7 The surplus in the postwar reconstruction fund was $435,766,464.39. T state debt at the end of the fiscal year was $359,696,084.

**Agriculture.**—In 1946, the production of dairy products in the sta was $315,861,000. Sales of eggs, poultry and other livestock produc were $193,451,000, the second largest source of farm income in the sta The 1946 value of all farm crops was $232,560,000. Government pa ments amounted to $43,223,000. The grand total of farm cash receip was $785,095,000.

As of Jan. 1, 1947, New York's milk-cow population was estimated 1,439,000 head; total cattle in the state numbered 2,118,000 head. The were 15,333,000 chickens.

Total milk production in 1946 was 7,803,000,000 lb., third largest the country. Egg production was 181,166,000 dozen. The New York sta department of agriculture and markets in 1946 reported animal popul tion as follows: horses, 202,000; mules, 3,000; milk cows and heifers t years old and over, 1,439,000; heifers, one–two years for milk cow 274,000; hogs, 235,000; and sheep, 223,000. The number of turke raised was 756,000.

The farm value of vegetable crops for market in 1946 was $64,861,00 The estimated value of the 1946 production of apples, peaches, pea cherries and grapes—the major New York fruits—was about $58,293,00

According to the 1945 federal census, 83% of New York farms ha electricity in the farm dwellings, 59% had running water, 53% te phones and 89% radios. Nearly 120,000 farms reported having 145,00 automobiles. Motor trucks were reported on 57,000 farms.

*Estimated Value of Product and Number of Employees in Ten Leading Manufacturing Industries, New York State, 1946**

| Industry | Value of product (000's omitted) | Numbe employ |
|---|---|---|
| Apparel and other finished products made from fabrics and similar materials | $5,751,000 | 404,44 |
| Food and kindred products | 2,345,000 | 142,54 |
| Printing, publishing and allied industries | 2,155,000 | 147,32 |
| Chemicals and allied products | 1,589,000 | 91,90 |
| Machinery (except electrical) | 1,213,000 | 146,87 |
| Nonferrous metals and products | 1,125,000 | 65,49 |
| Iron and steel and products | 1,118,000 | 108,90 |
| Textile-mill products | 837,000 | 94,03 |
| Paper and allied products | 832,000 | 66,77 |
| Electrical machinery | 827,000 | 114,71 |

*Estimates by New York state department of commerce.

**Manufacturing.**—In the first half of 1947, the state's manufacturin firms were producing goods at an estimated annual rate of $20,000,000 000, compared with an output of $7,134,000,000 in 1939. By the end o 1947, the number of business firms operating in the state had reached a all-time high of 540,000. Estimated total employment in September, exclusive of agricultural workers, proprietors, domestics and personnel of th armed forces, was 5,440,400. The average weekly earnings in factorie for that month were $54.94, or $4.13 more than the average for Sept 1946.

Of the 118 war plants constructed in New York state by the federa government, at a total cost of $316,983,560, 69 had been sold as of Nov 25, 1947; 16 were leased, chiefly to firms which had operated them durin the war; 23 were under negotiation for sale or lease; and 10 remaine available. Several of the larger plants were owned or operated by concerns which moved into the state.

**Mining.**—In 1945, the latest year for which complete statistics we available, New York state produced $90,286,000 worth of primary mineral products. The value of the principal products listed in 1945 included petroleum $17,470,000; salt $10,327,013; stone (including limestone

33,781; cement (Portland) $9,009,454; pig iron $74,857,092; coke 070,238; and gypsum $1,262,989. (H. C. Cl.)

## w York City.

Unofficial estimates placed the population of New York city in 1947 at 7,835,392. second year of Mayor William O'Dwyer's term of office saw New York city expense budget inflated to a record $1,023,-,530 by increased costs of construction and government. s budget was second in size only to that of the federal ernment.

LLPOX SCARE after 12 cases and 2 resultant deaths caused 6,350,000 York city residents to be vaccinated during April-May 1947. New Yorkers shown waiting to be immunized at the Morrisania hospital

Large increases in the cost of operating the municipal transit system caused the city administration to ask the state for legislation to enable the board of transportation to fix a fare that would cover operating costs of the subways. This program also called for an increase in the real estate tax limit to 2.5%, or for the removal of education costs from the tax limitation.

In a plan developed at the suggestion of the mayor, the city's airport building program was turned over to the port of New York authority. The city also invited proposals from public and private agencies for the rehabilitation of the port of New York under a setup that would also save the capital cost to the taxpayers but, like the airports, continue to provide revenue to the city.

Again, with a view to economy, a three-member mayor's committee on administration was established, whose duty was to study all city departments and streamline their administrative procedures. A bureau of analysis of the budget was organized to make detailed studies for this committee.

To encourage new business to enter New York, the department of commerce was re-established with leading businessmen serving on a nonsalaried basis in advisory capacities.

Although conservative estimates said that 150,000 families still needed homes, 18,100 apartments were provided in 1947, and many developments, both public and private, neared completion. In addition, the city established by local law a Temporary Housing Rent commission seeking to regulate rents in hotels, apartment hotels and other housing no longer subject to federal controls.

As New York prepared for its golden anniversary celebration in 1948, commemorating the consolidation of the five boroughs into greater New York, construction had been started on 18 new schools. In addition, although hampered by constantly rising construction costs, a program of subway improvement was started whose aim was to lengthen station platforms and thus double the passenger capacity of local trains. Plans went ahead, too, for the purchase of 750 new subway cars and 1,155 buses and trolley coaches.

To prevent inflation from hampering the city's fiscal arrangements for construction, the mayor proposed to labour, management and suppliers in that industry that they reach a stabilization agreement under which final building costs could be more accurately estimated. As a result, 70% of the 250,000 construction workers in the New York area joined an agreement to stabilize wages until June 30, 1950.

On the whole, labour had a quiet year, with the city's labour relations division settling 52 disputes of which 26 were major.

On Dec. 26 the greatest snowstorm in New York's history smothered the city under a 25.8 in. blanket weighing 99,000,000 tons. Business and transportation were momentarily paralyzed, but the snow was rapidly removed. (*See* also MUNICIPAL GOVERNMENT.)

## New York University.

A coeducational institution occupying six centres in various parts of New York city and consisting of two liberal-arts colleges, three graduate schools, seven professional schools and colleges and a division of adult education, with programs of study embracing the liberal and fine arts, business, dentistry, education, engineering, law, medicine and public administration. Although bearing the name of both the state and the city, it is a privately-controlled institution with no religious or other affiliations. Its operating revenue in 1946–47 was $16,615,218, derived from student fees, endowments and gifts. The latter exceeded $2,667,-000, of which approximately $843,000 was for specialized training and research. The university was engaged during 1947 in two major fund-raising campaigns, the first for the $3,000,000 law centre to be erected at Washington square, and the second for the projected $15,000,000 medical centre in conjunction with the proposed rebuilding of Bellevue hospital by the city of New York. The land comprising the site for the medical centre was acquired during the year and several of the activities of the centre were initiated, notably the Institute of Rehabilitation and the Institute of Industrial Medicine. Other educational developments during the year included the new co-operative work-study program in the School of Retailing, the Investment Banking program in the Graduate School of Business Administration, the consolidation of the Institute for Applied Mathematics and Mechanics in the Graduate School of Arts and Science, and the specialized programs of training in book publishing and business paper publishing in the division of general education. The cumulative enrolment of the university for 1946–47, including the summer session of 1946, reached a net total of 59,466, of whom 25,435 were veterans. Degrees and certificates were awarded at the regular June commencement exercises to 5,507 candidates. (For statistics of endowment, enrolment, faculty, library volumes, etc., *see* UNIVERSITIES AND COLLEGES.) (H. O. V.)

**New Zealand, Dominion of.** A British dominion, consisting of a group of islands, lying in the South Pacific to the southeast of Australia. Area: dominion proper 103,416 sq.mi.; other islands 519 sq.mi.; pop. dominion proper (est. March 31, 1947): 1,793,225 (including Maoris 105,699); Cook and other Pacific islands 19,167; Tokelau Islands (census 1945) 1,388. Western Samoa, a trusteeship, has an area of 1,133 sq.mi. and a pop. (est. March 31, 1947) of 71,460. Chief cities (pop. est. April 1, 1947): Wellington (cap. with suburbs, 183,100); Auckland (with suburbs, 281,900); Christchurch (159,400); Dunedin City (87,700). Language: English; religion: Christian (1936 figures, excluding Maoris: Church of England 600,786; Presbyterian 367,855; Roman Catholic 195,261; Methodist 121,012). Ruler: King George VI. Governor-general: Lieut. Gen. Sir Bernard Freyberg. Prime minister: Peter Fraser.

**History.**—On June 26, 1947, Lieut. Gen. Sir Bernard Freyberg, the governor-general, emphasized that the peace settlements with Japan and Germany should not be dictated by the great powers, but that all the antiaxis belligerents should take part in the peacemaking. Peter Fraser, the prime minister, announced on March 5 the gift to Britain of £NZ.12,500,000, "in recognition of the magnificent, unprecedented effort of the United Kingdom and her people in maintaining freedom. . . ."

The first session of the new parliament, in which the government had a majority of four, was opened by commission on June 24, and Robert McKeen (Labour, Wellington South) was elected speaker. Daniel Giles Sullivan, minister of industries, commerce, supply and munitions, died on April 8, and Mabel Howard, who succeeded him, became New Zealand's first woman cabinet minister. James O'Brien, minister of transport and marine, died on Sept. 28, and was succeeded by Terence McCombs; shortly afterward the cabinet was reorganized and McCombs became minister of education, various other changes taking place.

The New Zealand delegation to the British Commonwealth conference on the Japanese peace treaty, held in Canberra in August, was led by Fraser.

The government announced on Aug. 14 its decision to abolish or reduce subsidies on a number of goods (fruit, tea, meat, bacon, sugar and imported raw materials), on sea and rail fares and on freight charges. The value of the subsidies affected was about £NZ.6,900,000.

**Western Samoa.**—In August, Walter Nash, the acting prime minister, announced a number of constitutional changes, including the appointment of a council of state of three Sa
*Fautua* (high advisers) and the replacement of the council
legislature with a Samoan majority. On April 22, the U
Nations Trusteeship council, of which Sir Carl Berendsen
New Zealand delegate, was elected vice-chairman, decide
send a mission of investigation to Western Samoa. The miss
consisting of representatives of U.S.A., Belgium and Chile
ported in October, with recommendations similar to the
Zealand proposals already announced.

**Education.**—Dec. 1943: state elementary schools 2,090, scholars
060; postprimary scholars 47,620. University of New Zealand stu
(1946) 10,700. Total cost of education (year to March 31, 1
£NZ.5,221,389.

**Finance.**—(In £NZ.) revenue, consolidated fund (est. 1947–48), £
860,000; expenditure £105,516,000. Revenue, social-security fund
1947–48) £39,727,000, including contribution from consolidated fun
£16,000,000; expenditure £40,039,000. Note circulation (June 1
£39,842,000. Reserve (in reserve bank): gold £2,802,000, exchange
933,000. Net overseas funds £105,068,000. Deposits in post office
trustee savings banks (March 31, 1947) £171,782,000. Gross indebted
of general government (March 31, 1947) £634,800,000. Exchange
£NZ.125 = £100 sterling. £NZ. = 324.2 U.S. cents.

**Trade and Communication.**—Imports (1946) £NZ.71,630,000; exp
(1946) £NZ.99,410,000. Communication: road, paved or surfaced 45
mi. (including main highways 12,431 mi.); not paved or surfaced 8
mi.; railways 3,504 mi.; passenger journeys (year to March 31, 19
28,869,000. Civil aviation: passengers carried on internal air lines (
to March 31, 1947) 110,700; on overseas services 13,300; freight (i
nal) 128,700 ton-miles, (external) 220,300 lb.; mail (internal) 74
ton-miles, (external) 307,400 lb. Shipping (1946): entered 2,141,000
cleared 2,633,000 tons. Motor vehicles licensed (June 26, 1947) 338,
Wireless licences 395,139.

**Agriculture.**—Production (1945–46): wheat 5,439,041 bu.; oats 2,7
877 bu.; barley 1,872,316 bu.; maize 350,188 bu.; peas 816,897
potatoes 140,252 short tons; onions 11,996 short tons; perennial
grass 20,642,061 lb.; Italian rye grass (including western wolths) 10,
178 lb.; cocksfoot 3,107,218 lb. Livestock (1946): horses 216,335;
tle 4,666,782; pigs 549,391; sheep shorn 30,475,740. Wool produc
(1945–46): 365,000,000 lb. (greasy); butter fat production (1945–
368,000,000 lb.

**Manufacturing.**—1943–44: number of establishments 6,202; total n
ber of employees 117,864; salaries and wages paid £NZ.34,433,075; v
of products £NZ.175,686,689; value of land, buildings, machinery
plant £NZ.90,740,357.

**Mineral Production.**—Production in 1944 included: gold 142,287
silver 328,281 oz.; (in short tons) arsenic 18; talc 28; asbestos
scheelite 160; fuller's earth 117; coal 3,086,567; iron ore 6,640; p
phate 21,924.

**NHA (National Housing Agency):** *see* HOUSING.

**Nicaragua.** A republic in Central America, situated betw
Honduras on the north and Costa Rica on
south. Area: 57,143 sq.mi., of which 3,475 sq.mi. is water. P
(off. est., Dec. 31, 1945) 1,095,488. Capital, Managua (19
pop., 132,154); other urban centres: Chinandega (24,41
Granada (36,953), Jinotega (37,934), León (48,862), Masa
(35,065) and Matagalpa (50,072). Language: Spanish. Religi
predominantly Roman Catholic. Presidents in 1947: Gen. An
tasio Somoza, Leonardo Argüello, Benjamín Lacayo Sacasa a
Victor M. Román Reyes.

**History.**—In 1947 a presidential election, a coup d'état, an
general reorganization by a new constituent assembly ended t
presidency but not the power of General Somoza, Nicaragu
political strong man since 1936.

The election, held Feb. 2, was policed by the national gua
and resulted officially in victory for proadministration Leonar
Argüello. The opposition candidate, Enoc Aguado, protest
and left the country to obtain foreign support. Popular demo
strations and press criticism were suppressed by the governme

Argüello, inaugurated May 1, almost immediately alienat
his chief benefactor (General Somoza) by attempting to plac
the opposition and to eliminate military influence in the gove
ment. On May 25, Somoza and a portion of the national gua
forced Argüello out of the presidential mansion and reconven
the congress. The congress, sanctioning the general's actio
declared Argüello deposed for inability to maintain public ord
and designated Benjamín Lacayo Sacasa president *pro te*
Argüello took refuge in the Mexican embassy until Nov. 30 a

in December while an exile in Mexico. The temporary ident named Somoza minister of war, dissolved congress and voked national elections for a constituent assembly to form w constitution and select a new president.

leanwhile, economic crises resulted from the political un- ainty, both agriculture and trade suffering acutely. To aggra- the situation, a ten-day eruption of the Cerro Negro vol- in July devastated an estimated 280 sq.mi. of farm land, ng an undisclosed number of persons and leaving thousands neless in and around León.

he constituent assembly, selected Aug. 3 by orderly voting, ed Victor M. Román Reyes president on Aug. 15. General noza was left in charge of the national guard. Sporadic re- s in September brought about more stringent sedition legis- on, and on Sept. 28 Gen. Emiliano Chamorro, leader of the servative party, was charged with fomenting subversive ac- ties and was exiled to El Salvador.

he majority of the American republics refused to recognize new administration, and Nicaragua was not invited to the er-American conference near Rio de Janeiro. (*See* INTER- ERICAN DEFENSE CONFERENCE.) On Dec. 24, Pres. Román ves invited the United States to activate its treaty granting ights to build and protect an interoceanic canal in Nicaragua.

**ducation.**—In 1946 there were 1,275 schools of all kinds with a total lment of 84,651 students. The illiteracy rate (approx. 60% of the l population in 1945) continued to fall during 1947 as a result of onal legislation obligating literate citizens to teach reading and writ- to illiterates. As of Jan. 1, 1947, there were 44 motion-picture thea- with a total seating capacity of 41,037.

**inance.**—The monetary unit is the córdoba, officially maintained in e at 20 cents U.S. The provisional budget for the 1946–47 fiscal year mmended expenditures amounting to 77,359,607.59 córdobas. The pub- debt on Jan. 1, 1947, amounted to 17,675,975.22 córdobas, internal, 21,073,343.30 córdobas, external. At the same date the banks held 91,775.47 in gold and $871,924.23 in foreign exchange; money in ulation totalled $14,511,512.12.

**rade and Resources.**—Exports for 1946 were valued at $18,131,880 3,962,728 in 1945); imports, $14,822,775 ($12,651,615 in 1945). ing the first seven months of 1947, exports were valued at $14,400,- and imports at $11,700,000. The U.S. took 78% and supplied 79% the 1946 trade. The leading exports were gold (6,338 kg. at $7,731,- ), coffee (196,276 bags at $4,316,432), lumber (19,611,504 bd.ft. at 6,864) and rubber (584,245 kg. at $384,245). Early estimates of the 7–48 coffee crop placed production at 250,000 bags (230,000 bags in 6–47).

**ommunications.**—In 1946 public railroads measured 238 mi.; improved hways 597 mi.; telephone lines 4,748 mi.; telegraph lines 4,704 mi. ere were 14 radio broadcasting stations. Registered motor vehicles in- ded 725 automobiles, 94 buses and 623 trucks. In 1947 both internal l external air service continued to expand.

ncludes gross weight (not nickel content) of ore, matte, oxide and alloys.

**United States.**—The United States is dependent on imports for practically its entire supply of nickel, with Canada as the chief source.

**Canada.**—Nickel output dropped from 122,565 short tons in 1945 to 94,832 tons in 1946, but recovered to 85,336 tons in the first nine months of 1947.

**Cuba.**—During World War II Cuba developed into the second largest producer, with 12,015 short tons of contained nickel in 1945 and 12,391 tons in 1946. (G. A. Ro.)

## Nicola, Eñrico de

(1877– ), Italian statesman, was born on Nov. 9, in Naples. After graduating from Naples university in 1895 with a law degree, he was admitted to the bar and won renown as a criminal lawyer. Elected Liberal member for Naples to the chamber of deputies in 1909, he was re-elected in 1913, 1919 and 1921. Undersecretary of state in the Orlando and Giolitti governments, De Nicola was elected in 1920 speaker of the chamber of deputies. He occupied this position when Mussolini was appointed prime minister and held it until the end of 1923. He was re-elected speaker in 1924 without being candidate; he refused to take his seat and retired from politics. Under the fascist regime he kept aloof from public affairs, but in 1932 he accepted an appointment as senator. In 1944, monarchist in sentiment, he acted as intermediary between King Victor Emmanuel III and the committee of national liberation, and it was he who formulated the decree by which Crown Prince Humbert became lieutenant general of the realm (June 28, 1944). On June 28, 1946, after the proclamation of the republic, the constituent assembly elected De Nicola provisional head of state, and he was re-elected for another year on June 25, 1947. He accepted with the reservation that he would not be a candidate once the constitution had been promulgated.

## Nitrogen, Chemical.

Imports of Chilean nitrate into the United States dropped from 849,888 short tons in 1945 to 529,677 tons in 1946. Ammonium sulphate recovered in the by-product coking of coal also dropped, from 764,293 tons in 1945 to 643,752 tons in 1946, while the ammonia content of other by-product recovery declined from 218,680 tons in 1945 to 185,929 tons in 1946. As an offset to these reductions the output of synthetic ammonia rose from 548,655 tons in 1945 to 725,537 tons in 1946.

There was such an insistent demand for fertilizer nitrogen from the areas devastated by World War II that the decreased needs for military uses were more than offset, resulting in a world shortage of nitrogen which was expected to last at least into 1948. (G. A. Ro.)

## Nobel Prizes.

The Nobel prizes, five in number, were awarded annually beginning in 1901. The 1947 physics and chemistry prizes, amounting to $40,588 each, went to two British scientists: the physics prize to Sir Edward Victor Appleton, world authority on radio waves and the discoverer of the ionosphere and the Appleton layer, atmospheric belts which surround the earth at heights of 60 mi. and 120 mi.; the chemistry prize to Sir Robert Robinson, authority on the synthesis or building up of natural compounds, and codiscoverer of the artificial sex hormones, stilbestrol and hexestrol. The prize in medicine and physiology was divided between Drs. Carl F. and Gerty T. Cori, U.S. biological chemists, and Dr. Bernardo A. Houssay of Argentina. The Coris, husband and wife, are naturalized U.S. citizens, working at Washington university, St. Louis, Mo. They took their degrees and received their training in the German and Czech university schools at Prague. Dr. Houssay was formerly professor of physiology at the Buenos Aires National university but was deprived of his post during a political purge. The literature prize was won by the 78-year-old French writer, André Gide, whose works in English translation are issued by Knopf, and in French by Pantheon Books and Crofts. The 34th award of the peace prize was divided between the American Friends Service Committee of Philadelphia and the Friends Service Council of London. These two Quaker groups divided $40,946 between them. (B. Gm.)

## Noel-Baker, Philip John

(1889– ), British statesman, was born on Nov. 1 and was educated at Bootham school, York, and King's college, Cambridge. During World War I he served with the Friends' ambulance unit in France and Italy. Labour member for Coventry, 1929–31, and for Derby from 1936, he served as parliamentary secretary to the ministry of war transport in the coalition government, 1942–45. In the Labour government he was minister of state, 1945–46, and was appointed secretary of state for air, Oct. 1946.

In Jan. 1947 Noel-Baker visited royal air force establishments in Malta and Gibraltar. At the completion of his year of office as chairman of the Labour party, he presided over the annual conference in May, where he spoke of the Labour government's "bold new legislation and beneficent reforms." In the ministerial changes in October, Noel-Baker entered the cabinet as secretary of state for commonwealth relations. During the illness of Alfred Barnes, minister of transport, he was temporarily in charge of the transport ministry.

## Nokrashy Pasha, Mahmoud Fahmy

(1888– ), Egyptian politician, was educated at the University college of Nottingham, Eng. He taught school in Egypt and joined the government in 1920 as a subdirector in the agriculture ministry. He was minister of communications in 1930 and again in 1936–37. He also held the portfolios of interior, education and finance between 1938 and 1940.

In 1938, Nokrashy pulled out of the Wafd party, joining the Saadists (or dissident Wafdists). He became president of the Saadist party in 1945.

Following the assassination of Ahmed Maher Pasha, Nokrashy Pasha (then foreign minister) became prime minister of Egypt, Feb. 25, 1945. However, following a week of anti-British demonstrations in Cairo, during which several persons were killed, his government fell on Feb. 15, 1946. He returned as prime minister Dec. 9, 1946, after the downfall of Ismail Sidky Pasha's government.

In 1947, he unsuccessfully tried to obtain British consent to termination of the Anglo-Egyptian condominium over the Sudan, permitting the latter area to achieve independence "under the Egyptian crown." He took up his case before the United Nations Security council, delivering before that body (on Aug. 11) an impassioned 11,000-word speech asking the council to order Britain out of the Sudan and evacuate all British troops from Egyptian soil. The Security council took no action, however, and tabled the Egyptian complaint on Sept. 10.

## North Borneo.

Three separate territories (all in the northern part of the island of Borneo) were under British protection before World War II, viz.: the state of Brunei under its own sultan; Sarawak, governed by a white rajah (Sir Charles Vyner Brooke); and the state of North Borneo, administered through a governor by a chartered pany operating in London. Under arrangements made in full sovereignty over Sarawak and British North Borneo transferred, by the rajah and the chartered company res tively, to the British crown, and British North Borneo united with Labuan to form the new colony of North Bor Sarawak became a separate colony. Brunei retained its st as an independent sultanate under British protection. Are North Borneo (including Labuan): 29,417 sq.mi.; Sara 50,000 sq.mi.; Brunei, 2,226 sq.mi.; pop.: North Borneo cluding Labuan, est. 1946), 310,000; Sarawak (est. 1946), 6 000; Brunei (1946 est.), 40,786. Capitals: North Bor Jesselton (pop. 15,000); Sarawak, Kuching (pop. 25,0 Brunei, Brunei (12,000). Executive authority in North Bo and Sarawak is vested, under the new arrangements, in a ernor appointed by the British crown. Brunei is governed sultan, assisted by a state council and advised by a British dent. All three territories come under the general co-ordina and supervisory authority of the British governor-genera Malaya. Governors: North Borneo, E. F. Twining; Sara Sir Charles Arden Clarke (both appointed in 1946).

**History.**—The main effort of the civil government in eac these territories during 1947 was concerned with urgent habilitation measures. In Sarawak much attention was give problems of health and education, and steps were taken for establishment of new local government institutions. As rega North Borneo, arrangements were being made for the settle by arbitration, under the terms of the 1946 agreement, of amount of compensation to be paid to the British North Bor company for the transfer of its territory to the crown. Opp tion was raised during the year to the maintenance of an exp tax on rubber from North Borneo, first imposed by the Bri military administration during the period following the ejec of the Japanese. Negotiations on the subject were in prog between the colonial office and the Rubber Growers' associat Schemes sanctioned during the year, under the Colonial De opment and Welfare act, included grants for appointments North Borneo of a drainage and irrigation officer, a town p ner and a veterinary officer. Grants to an aggregate amount more than £250,000 were sanctioned for Sarawak. A furt grant of £21,500 was made for the investigation of coal depo in both territories.

**Finance and Trade.**—The normal unit of currency in all these Bri territories is the Straits dollar, linked to sterling. Prior to World War the Sarawak and British North Borneo governments issued their notes and subsidiary coinage. Revenue: North Borneo (1947 est.) £5 000; Sarawak (9 months) £494,000; Brunei (6 months) £75,000. penditure: North Borneo (1947 est.) £1,070,000; Sarawak (9 mont £815,000; Brunei (6 months) £103,996. Imports: North Borneo (19 £1,083,000; Sarawak (1946) *c.* £3,383,000. Exports: North Bor (1940) £2,386,000; Sarawak (1946) *c.* £2,683,000. The leading agri tural product of North Borneo is rubber. Other exported articles inclu timber, cutch (a tanning extract prepared from bark), dried fish and bacco. In Sarawak, as in North Borneo, rubber is the most import agricultural product, but the territory also contains oil deposits ( Miri oil fields). Apart from oil and rubber, articles of export incl gold, sago flour, pepper and copra. Brunei produces oil, rubber, sago rice. (*See* also BRITISH EMPIRE; NETHERLANDS INDIES.) (J. E. SH.

## North Carolina.

A south Atlantic coast state, popula known as the "Old North state" or "Tar Heel state," North Carolina is one of the original states of the union; area 52,712 sq.mi. (49,142 sq.mi. la 3,570 sq.mi. water); pop. (1940) 3,571,623 of which 974, (27.3%) were urban, 2,597,448 (72.7%) rural and 1,005, (28.2%) nonwhite. On July 1, 1944, the bureau of the cens estimated the civilian population of the state at 3,534,545. C ital, Raleigh (46,897); other cities: Charlotte (100,899); W ston-Salem (79,815); Durham (60,195); Greensboro (59,31 Asheville (51,310).

**History.**—Continuing high prices and income and econom sperity characterized North Carolina in 1947. The state slature meeting in Raleigh, Jan. 8–April 5, broke all records its appropriations of $155,615,959 for current expenses debt service for all state functions for the biennium 1947– It also appropriated $48,432,256 for permanent improve- ts to become available for projects upon the approval of governor and the Advisory Budget commission. The Post r Reserve fund was increased by $9,300,000 to a total of ,000,000 as a cushion against declining revenues. Emergency uses of $8,050,000 for teachers and state employees were ed for the fiscal year 1946–47 and regular average increases 20% for state employees and approximately 30% for school chers were voted for 1947–49.

The entire state medical care program as recommended by Medical Care commission and approved by the governor been so well publicized that it was adopted by the legisla- e without the expected opposition. It provides, among other ngs, for the establishment of a four-year medical school and ching hospital at the University of North Carolina in Chapel l. The launching of the medical care program was con- gent upon the availability of federal funds to the extent of -third of the costs of the projects.

Three state-wide liquor referendum bills were defeated, thus serving the state-wide county local-option system of liquor res. The local-option idea was extended beyond the county- t system by local acts permitting a few designated cities call A.B.C. store elections independently of the county and a general law providing for the holding of an election on question of the sale of wine or beer or both in any county. the sale is defeated in the county referendum, any town h a population of 1,000 or more may hold an election on question of the sale of wine or beer or both in the town. xes on beer and wine were increased.

An act was passed over strong labour opposition making it gal after July 1, to enter into a labour contract providing a closed shop, a union shop, the check-off of union dues the maintenance of union membership. A mild wages-and- urs bill was defeated. Other laws required public registration persons, firms and corporations engaged principally in the siness of influencing public opinion or legislation and made a felony to advise, advocate or teach the duty or necessity overthrowing the state's organized government by force.

State officers in 1947 were R. Gregg Cherry, governor; L. Ballentine, lieutenant governor; Thad Eure, secretary of te; Henry L. Bridges, auditor; C. M. Johnson, treasurer; yde A. Erwin, superintendent of public instruction; Harry cMullan, attorney-general; W. P. Stacy, chief justice.

**Education.**—In 1945–46 there were 3,418 public elementary schools h 19,794 teachers and principals and 689,348 enrolled pupils; 971 lic high schools with 6,100 teachers and principals and 133,771 en- led pupils; these schools were operated at a cost of $56,970,455, out three-fourths of which was contributed by the state government. erage of all teachers' salaries was $1,545. The state provided bus nsportation for 308,191 school children at an average cost of $11.93 pupil.

**Social Insurance and Assistance, Public Welfare and Related Programs.**— Nov. 1947, public grants amounting to $750,185 were made to 41,666 sons for old-age assistance; $278,302 to 8,025 families for aid to de- ndent children; $78,977 to 2,980 blind persons; and $43,177 to 3,066 es for general relief (by the county governments). During the year ling June 30, 1947, the total amount of public relief funds distributed s $11,459,301, and during the first 11 months of 1947 unemployment efits amounted to $5,537,094. In 1947 the state maintained 10 charita- institutions with 10,431 inmates on Nov. 1; 5 correctional institu- ns with 782 inmates; and state highway prison camps with 7,198 soners.

**Communications.**—In 1947 the state highway and public works com- ssion maintained 11,349 mi. of state highways, of which 10,062 mi. e hard-surfaced; and 50,845 mi. of county roads, of which 3,334 mi. e hard-surfaced. There were 4,581 mi. of railroads, 324 mi. of city routes, 10,277 mi. of passenger bus routes and 11,525 mi. of freight icle routes in 1944.

**Banking and Finance.**—On June 30, 1947, there were 59 national banks branches with assets of $471,065,000, and 332 state banks and nches with deposits of $1,223,676,791 and assets of $1,313,593,493. On Jan. 1, 1947, there were 150 building and loan associations operating under state charters with 142,462 shareholders and total assets of $117,645,155, and 26 federal savings and loan associations with total assets of $65,090,629. In 1946–47 state receipts were $407,247,812; disbursements $382,874,418. On June 30, 1947, the state gross bonded and net debts were $90,956,500 and $22,640,218 respectively The assessed value of property was $2,884,364,459 in 1945. In the state general fund there was a cash surplus of about $42,100,000 at the end of 1947.

Table I.—*Leading Agricultural Products of North Carolina, 1947 and 1946*

| Crop | 1947 (est.) | 1946 | Value, 1947 |
|---|---|---|---|
| Tobacco, lb. . . . . . . . . . . . . . | 915,460,000 | 927,425,000 | $386,285,000 |

| Pecans, lb. . . . . . . . . . . . . . | 2,040,000 | 1,344,000 | 682,000 |

**Agriculture.**—The total value of agricultural production harvested from about 6,650,000 ac. in 1947 was approximately $782,000,000 of which tobacco accounted for $386,285,000 and cotton $69,300,000. North Carolina produced about 42% of all the tobacco and 70% of all flue-cured tobacco grown in the United States. The cash income of North Carolina farmers in 1946 was $633,394,000 from crops; $119,799,000 from livestock and livestock products; and $11,211,000 from government payments. The value of the lands and buildings on the 278,276 farms in 1940, 44% of which were operated by tenants, was $736,708,125.

**Manufacturing.**—In 1939 manufacturing establishments numbering 3,225 employed 270,210 wage earners at wages of $199,289,501 and made products valued at $1,421,329,578. The principal industries were tobacco products, cotton goods and furniture. Estimated industrial production in 1947 was about $2,000,000,000.

**Mineral Production.**—The mineral production for North Carolina in 1944 was $22,199,000. In quantity production of mica, feldspar and bromine, North Carolina ranked first among the states; but in value of all minerals produced, it ranked 32nd in 1944. The value of gold produced in 1943 was $4,585.

Table II.—*Principal Mineral Products of North Carolina, 1945, 1944, 1943 and 1942*

| Mineral | Value, 1945 | Value, 1944 | Value, 1943 | Value, 1942 |
|---|---|---|---|---|
| Stone . . . . . . . . . . . . | $3,044,135 | $5,975,951 | $5,376,600 | $3,774,472 |

## North Carolina, University of.

The University of North Carolina at Chapel Hill began its 154th session with an enrolment of 7,600 students, an increase of 80% above 1941. Three large dormitories were almost completed. Additional classroom facilities were provided by 28 temporary buildings, secured from the Federal Works administration. The chief items of new construction authorized by the state legislature were: a 50% increase in the library; a new medical school and teaching hospital of 400 beds; and expansion of the various utilities. Salary increases of 20% were also authorized.

Gifts during 1947 included the David C. and Martha Reeves Edwards Student Loan fund of $78,000, a bequest of $82,500 from Julian Price to assist in supplying a professorship of insurance and $280,000 from other sources. The Business foundation received approximately $1,000,000, the income from which is used to provide educational services and research for business and industry. On Nov. 29, the cornerstone was laid for the $2,000,000 Morehead Memorial building which would provide space for a planetarium and for an art collection.

The curriculums leading to graduate degrees in the school of public health were reorganized and the faculty strengthened. The school of pharmacy was authorized to offer the Ph.D. degree. Staff was added for expanding teaching and research in clinical psychology. A unit of the air officers reserve training corps was inaugurated. A new department of radio was authorized to give an undergraduate major leading to the A.B. degree. Of unusual significance in a state university was the beginning of a department of religion with plans to offer both elective courses and a major in the college of arts and sciences. (For statistics of endowment, enrolment, faculty, library volumes, etc., *see* UNIVERSITIES AND COLLEGES.)

**North Dakota.** A west north central state of the United States, admitted to the union Nov. 2, 1889. Popular name, "Flickertail State." Land area, 70,054 sq.mi.; water area, 611 sq.mi. Population (1940), 641,935; rural, 510,012; urban, 131,923. The bureau of the census estimated the population July 1, 1944, as 528,071. Capital, Bismarck (15,496). Chief cities, Fargo (32,580); Grand Forks (20,228); and Minot (16,577).

**History.**—The Garrison dam and Missouri-Souris irrigation projects were expected to increase the possible resources and population of the state appreciably. Federal agencies appropriated $22,785,545 to be spent in North Dakota in the year ending June 30, 1948. The Republican Organizing committee gained majorities in both house and senate of the 1947 legislature in the 1946 election. The chief state officers in 1947 were: governor, Fred G. Aandahl; lieutenant governor, C. P. Dahl; secretary of state, Thomas Hall; auditor, Berta E. Baker; treasurer, H. W. Swenson; attorney-general, Nels G. Johnson; superintendent of public instruction, G. B. Nordrum; commissioner of insurance, Otto Krueger; commissioner of agriculture and labour, Math Dahl; tax commissioner, John Gray; public service commissioners, C. W. McDonnell, S. S. McDonald, and Ben C. Larkin.

**Education.**—School teaching positions for the year ending June 1947 were 6,420; elementary 4,901; high school 1,519; enrolment 114,541 (elementary 85,912; high school 28,629); buildings, one-room and two-room 2,848; graded elementary 231; combinations (elementary and high school), 421; schools in session (1947–48), 3,500. Total enrolment in the state university, the state agricultural college and other state institutions of higher education, in the fall of 1947, was 12,091.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—Public assistance, in the year to Nov. 30, 1947, was $6,190,988; average number aided per month, 11,971; types of aid: old-age, $4,145,998 with 8,912 persons; care of dependent and foster home children, $1,563,018 with 1,972 persons; blind $57,514 with 125 persons; general assistance, $424,458 with 962 persons. Cost of operating 4 charitable and 4 correctional institutions, biennium to June 30, 1949, $4,758,520. Average number of patients (1947): feeble-minded, 1,025; blind, 30; deaf, 88; tubercular, 230; correctional institutions, penitentiary, 218, state farm, 18, training schools, 1,175. Additional appropriations for improvements, repairs, new buildings and equipment, $1,674,370.

**Communications.**—Highway mileage, state, 7,223; rural, 107,413. Spent for construction of state highways (1947) $6,093,000, and for maintenance of state highways, $4,500,000. No additional amounts apportioned to counties. Railway mileage, 5,272.

**Banking and Finance.**—On June 30, 1947, 1 trust company and 110 state banks had resources of $311,959,931; deposits, $296,069,436. Resources, 41 national banks (4 with trust powers), $242,102,000; deposits, $230,975,000. On Dec. 31, 1946, 6 federal savings and loan associations had resources of $8,285,171; share capital of $7,201,998; 12 state building and loan associations, Dec. 31, 1946, had resources of $19,536,679 and share capital of $17,865,671. State treasury collections, year to June 30, 1947, $40,451,855; payments, $35,382,127; bonded debt, $17,350,250.

**Agriculture.**—Farm acreage in crops (1947), 17,082,000. Gross farm income (1947) of $619,491,400 averaged $10,500 per farm unit for 60,000 operators; of this livestock and its products made $216,660,000; crops, $381,650,400; and soil conservation payments, $21,181,000; additional crops of $125,109,300 were fed to livestock on the farms. Number of workers on farms in 1947 was 236,539, reduced from 252,052 in 1943.

*Leading Agricultural Products of North Dakota, 1947 and 1946*

| Crop | 1947 | 1946 |
|---|---|---|
| Spring wheat (other than durum), bu. | 105,868,000 | 107,460,000 |
| Durum wheat | 40,170,000 | 32,364,000 |
| Corn | 24,374,000 | 25,542,000 |
| Oats | 61,902,000 | 62,764,000 |
| Barley | 50,358,000 | 46,600,000 |
| Rye | 4,360,000 | 2,058,000 |
| Flax | 11,400,000 | 5,334,000 |
| Potatoes | 20,100,000 | 17,760,000 |
| Hay, tons | 3,281,000 | 2,736,000 |

**Manufacturing.**—Estimated number of employees in nonagricultural establishments in North Dakota (Sept. 1947), 219,000, an increase of 9% over 1940; and in manufacturing, 6,200 employees, an increase of over 1940; estimated yearly wages per worker in manufacturing, $2, Value of creamery butter, $34,750,000. There were approximately 15 places of business in North Dakota on Dec. 1, 1947, an increase of a 3,000 in 12 months.

**Mineral Production.**—Production of lignite coal, to June 30, 1947, 2,817,768 tons; value, $4,743,581. Employment, 509 miners, 285 ot New mines, 9; reopened, 17; closed, 35. Number of mines in operat 119. Natural gas, 24 wells, to Nov. 30, 1947, produced 364,630,000 cu yield from 16 wells, calendar year 1946, was 344,653,000 cu.ft.

**Northern Ireland:** *see* IRELAND, NORTHERN.
**Northern Rhodesia:** *see* RHODESIA, NORTHERN.

**Northwestern University.** An institution of hig learning at Evanston a Chicago, Ill. The university comprises the following divisio the college of liberal arts, the graduate school, the technologi institute and the schools of music, education, speech, comme and journalism, all located in Evanston (a suburb of Chicag on a campus bordering Lake Michigan; the medical, law a dental schools and the evening departments of the universi all on Chicago's near north side, on a campus six blocks fr the loop business district.

During the academic year ending Aug. 31, 1947, the u versity awarded 3,504 degrees and diplomas, and the gifts ceived totalled $1,582,318.

The enrolment of the university for the fall term of 19 totalled 24,254 students, consisting of 10,446 full-time studen and 13,808 part-time students enrolled in the evening divisio on the Chicago campus. The enrolment showed a 12% increa over that of the previous year, and veterans represented appro imately 50% of the total. The university would gladly ha restricted its enrolment to more normal figures, but such course was unthinkable in view of its obligation to do all could for the returning veterans.

Under trying conditions, the university was making eve effort to maintain the quality of its educational programs. Ab teachers were added to the staff. Late afternoon and eveni classes relieved congestion, and careful selection of studen made it possible to do good work under adverse conditions.

The large enrolment, however, created a financial problem f the simple reason that tuition represented only about 65% instructional costs. The increased enrolment did not bring i creased endowment. Its net effect was to impose an addition burden on the university's investment income, already too thin spread.

During the year the university completed a $3,000,000 buil ing, containing 208 apartments, which were immediately occ pied by faculty, staff and students. (For statistics of endov ment, enrolment, faculty, library volumes, etc., *see* UNIVERS TIES AND COLLEGES.)

**Northwest Territories.** The Northwest Territories com prise the mainland portion c Canada lying north of the 60th parallel of latitude betwee Hudson bay on the east and Yukon territory on the west, to gether with the islands lying between the mainland of Canad and the north pole, including those in James bay, Hudson ba and Hudson strait. Area, 1,304,903 sq.mi.; pop. (1941 censu 12,028, comprising 2,284 whites, 4,334 Indians, 5,404 Eskim and 6 others; estimated pop. (1947), 15,201. The seat of gov ernment is at Ottawa, Ont.

For purposes of organization and administration, the terr tories were divided into the provisional districts of Mackenzi Keewatin and Franklin by order in council dated March 1 1918. The Northwest Territories act (1927) provided for territorial government composed of a commissioner, a deput commissioner and five councillors appointed by the governor ncil. The Northwest Territories council in 1947 was com- ed as follows: commissioner, Hugh L. Keenleyside; deputy ımissioner, Roy A. Gibson; members of council: Stuart T. od, Robert A. Hoey, John G. McNiven, Louis de la C. lette, Harold B. Godwin; secretary, James G. Wright.

**ducation.**—The education of white, native and half-breed children in :kenzie district was carried on at day and residential schools oper- under the supervision of the dominion government by missions of Church of England in Canada and the Roman Catholic Church, and ublic schools situated at Fort Smith and Yellowknife, all of which ived financial assistance from the government. The new public school ellowknife, designed to provide greater educational opportunities for lren residing at other settlements in the territories, was completed occupied in 1947. A school inspector was appointed by the North- . Territories administration in 1946 to co-ordinate all educational ices in the territories, and improvements introduced during 1947 in- ed an extensive circuit system for the distribution of educational films the institution of special radio programs broadcast to the classrooms. imo children in the eastern arctic were given instruction at mission schools.

**ansportation and Communications.**—Inland water transportation on the :kenzie river system from railhead at Waterways, Alta., to points in :kenzie district was available during the open season of navigation. ular commercial air services, which also carried mail, were maintained ı Edmonton, Alta., to the principal settlements. Good progress had ı made at the end of the year on the construction of a new all-weather way from Grimshaw, Alta., to Hay River settlement on Great Slave . Medical centres, trading posts, missions, etc., in the eastern arctic served, in part, by R.M.S. "Nascopie," and following the wreck of vessel off Cape Dorset in July 1947, by auxiliary boat services from ıead at Churchill, Man., and by special charter vessel S.S. "North ıeer," from Montreal. Radio communication was maintained between ortant settlements and trading posts in the territories and outside ıts through government and private commercial radio stations.

**griculture, Lumbering and Fisheries.**—Limited agricultural and horticul- l operations were carried on at most of the settlements in Mackenzie r valley. Experimental substations operated by the department of culture at Fort Simpson and Yellowknife carried on field work during year. Sawmills in the vicinity of Slave river delta operated to meet demand for lumber at Yellowknife. Commercial fishing on Great e lake, inaugurated in 1945, produced a catch of 2,387,000 lb. (round ght) during the summer of 1946, and a catch of 251,965 lb. during 1946–47 winter season.

**ur Trade.**—The trapping of fine furs continued to provide the chief ıpation of the native population. The fur harvest for the year ended e 30, 1946, totalled 565,065 pelts, with an estimated value of $2,750,- . Fur trading was controlled by regulation, and was open only to se who had been issued permits and who had established permanent ts. Of the white residents, only those who, under the regulations, were uded in an established eligible list were permitted to hunt and trap, such individuals required an annual licence. Reindeer herding in the ckenzie delta region was continued in the interests of the native ulation.

**Aineral Production.**—Mineral development in 1947 included the produc- ı of gold, silver, pitchblende concentrates, from which radium and ura- m are extracted, and petroleum. Yellowknife continued to be the centre gold mining activity, with the Con-Rycon, Negus and Thompson- ndmark mines in production. Development work was continued at er properties in the district, with emphasis on prospecting and assess- nt work to hold claims already acquired in good standing. Mineral duction in the Northwest Territories during 1947 included 60,346 oz. gold, with an estimated value of $2,112,110; 16,192 oz. of silver, h an estimated value of $11,658; 244,194 bbl. of petroleum, with an imated value of $239,310. These are preliminary figures.

At the end of the year considerable work had been done on the new droelectric power development on Snare river, 94 mi. northwest of llowknife, designed to provide the power required by new mines in the llowknife district.

Production of pitchblende concentrates was continued at the mine of lorado Mining and Refining (1944) Ltd. at Port Radium on Great ar lake. The concentrates were shipped by air and rail to the com- ny's refinery at Port Hope, Ont., for reduction.

Crude oil production was continued by Imperial Oil Ltd. at Norman ells on Mackenzie river. Much of this oil was processed at the Norman ells refinery, and was then shipped by barge to Port Radium and to llowknife where consumption of petroleum products, including fuel oil, s maintained at a high level.

A building program on a scale hitherto unknown in the Northwest Ter- ories was carried on at Yellowknife settlement, and two-thirds of the ilding lots available within the settlement had been taken up at the l of the year.

Freight shipments to Yellowknife, from points north and south of the tlement, far exceeded in volume the shipments of any previous year. provements were made in navigation aids and landing fields available the use of aircraft operating in the Northwest Territories, and access ıds to airports at all principal settlements were maintained by the de- rtment of transport. The landing field at the Yellowknife airport, in- ding two 600 ft. x 5,200 ft. strips, with rolled gravel surfaces, was npleted in 1947. (R. A. G.)

**orway.** A democratic monarchy of northern Europe, bounded north by the Arctic ocean, east by Finland, e U.S.S.R. and Sweden and west by the North sea. Area 124,- 6 sq.mi.; pop. (Dec. 3, 1946, census, prelim. figs.) 3,123,883. apital, Oslo (1930 census, 253,124). Other principal cities with 1930 populations are Bergen (98,303); Trondheim (54,458) and Stavanger (46,780). Religion, Lutheran Christian. Ruler in 1947: King Haakon VII. Prime minister: Einar Gerhardsen.

**History.**—The major news of Norway in 1947 was the progress of the hard-fought battle of reconstruction. Imports were restricted, exports were stimulated, work stoppages were prohibited and the wartime compulsory arbitration of labour disputes was continued. By the end of 1946 total production was back to 90% of normal and the figure for Jan. 1947 rose to 109%.

Norwegians showed their hopefulness and vigour by planning a number of large-scale enterprises. Foremost of course was a rebuilding of the merchant and fishing fleet. In the first 10 months of 1947, 261 ships of 818,051 gross registered tons and a value of 660,000,000 kr. were added.

Food rationing was strict, and late in the year the amount of flour, sugar and fats allowed to bakeries was appreciably reduced. Meat continued to be very scarce in most of the country. Eggs continued to be very short.

International trade was encouraged in every way. The government made agreements for exchange of goods with Finland, Poland, the U.S.S.R. and other countries. Most significant were the arrangements made for tariff reductions in the series of trade treaties negotiated at Geneva with the U.S., Great Britain, France, the Benelux countries (Belgium, the Netherlands and Luxembourg), Brazil, Cuba, Australia, Canada, Chile, China and New Zealand. About 50% of Norway's exports to the U.S. were affected, on which the U.S. granted tariff reductions of about 50%; among the items concerned were whale oil and sardines. Norway in turn lowered its duties on automobiles from 40% to 30% and made adjustments on many other items. Parliamentary review was to precede application of the new rates.

Norway also made an agreement with Great Britain and Sweden (Nov. 18) to concert measures in financial exchange. This was a result of the Marshall Plan conference in Paris and the original agreement among Benelux, France and Italy.

Many of the measures described involved use of forceful social controls. The Norwegian government was frank in acknowledging that it took a popular mandate to the Socialist and Communist delegates to mean that the people favoured governmental oversight. But the Conservatives vociferously attacked the government at many points, and demanded a larger degree of individual freedom of action. The effectiveness of this attack—together with a trend rightward throughout western Europe—resulted in general losses to the left parties in the municipal elections of October. In a vote much larger than at the elections of 1945 the Conservatives increased their ballots by 56%, the Farmers by 49%, the Liberals by 32%, and the combined Labour parties by only 2.3%. The Communists lost votes absolutely as well as relatively. The Labour party lost 140 council seats and the Communists lost 150; the Conservatives gained 240. Although storting seats were not affected, the right won an impressive moral victory, all the more so because Premier Gerhardsen had declared that people would vote for or against the Labour government policy.

In international affairs Norway faced two delicate problems at the very beginning of the year. A dispute with Russia had been simmering since the fall of 1944 when Russia asked to become a partner with Norway in the defense of the island of Spitsbergen (Svalbard), and sole defender of Bear Island. Norway then had no choice but to be partly yielding, partly evasive, and passed a resolution to the effect that the defense of Spitsbergen was a joint concern of Norway and the Soviet Union. Russia forced the question into the open in Jan. 1947. On Feb. 15, the Norwegian storting met in secret session and voted 101 to 11 to deny the Russian request for bases. The 11 votes were all cast by Communists. Norway argued in its reply to the Soviet Union that conditions had changed with the ending of the war: one factor was the soviet-initiated vote for disarmament in the United Nations. Joint defense of an area under Norwegian sovereignty, it said, was contrary to the policy pursued by the Norwegian government since the liberation.

The other serious problem was in relation to Spain, which took umbrage at Norwegian leadership in the United Nations against General Francisco Franco and his government. Other states did little to back their acid remarks on Spain, and Norwegian restrictions on trade with Spain were annoying rather than effective. Hence, on Jan. 4 the Spanish government threatened to retaliate against Norway by excluding Norwegian ships from Spanish ports. After reviewing the entire situation in the storting Norway decided to negotiate directly with Spain for a settlement of the dispute in line with Norwegian interests.

Most spectacular of the year's Norse expeditions was the raft voyage across the Pacific, headed by 32 year old Thor Heyerdahl. On the 15 ton "Kon-Tiki" six scientist-navigators drifted from Peruvian shores to the Polynesian islands in a 4,300 mi. slow-motion passage, to prove that prehistoric South Americans could have drifted this same route and peopled the islands of the Southwest Pacific. They kept careful records of a variety of phenomena in the 101 days at sea.

**Finance.**—The monetary unit is the krone (20.16 U.S. cents in Sept. 1946 and remained quite stable throughout 1947). Along with rebuilding its fleet, and largely because of its expenditures for that, Norway's great problem was dollar exchange. Much of its gold reserves was used, its gold and foreign exchange dropping from $300,000,000 at the end of 1946 to $136,000,000 on Sept. 30, 1947. About $40,000,000 was left of a United States Export-Import bank credit, and there was a revolving credit of $16,000,000 set up by New York banks in 1946. In the spring of 1947 Norway also sold a $10,000,000 bond issue (3½%) in New York.

Norway sought only slight aid from the Marshall plan.

**Trade and Communication.**—For the first 10 months of 1947 imports amounted to 2,593,000 kr. and exports to 1,420,000,000. The October figure for imports was down to 247,600,000 kr., showing that import restrictions were taking effect. Exports consisted chiefly of the following items (for first 10 months 1947): fish and canned goods 372,500,000 kr., wood products 393,400,000 kr., metals 196,000,000 kr., fertilizers 84,000,000 kr., whale and cod oil 214,000,000 kr.

**Agriculture.**—Acreage tilled declined about 8.8% from 1942 (from 1939, 9.4%). The chief loss was in grain acreage. The number of pigs increased slightly (2,000) over 1946, but was 28.5% less than in 1939. Chickens increased 42.8% from 1946, but were still 40% less than in 1939. Horses were more numerous than in 1939, but 5.6% less than in 1946. Milk cows were 8% less than in 1939.

**Fisheries.**—The whaling season (from Dec. 1946 to April 1947) produced about 1,000,000 bbl. of whale and sperm oil (165,000 tons); with prices high this was expected to bring 250,000,000 to 300,000,000 kr. in foreign exchange. In the Lofoten fisheries a good catch of 146,000 tons of cod was valued at 55,000,000 kr., and the total cod take was 227,905 tons. Winter herring produced a record catch with a value of 79,000,000 kr.

**Manufacturing.**—As of 1944 there were 4,905 industrial establishments, with 153,436 workers, which produced goods valued at 2,363,282 kr. In 1947 the timber felled reached a record high and promised a paper output of 400,000 tons.

The general production index figure was 106 for June 1946, as compared with 105 for 1938 and 109 for 1939. Production committees, based on a U.S. wartime system, aided in maintaining high outputs. Employment by March 1946 was up to 170,900, only 2,100 less than in 1939, and remained at a high level through 1947, partly because of the government prohibition of work stoppages, partly because of national feeling and the needs of reconstruction.

**Mineral Production.**—Total mineral production, 1943, was valued at 49,575,000 kr. The chief products and the value of each were:

| | Weight | Value |
|---|---|---|
| Silver ore | 12,303,000 kg. | 709,000 kr. |
| Copper | 21,216,000 " | 9,406,000 " |
| Sulphur pyrites | 808,779,000 " | 23,252,000 " |
| Nickel | 15,679,000 " | 1,506,000 " |
| Titanium | 285,191,000 " | 8,830,000 " |
| Zinc and lead | 9,075,000 " | 1,403,000 " |
| Molybdenum | 386,000 " | 4,159,000 " |

## Notre Dame, University of.

Quadrupling of its research program highlighted the 1947 program of the university. The expansion indicates the opportunities challenging universities through pure research developments and through the requirements of the government and industry. A peak enrolment of students conti to tax housing and academic facilities. Fifty new members added to the teaching staff in September.

The 1947 Laetare medalist was William G. Bruce, dis guished Milwaukee Catholic publisher, who became the recipient of the outstanding American award to Catholic laym

Academic highlights of the year were the opening of Medieval institute on Feb. 2; resumption of the universi summer session after a three-year wartime suspension; and first Natural Law institute, conducted by the College of I on Dec. 12–13.

Rev. J. Hugh O'Donnell, C.S.C., president of Notre Da during the war years (1940–46) died on June 12, 1947.

The 1947 commencement highlighted addresses by G George Kenney and Rt. Rev. Msgr. William Newton, bibl scholar, who received honorary LL.Ds. as did also I. O'Shaughnessy, St. Paul business leader and philanthropist; R J. Hugh O'Donnell, C.S.C., past president of the universi Mother Rose Elizabeth, C.S.C., superior general of the Sist of Holy Cross, and Most Rev. Lawrence Graner, C.S.C., D. alumnus-bishop of Dacca, Bengal, India.

Most significant development of the year for the universit future was the establishment of the University of Notre Da foundation. A university-alumni enterprise, it proposes to ordinate and stimulate fund-raising to enable the university meet effectively the opportunities offered it. Key to the foun tion program are 48 state governors and 200 city chairm organizing a program of public relations for the university the state and community levels.

Undefeated national cochampion, Notre Dame's football te attracted record crowds and publicity.

A new laboratory for advanced study of germ-free life begun.

(For statistics of endowment, enrolment, faculty, library v umes, etc., *see* Universities and Colleges.) (J. E. Ar.)

## Nova Scotia.

Most easterly of the three maritime pr inces of Canada, Nova Scotia entered union in 1867. Its area is 21,428 sq.mi., of which 325 sq. are lakes; pop. (1941) 577,962; (1947 est.) 621,000. The ca tal is Halifax, pop. (1943) 126,480; other cities are Sydn (1941) 28,305, Glace Bay 25,147.

**History.**—Liberal Premier Angus L. Macdonald continu in office and reported the largest peacetime surplus of $122,6 for the fiscal year ending Nov. 30, 1947. Lieut. Col. Hon. H. Kendall resigned as lieutenant governor and John Alexand Douglas McCurdy (first man to make an aeroplane flight in t British empire on Feb. 23, 1909) was appointed. The minimu age limit of industrial workers was raised from 14 to 16. T 1947 provincial Trade Union act made union officials respon ble for their activities, established fines for illegal striki and placed restrictions on employers to prevent discriminati The first general maritime coal strike after 1925 lasted 1 days. Miners lost $5,000,000 in wages and coal production w cut by 1,000,000 tons.

**Education.**—Total enrolment in educational institutions the 1944–45 school year was 133,107. In 1946, 250 of t province's 2,236 schools were without teachers. Faced with similar problem when the 1947 school year began, the gover ment increased schoolteachers' pay about 35%, and grant school boards $700,000 to meet the increases.

**Transportation.**—The government commenced a paved highway progra aimed at covering 800 new miles by 1950. A $1,000,000 causeway connect Cape Sable Island with the southern tip of the mainland w begun. After a hiatus of nearly a century, the province's ancient cro and-lion flag flew on 12 Nova Scotia-owned freighters.

**Agriculture.**—Agricultural sales in the first six months of 1947 totall $14,663,000 (same period 1946: $13,366,000). Livestock (cattle, hors ı, swine) stood at 445,000 in 1946 (1944: 498,000). The 1947 apple was estimated at 1,125,000 bbl.

**sources and Industry.**—Mineral production reached a high of $35,391,- in 1946, about $3,200,000 more than 1945. Increased production of and gypsum were the principal factors. After spending two years $1,000,000, the Sun Oil company abandoned drilling near Amherst. ı Jan. 1, 1946, to July 1, 1947, 52 new industries began operation in ı Scotia.

**oduction.**—The gross value of 1945 production was $338,522,173. net value was $182,724,409, which was 3.01% of Canada's total. capita production was $294.24. (C. Cy.)

**sery Schools:** *see* Education.

**sing:** *see* Hospitals.

**megs:** *see* Spices.

**rition:** *see* Food Research; Vitamins.

**ts.** The U.S. pecan crop of 1947 was estimated at 100,209,000 lb., compared with the short crop of 76,706,000 lb. vested in 1946 and an average of 107,784,000 lb. during –45. The crop of improved varieties was 42,887,000 lb., above the previous year but 10% below average. The lling crop was much better, being 45% above 1946 and 2% ve average. The improved varieties were grown mostly in southeast, 51% in Georgia alone, while the seedlings or varieties were grown in Texas and Oklahoma. The 1947 was short in Mississippi and Louisiana, where the Septem- hurricane caused severe loss. Florida also suffered from storms.

Valnut production was estimated at 64,800 tons, a smaller than in 1946 but above average. Dry weather during tember in California reduced the yield and produced smaller s. The Oregon crop was estimated at 5,800 tons compared the record 8,900 tons harvested in 1946. Damage from ht reduced the output.

he almond crop of California was estimated at 29,200 tons 3% below the record high crop of 37,800 tons harvested in 6. This crop was 65% above the average harvest.

ilbert production in Oregon and Washington was estimated 3,900 tons, a new record, compared with a production of 0 tons in 1946, the record to that year. The 1947 crop was out double the average of 4,310 tons for the two states. egon produced 7,800 tons and Washington 1,100 tons. (*See* Coconuts.) (J. C. Ms.)

*U.S. Pecan Production, 1947 and 1946*

(In thousands of pounds)

| | Improved varieties | | Wild varieties | |
|---|---|---|---|---|
| State | 1947 | 1946 | 1947 | 1946 |
| gia | 22,572 | 13,000 | 3,983 | 3,000 |
| ama | 6,175 | 6,642 | 1,265 | 2,098 |

**asaland.** A British protectorate in central Africa surrounded by northern Rhodesia, Tanganyika the Portuguese Mozambique. Area: 47,949 sq.mi., including 353 sq.mi. of water; pop. (1945 census) 2,050,051, (1946 ) 2,230,955, including 3,100 Asiatics, and 2,400 Europeans. pital: Zomba. Governor: G. W. T. Colby. Public finance 44): revenue (including grants in aid) £1,029,282; expendi- e £857,194; public debt £3,779,161. Foreign trade (1945): orts £1,876,063; imports £1,620,882. Chief exportable prod- s: tobacco, tea, cotton, beans, groundnuts, tung oil, sisal.

**lon:** *see* Rayon and Other Synthetic Fibres.

**Oats.** The U.S. oat crop of 1947 was estimated at 1,215,970,000 bu., a decline from the 1,497,904,000 bu. record crop of 1946. The average of 1936–45 was 1,161,282,000 bu. Lower production in 1947 was mainly due to an 11% drop in acreage to 38,648,000 ac. from the 43,205,000 ac. harvested in 1946 and also a decline in average yield per acre to 31.5 bu. from 34.7 bu. in 1946. Unfavourable weather in April and May delayed planting and kept growers from seeding full acreages in most of the heavy producing north central states. Dry, hot weather reduced yields on late planted areas.

*U.S. Oats Production in Leading States, 1947, 1946 and 10-year Average, 1936–45*

(In thousands of bushels)

| State | 1947 | 1946 | 10-yr. average | State | 1947 | 1946 | 10- yr. average |

| New York | 13,338 | 32,360 | 22,989 | New Jersey | 1,000 | 1,440 | 1,335 |
| Mississippi | 12,480 | 10,571 | 7,785 | | | | |

The world's oat crop was not as good in 1947 as in the preceding three years; it was estimated at 4,120,000,000 bu. compared with a prewar average of 4,363,000,000 bu., 1935–39. Yields were lower in Europe than in previous years, although the acreage was well maintained and was approaching the prewar level. The crop in France, Germany and the United Kingdom reflected the effects of unfavourable weather. (J. C. Ms.)

**Obituaries.** The following is a selected list of prominent men and women, of the United States and other countries, who died during the year 1947.

**Abadía Méndez, Miguel** (June 5, 1867–May 15), Colombian politician.

**Agate, James Evershed** (Sept. 9, 1877–June 6), British drama critic.

**Ajalbert, Jean** (1863–Jan. 14), French writer.

**Albers, Homer** (Feb. 28, 1863–Jan. 9), U.S. lawyer, educator.

**Allen, Sir William (James)** (Oct. 1866–Dec. 20), Northern Ireland politician.

**Anderegg, Rupert Andrew** (1894?–July 18), U.S. flood control expert, educator.

**Anderson, William Gilbert** (Sept. 9, 1860–July 7), U.S. athletics director.

**Andrae, Tor Julius Efraim** (1885–Feb. 24), Swedish clergyman, politician.

**Anglesey, Charles Henry Alexander Paget,** 6th Marquess of, (April 14, 1885–Feb. 21), British peer.

**Anspacher, Louis Kaufman** (March 1, 1878–May 10), U.S. writer.

**Argüello, Leonardo** (1875–Dec. 15), Nicaraguan politician and physician, was born in León, Nicaragua, and studied medicine in León and Europe. Dr. Argüello participated in the revolution of 1912 and subsequently was deputy to the national congress and held several cabinet posts. He was an unsuccessful candidate for president in 1936, but nominated again in 1946, he was elected Feb. 1, 1947, and was inaugurated May 1. However, 25 days later he was deposed by Gen. Anastasio Somoza, former president and powerful political leader. Argüello fled to the Mexican embassy where he was given asylum for six months. Finally on Nov. 20, he was permitted to leave with his family for Mexico City where he died.

**Armstrong, Warwick Windridge** (May 22, 1879–July 13), Australian cricketer.

**Ashley, Clifford Warren** (Dec. 18, 1881–Sept. 18), U.S. marine artist, author.

**Ashley, Raymond Harman** (March 29, 1881–Dec. 1), U.S. chemist, educator.

**Asquith, Herbert** (March 11, 1881–Aug. 5), British novelist, poet.

**Atcheson, George, Jr.** (Oct. 20, 1896–Aug. 16), U.S. government official and diplomat, was born in Denver, Colo. He served in the army during World War I as an aeronautics instructor and was graduated from the University of California, Berkeley, with a B.A. degree in 1919. He entered the U.S. foreign service in 1920 and spent the next two decades in various diplomatic posts in the orient. In 1942 he was dispatched to Chungking as counsellor of the U.S. embassy, but he clashed with Ambassador Patrick J. Hurley over policy. Hurley accused Atcheson of "disloyalty," and while the latter was removed from his post on grounds of insubordination, he was subsequently cleared of the disloyalty charges.

Atcheson's next assignment, in Sept. 1945, was that of political adviser to Gen. Douglas MacArthur, supreme commander of allied occupation forces in Japan, who made him the U.S. member of the Allied four-power council in Tokyo.

An army plane, in which Atcheson was en route from Tokyo to Washington, D.C., sank after an emergency landing in rough seas west of Honolulu.

Atcheson was one of the four persons who were missing after the craft went down and he was presumed dead.

**Atwater, Helen Woodward** (May 29, 1876–June 26), U.S. home economist.

**Aung San, U** (1914?–July 19), Burmese national leader, was imprisoned when an undergraduate at Rangoon university for subversive activities. Shortly after the outbreak of World War II, he escaped to Japan, where he received military training. During the Japanese occupation he negotiated with the British and, as a result, the Burmese National army attacked the Japanese on April 26, 1945, and assisted the Allies. From the political movement accompanying this armed resistance was formed the Anti-Fascist Peoples' Freedom league, uniting most parties under Aung San's leadership. Soon after the liberation, Aung San refused office in the executive council, unless his party was given a large majority of seats. On Sept. 26, 1946, a new council with powers of interim government was formed, with the governor as chairman and Aung San as deputy chairman and counsellor for defense and external affairs. Aung San demanded that steps be taken toward Burma's constitutional independence and headed a delegation which visited London in Jan. 1947, where a wide measure of agreement was reached with the British government. In the election for a constituent assembly, held in April and boycotted by extremists and dissidents from his policy, his party won 196 out of 202 seats. Five men armed with Sten guns and rifles broke into the council chamber at Rangoon while the executive council was in session and assassinated Aung San and six other members.

**Ayres, Louis** (Aug. 25, 1874–Nov. 30), U.S. architect.
**Backe, Herbert** (1896–April 6), German politician.
**Bacon, Charles Sumner** (July 30, 1856–July 10), U.S. obstetrician.
**Bacon, Sir Reginald (Hugh Spencer)** (1863–June 9), British naval officer.
**Bagg, Halsey Joseph** (Oct. 23, 1889–April 14), U.S. research biologist.
**Baily, William Lloyd** (Dec. 26, 1861–April 6), U.S. architect, ornithologist.

**Bainbridge, William Seaman** (Feb. 17, 1877–Sept. 22), U.S. surgeon and cancer authority, was born in Providence, R.I., and in 1893 was graduated from the College of Physicians and Surgeons of Columbia university. He spent several years in postgraduate work in European hospitals.

In the United States, Dr. Bainbridge won wide renown as the first U.S. surgeon to use spinal analgesia. He also developed new surgical methods for use in cancer cases and a special technique for removal of cancer-infected breasts.

He was professor of operative gynaecology of the New York Post-Graduate Medical school, professor of surgery at New York Polyclinic Medical school and hospital, and surgeon and secretary of the research committee of the New York Skin and Cancer hospital.

He served in World War I as ship's operating surgeon and as medical observer with Allied field armies. Later he became consulting surgeon of the 3rd naval district and attending specialist in surgery with the U.S. public health service of the New York city area.

Author of *The Cancer Problem* (1914), Dr. Bainbridge also wrote numerous monographs on cancer and surgical subjects. He died at Danbury hospital, Bethel, Conn.

**Bajpai, Sir Seetla Prasad, Rai Bahadur** (April 19, 1865–Feb. 1), Indian jurist.
**Baldwin, Edward Robinson** (Sept. 8, 1864–May 6), U.S. physician.
**Baldwin, Elbert** (1894?–Dec. 6), U.S. economist.

**Baldwin of Bewdley, Stanley Baldwin, 1st Earl** (Aug. 3, 1867–Dec. 14), British statesman and thrice prime minister, was born at Bewdley, Worcestershire, the only child of Alfred Baldwin, M.P., and was educated at Harrow and Trinity college, Cambridge. For his early life see *Encyclopædia Britannica.*

After nine months out of office, Baldwin's second term as prime minister, which saw Britain's return to the gold standard, the general strike of May 1926 and the passing of the Trades Disputes act, 1927, began in Nov. 1924, when the Conservative party was returned in the house of commons. The general elections of June 1929 returned a Labour government, but in Aug. 1931 a National government was formed in which Baldwin was lord president of the council. From Sept. 1932 to 1934 he held the additional post of lord privy seal.

On the resignation of J. Ramsay MacDonald in June 1935, he became prime minister for the third and last time, for on May 28, 1937, he retired—a sick man needing a long rest. During his last period as premier, the grave constitutional crisis arose, which ended in the abdication of King Edward VIII and the accession of the duke of York as King George VI.

His services to the state were recognized by the conferment of the titles of Earl Baldwin of Bewdley, Viscount Corvedale and a knighthood of the Order of the Garter. He died at his home near Stourport-on-Severn, Worcestershire.

**Barbeau, Antonio** ( ?–June 14?), Canadian neurologist.

**Barcroft, Sir Joseph** (1872–Mar. 21), British physiologist, was educated at Bootham school, York, the Leys school, Cambridge and at King's college, Cambridge university, where he was made a fellow in 1901. His work was classical in three major fields: the physical chemistry of oxyhaemoglobin, the distribution of the blood between the storage depots and the circulation; and the physiology of foetal life. His work in World War I made him a leading authority on defense against war gases. He was elected a fellow of the Royal society in 1910, was appointed a C.B.E. in 1918; was elected president of the physiological section of the British association in 1920; Fullerian professor of physiology at the Royal institution, 1923–26; and was professor of physiology at Cambridge university, 1926–37. He was knighted in 1935. From 1941 he was director of the unit of animal physiology under the Agricultural Research council. Many learned societies and universities honoured him, and in 1943 he received the Copley medal, the Royal society's highest honour. He was editor of the sixth edition of *Huxley's Physiology*, joint editor of the *Cambridge Comparative Physiology* and was a departmental editor (physiology) of *Encyclopædia Britannica*. He died at Cambridge.

**Barnard, William Nichols** (April 24, 1875–April 3), U.S. educator.
**Batchelder, Charles Foster** (July 20, 1856–Sept. 3), U.S. naturalist.
**Bauer, Charles Christian** (Nov. 17, 1881–March 15), U.S. tax authority.
**Baxter, Bruce Richard** (Aug. 18, 1892–June 20), U.S. Methodist bishop.

**Beaman, Bartlett** (July 20, 1891–Nov. 14), U.S. army officer.
**Beatty, Bessie** (Jan. 27, 1886–April 6), U.S. radio commentator.
**Beaumont, Henry** (June 7, 1902–Feb. 21), U.S. educator, psychologist.
**Beedy, Carroll Linwood** (Aug. 3, 1880–Aug. 30), U.S. congressman.
**Belcher, George Frederick Arthur** (Sept. 19, 1875–Oct. 3), British cart
**Belloc, Marie Adelaide** (Mrs. Lowndes) (1868?–Nov. 14), British n
**Belmont, Perry** (Dec. 28, 1850–May 25), U.S. diplomat.
**Belson, J. Harry** (1906?–March 13), Canadian chess champion.
**Bench, John J.** (1905?–Dec. 9), Canadian senator.
**Benlliure y Gil, Mariano** (Sept. 8, 1862–Nov. 9), Spanish sculptor.

**Bennett, Richard Bedford Bennett, 1st Viscount, of Mickleham i** County of Surrey and of Calgary and Hopewell, in Canada (J 1870–June 26), was prime minister of Canada 1930–35. Born at Ho N.B., and educated in local schools, he took a law degree at Dalhous versity, Halifax, and built up a successful law practice, first at Cha N.B., and later at Calgary, Alta. He entered politics in 1898 as a m of the legislature of the Canadian Northwest Territories. From 1911– represented Calgary in the Canadian parliament. For a short time, in he was minister of justice and attorney general, but was not thereaft litically active until 1925 when he re-entered parliament and in 1926 b minister of finance. In the following year he became leader of the Co ative party, a post which he held until 1938. In 1930 he became minister, and attended the 1930 Imperial conference in London whe came out in favour of the principle of empire preferences. Apart fro tending to negotiations in Washington with President Herbert Hoo 1931, he played an important part at the Ottawa Empire conference of in which the system of empire preferences was greatly strengthene represented Canada at the World Economic conference in London in at the League of Nations in 1934 and again in London at the celebra of King George V's silver jubilee in 1935. In that year, he resigne premiership after the Conservative party was defeated in the general tion, and in 1936 visited Australia and New Zealand. In 1938 he r from public life in Canada and settled at Mickleham, Surrey, Eng During World War II he served in an advisory capacity to Lord Beaver at the ministry of aircraft production. He was created a viscount in and died at Mickleham. *See* also *Encyclopædia Britannica.*

**Benton, James Webb** (July 9, 1892–Oct. 22), U.S. diplomat.
**Beresford, John Davys** (March 7, 1873–Feb. 1), British novelist.

**Bernard, Tristan** (Sept. 17, 1866–Dec. 7), French playwright, humoris novelist, was born in Besançon. For his early career, see *Encyclo Britannica.* Abroad, Bernard was noted principally for his plays, b home he was perhaps even more famed as a humorist.

Bernard left Paris for Cannes to escape the German occupation d World War II. But his caustic comments on the occupation offende conquerors and, arrested on the Riviera in Sept. 1943, he was intern Drancy until the liberation.

Among his later works are *l'Enfant prodigue de Vésinet* (1921), *Le V imprevu* (1928), *Aux abois* (1933), *Paris Secret* (1933), *Visites nocturnes* ( and *Robins des bois* (1935).

Bernard died at his home in Paris.

**Berreta, Tomas** (Nov. 22, 1875–Aug. 2), Uruguayan soldier and polit was born near Arroyo Miguelete, Uruguay, the son of an Italian li emigré. He participated in the revolutions that shook Uruguay bet 1896 and 1904, tied his fortunes to those of Pres. José Batlle y Ordoñe became chief of Batllista armed forces.

In the ensuing years, Berreta became an important figure in the go ment. He was a national deputy, 1922–29, and a member of the Nat Council of Administration from 1929 until its dissolution by Pres. Ga Terra in 1933.

An opponent of the Terra regime, Berreta was banished but later permitted to return to Montevideo, where he once more assumed a lea role in the government. In 1942 he was elected to the council of state later became minister of public works. He reached the peak of his poli career in 1946, when as candidate of the liberal Colorado party, he defe Luis Alberto de Herrara for the presidency. In Feb. 1947, the new presi elect visited Pres. Harry S. Truman in Washington. At the time, he phasized that his purpose was not to engineer a loan but to tighten bon Uruguayan-U.S. friendship.

Berreta, who was inaugurated March 1, 1947, died in Montevideo an emergency operation.

**Bidwill, Charles W.** (1896?–April 19), U.S. sports promoter.

**Bilbo, Theodore Gilmore** (Oct. 13, 1877–Aug. 21), U.S. politician, was in Juniper Grove, Miss. At the age of 19, he became an active Baptist preacher. He was admitted to the Tennessee bar in 1908.

Elected to the Mississippi state senate in 1908, Bilbo was accused years later of taking a bribe to vote for a candidate to the U.S. senate, later asserted he had taken the gift to "trap" the giver.

Bilbo's explanation was received with skepticism by his colleagues voted a resolution into the state journal calling for his ouster.

The Mississippi politician, however, toured the back country, and, florid oratory, convinced his constituents that he was being victimized issue also helped him win election as lieutenant governor in 1911 and governorship in 1915 and again in 1927.

In 1934 Bilbo was elected to the U.S. senate and was re-elected in and 1946. In the upper house, he denounced the anti-lynching bill an Committee on Fair Employment Practice measure. He spoke for "w supremacy," urged deportation of all Negroes to Africa and (in 1946) mitted membership in the Ku Klux Klan.

In Dec. 1946, however, senate committees investigated charges that used intimidation to keep Negroes from the polls in Mississippi and tha used his office to get financial favours from war contractors. During inquiry into the bribe charges, Bilbo admitted receiving certain gifts parently for the purpose of promoting the candidacy of Wall Doxey fo senate, but claimed there was nothing "improper" in these actions. the senate refused to permit Bilbo to take the oath of office in Jan. 194 did not expel him. He died in New Orleans, La.

**ley, George Richard Lane-Fox,** 1ST BARON (Dec. 15, 1870–Dec. 11), itish politician.
**k, Charles Clarke** (July 29, 1858–Dec. 23), U.S. jurist.
**, Arthur** (Sept. 2, 1869–Feb. 4), British army officer.
**e, Maurice Adin** (Dec. 1, 1882–Dec. 14), U.S. horticulturist.
**kfort, Isaac Moses** (Feb. 5, 1846–July 6), U.S. educator.
**n, Jean-Richard** (1884–March 15), French writer, politician.
**ne, Samuel George** (May 19, 1868–July 17), U.S. author.

**ard, Pierre** (Oct. 3, 1867–Jan. 24), French painter, was born at Fontenay-x-Roses, near Paris. He attended the Académie Julian and was erward inscribed at the École des Beaux-Arts but did not attend ere. He was a civil servant until 1899 when he resigned in order to vote himself to painting. He had first been attracted to decorative art, signing the covers of musical scores, screens and posters, and illustrating oks. About 1890 he began to execute coloured lithographs and in 1895 hibited stained-glass windows. His first paintings were exhibited at the lon des Indépendants in 1891. An important exhibition at Durand-Ruel's llery in 1896 made his work generally known.

Bonnard was a post-impressionist whose most characteristic pictures were interiors with figures, although he painted many landscapes and still life bjects. Together with his friend, Jean Edouard Vuillard, he was often scribed as an "intimist." Early in his career he was for a short time sociated with the "Symbolist" painters led by Paul Gauguin in Brittany. olour was his chief means of expression, in which he was influenced by erre Renoir, his design and drawing owing something to Hilaire Degas and enri de Toulouse-Lautrec. In his charming and affectionately-treated in-riors the quiet forms are resolved into colours whose brilliant and subtle tterns give them life.

The Tate gallery in London possesses four paintings by Bonnard and his ork is represented in most large modern collections.

**ner, Lucius Messenger** (Aug. 22, 1878–June 26), U.S. hotel manager.
**h, Fenton Whitlock** (May 12, 1869–July 26), U.S. jurist.
**, Carl Oscar** (March 3, 1879–May 8), U.S. artist.
**ater, Sir Frank H.** (April 3, 1866–Nov. 10), British politician.
**erman, Charles William** (Jan. 22, 1851–June 11), British trades union ficial, politician.
**es, Robert E.** (Feb. 18, 1899–Nov. 10), U.S. educator.
**lbury, Samuel** (April 30, 1883–Aug. 29), U.S. medical author.
**lley, Frederick Van Ness** (April 12, 1898–May 24), U.S. congressman.
**lley, Walter Parke** (July 7, 1862–Sept. 14), U.S. research chemist.
**nham, William Gibbons** (July 13, 1874–July 8), U.S. baseball executive.
**ner, Olaf Martinius** (Feb. 9, 1869–Jan. 3), U.S. portrait painter, educator.
**ges, H. F. G.** (1902?–Aug. 10), Canadian cabinet minister.
**k, Sir Osmond de Beauvoir** (Jan. 5, 1869–Oct. 14), British naval officer.
**oks, Eugene Clyde** (Dec. 3, 1871–Oct. 18), U.S. educator.
**wn, Sir William (Barrowclough)** (1893–Feb. 11), British government of-cial.
**vne, Charles** (Sept. 28, 1875–Aug. 16), U.S. physician, congressman.
**vne, Charles Albert** (Aug. 12, 1870–Feb. 3), U.S. chemist.
**vning, Sir Montague Edward** (Jan. 18, 1863–Nov. 4), British naval officer.
**is, Henry Frederick** (Nov. 24, 1889–Jan. 20), U.S. naval officer.
**ant, William Letchworth** (1871–June 10), U.S. palaeontologist, author.
**k, Sir Percy Carter** (1871–Oct. 3), British organist, music professor.
**ington, Joseph** (Sept. 5, 1855–Oct. 21), U.S. jurist.

**ard, Robert Lee** (Jan. 15, 1861–Sept. 11), U.S. army officer, was born at oungsboro, Ala. For his early career, see *Encyclopædia Britannica.* Gen-al Bullard was commander of the U.S. 2nd army during World War I and d the celebrated counterattack in the second battle of the Marne (July 18) hat turned defeat into victory.

In 1925 Bullard retired from active service with the rank of lieutenant eneral. He became head of the National Security league, advocated that reparedness was the best insurance against war, contributed articles on omestic and world affairs to the Hearst papers and, in 1935, alleged that communists" were undermining the country's relief program.

General Bullard died at the Fort Jay hospital, Governors Island, N.Y.

**gess, Ellis Beaver** (Nov. 19, 1869–Dec. 20), U.S. Lutheran churchman.
**gess, William Starling** (Dec. 25, 1878–March 19), U.S. naval architect, ngineer.
**nham, Frederick Russell** (May 11, 1861–Sept. 1), U.S. explorer.
**russ, Julian Ashby** (Aug. 16, 1876–Jan. 4), U.S. educator.
**ton, Sir Pomeroy** (1868?–Oct. 15), British journalist.
**e, John Crichton-Stuart,** 4TH MARQUESS OF (June 20, 1881–April 25), Brit-sh peer.

**ler, Nicholas Murray** (April 2, 1862–Dec. 7), U.S. educator and publicist, as born at Elizabeth, N.J. For his early career, see *Encyclopædia Britan-ica.* Dr. Butler was associated with Columbia university for 60 years—he last 44 as president of the institution. Throughout his lifetime, he worked ndefatigably for world peace and his efforts to promote international under-tanding were recognized in 1931 when he was named co-winner of the Nobel eace prize.

Although a lifelong Republican, he aligned himself against the so-called noninterventionists" in the party, and upheld the Rooseveltian foreign olicy in the critical years preceding U.S. entry into World War II.

He was the author of *The Path to Peace* (1930), *Looking Forward* (1932), *etween Two Worlds* (1934), *Family of Nations* (1938), *Across the Busy Years* 1939), *Why War* (1940) *Liberty, Equality, Fraternity* (1942), and *The orld Today* (1946).

After his retirement from the university in 1945, Dr. Butler became totally lind and he died in New York city, N.Y.

**loux, Cecil John** (May 24, 1883–Aug. 17), British church historian.
**thness, Norman Macleod Buchan,** 18TH EARL OF (April 4, 1862–March 5), Scottish peer.

**decote, Thomas Walker Hobart Inskip,** 1ST VISCOUNT (March 5, 1876–Oct. 1), British lawyer, educated at Clifton and King's college, Cambridge. He as called to the bar in 1899, and joined the western circuit where with his amily's Bristol connections he soon developed a large practice. He made wo unsuccessful attempts to enter parliament in 1906 and 1910, and during orld War I was at the admiralty where he became head of the naval law branch. In 1918 he was elected Unionist member for Bristol Central, and in 1922 commenced his first term of office as solicitor general. With the fall of the government in Jan. 1924 he went out of office, only to return in November again as solicitor general. During 1928-29 he was attorney general until the general election when he lost his seat in the commons. Again solicitor general, 1931-32, having been elected for Fareham (Hants.), and attorney general, 1932-36, when he was appointed to the newly created post of co-ordination of defense.

As World War II approached he was succeeded by Admiral of the Fleet Lord Chatfield, and became dominions secretary. In Sept. 1939 he became lord chancellor, until May 1940 when for six months he returned to the dominions office. In October he was appointed lord chief justice of England. Because of ill-health he resigned in Jan. 1946. He always took a keen interest in the affairs of the church, and in 1927 and 1928 attracted public opinion in the debates on the revised prayer book and his efforts led to its eventual rejection. He was a member of the assembly of the Church of England and president of the National Church league. He took silk in 1914, and was raised to the peerage as Viscount Caldecote of Bristol in 1939. He died at Godalming, Surrey.

**Caldwell, Otis William** (Dec. 18, 1869–July 5), U.S. educator.
**Callahan, William Washington** (1864?–Aug. 6), U.S. jurist.
**Cameron, Arnold Guyot** (March 4, 1864–July 29), U.S. editor, author, educator.
**Campbell, Robert Fishburne** (Dec. 12, 1858–April 3), U.S. churchman.
**Campbell, Wallace Ronald** (Feb. 3, 1882–Aug. 10), Canadian motorcar executive.
**Capart, Jean** (1877?–June 16), Belgian archaeo'ogist, Egyptologist.

**Capone, Alphonse** ("SCARFACE AL") (Jan. 17, 1899–Jan. 25), U.S. gangster, earned the reputation as "public enemy No. 1" during the turbulent prohibition era (1920–33). He was born in Naples, Italy, was brought up in Brooklyn, N.Y., and did not get beyond the fourth grade in school.

By the time Capone was 19, he was reputed to have committed several robberies and was suspected of two murders.

He went to Chicago, Ill., to work for Johnny Torrio, owner of vice dens and distributor of bootleg whiskey, and soon became Torrio's right-hand man and partner. Torrio and Capone "muscled into" territory controlled by rival gangsters in the city and suburbs. They developed an enormous bootleg business and gained control of gambling, prostitution, dance halls and dog tracks.

In a gang war for undisputed control over the Chicago underworld area, the Capone gang slew Dion O'Bannion, a rival gang leader, in 1924. Torrio retired from the "business" in 1925, and Capone was left in control. The climax of the gang war was the St. Valentine's day massacre of 1929, during which Capone "troopers," disguised as policemen, slew seven members of the Moran gang in a Chicago garage.

In 1929, Capone entered the political arena and openly endorsed the candidacy of "Big Bill" Thompson for mayor.

The profits that flowed from Capone's activities were huge. Although the municipal authorities were powerless to bring him to trial for the 300-odd murders which he was said to have inspired, the federal government arrested him on charges of evading income taxes. Tried in Oct. 1931, he was convicted, sentenced to 11 years in federal prison and fined $50,000 and $20,000 for costs.

Capone was released in 1939, broken physically and mentally, a victim of paresis. He retired to his estate at Miami Beach, Fla., where he died.

**Carey, Eben James** (July 31, 1889–June 5), U.S. educator and anatomist, was born in Chicago, Ill. He received his degree of doctor of science at Creighton university, Omaha, Neb., in 1920 and his medical degree from Rush Medical college in Chicago, in 1925.

After six years on the faculty at Creighton, as an assistant professor of anatomy, he went to Marquette university, Milwaukee, Wis., in 1920 as director and professor of anatomy, becoming dean of Marquette's medical school in 1933.

Dr. Carey won international recognition for his research work on bone, muscles and nerves and in his later years he devoted much of his research to poliomyelitis under grants financed by the National Foundation for Infantile Paralysis.

He received numerous medals and awards from such institutions as the American Medical association, the Radiological Society of North America and the American Congress of Radiology. In 1939 Dr. Carey reported his discovery that vibration of a protoplasmic jelly inside the muscles is the secret of strength. He was the author of *Studies in Anatomy* (1924).

Dr. Carey died in Milwaukee, Wis.

**Carey, Harry** (Jan. 16, 1878–Sept. 21), U.S. stage and screen star, was born in New York city, N.Y., and was christened Henry De Witt Carey, 2nd. He grew up in the Bronx, played football on the New York university team and studied law at New York Law school. He gave up law for drama, entered motion pictures in 1908 and went to Hollywood three years later where he became one of the "kings of the saddle" of the silent film "horse operas."

The eastern born-and-bred star won great popularity in his western roles with his impersonation of the western drawl and bowlegged gait. Furthermore, he fitted in with the youthful preconception of what a "typical" cowboy looked like.

After the advent of the talking film, Carey's star declined temporarily but rose again when he was given the leading role in *Trader Horn* (1929).

Among later pictures in which he was either starred or featured were *Valiant is the Word for Carrie, Mr. Smith Goes to Washington, The Shepherd of the Hills, Sundown* and *Air Force.*

In 1940 he appeared on Broadway in *Heavenly Express.* He also played in the 1941 revival of Eugene O'Neill's *Ah, Wilderness!* and in *—But Not Goodbye* in 1944.

He died at his home in Brentwood, Calif.

**Carey, William Gibson, Jr.** (July 3, 1896–Oct. 4), U.S. industrialist.

**Carlson, Evans Fordyce** (Feb. 26, 1896–May 27), U.S. marine corps officer, was born at Sidney, N.Y., the son of a Congregationalist minister. Carlson joined the army at the age of 16, saw service in the Philippines and Hawaii and was honourably discharged in 1915 as a top sergeant.

He was recalled to service during the Mexican border troubles, and during World War I he went overseas with the American expeditionary force. Upon the end of the war he had attained a captaincy and had been decorated by Italy and France. He also was cited by Gen. John J. Pershing.

Soon wearying of civilian life, he joined the marine corps as a private in 1922. The following year, he was commissioned as a second lieutenant and later served in China and Nicaragua. At the height of Japanese aggression in China, Carlson was appointed a military observer by Adm. Harry E. Yarnell, in which capacity he made a 2,000-mi. trip into the interior areas of China. He found much to praise in the tactics and fighting ability of the guerrilla forces and penned his experiences and observations in two books, *Twin Stars of China* and *The Chinese Army* (1940).

Carlson subsequently resigned from the marines and revisited China in 1940 and 1941 as a civilian. Convinced that Japanese policy in the far east would eventually lead to war with the United States, he rejoined the marines in 1941 as a major and set up a special raiding unit of 1,000 picked men, patterned in some respects on the guerrilla units he had observed in China.

Thoroughly schooled in guerrilla tactics, "Carlson's Raiders," as the force was known, made its first successful hit-and-run raid on Japanese-held Makin Island in Aug. 1942. Later, it participated in operations on Guadalcanal, the Gilbert Islands and Saipan. Carlson was promoted to lieutenant colonel in 1944, and became a brigadier general upon his retirement in July 1946.

After the war, Carlson joined the Progressive Citizens of America, of which he became national vice-chairman. He died at a camp on Mt. Hood, Ore.

**Carmichael, Archibald Hill** (June 17, 1864–July 15), U.S. congressman.
**Carpenter, Ford Asham** (March 25, 1868–Nov. 10), U.S. meteorologist, aeronaut.
**Carrington, William John** (Feb. 4, 1884–July 24), U.S. Kiwanis executive.

**Cather, Willa Sibert** (Dec. 7, 1876–April 24), U.S. author, was born at Winchester, Va. For her early career, see *Encyclopædia Britannica.* Miss Cather was pre-eminently famous for her early novels, including *O Pioneers!* (1913), *My Antonia* (1918), *A Lost Lady* (1923) and *Death Comes for the Archbishop* (1927). Among her later works are *Lucy Gayheart* (1935) and *Not Under Forty* (1936), a collection of essays. Her last published novel was *Sapphira and the Slave Girl* (1940). In her later years, Miss Cather avoided publicity and rarely appeared in public. In 1944, she received the gold medal of the National Institute of Arts and Letters for the high quality of her works.

She died at her home in New York city, N.Y.

**Catt, Carrie Chapman** (Jan. 9, 1859–March 9), U.S. suffragist leader, was born at Ripon, Wis. For her early career, see *Encyclopædia Britannica.* Militant champion of women's rights, Mrs. Catt was in the forefront of the suffragist leaders who brought about passage of the 19th (woman-suffrage) amendment. After ratification of the act in 1920, she devoted her considerable forensic and organizational talents to the cause of world peace; as head of the National Committee on the Cause and Cure for War, she agitated for disarmament and urged the United States to join the League of Nations. The outbreak of World War II led to the committee's dissolution and its replacement by the Women's Action Committee for Victory and a Lasting Peace, of which Mrs. Catt was made honorary chairman. She received numerous awards and medals for her services to women and for her crusading efforts in behalf of racial tolerance and international understanding. Mrs. Catt died in New Rochelle, N.Y.

**Chadwick, Hector Munro** (?–Jan. 2), British philologist.
**Chadwick, Roy** (1894–Aug. 23), British aircraft designer.
**Chambliss, Alexander Wiles** (Sept. 10, 1864–Sept. 30), U.S. jurist.

**Champetier de Ribes, Auguste** (1882–March 6), French lawyer and politician, played a not inconsiderable role in the political life of France's Third republic. A lawyer by profession, he was first elected a member of the French chamber of deputies (lower house) in 1924. He joined the political group known as *démocrates populaires* who, although steeped in Catholic tradition, represented in their social views the extreme left of the Conservative right. He moved to the senate (upper house) in 1934 where he led his group, and he held office in several governments, as minister of pensions and under-secretary for foreign affairs, the latter in Paul Reynaud's cabinet of 1940. In that cabinet, the last of the Third republic, he opposed the capitulation of June 1940. As an opponent of the Vichy regime that followed, he was arrested by the Germans in 1942, but escaped from prison and joined the French underground movement in the Pyrenean district which he had represented in the chamber. In the political regrouping which followed the liberation of French territory in 1944, he became a leading member of the new Catholic left, the *mouvement républicain populaire* (M.R.P.). He was France's chief prosecutor at the Nuernberg war crime trials until his election to the presidency of the Council of the French Republic, the new upper house under the French constitution of 1946. He held this office until his death in Paris.

**Chandler, Frank Wadleigh** (June 16, 1873–June 13), U.S. educator.
**Chase, Frederick Starkweather** (July 2, 1862–Dec. 5), U.S. industrialist.

**Chase, Harold (Hal)** (Feb. 13, 1883–May 18), U.S. baseball player, was born at Los Gatos, Calif. Starting his diamond career with Pacific coast teams, he went to the big leagues in 1905 as a first baseman for the New York Yankees in the American league. In late 1910 he managed the Yankees, but in 1913 he was traded to the Chicago White Sox.

Chase jumped the American league to play with Buffalo in the newly-formed Federal league during 1914 and 1915, but in the following year he was back in the major leagues as a member of the Cincinnati National league club. During his last year in big league baseball (1919) he played with the New York Giants.

Both a good fielder and batter, Chase was regarded by many as one of the best first basemen in baseball history.

While with the New York Giants in 1919, Chase was mysteriously dropped from the club. It was recalled that earlier that year he had been absolved temporarily of charges made by Christy Mathewson of the Reds that there were "irregularities" in his play with the Cincinnati team during the '17 and '18 seasons.

Arrested in 1921 in connection with the scandal involving the Chicago White Sox baseball team, he was subsequently cleared, although no m league team would hire him thereafter. He closed his career playing managing small teams in the Arizona state league.

He died at Colusa, Calif.

**Cheyney, Edward Potts** (Jan. 17, 1861–Feb. 1), U.S. educator.
**Chidester, Floyd Earle** (Oct. 13, 1884–June 19), U.S. biologist, author.
**Chilston Aretas Akers-Douglas,** 2nd Viscount, of Boughton Malhe (Feb. 17, 1876–July 25), British diplomat.

**Christian X** (1870–April 20), king of Denmark, of whom a biographical count will be found in the *Encyclopædia Britannica,* was the son of K Frederik VIII. His childhood was spent about the happy court of his gra father, Christian IX, where there was a steady flow of visitors from Europe. His father had three sisters, one who married Edward VII England, the second who married Alexander II of Russia, and the t who married the Duke of Cumberland. An uncle became King Georg of Greece, and a brother King Haakon VII of Norway.

Christian became crown prince in 1906 on the death of his grandfat and king in 1912 on the death of his father. During his reign the Da West Indies were sold to the U.S., much to his sorrow. Still more deeply he regret the separation of Iceland, but he recognized the Icelanders' r to decide for themselves. On the more pleasant side, he saw northern Sle united with Denmark after the plebiscite of 1920. But the most import events of his reign were the two world wars. In 1914 and the years wh followed he steered Denmark on a neutral course; in the years follow 1939 he was forced to see Denmark occupied by German troops and himse prisoner in his own land (after 1943).

The stanch and beloved king was a man of complete integrity and gr courage, and was a steadying and powerful influence in the country. people respected him fully, loved to watch their 6 ft. 5 in. sovereign ride horse early in the morning through the streets of Copenhagen, and expres their deep partriotism in homage to the king. During his reign the incipi republican spirit died out, for here stood a monarch more democratic t many a president or premier.

Christian X had a heart attack on Easter Sunday and died two we later, at the age of 76. He was buried at Roskilde cathedral.

**Churchill, Winston** (Nov. 10, 1871–March 12), U.S. novelist, was born in Louis, Mo. For his early career see *Encyclopædia Britannica.* It was until publication in 1899 of *Richard Carvel,* an historical novel, that Churc attained fame; this work was said to have sold in excess of 1,000,000 cop It was followed in 1901 by *The Crisis,* the heroine of which is a descend of Richard Carvel, the hero of the former volume. In 1917 Churchill g up his career because he "got tired of writing novels," lived in virtual se sion on his New Hampshire estate and did not produce another book u 1941 when *The Uncharted Way,* a psychological analysis of Christianity, w published.

Churchill was not related to Winston Churchill, the British statesm but was frequently mistaken for him. It was said that early in their care the two Churchills came to a *modus vivendi* to avoid further confusion. T Britisher, who was three years younger, bowed to his U.S. namesake's s iority and agreed to insert the initial "S" between his two names.

Winston Churchill, the American, died in Winter Park, Fla.

**Clark, Calvin Montague** (Jan. 30, 1862–March 1), U.S. theologian.
**Clark, Hubert Lyman** (Jan. 9, 1870–July 31), U.S. zoologist.
**Clarke, Sir Basil** (1879–Dec. 12), British journalist.
**Clayton, Sir Hugh Byard** (1877–Sept. 27), British colonial official.
**Cleary, Michael Joseph** (Sept. 23, 1876–Feb. 22), U.S. insurance executive
**Clementi, Sir Cecil** (Sept. 1, 1875–April 5), British colonial governor.
**Clopton, Malvern Bryan** (Oct. 8, 1875–April 21), U.S. surgeon.
**Cobbett, Louis** (1862–March 10), British pathologist, bacteriologist.
**Cochran, John Joseph** (Aug. 11, 1880–March 6), U.S. politician.

**Cohen, Morris Raphael** (July 25, 1880–Jan. 28), U.S. educator and philo pher, was born at Minsk, Russia. When he was 12 years old, his pare migrated to the United States and settled in New York city. There he tended public schools, receiving his B.S. degree from City college in 19 Six years later, he took his Ph.D. degree at Harvard university. In 1902 joined the staff of City college as mathematics teacher, becoming profes of philosophy in 1912.

His classes were considered among the most popular on the campus a his lectures an "intellectual adventure," as attested by the numerous quests of students to "sit in." He retired in 1938 as professor emeritus a joined the faculty of the University of Chicago as professor of philosop leaving the latter institution in 1942 to devote his remaining years to writi He was the author of *Reason and Nature* (1931), *Law and the Social Or* (1933), *Preface to Logic* (1944) and *Faith of a Liberal* (1945). He was author of *An Introduction to Logic and the Scientific Method* (1934) and *The Cambridge History of American Literature,* vol. 3 (1922); he also was t editor of the *Modern Legal Philosophy Series* and the *Jewish Social Stud* At the time of his death five of his books were in the process of publicati They included: *The Meaning of Human History, A Dreamer's Journey* (au biography), *Juristic Studies, Studies in Philosophy and Science* and *Reflecti of a Wondering Jew*; a sixth book, *A Source Book in Greek Science,* was writ in collaboration with I. E. Drabkin. Dr. Cohen died in Washington, D.

**Colcord, Lincoln Ross** (Aug. 14, 1883–Nov. 16), U.S. author.
**Coleman, Frederick W. B.** (May 17, 1874–April 2), U.S. diplomatist.
**Collins, Sir William Henry** (1873?–Nov. 30), British industrialist.
**Colonna, Prince Marcantonio** (July 25, 1881–March 9), Italian member pontifical court.

**Cook, Sir Joseph** (1860–July 30), Australian statesman, was born at Silverda Staffordshire, England, and worked in a coal mine at the age of nine. In 1 he emigrated to New South Wales where he became secretary of the Mine association. He helped to create the Labour party in New South Wales a entered the state legislative assembly in 1891, but later joined the free tr party. In 1894 he became postmaster general and later held the portfolio mines and agriculture. He entered federal politics, when in 1901 he w elected for Parramatta, and succeeded to the leadership of the Free Tr party. In 1909 he was minister of defense. Cook, as leader of the Libe party, returned to office in 1913 as prime minister, but resigned in 1914. was sworn of the privy council in 1914 and served during World War I aister for the navy and later as treasurer. In 1918 he went to England as nember of the imperial war cabinet and was appointed a Knight Grand oss of St. Michael and St. George. He attended the peace conference in rsailles in 1919. He returned to London in 1921, where until 1927, he was h commissioner. In 1922 he was senior Australian delegate to the third embly of the League of Nations and Australian delegate to the Genoa ference. (*See* also *Encyclopædia Britannica.*)

**dge, Marcus Allen** (Oct. 6, 1865–Jan. 23), U.S. politician.
**araswamy, Ananda Kentish** (April 22, 1877–Sept. 9), Ceylon-born art ert, author.
**ey, Ira Clifton** (Oct. 25, 1864–Nov. 2) U.S. publisher.
**si, Filippo** (Aug. 8, 1876–Feb. 1), Italian papal envoy.
**si, Salvatore** (April 24, 1864–March 3), Italian journalist.
**rave, John O'Hara** (July 11, 1864–Sept. 19), U.S. journalist.
**on, George Gordon** (Oct. 15, 1858–March 4), British historian.

**tauld, Samuel** (1876–Dec. 1), British business man and patron of arts, s educated at Rugby school. He then began his connection with the fam- silk-weaving business, and after training at Krefeld, Ger., he soon became nager of the company's dyeing and finishing factory at Bocking, Essex. 1904 the business was registered as a public company, and two years later gan manufacturing rayon yarn by the viscose process. By 1915 he was cted to the board, and in the following year a joint managing director. the death of H. G. Tetley in 1921 he became chairman of the company, ich had by then become one of the largest textile concerns in the United ngdom producing silk and rayon yarns.

At his home in Portman square, London, he built up a notable art collec- n, and on his wife's death in 1931 he transferred the house to the Univer- y of London as the Courtauld institute.

In 1923 he gave £50,000 for the purchase of paintings, and the Tate llery was enriched by this gift with paintings by P. A. Renoir, H. G. E. gas, V. van Gogh, P. Cézanne and A. Sisley. He was a trustee of the Tate llery, 1927–34 and 1935–37; at the time of his death in London he was a istee of the National gallery.

**Theodore Sullivan** (Aug. 17, 1894–May 10), U. S. educator.
**tree, Ernest Granville** (Nov. 23, 1883–May 30), U.S. surgeon, urologist.
**e, Frederick Evan** (March 2, 1869–Nov. 21), U.S. jurist.
**ston, Claudia** (?–June 26), U.S. author, editor.
**t, Henry Page Croft,** 1ST BARON (June 22, 1881–Dec. 7), British politician.
**by, Franklin Muzzy** (Jan. 16, 1875–June 29), U.S. industrialist.
**ninshield, Frank** (FRANCIS WELCH) (June 24, 1872–Dec. 28), U.S. editor.
**ther, Samuel** (1880?–Oct. 27), U.S. writer.
**hy, Joseph Michael** (Sept. 12, 1878–Oct. 25), U.S. meat packing execu- e.
**iffe-Owen, Sir Hugo** (Aug. 16, 1870–Dec. 14), British industrialist.
**ey, Michael Joseph** (Oct. 12, 1879–May 16), U.S. Catholic archbishop.
**ick, Max Cohen** (Sept. 1, 1877–May 23), U.S. religious leader.
**ing, Harold Beveridge** (April 6, 1873–Oct. 31), Canadian pediatrician.

**er, Elliott Carr** (July 30, 1888–Aug. 16), U.S. surgeon, was born in Bangor, e., and received his medical degree from Harvard university in 1913. uring World War I Dr. Cutler was head of the first Harvard medical unit Paris and by the end of that conflict he held the rank of a major and was charge of a base hospital.

Returning to civilian life in 1919, Dr. Cutler became an instructor in sur- ry at the Harvard Medical school and resident surgeon of the Peter Bent righam hospital. He left Harvard in 1924 to become professor of surgery at estern Reserve Medical school, Cleveland, O., and director of surgery at leveland's Lakeside hospital. In 1932 he succeeded Dr. Harvey Cushing as oseley professor of surgery at Harvard and chief surgeon at the Peter Bent righam hospital.

Credited with many innovations in surgery, Dr. Cutler in 1923 performed hat was said to be the first successful operation on the valves of the human eart.

Dr. Cutler served in World War II, attaining the rank of brigadier gen- al, and was chief consultant in surgery and later chief of professional serv- es, office of the chief surgeon, in the European theatre of operations. In 945 he was appointed consultant to the Veterans' administration. In 1939 r. Cutler and Dr. Robert Zollinger published an *Atlas of Surgical Opera- ons*, a surgery manual.

He died at his home in Brookline, Mass.

**ney, Richard Heath** (March 29, 1860–May 16), U.S. educator.
**ty, Ernest** (1891?–Oct. 30), Canadian organist.
**on, Alexander Martin** (July 28, 1874–Nov. 26), U.S. Salvation Army ficer.
**ewski, Herman** (1883?–June 2), Russian-born composer.
**k, Sidney** (1874–Oct. 11), British author, journalist.
**is, Harry** (1873?–Aug. 11), U.S. baseball player.
**is, Jackson** (Sept. 25, 1882–April 15), U.S. educator.
**is, James John** (Oct. 27, 1873–Nov. 22), U.S. politician.
**and, Clyde Osmer** (Dec. 27, 1872–March 27), U.S. artist.

**nett, Mary Ware** (April 4, 1872–July 25), U.S. suffragist and writer, was orn in Worcester, Mass. Educated at the School of Applied Design of the oston Museum of Fine Arts, she became a general designer. Mrs. Dennett rtually abandoned her career as an artist in the early 1900s to join the ffragist movement, becoming secretary of the National Suffrage associa- on in New York from 1910 to 1915 and acting president of the Twilight eep association, 1913–14.

She also crusaded for free and unfettered dissemination of sex information d birth control literature and was one of the three founders of the National irth Control league. In 1916 she took an active role in peace movements, anaged "anti-preparedness" mass meetings in the midwest and served with omen's groups campaigning to re-elect Pres. Woodrow Wilson for a second rm.

Her propagandizing in behalf of birth control brought Mrs. Dennett into e national spotlight in 1925 when she was convicted and fined $300 for ving sent through the mails an educational pamphlet on sex, which she ad written for the guidance of her two sons. The case aroused widespread interest after Mrs. Dennett announced that she would rather go to jail than pay the fine. The conviction was reversed in 1930 by a circuit court of appeals.

In her later years Mrs. Dennett helped found the World Federalists in 1941, serving as chairman of the organization until 1944 when failing health compelled her to resign.

She died at Valatie, N.Y.

**Deverell, Sir Cyril John** (Nov. 9, 1874–May 12), British army officer.
**De Vore, Harry S.** (July 27, 1891–Oct. 14), U.S. educator, churchman.
**Dewar, Peter Menzies** (1871?–June 3), British whiskey distiller.
**Diaz, Salvador Bueitrago** (1883?–April 5), Nicaraguan politician.
**Digges, Dudley** (1879?–Oct. 24), U.S. actor.
**Ditzen, Rudolf** (HANS FALLADA) (July 21, 1893–Feb. 6), German novelist.
**Dodd, Charles J.** (1873?–July 24), U.S. jurist.
**Drake, Joseph Horace, Sr.** (May 18, 1860–Aug. 4), U.S. educator.
**Drane, Herbert Jackson** (June 20, 1863–Aug. 11), U.S. congressman.
**Ducane, Sir John (Philip)** (May 5, 1865–April 5), British army officer, colonial official.
**Dunbar, Seymour** (Oct. 9, 1866–April 18), U.S. historian.
**Duncan, Luther Noble** (Oct. 14, 1875–July 26), U.S. educator.
**Dunnells, Clifford George** (July 8, 1875–April 15), U.S. educator, civil engineer.
**Dupree, Minnie** (Jan. 19, 1875–May 23), U.S. actress.

**Durant, William Crapo** (Dec. 8, 1861–March 18), U.S. industrialist and financier, was born in Boston, Mass. His family moved to Flint, Mich., where he attended school until he was 17 years old, later working as a grocery clerk, millhand, patent medicine salesman and real estate agent. Durant and J. Dallas Dort, a hardware clerk, joined forces in 1886 and borrowing $2,000 from friends, they secured control of a wagon works. The Durant-Dort carriage company met with astounding success, producing as many as 150,000 buggies in a peak year.

In 1904 Durant went into the motor car business. Obtaining control of a tottering plant that produced only 28 cars yearly, he got the patent rights to the Buick automobile, capitalized the Buick Motor Car Co. in 1905 for $10,000,000 and reaped a fortune.

Three years later (1908), Durant purchased the Cadillac, Oakland, Oldsmobile and Northway motor car companies and together with the Buick company formed the General Motors Co. At the time, the giant merger was derided as "Durant's folly," but in the second year of operation it showed a profit of $10,500,000.

Ousted from controlling position in the company in 1910, he regained it with the help of the Du Ponts in 1915 and added Chevrolet (which he had organized earlier) to General Motors but finally lost control of the combine after the 1920 postwar depression.

In 1921 he re-entered the automotive field with a new enterprise, the Durant Motors, Inc. When he retired in 1926 from the motor car business, he had amassed a new fortune estimated at $20,000,000. But he lost all of it in the Wall street crash of 1929 and in the ensuing depression years. He later became a real estate broker in Newark, N.J., owner of a bowling alley in Flint, and was fairly well-to-do at the time of his death in New York city.

**Du Shane, Donald** (June 5, 1885–March 10,) U.S. educator.
**Dutton, Emily Helen** (Sept. 29, 1869–June 18), U.S. educator.

**Edison, Mina** (MRS. THOMAS ALVA EDISON) (July 6, 1865–Aug. 24), second wife, and widow, of U.S. inventor Thomas Alva Edison, was born in Akron, O., and attended schools in her native city and in Boston. She married Edison on Feb. 24, 1886.

Distinguished in her own right, Mrs. Edison was a daughter of Lewis Miller, co-founder of the Chautauqua institution, of which she was a trustee and active member for more than a score of years. She was also a leader of the U.S. temperance movement, and stumped for Herbert Hoover during the latter's first presidential campaign in 1927.

Mrs. Edison occasionally stirred up heated controversy with her outspoken opinions on contemporary issues. A case in point was a broadcast in 1930 in which she declared that U.S. women ought to return to their "homemaking" and quit trying to be career women, a statement that roused considerable indignation among U.S. feminists.

Four years after the death of her inventor husband, she married (in 1935), Edward Everett Hughes, a retired steel executive and one of her childhood friends. In 1940 she was widowed again and resumed the name of her first husband.

She died in New York city, N.Y.

**Eigenmann, Rosa Smith** (1858?–Jan. 12), U.S. ichthyologist.
**Elkus, Abram I.** (Aug. 6, 1867–Oct. 15), U.S. diplomat, lawyer.
**Elliott, Harriet Wiesman** (July 10, 1884–Aug. 6), U.S. educator and government official.
**Ellis, Edgar Clarence** (Oct. 2, 1854–March 15), U.S. lawyer, politician.
**Elsa, Princess of Liechtenstein** (Jan. 6, 1875–Sept. 28), widow of Prince Franz I.
**Emerson, Rollins Adams** (May 5, 1873–Dec. 8), U.S. geneticist.
**Emmett, Arthur Donaldson** (Dec. 19, 1878–June 11), U.S. scientist, vitamin authority.
**Engel, Edward J.** (July 28, 1874–March 30), U.S. railway president.
**Ennis, William Duane** (Jan. 6, 1877–Oct. 14), U.S. educator, engineer.
**Epp, Franz Xaver Ritter von** (Oct. 10, 1868–Feb. 7), German politician, army officer.
**Estrada, Juan M.** (1871?–July 11), Nicaraguan politician.

**Eugen, Prince** (Aug. 1, 1865–Aug. 17), Swedish prince and duke of Närke, son of King Oscar II and Queen Sophia, and younger brother of King Gustavus V of Sweden, was born at the chateau of Drottningholm. He studied at Uppsala university and entered the army as a commissioned officer but, showing little taste for either a military career or life in the royal court, he left Stockholm to study painting in Paris.

In the French capital, Prince Eugen specialized in landscapes and soon came to be regarded as a competent painter. He rarely sold his canvasses and generally donated them to museums, schools, or friends.

More famous than his own work was his private collection of art works housed in his estate at Valdemarsudde, Sweden, where he died.

**Evans, Curtis Alban** (April 20, 1879–May 3), U.S. surgeon, educator.

**Evans, Sir Thomas John Carey** (1884–Aug. 25), British surgeon.

**Evers, John J. ("Johnny")** (July 23, 1881–March 28), U.S. baseball player, was born in Troy, N.Y. He started his professional baseball career with the Troy minor league team and joined the Chicago Cubs of the National league in 1902 as a second baseman. Small, wiry, and weighing hardly more than 90 lb., Evers was not an impressive batter. But what he lacked in hitting power, he more than made up in fielding ability and baseball guile.

A member of the celebrated "Tinker-to-Evers-to-Chance" infield combination of the Chicago team, Evers was in large measure responsible for depriving the New York Giants of the championship in the celebrated Cub-Giant game on which the pennant depended, at the end of the 1908 season. On that occasion the alert Evers noticed that Fred Merkle, Giant first baseman, had forgotten to tag second base. Calling frantically for the ball, Evers tagged the base, which made Merkle automatically out. Merkle's "boner" necessitated a replay of the game, which the Cubs won.

At the peak of his career, Evers brought up his weight to about 130 lb. While still unable to hit the ball with much power, he proved an able place hitter and a daring base runner. He played with the Cubs from 1902 to 1914, with the Boston Braves between 1914 and 1917 and wound up his active playing days with the Philadelphia National league team in 1917. Thereafter, he served as coach with several teams, managed the Chicago White Sox in 1923 and was assistant manager of the Boston Braves in 1929. Subsequently he was associated with the Albany minor league team and operated a sporting goods store. He died in Albany, N.Y.

**Fairburn, William Armstrong** (Oct. 12, 1876–Oct. 1), U.S. inventor, industrialist.
**Fairlie, John Archibald** (Oct. 30, 1872–Jan. 23), U.S. educator.
**Farnsworth, Charles Hubert** (Nov. 29, 1859–May 22), U.S. speech and music educator.
**Farthing, John Cragg** (Dec. 13, 1861–May 6), Canadian Anglican cleric.
**Fay, William George** (Nov. 12, 1872–Oct. 27), Irish actor, producer.
**Fedorenko, Yakov Nikolayevich** (1896–March 27?), soviet army officer.
**Feldman, Herman** (March 20, 1894–Oct. 16), U.S. educator.
**Ferris, David Lincoln** (Dec. 31, 1864–June 9), U.S. Episcopal bishop.
**Ffoulkes, Charles John** (June 26, 1868–April 22), British armour and heraldic expert.
**Finletter, Thomas Dickson** (Oct. 20, 1862–Feb. 4), U.S. jurist.
**Fish, Walter George** (June 3, 1874–Dec. 21), British newspaper editor.
**Fisher, Edwin** (1883–Jan. 27), British banker.

**Fisher, Irving** (Feb. 27, 1867–April 29), U.S. political economist, was born at Saugerties, N.Y. For his early career, see *Encyclopædia Britannica*. Dr. Fisher, who taught at Yale university for more than 45 years, retired as emeritus professor of political economy in 1935.

Champion of the 100% money system, Dr. Fisher campaigned to standardize the dollar and to require banks to maintain an actual money reserve of 100% for all funds liable to transfer by check, the assumption being that the chief inflations and deflations were of check-book money.

Commenting on economic problems that arose after the close of World War II, Dr. Fisher on his 80th birthday derided as "naive" the assumption that the inflationary trends of early 1947 resulted solely from the "vicious spiral" of wages and prices inflated by organized labour, and warned against repeating the error of 1920 when a deflation was employed to liquidate an inflation. Dr. Fisher died in New York city.

**Fitzalan of Derwent, Edmund Bernard Fitzalan-Howard,** 1st Viscount (June 1, 1855–May 18), British peer, third son of Henry Granville, earl of Arundel, who succeeded as 14th duke of Norfolk in 1856. He was educated at the Oratory school, Edgbaston, where he came under the influence of Cardinal Newman; in later years he was regarded as the leading and representative Roman Catholic layman in England. In 1875 he received a commission in the 11th Hussars, and in the following year took the name and arms of Talbot in compliance with the will of the 17th earl of Shrewsbury, who had made him heir of his estates in 1856. He was known as Lord Edmund Talbot for the greater part of his life; in 1921 he was raised to the peerage as Viscount Fitzalan of Derwent and reverted to his real surname of Fitzalan-Howard.

In 1894 he entered parliament as a Unionist member for Chichester, a seat which he held until he was raised to the peerage. His influence in the house grew during the years after 1906, when the Unionist party was in opposition, and in 1913 he became Unionist chief whip. In 1921 he was appointed viceroy of Ireland under the act of 1920, and held office while the Irish Free state was set up in the same year. He died at Windsor, England.

**Fitzgerald, Desmond** (1890?–April 9), Eire government official.
**Fitzgerald, Walter James** (Nov. 17, 1883–July 19), Alaskan clergyman, educator.
**Fitzgerald, William Joseph** (March 2, 1887–May 6), U.S. congressman.
**Flagg, Ernest** (Feb. 6, 1857–April 10), U.S. architect.
**Flett, Sir John Smith** (1869–Jan. 28), British geologist.

**Forbes, George William** (March 12, 1869–May 18), New Zealand statesman, was born at Lyttelton, New Zealand, and educated at the Boy's High school, Christchurch, N.Z. He entered active politics in 1908, when he was elected to the New Zealand parliament. In 1912 he became the Liberal party's chief whip. When the party declined, he became in 1925 leader of the National party. The new party and other Liberals merged in 1928 into the United party which carried the elections, Forbes becoming minister of lands and agriculture. In 1930, he became leader of the United party, in succession to Sir Joseph Ward whom, a little later, he succeeded as prime minister and minister of external affairs. Forbes attended the Imperial conference in London in 1930 and pleaded for increased empire trade and reinforced empire preferences. He also represented his country at the World Economic conference in London in 1932 and, again, at King George V's silver jubilee in 1935. His party relinquished power in the same year and Forbes led it in opposition until 1936. In that year he handed over the leadership of the party, though he continued to sit in parliament until 1943.

**Ford, Henry** (July 30, 1863–April 7), U.S. motor car manufacturer, was born on a farm near Dearborn, Mich. For his early career, see *Encyclopædia Britannica*. He started the Ford Motor Co., which in the 1920s grew to become one of the great industrial empires of the era. At the peak of his career, Ford was believed to have been worth $2,000,000,000.
